

THE

British Provident Institution.

Office : 6, St. Andrew Square. London : 17, King William Street, E.C.
THIS SOCIETY combines the advantages of
Mutual Assurance with Moderate Premiums.

THE PREMIUMS are so moderate that an Assurance of £1,200 or £1,250 may generally be secured from the first for the yearly payment which would elsewhere assure (with profits) £1,000 only--the difference being equivalent to an immediate Bonus of 20 to 25 per cent.

The Whole PROFITS go to the Policyholders, on a system at once safe and equitable--no share being given to those by whose early death there is a *loss* to the common fund. On this principle large additions have been, and will be, made to the policies of those who live to participate, notwithstanding the lowness of the premiums.

The SURPLUS at last Investigation was £1,051,035, of which £350,345 was *reserved*. The number who shared was 9,384. First shares were (with a few unimportant exceptions) from 18 or 20 to 34 per cent. Other policies were increased 50 and 80 per cent.

Examples of Premium of £100 at Death With Profits.

AGE.	25	30	35	40	45	50
During Life	£4 18 0	£2 1 0*	£1 6 10	£2 14 6†	£3 5 9	£4 1 7
Payments ..	12 0	15 4	20 2	37 5	37 6	412 1

The usual *non-participating* Rates differ little from these Premiums.

* A person of 20 may secure £1,000 at Death by a yearly payment, *during life*, of £10 15s.

[This Premium would generally elsewhere secure £800 only, instead of £1,000.]

OR he may secure £1,000 by 21 yearly payments of £17 15s. 4d. *being thus free from payment after age 50.*

† At Age 40 the Premium *ceasing at age 60* is for £1,000 (with profits), £33 14s. 6d., being but the same as most other Offices require to be paid during the whole term of life. *Before these Premiums have ceased the Policy will have shared in at least one division of profits.*

New Assurances completed in 1890 were £1,032,008.

Being for the seventeenth year in succession above a Million.

Premiums in year £600,820.

Total income £907,648.

60	257,734	7 19 10	12 17 6	18 2 11

The above results in every case exceed the Company's estimates of 1884.

MUTUAL LIFE CONSOLS.

The New Six per Cent. Consol Policy has been specially devised to meet the requirements of people of means, to whom a good investment may be of more moment than Insurance Protection. The Consol Policy meets both requirements, and combines more additional advantages, with fewer restrictions, than any Investment Insurance contract hitherto placed before the Public. It guarantees immediate insurance (increasing annually), Endowment and Permanent Income.

NO OTHER COMPANY OFFERS THIS POLICY.

An Appeal to Invalids

The best remedy for **WEAK AND LAUGUID** Feelings, Nervous Exhaustion, Brain Fag, Impaired Vitality, Debility, Sleeplessness, Indigestion, Torpid Liver, Constipation, Ladies' Ailments, Hysteria, Kidney Diseases, etc., is Nature's Great Restorative, Electricity, which may be imperceptibly applied to the system by wearing

MR. C. B. HARNESS'

ELECTROPATHIC BATTERY BELT

GALVANIC AND FARADIC.

BY ROYAL LETTERS PATENT.

**GENTLEMAN'S
ELECTROPATHIC BELT.**

It is light and comfortable to wear, gives wonderful support to the body, and may be relied on to speedily impart life and vigour to the debilitated constitution.

LADY'S ELECTROPATHIC BELT.

DEBILITY.

Herbert Riley, Esq., Lynton House, Guseley, Yorks, writes, April 24th, 1891: "Mrs. Riley wishes me to say that the Electropathic Belt she purchased from you over a month ago, has done her a great deal of good. When she received it she was very ill in bed, but after putting on the Belt a marked improvement took place, and she was able to sit up a bit the same evening, the following day to go downstairs. She has been much better since wearing the appliance, and I trust the treatment will continue to do her good."

**IT RENEWS
IMPAIRED
VITALITY.**

*Read
this
Carefully*

HYSTERIA.

Mrs. W. Francis, Church Street, Lyme Regis, writes, March 16th, 1891: "I have much pleasure in informing you that the Electropathic Belt received from you on the 9th of this month, for my Granddaughter, E. Spence, has worked wonders in the short time she has worn it. She has been a great sufferer from weakness, etc., for the last three years, but is now, through your valuable appliance, very much better. Her appetite has very much improved and her spirits are cheerful, in fact, the change is wonderful."

**IT CURES
HYSTERIA.**

Mr. C. B. HARNESS, the President of the Institute, and the other Officers of the Company, may be consulted either personally or by letter free of charge, on all matters relating to Health, and the application of Medical Electricity. Call or write to the

MABIE, TODD & CO.'S GOLD PEN.

ONE OUTWEARS NINETY GROSS OF STEEL PENS.

Illustrated Price Lists Gratis and Post Free.

Address Postcard, 93a, CHEAPSIDE, LONDON.

In shape they are like the steel Pens you are familiar with, which have lasted you only a few days. ONE of our Gold Pens will serve you faithfully an ordinary lifetime.

We make them of gold because that metal is positively unaffected by ink. We point them with iridium, because that will resist wear.

The *Encyclopædia Britannica* says:—"Iridium is a white, or nearly white, metal of high specific gravity. It is almost indestructible. A beautifully polished surface can be obtained upon it."

They are for all who are fond of old friends.

They glide smoothly and noiselessly without catching in the paper or spattering the ink.

You need not keep a pen that does not suit your hand; we will exchange it, or return your money after a week's trial.

WITHIN THE MEANS OF ALL CLASSES. From 4s.

CHEAPER TO USE THAN STEEL PENS.

Send postcard for Illustrated List, which will be sent free, post paid, by the Manufacturers,

For the Hair, Complexion, and Teeth, are the PUREST and BEST.

ODONTO

A pure non-gritty tooth powder; it whitens the teeth, prevents decay and sweetens the breath; is more efficacious than pastes or washes, 29.

MACASSAR OIL

preserves and beautifies the hair, and prevents it falling off or turning grey, is the best Brilliantine for ladies' and children's hair, being less greasy and drying than ordinary Brilliantine, and can be had in a golden colour for fair hair. Sizes, 3/6, 7/-, 10/6, equal to four small.

KALYDOR

is a most soothing, healing, and refreshing milk for the face, hands, and arms. It prevents and removes Freckles, Tan, Sunburn, Chaps, Chilblains, Cutaneous Eruptions, etc., and produces a beautiful and delicate complexion. Bottles, 2/3 and 4/6.

Redness and Roughness of the skin, soothes and heals all Irritation, Chaps, Chilblains, Cutaneous Eruptions, etc., and produces a beautiful and delicate complexion. Bottles, 2/3 and 4/6.

ESSENCE OF TYRE effectually dyes red or grey hair a permanent brown or black, 4/-.

EUKONIA. A pure toilet powder in white, rose, or cream tints. 1/- and 2/6 per box. Ask Chemists for ROWLAND'S ARTICLES, of 20, HATTON GARDEN, LONDON, and avoid spurious imitations.

THE CYCLOSTYLE COMPANY.

SOLE PROPRIETORS, PATENTEES, AND MANUFACTURERS OF THE
NEO-CYCLOSTYLE DUPLICATING APPARATUS AND CYCLOSTYLE PATENTS.
(GESTETNER'S PATENT)

The Neo Cyclostyle Copying process is practically the only one which will work satisfactorily and continuously in a hot mate. A new Indestructible Indiarubber Roller has been invented, and is now supplied at a small extra charge in lieu of the old composition—one which was liable to be affected by heat and damp.

TELEGRAMS—"CYCLOSTYLE, LONDON."

THIS APPARATUS
WILL GIVE
2000 Copies
IN BLACK,

OR ANY OTHER
COLOUR,
From One
Original.

THE "NEO-CYCLOSTYLE" PROCESS FOR DUPLICATING TYPEWRITING.

(GESTETNER'S PATENT.)

This is a simple and perfect process for producing copies of Typewriting, by means of which 2000 copies may be taken equal to original Typewriting. It may be used with the "Remington," "Caligraph," "Barlock," or "Hammond" Typewriters.

As supplied to the War Office, Lloyd's, and Leading Merchants and Banking Houses.

HAZELL'S ANNUAL

FOR 1892:

A CYCLOPÆDIC RECORD OF MEN AND
TOPICS OF THE DAY.

CONTAINING

*ABOVE 3500 CONCISE AND EXPLANATORY ARTICLES, ON
EVERY TOPIC OF CURRENT POLITICAL, SOCIAL,
BIOGRAPHICAL AND GENERAL INTEREST
REFERRED TO BY THE PRESS AND
IN DAILY CONVERSATION.*

REVISED TO NOVEMBER 22, 1891.

SEVENTH YEAR OF ISSUE.

London:

HAZELL, WATSON, & VINEY, LD., 1, CREED LANE, LUDGATE HILL
HODDER AND STOUGHTON, 27, PATERNOSTER ROW.

1892.

[All rights reserved.]

P R E F A C E.

THE seventh volume of HAZELL'S ANNUAL requires but little introduction. The literary matter in the book is of the usual varied character, recording the year's history in all parts of the globe, as well as in all the departments of work which engage current attention.

Social topics have in 1891 almost superseded the ordinary political themes. The relations of Capital and Labour, the question of State Pensions, and the increasing importance given to Education, are among the leading themes in this volume. Biographies of new thinkers, writers, and workers absorb much of its space, in view of the popularity of this section. Commercial, financial, insurance, and shipping interests, have many articles allotted to them. Retrospects on accomplishments in Art, Music, Drama, Literature, and Science, during the past year, occupy many pages. The unique features dealing with legal decisions and engineering schemes are retained, as well as the full accounts of the Army, Navy, and Volunteers. Additional space has been given to the many departments of Athletics. The statesman will find an extremely complete record of the Parliamentary work of the year. Briefly, the aim of the book has been to present a mirror, reflecting instantly and truthfully the past year's incidents and individuals.

Gratitude must be again expressed for the able co-operation of many distinguished writers, and also for numerous letters, often containing valuable suggestions, which will always be welcomed.

THE AUSTRALIAN IRRIGATION COLONIES.

From the Speech of HIS EXCELLENCY the GOVERNOR of VICTORIA (LORD HOPETOUN),
in Laying the Foundation Stone of the CHAFFEY COLLEGE of AGRICULTURE, at
Mildura, in April 1891:—

“I have long looked forward to the opportunity of seeing the settlement which has so recently sprung into existence, and which appears to be growing in importance day by day. I congratulate you upon the satisfactory report of the local health officer, and on the fertility of your soil, so suitable alike for the growing of the orange, the vine, and other fruit trees. I have been very much pleased with Mildura, and I think the success of the enterprise will be a grand thing, not only for Victoria, but for the whole of Australia.”

**Established by Special Acts of the Colonial Parliaments, and Regulated by the
Respective Governments.**

Offer a pleasant occupation—a healthy life—a cheerful home—a soil of unequalled fertility—producing by . .
Irrigation results unparalleled in the annals of Horticulture—comfort, civilisation,
and material prosperity combined.

LARGE FOLIO ILLUSTRATED DESCRIPTIVE WORK. Price 2s. 6d. Pamphlet Free.
Gold Medal, Paris Exhibition, 1889. Diploma of Honour, Edinburgh, 1890.

HALF A MILLION ACRES in the sunny and salubrious climate of Victoria and South Australia, on the great River Murray, which affords an abundant supply of fertilising water for the Irrigation of **VINE-YARDS and FRUIT FARMS**, and for the production, in assured quantity and excellence, of **Grapes, Oranges, Lemons, Olives, Apricots, Figs**, and other **Fruits** (already so successfully grown in Australia), by Cultivators with large and small capital, holding from **Ten to Eighty Acres** and upwards. The Wines and Fruits of Australia are now in extensive demand in **British and Colonial Markets**, and there is a practically unlimited field for such production, under most profitable conditions to the Settlers.

London Offices: CHAFFEY BROS., Ltd.,

- Trade Information** is given in articles entitled "TRADE" and "FOREIGN TRADE."
- Universities** will be found under their respective headings, as "ABERDEEN UNIVERSITY," etc.

HAZELL'S ANNUAL, 1892.

A Cyclopaedic Record of Men and Topics of the Day.

[A]

A

[Abb

Abbott, Hon. John Joseph Caldwell, the Premier of Canada, was b. at St. Andrews, Argenteuil County, Quebec, on March 12th, 1837; was ed. at McGill Coll., Montreal, graduating B.C.L. Devoting himself to the law, he was called to the bar of Lower Canada. Represented Argenteuil in the Canadian Assembly from '59 to '67, after which he entered the Dominion Parliament. Took silk in '62, in which year he became **Solicitor-General**. Mr. A. was responsible for the **Insolvency Act**, which was passed in '64. Certain disclosures having taken place, Mr. A. resumed his private practice until '79, when he visited England in connection with the dismissal of the Ministry. Re-entering Parliament a year later, he joined Sir John A. Macdonald's Cabinet in '87. Became **Premier** on the decease of Sir John A. Macdonald in June, '91. Many important Acts of Canadian legislation owe their inception to Mr. Abbott.

Abbreviations, List of. These may be classified into—initial prefixes of royal personages; aliases of rank in orders of knighthood; indications of military, naval, or civil service; university degrees; diplomas of medical and other licensing bodies; membership of learned institutions; and others. Those here given occur more or less frequently, and are all of recognised status. A few of them are very rarely used. Degrees conferred by some one or all of British, Irish, or Colonial Universities, are indicated by "Univ." Degrees granted only in America, or only so expressed there, are shown by "U.S.A." It is not unusual to add "Oxon.," "Camb.," "Lond.," to indicate the source of the degree. Similarly, medical and scientific *atque* add an L. for London, E. for Edinburgh, and I. for Ireland, the relative value of diplomas from bodies of similar name and profession not being always the same. Letter-affixes are employed by Freemasons and similar bodies among themselves, but are often intelligible only to the initiated.

A.A. . . . Associate of Arts.
A.B. . . . Bachelor of Arts (Univ.). Also describes "able-bodied" seamen.
A.C.A. . . . Associate of Chartered Accountants, England and Wales.
A.C.E. . . . Associate of the College of Engineering.

P.C. . . . Privy Councillor. Also Police Constable.	

Abd-ul-Hamid II, Sultan of Turkey, was b. Aug. 6th, 1842. He was proclaimed Sultan in succession to his brother Murad V., who was deposed in consequence of his mental incapacity (Aug. 31st, '76). Under the rule of Abd-ul-Hamid the Ottoman Empire has been dismembered at some of its fairest regions. The **Berlin Treaty**, concluded after the disastrous war with Russia in '78, practically deprived the Sultan of Bulgaria, Bosnia, and Herzegovina in Europe, and of Ardahan, Kars, and Batoum in Asia. By article 61 of the same treaty the Sultan undertook to carry out without further delay the amelioration and the reforms demanded by the Armenians, and to guarantee their security against the Circassians and Khurds. His neglect to abide by this stipulation led to serious trouble in Armenia.

Abdurrahman Khan, Ameer of Afghanistan, is a nephew of the late Ameer, Sher Ali, and was b. 1830. He took sides against his uncle in the civil war of '64, and won the battles of Shinkhabad and Khelat-i-Ghulzai. In '68 he was defeated by Yakoub Khan, son of Sher Ali, and fled for protection to Russian territory. The Russians provided him with a residence at Samarcand, and a pension. In '79 he made his way to the Cabul frontier, and, having gained

the allegiance of the leading men of that city, was acknowledged **Ameer** by the **British Government**, who allow him a pension of £160,000 a year. He has repeatedly been engaged in suppressing revolts against his authority, the most serious of which was that led by Ishak Khan, in '88. On Dec. 26th, '88, he was shot at by a Sepoy, at Mazar-i-Sherif, but without injury. See **AFGHANISTAN**.

a. Beckett, Arthur William, youngest surviving son of the late Gilbert Abbott a Beckett, the well-known Metropolitan police magistrate and man of letters, was b. Oct. 25th, 1844. He was ed. at Homerton and Civil Service, was private secretary to Duke of Norfolk. Has edited several newspapers, including the *Glovesworn* in '66, and is now editor of the *Sunday Times*. Was special correspondent in Franco-German war for *Standard* and *Globe*. Since '74, has been on the literary staff of *Punch*, of which (after the editor) he is now senior member. Has contributed several series to *Punch*, including "Letters from Pumphandle Court," by A. Briefless, jun., republished in '89. Is author of several novels, including "Fallen among Thieves," and plays, including "About Town," "L. S. D.," "Long Ago," and "Faded Flowers." Has brought up to date (90) his father's "Comic Blackstone" (45). Was called to the bar at Gray's Inn '82, and in '87 was appointed by the Society Master of the Revels, when he produced "The Maske of Flowers," in honour of the Queen's Jubilee. This he repeated in '91 at the Inner Temple. Retains the rank of captain after twenty years' militia service in the 7th Batt. Rifle Brigade and 4th Batt. Cheshire Regt.

Abel, Sir Frederick Augustus, C.B., D.C.L., F.R.S., b. 1827, is chemist to the War Department, chemical referee to the Government, a member of the Royal Engineers' Committee, associate member of the Ordnance Committee, Past President of the Institute of Chemistry, of the Society of Chemical Industry, of the Chemical Society, and Society of Telegraph Engineers and Electricians; Royal Medallist for researches in explosives, member of the Royal Commission on Accidents in Mines, and hon. member of the Institutes of Civil and Mechanical Engineers. He was commissioner to the Electrical Exhibition at Vienna in '83, and was knighted in that year. He is secretary of the Imperial Institute (q.v.), Rede Lecturer '88; President of the Special Committee on Explosives appointed '80. As President of the **British Association**, which met in Sept. '90 at Leeds, Sir Frederick delivered a most comprehensive address.

Aberdeen University was founded in 1494 by Bishop Elphinstone, with only one college—viz. **King's**. In 1593 George Keith, Earl Marischal, founded **Marischal College**, which was also a university distinct from the former foundation. In 1860 these two universities were united in one institution, and now form the University of Aberdeen. The arts and divinity classes meet in the old college, while the law and medical meet in the new. **Lord Rector** (elected '90), the Marquis of Huntly. **Principal**, W. D. Geddes, LL.D.; there are 23 professors and upwards of 900 students. In conjunction with Glasgow it sends one representative to Parliament (present member, J. A. Campbell, LL.D.). It grants certificates of proficiency to women in the local examinations which it has instituted

throughout the northern counties of Scotland. Its degrees are: **M.A.** (hood black silk, lined with white silk); **B.D.** (h. black silk, lined with purple silk); **D.D.** (h. purple cloth, lined with white silk); **LL.D.** (h. purple cloth, lined with pale blue silk); **M.B. C.M.** (h. black silk, lined with crimson silk); **M.D.** (h. purple cloth, lined with crimson silk).

Aborigines Protection Society, was founded in 1847, the first president being the late Sir Thomas Fowell Buxton. The Society was established to protect those who had no power to protect themselves. By diffusing correct information concerning the character and condition of the aborigines, by appealing to the Government and to Parliament when appeal was needed, and by bringing popular opinion to exert its proper influence in advancing the cause of justice, it hoped that much might be done towards the diminution of those gigantic evils the continuance of which reflects such deep dishonour on the British name. **Offices**, Broadway Chambers, Westminster. **Secr.**, Mr. H. R. Fox Bourne.

Aboukir Lake Drainage (see ed. '90). According to a telegram from Cairo, April 10th, '91, the Government granted the Reclamation Company permission to run their drainage water by gravitation into Lake Mareotis, this being a valuable modification of the original concession. The Company were to hand over their pumps for removal to Mareotis, where they will be utilised by the Government for keeping down the level of the lake.

Abyssinia. Called **Habesh** by foreigners, **Mokadah** and **Itopia** by its inhabitants. A country of North Africa, occupying a highland region S.W. of the Red Sea. Estimated area 150,000 square miles; pop. 3,000,000. Ancient cap., **Gondar**. Country made up of many semi-independent small states, belonging to three great divisions: **Tigré** in the north, **Amhara** central, **Shoa** in the south. The capital of Shoa is **Ankobar**, and its outlet the Gulf of Tajurah. Abyssinian trade passes through **Adowa**, the present capital, to the port of **Massowah**, now Italian. Contains the sources of the Blue Nile, Atbara, and Mareb rivers, the first of which flows out of great lake Dembea, 6000 to 9000 feet, broken by deep ravines, summits rising to 15,200 feet. Three distinct zones of elevation, roughly to be described as tropical, temperate, and highland. Temperate zone chief scene of industry and habitation. Government monarchical, and a sort of feudal military system obtains. Religion a form of the Aramean and Coptic Christian Church, called Monophysite. Manufactures limited to coarse cotton and woollen cloths, leather, pottery, and some iron, steel, and other metal articles. Exports are ivory, gold dust, musk, coffee, and some other productions. Imports are arms, Persian carpets and silks, French velvet and broadcloth, Venetian beads, etc. The language of court and commerce is Amharic. The kings of Abyssinia claim descent direct from King Solomon. People a mixed race: Semitic or Arabic type most prevalent; colour yellow-brown to black. There are Mohammedans, and Jews called Falashas. They are exclusive, more moral than the rest of the population, number about 250,000, and are the principal agriculturists and manufacturers of Abyssinia. There is a despised aboriginal race called Waito dwelling round Dembea,

In 1866 the tyrant Lij Kasa, or **Theodorus**, gained power over the entire country of Abyssinia. He imprisoned Englishmen, and a force under **Lord Napier** was sent to chastise him. It reached the fortress of **Magdala**, where a decisive battle was fought ('68), resulting in Theodore's defeat and suicide. Prince Kasa, of Tigre, then obtained British assistance, and now, as **Johannes II.**, rules over Tigre and Amhara. Shoa, till lately virtually independent, under King **Menelek**, is now under the suzerainty of Negus Johannes. During the Soudan campaign **Admiral Hewitt** and others visited Johannes, and an understanding between him and the British Government was arrived at. He sent an army under **General Ras Aloula** to the relief of **Kassala**. A battle was fought at **Kufeti**, Sept. 23rd, '85, when **Osman Digma's** army was broken up by the Abyssinian forces. During '87-8 various conflicts took place between Abyssinian forces and those of Italy at **Massowah**.—'91 has been a very quiet year for this country, though there appears to have been some little friction between A. and Italy, which, however, did not come to a crisis. The feud between the chiefs Degia Mangalia, Ras Alula and Dubch, was terminated by the death of the latter (Sept. 20th) in a battle against the other two chiefs.

Academy, The. See **ROYAL ACADEMY**.

Acadia. The name of **Nova Scotia** while it remained a French colony.

Accidents. See **LOCAL COMPENSATION ACT**.

Acts of Parliament. All public Acts affecting the United Kingdom, and all local Acts affecting only limited areas, as well as private Acts of Parliament, are published, and can be obtained (if in print) at various prices, from Messrs. Eyre & Spottiswoode, Last Harding Street, London, E.C., who also publish at the close of each Session a cheap edition of the public Acts in covers.

Acts of Parliament passed during Session '91. See **SESSION**, sect. 47.

Address, Forms of—alphabetically arranged. (See also **COURTESY**, **TITLES**.) **Archbishop**—commence **My Lord Archbishop**; refer to personally as **Your Grace**; and address letter to "His Grace the Archbishop of —." An **Archbishop's wife** and the other members of his family enjoy no title as such. **Archdeacon**—commence **Venerable Sir**; refer to as **Sir**; address to "The Venerable the Archdeacon of —." **Baron**—commence **My Lord**; refer to personally as **Your Lordship** or **My Lord**; and address letter to "The Rt. Hon. Lord —." **Baroness** or **Baron's wife**—commence **Madam**; refer to personally as **Your Ladyship** or **My Lady**; and address to "The Lady —," or more strictly "The Rt. Hon. the Baroness —." **Baron's son**—commence **Sir**; refer to as **Sir**; and address to "The Hon. John —." **Baron's daughter**—commence **Madam**; refer to as **Madam**; and address, if unmarried, to the "The Hon. Jane —," if married to an esquire to "The Hon. Mrs. —." **Baronet**—commence **Sir**; refer to as **Sir**; address to "Sir William —, Bart." **Baronet's wife**—commence **Madam**; refer to as **Your Ladyship**; address to "Lady —" (without Christian name, unless she be the daughter of a duke, marquis, or earl). **Bishop**—commence **My Lord**; refer to as **Your Lordship**; address to "The Right Rev. the Lord Bishop of —." **Retired Bishops**—commence **Right Rev. Sir**; address to the "Right Rev. Bishop" [then the surname]. **Bishops**

——commence in the same way, and address to "The Bishop Suffragan of —." A **Bishop's wife** and children enjoy no title whatsoever as such. **Canon**—commence **Rev. Sir**; refer to as **Sir**; address to the "Rev. Canon —." **Cardinal**—commence **Your Eminence**, refer to as same, address to "**His Eminence**—." **Clerk in Holy Orders**—commence **Rev. Sir**; refer to as **Sir**; address to "The Rev. John Jones," or, if the Christian name be not known, to "The Rev. — Jones." **Countess** (see **Earl**). **Dean**—commence **Very Rev. Sir**; refer to personally as **Sir**; address to "Very Rev. the Dean of —." **Dowager**—the widow of a peer or baronet should be addressed as "The Dowager Duchess of —," or "The Dowager Lady —," when her son or grandson succeeds to the title and is married. **Duke**—commence **My Lord Duke**; refer to as **Your Grace**; and address to "His Grace the Duke of —." **Duchess**—commence **Madam**; refer to as **Your Grace**; and address to "Her Grace the Duchess of —." **Duke's eldest son** as if he held legally the second title of his father. **Duke's younger son**—commence **My Lord**; refer to as **Your Lordship**, and address to "The Lord Henry —." **Duke's daughter**—commence, **Madam**; refer to as **Your Ladyship**; and address to "The Lady Ellen —." **Earl**—commence **My Lord**; refer to as **Your Lordship**; and address to "The Rt. Hon. the Earl of —." **Earl's eldest son** as if he held legally the second title of his father. **Earl's younger son**, same as the younger son of a duke. **Countess**—commence **Madam**; refer to as **Your Ladyship**; address to "The Rt. Hon. the Countess of —." **Judge of the High Court of Justice**—commence **Sir**; refer to in letter only as **Sir**, but on the bench as **My Lord**; address to "The Hon. Sir John —." **Knight**—commence and refer to as **Sir**; and address to "Sir Thomas —." If a **Knight Bachelor** (Kt., the form of knighthood usually conferred upon a judge, and the law officers amongst others) it is not customary to add "Knight," except in formal documents; but if the person addressed be a K.G. or K.T. or K.P. or G.C.B., etc., etc. it is usual to add the initials after the name. When the person addressed is a knight of several orders give at least the initials of the most illustrious. **Knight's wife**, same as wife of a baronet. **Lord-Lieutenant of Ireland**—commence **My Lord Marquis** or **My Lord**, according to rank; address to "His Excellency the Lord-Lieutenant," or if a duke, to "His Grace the Lord-Lieutenant." **Lord Mayor**—commence **My Lord**; refer to as **My Lord** or **Your Lordship**; and address to "The Right Hon. the Lord Mayor of London, or York, or Dublin," as the case may be. **Lady Mayoress**, same as baroness, addressing to "The Rt. Hon. the Lady Mayoress." **Marquis**—commence **My Lord Marquis**; and refer to as **My Lord** or **Your Lordship**; and address "The Most Hon. the Marquis of —." **Marchioness**—commence, **Madam**; refer to as **Your Ladyship**; and address to "The Most Hon. the Marchioness of —." **Eldest son** as if he legally held the second title of his father. **Younger son**, same as younger son of a duke. **Marquis's daughter**, same as daughter of a duke. **Mayor**—commence and refer to as **Sir**; and address to "The Mayor of —," or in any formal documents to "The Right Worshipful the Mayor of —." **Prince**—commence **Sir**; refer to as **Your Royal Highness**; and address, if a prince, "His

Royal Highness Prince —, " or if a duke also. of a person having personal property dying " His Royal Highness the Princess—commence, *Madam*; sonally as *Your Royal Highness* to " Her Royal Highness the Princess if a duchess, to " Her Royal Duchess of —." **Privy Council** and refer to according to rank, the " Right Honourable —," moner omit Esq. (e.g., " The Hon. Lord Randolph Churchill Joseph W. Pease, Bart., M.P.; Esq., M.P.). A Privy Council children take no title as such. *Qu Madam*; refer to personally as *Your Majesty*; and address " The Queen's Most Excellent Majesty." **Viscount**—commen refer to as *Your Lordship*, address to " The Rt. Hon. La or " The Lord Viscount —." —commence *Madam*; refer to *ship*; and address to " The Viscountess —," or " The Viscount's son or daughter, a daughter of a baron. **Notr.** A earl, or a viscount by courtesy is he were a peer and enjoyed one by right. In communications up ness give the office held by dressed in a line beneath the na proper names the first part name must not be confused w name: e.g., J. Robinson-Brown addressed as " Robinson Brown the case of a knight, Sir William must not be written to as Sir which would be as incorrect as S Jones.

Quakers, Moravians, who had seceded from it retained a conscien- oaths, were permitted upon every occasion on wise have had to take on Law Procedure Act called as a witness in it refuse, on conscien- an oath, was enabled instead. By an Act of

trials were permitted, on declaring that the taking of an oath was according to their religious belief unlawful, to make an affirmation instead. By the Evidence Further Amendment Act '69, explained by an amending Act of '70, a person called as a witness in any proceeding, civil or criminal, might, if he objected to take an oath, and if the court were satisfied that it would have no binding effect upon his conscience, give his evidence upon affirmation simply. By the **Parliamentary Oaths Act '66** it was enacted that every person for the time being by law permitted to make an affirmation instead of taking an oath, should be allowed, on making an affirmation in the form therein prescribed, to take his seat in either House. In the case of *Clarke v. Bradlaugh* (vol. 7, Law Reports, Queen's Bench Division), it was held by Mr. Justice Mathew, and confirmed by the Court of Appeal, that this Act did not apply to any person enabled by the Acts of '54, '61, or '69, to give his evidence on affirmation in a court of justice, but only to persons entitled upon every occasion on which an oath may lawfully be required to make an affirmation instead. Thus an atheist may give evidence upon affirmation in a court of justice; but he cannot by making an affirmation qualify himself to take his seat in either House.

Afghanistan is an inland country of Asia, forming the north-east portion of the great Iran plateau, between lat. $28^{\circ} 50'$ and $36^{\circ} 30'$ N. and long. 62° and 72° E. Its area is about 279,000 sq. m. It is bounded on the E. by the Suliman Mountains; on the S. by Beloochistan; on the W. by Persia; on the N. by Turkistan, as far as the Oxus. **Cabul** is the capital. Exports: tobacco, madder, fruits, furs, shawls, and chintz. There is no Afghan nation; the population (400,000) consists of discordant tribesmen, constantly in revolt, and only kept in subjection by frequent military expeditions from Cabul.—'91. The **Ameer (Oct.)** issued a proclamation to the effect that he intended to visit England. — For Agent to Gov.-Gen. of India see **DIPLOMATIC**.

Africa. Under various headings will be found items dealing with every country, district, or feature of current interest relating to the continent. This gradual partition of Africa among certain European Powers will chiefly interest the political student, who is here referred to **ANGLO-PORTUGUESE CONVENTION**, **CONGO FREE STATE**, **COLONIES OF EUROPEAN POWERS**, and each of the said colonies under its proper title, as well as other countries and regions under their respective names. The following statistics as to the possession of Africa are given by the *Mouvement Géographique* (areas under the influence of Turkey and Egypt are not included): In '90 the **Congo Free State** comprised 1,000,000 square miles; **France** owned 2,300,248; **Germany**, 1,035,720; **Great Britain**, 1,099,445; **Italy**, 360,000; **Portugal**, 774,993; and **Spain**, 210,000 sq. m.

Africa, Central. A term applied in its widest sense to indicate all of the continent lying between the parallels of 15° N. and 20° S. lat., comprising an area of possibly 8,000,000 sq. miles, with a population roughly guessed as 100,000,000. The term is more closely connected with the regions lying between the Suaheli coast and Lower Guinea, comprising the Congo valley, the Great Lakes, Equatorial Africa proper, and the native states north of the Zambesi. See **GEOGRAPHICAL PROGRESS**, **CONGO FREE STATE**, **ZANZIBAR**, **SOUDAN**, **ABYSSINIA**, **SOMALI-LAND**,

MOZAMBIQUE, **ZAMBESI**, **NYASSA**, **BLANTYRE**, **ANGOLA**, **COLONIES OF EUROPEAN POWERS**.

African Lakes. The great equatorial chain consists of the following, as well as sundry lesser ones:—**Albert Nyanza**, lying under equator, 2500 feet above sea-level, 150 by 40 miles, discovered by Baker, 1894, scene of **Emin Pasha's** labours; to east of it, **Victoria Nyanza**, 3800 feet above sea-level, 400 by 200 miles, discovered by **Speke**, '58. South of the Albert Nyanza is the **Albert Edward Nyanza**, connected to it by the Semliki river discovered by Mr. Stanley. South again is **Tanganyika**, 2700 feet above sea-level, 400 by 50 miles, discovered by **Burton**, '58, explored by **Livingstone**, **Stanley**, **Thomson**, and **Cameron**; to the east of the south part of **Tanganyika**, the **Curus**, **Salt Lake**, **Rukwa**, south-east of **Nyassa**, 1500 feet above sea-level, 358 by 38 miles, discovered by **Livingstone**, '59; south-east of **Tanganyika**, the small **Shirwa**; far to west, **Moero**, 65 by 60 miles, explored by **Livingstone**, '67; and south of it, **Bangweilo**, or **Bemba**, 3000 feet above sea-level, 150 by 75 miles, discovered by **Livingstone**, '68. North and west of **Moero** are supposed to be other lakes, not yet explored. The **Nyassalies** in the basin of the Zambesi, and presents great facilities for penetrating the interior of Africa—facilities of which the **African Lakes Trading Co.**, of Glasgow, have taken advantage. A steamer runs up the Zambesi and the **Shit** to **Katanga**, 300 miles; thence a road leads past the rapids to the head of **Murchison Falls**, 65 miles; thence another steamer sails to **Karonga**, near the northern extremity of **Nyassa**, 420 miles; and thence a road runs to **Tanganyika**, 210 miles. **Lake Samburu** and **Lahungo** are lakes lying to the north-east of **Victoria Nyanza**; and in this little known region of Africa we may yet expect to find other large sheets of water. To the east of this great bend of the **Niger** is the remarkable **Lake Chad**, which is, to a large extent, a huge swamp varying in width. South of the **Zanibesi** are the **Kalahari Desert** and **Lake Ngami**, discovered by **Livingstone**, also of a swampy nature.

Agricultural Society. See **ROYAL AGRICULTURAL SOCIETY**.

Agriculture. The United Kingdom must be regarded as a great agricultural as well as trading country. The intelligence and skill of its farmers, the average yield of its productions per acre, as compared with other countries, the early maturing, prime beef producing qualities of its live-stock, are universally admitted to be the distinguishing features of British agriculture. This country has only 22,250,000 acres of arable land, and 25,000,000 acres of permanent pasture; but it possesses a population of 36,000,000, and practises a system of free trade which invites the whole world to compete in its markets on the same terms as the home-producer. British agriculture, therefore, only constitutes a portion of the vegetable and animal food consumed by the people of the kingdom. Portugal, Holland, Spain, France and Egypt contribute largely to the import supply; and nearly the whole of the vegetables and raw fruits imported (excluding apples), valued at £3,324,226, come from France and Spain. The vast pastoral territories and fine climate of Australia enable that island-continent to send nearly three-fourths of the foreign supply of wool to the British market, the aggregate value of which, in 1887, was £24,280,593. Cattle and sheep, too, are so cheaply fed in Australia and

the United States, that thousands of carcasses are boiled down for the sake of the tallow and stearine, which is exported to this country; of the total value of these two articles imported, £1,074,028, in '88, three-fourths came from the two countries just mentioned. **The Agricultural Holdings Act** was, in '83, however, made compulsory; and now the landlord, or tenant, is prevented from contracting himself out of the Act which entitles the tenant, on quitting his farm, to compensation for unexhausted improvements. Apart from the numerous proposals made for the reform of the land laws, such as the abolition of the law of primogeniture, the curtailment of the system of entail and settlements, the adoption of a better system of land transfer, the more immediate remedies suggested for the removal of agricultural depression are "a general revision of existing rents, complete security for the tenant's capital, by granting him continuity of tenure, with free sale of his interest in his holding, the landlord having a right to pre-emption," together with freedom of cropping, reduction of local taxation, relief from excessive railway charges, the extension of fruit and vegetable, dairy and poultry farming. **The British Fruit Growers' Association** has been formed for the purpose of promoting fruit culture on an extensive scale, and this industry has been further encouraged by the Royal Horticultural Society, who hold periodical Apple and Pear Conferences and Exhibitions. The varied character of the climate in the kingdom has much to do with the particular system of agriculture pursued in any district. In the eastern counties, which comprise the comparatively dry and sunny districts of the county, the cultivation of wheat and barley largely prevails; while in the humid climate of the western counties, dairy farming, stock breeding and rearing, and root-growing, are the dominant features of agriculture pursued. The humid climate of Ireland lends itself very suitably to the rearing of cattle and to dairy farming. In the uplands and hilly districts sheep farming with a little corn growing is generally carried on. In colonies where the area under cultivation is vast compared with the population, and where, too, the land is cheap, the payment of rent the exception, not the rule, and almost every owner the cultivator of his own land, one of their most important industries consists in the sending of their agricultural products to the British market. The general consumer is thus benefited, though the home farmer has to be satisfied with a smaller price than that obtained before for his produce. The United States, Russia, British India, and Australia, and other countries send to Britain annually over £50,000,000 sterling worth of wheat and wheaten flour, other grains and meals; £11,216,333 worth of live cattle, sheep and pigs, were imported in 1890, the larger number of which came from the United States, Canada, Denmark, Holland, and Germany; £19,773,468 worth of fresh-preserved and salted meat of all kinds were imported from Australia, Canada, the United States and other countries; £3,428,802 worth of eggs came principally from France, Belgium and Germany; while nearly two-thirds of the foreign supply of butter, including butterine, amounting in value to £13,682,579, was sent from Holland, Denmark and France; four-fifths of the cheese imports, with a total value of £4,975,234, came from the United States, Canada and Holland; and Belgium and France

exported to this country nearly the whole of the foreign supply of poultry and game, including rabbits, the value of which was £895,956; and a considerable portion of the shipment of potatoes, valued at £714,257, came from the Channel Islands and France. The extended use of machinery in the operations of agriculture is borne out by the fact that, according to the census of 1881, though the number of persons engaged in the cultivation of farm lands has since 1871 decreased 0·1 per cent., the number of attendants on agricultural machines has considerably increased. The total acreage of **corn crops** in the United Kingdom last year was 9,574,249 acres, while it is estimated that the area this year is less, thus keeping up the decline which has been going on with only one break since '77. Notwithstanding the depression in agriculture so frequently noticed in the reports of collecting officers, there are in certain localities, such as parts of the counties of Cornwall, Devon, Durham, Lancaster, and the North Riding of Yorkshire in England, and others in Wales and Scotland, several instances of land newly reclaimed and brought under cultivation since '86. The total area under wheat in '91 is 2,307,277 acres, against 2,386,336 acres in '90; barley, 2,112,700, against 2,111,178; oats, 2,899,129, against 2,902,998; potatoes, 532,794, against 529,661; and hops, 56,148, against 53,961. The estimated yield of hops in '89 was 497,811 cwt., at an average yield of 8·62 cwt. per acre, against 281,291 cwt. in the previous year, at an average of 4·81 cwt. The estimated yield in '90 was 220,000 cwt. Turning now to the various kinds of **live stock**, cattle have increased from 6,508,632 in '90 to 6,851,821 in '91; sheep and lambs from 27,272,459 to 28,732,558; and pigs from 2,773,609 to 2,888,773. — **IRELAND.** In the returns of the crops and live stock the following changes are to be noticed. There is a decrease in the cereal area of 21,505 acres, as compared with '90, that under wheat being less by 10,947 acres, oats by 65,38 acres, barley by 410 acres, and rye by 810 acres. There is a decrease of 27,741 acres in potatoes, but the total area of root crops exceeds that of last year by 10,100 acres. Flax has a decrease of 22,224 acres, or more than one-fifth of the acreage of '90. As regards live stock in Ireland, the total number of sheep and lambs amount to 4,722,391, or an increase of 398,996. Pigs have decreased by 202,590 to 1,367,776, but cattle have gained by 208,161 to 4,443,477. The production of wheat in '91 is estimated as follows compared with the previous year:—

Agriculture, Board of. By an Act of the Session of 1889 provision was made for the establishment of a Board of Agriculture for Great Britain, on similar lines to the Board of Trade and Local Government Board. The statute in question enacted that there should be established a Board of Agriculture, consisting of the Lord President of the Council, Her Majesty's Principal Secretaries of State, the First Commissioner of the Treasury, the Chancellor of the Exchequer, the Chancellor of the Duchy of Lancaster, and the Secretary for Scotland, and such other persons (if any) as Her Majesty might from time to time think fit to appoint during her pleasure. Her Majesty might appoint any member of the Privy Council to be President of the Board during her pleasure, and the Board was to be deemed to be established on the appointment of the president thereof, who, if not one of the above-mentioned officers of state, was to receive a salary of £2000 per annum, and was not to be incapable of sitting in Parliament. The Board was duly established in September '89. There were transferred to it by the Act the powers and duties of the Privy Council under the Destructive Insects Act '77, and the Contagious Diseases (Animals) Act '78, '84 and '86; the powers and duties of the Land Commissioners for England under the Tithes Rent-charge Acts '36-86, the Copyhold Acts, Inclosure of Commons and Allotments Acts, Metropolitan Commons Act, Drainage and Improvement of Lands Acts, or under any other Act; and all powers and duties vested in the Commissioners of Works under the Survey Act '70. The Board also undertakes the collection and preparation of statistics relating to agriculture and forestry, and may also undertake the inspection of and reporting on any schools which are not public elementary schools, and in which technical instruction,

practical or scientific, is given in any matter connected with agriculture or forestry, and the aiding of any school which admits such inspection and in the judgment of the Board is qualified to receive such aid, and the aiding of any system of lectures or instruction connected with agriculture or forestry, and the inspection of and reporting on any examinations in agriculture or forestry. The Board may also make or aid in making such inquiries and experiments, and collect or aid in collecting such information, as they may think important for the purpose of promoting the advancement of agriculture or forestry; and it may from time to time make such general or special orders as it may think fit relative to the muzzling of dogs, and the keeping of dogs under control, and to the seizure, detention and disposal (including slaughter) of stray dogs, unmuzzled dogs, and of dogs not being kept under control, and the recovery from the owners of dogs of the expenses incurred in respect of their detention. Power is given by order in Council to transfer to the Board such statutory powers and duties of any Government department as relate to agriculture or forestry, and appear to be of an administrative character, the draft order to be laid before Parliament, and to be withdrawn if either House present an address against it. The Act also provides for the ultimate abolition of the Land Commissioners. The expression "agriculture" is defined to include "horticulture." Further powers in respect to pleuro-pneumonia were conferred on the Board by an Act of '90. Under this statute the Board is empowered to cause to be slaughtered all cattle affected with the disease, and may cause to be slaughtered any cattle suspected of being affected, and any cattle which are or have been in the same field, or in the same herd, or otherwise in contact with affected cattle, or which appear to have been in any way exposed to infection. Such moneys, not exceeding £140,000 in any one year, as may be provided by Parliament, are to be used towards defraying the costs of any execution of the Act in Great Britain, and a sum not exceeding £20,000 in any one year, may be spent for the same purposes in Ireland. **President**, Rt. Hon. Henry Chaplin, M.P.; **Secretary**, Lieut.-Colonel George Archibald Leach, C.B.; **Assistant Sec.**, Mr. R. Dawson; **Private Sec.**, to President, Mr. P. H. Bagenal. Major P. G. Craigie is the head of the Intelligence Department. The Right Hon. Sir James Caird, one of the Land Commissioners, was appointed by Her Majesty a member of the Board, and several of the ministers are also ex-officio members. (See also TRANSATLANTIC CATTLE TRADE.)

Allesbury Estate. See SETTLED LAND ACTS.**Alre and Calder Navigation Improvement.**

Reference was made in a speech by Mr. B. Walker, at Leeds, on Dec. 6th, '90, to the extensive works now being carried on by this navigation company, especially at the port of Goole. By the diversion of the Ouse to the east end of Goole Reach, the width of the river has been increased to about 1000 ft., and the new channel is to be 700 ft. wide. Up to the time above indicated four of the eight miles of river between Goole and the Humber had been dealt with, and an increased depth of 4 ft. or 5 ft. obtained, while the walls are being constructed of furnace slag to a height of 50 ft., and a width at low water of 35 ft. It takes 12,000 to 13,000 tons of material to advance the walls

60 ft. The waterway between Leeds and Goole is also undergoing enlargement. The shipment of coal at Goole increased in three years from 66,000 tons to about 900,000 tons in '90. The new dock built by the company at Goole was opened in the summer of '91. It is four acres in extent, 620 ft. long, 260 ft. broad, with 22 ft. of water. This makes the total area of docks at Goole in connection with this navigation 30 acres.

Airy, Sir George Biddell, K.C.B., F.R.S., ex-Astronomer Royal, was b. at Alnwick, Northumberland, 1801. Was ed. at Hereford, Colchester and Trin. Coll. Camb., where he graduated, senior wrangler '23. Lucasian Professor '26, and '28 Plumian Professor with the charge of the Cambridge Observatory. In '35 he was elected **Astronomer Royal**, and made many improvements in the Observatory at Greenwich, in the methods of taking observations. Sir G. B. Airy conducted the astronomical observations on the occasion of the demarcation of the boundary between Canada and the United States. He is an Associate of the Institute of France, a member of numerous foreign academies, and an honorary graduate of Oxford, Cambridge, and Edinburgh. He has served with distinction on numerous royal commissions of a scientific character, and in '73 and '74 was **President of the Royal Society**. He was created a K.C.B. in '72, and on his retirement from the post of Astronomer Royal in '81 was granted a pension of £1100 a year. His latest researches have been devoted to a new method of treating the lunar theory.

Albani, Madame, the vocalist, whose name prior to her marriage with M^r. Ernest Gye was Emma la Frenesse, was b. in Montreal. No *prima donna* has a more extensive *repertoire*, and her fame is as great on the oratorio platform as on the lyric stage. She studied under Duprez in Paris, and under Lamperti in Milan. She made a successful *début* at Messina in 1870, and subsequently sang in other Italian theatres, coming to the Covent Garden Opera House in '72. Wagner's "*Lohengrin*" and "*Tannhäuser*" owe much of the favour they have received in this country to her intellectual and refined impersonation of the heroines. She has sung in Paris, in Berlin, and other Continental cities, and throughout the United States. In '91 M^{me}. A. appeared with her usual success at the Handel Festival and in Italian Opera.

Albania is a wild and mountainous province of Turkey, renowned for the warlike qualities of its inhabitants. It is in a semi-independent state. It was reported (Dec. '90) that the State was in a condition of sanguinary anarchy. The house of the Chief Justice was attacked by Arnauts, who murdered him and his servants. The Zaptiehs did not interfere, and Christians were murdered, plundered, and their houses burned every day. The Porte appointed a Commission, under the Mudir of Herana, to inquire into the outrages (31st). During Jan. '91 a band of 250 Arnaut brigands, under Bilon Esela, ravaged the region between Philip and Dibra. Further outrages by the Arnauts were reported (Jan. 3rd). The Vale of Scutari received orders (6th) to march against the Malissori Serb brigands. A collision occurred between Montenegrins and Albanians (Feb. 21st), in consequence of the murder of an

Albanian by a Montenegrin. The troops quelled the riot after some civilians had been killed. To prevent blood feuds and conflicts the Ottoman Government determined (Oct.) to disarm the Albanians.

Albany and Troy (Hudson) Ship Canal. At the end of '90 a special commission was announced to consider a proposal to convert these towns into seaports. The Hudson river was stated to be navigable by ocean vessels as far as Hudson city, twenty-nine miles below Albany, and by river steamers to Albany and Troy, and to complete the course throughout a channel 20 feet deep would be required. At Troy are the termini of the Erie and Champlain canals, which afford waterways to the great lakes.

Albany, H.R.H. the Duchess of, daughter of the Prince and Princess of Waldeck-Pyrmont, and sister of the Queen-Regent of the Netherlands, was b. Feb. 17th, 1801. She married H.R.H. Prince Leopold of England, Duke of Albany, April 27th, '82, and became a widow by his sudden death ('84). In '88 the Princess lost her mother. H.R.H. receives a pension of £6000 a year from the British Government. She was most assiduous in the interest displayed by her in the performance of various public duties during '91. The youthful Duke of Albany made his *début* by distributing prizes at a local flower show in Surrey (July).

Alberta. Named after Princess Louise, Marchioness of Lorne. A district of the North-West Territories, and a future province of the Dominion of Canada. Lies north of the United States boundary, and extends from Assiniboia and Saskatchewan to the Rocky Mountains. Area 106,500 sq. m. Capital, Calgary.

Albert Medal. The, was instituted in 1896 and extended in '67 and '77 for the purpose of rewarding acts of heroism performed by civilians at sea or on land. The recipients of the decoration belong to one of two classes. The first class are awarded a decoration consisting of a gold oval-shaped badge bearing the words on a sash "For Gallantry in Saving Life at Sea," or "on Land," as the case may be. Members of the second class whose act of bravery, though meritorious, has not been so striking, receive a bronze badge with the same inscription.

Alderney. One of the Channel Islands (q.v.).

Alexander I., King of Serbia, was b. 1876, and ascended the throne on the abdication of his father, King Milan (q.v.), on March 6th, '89. Privately educated at Belgrade, according to the programme of the German gymnasium or high school. He is under the guardianship of M. Ristitch, M. Protitch, and M. Belimar-Vuitch, who act as Regents until he attains the age of eighteen years. When Crown Prince he accompanied his mother, Queen Natalie, into exile after her separation from the King, but was forcibly removed from her at Berlin, and conveyed back to Belgrade. During July '91 he travelled through various parts of Russia, receiving a kind reception. In Aug. he paid a state visit to the Emperor of Austria, and was decorated with the Grand Cross of St. Stephen. Afterwards, he met King Milan at Buchs, and spent some time with him in Switzerland and France.

Alexander III., Emperor and Autocrat of all the Russias, was b. March 10th, 1845. On the

death of his brother the Grand-Duke Nicholas, who died at Nice ('65), he became heir-apparent, and ascended the throne after the assassination of his father the Emperor Alexander II. in '81. He married ('66) Maria Dagmar, daughter of the King of Denmark and sister to the Princess of Wales and the King of Greece. Though the Tzar seldom appears in public in Russia, he has paid several visits to Copenhagen and other parts of Europe since his accession. In Nov. '87 he made a public entrance into Berlin on the occasion of his visit to the Emperor William I. In October '88 the Tzar with his family narrowly escaped death by a railway accident on the Transcaspian Railway. As the result of an influential meeting at the Mansion House a letter of remonstrance at the treatment accorded to the Jews in Russia was sent in '91 to the Tzar. He visited Fredensborg in the summer.

Alexander, George, made his *début* as Caleb Decree in "The Two Roses" at the Lyceum Theatre. He subsequently joined the St. James's Theatre company, where he remained for a short time. In "The Parvenu" he represented Claude Glynn at the Comte Theatre. His connection with the Lyceum company has been of considerable duration, but lately he played at the Adolph Theatre, in "London Day by Day." In March '90 he commenced to play at the Avenue theatre; impersonating a cripple in "Sunlight and Shadow" (Nov). During '91 he appeared in "The Idler" at St. James's Theatre.

Alexandra, Princess of Wales. See WALEs, PRINCE OF.

Algeria. One of the Barbary States of North Africa, now a French province. Area 122,576 sq. m.; pop. 3,867,000 (1888). It is divided into three civil divisions of **Oran**, **Constantine**, and **Algiers** capital cities of same names,—and subdivided into twelve *arrondissements*, sending deputies to the National Assembly; also the Saharan borders, divided into three military territories. There are 1282 miles of railway. Imports ('87), 711,347,555 fr.; exports 185,953,302 fr., consisting of esparto and halia grass, barley, wine, oil, tobacco, wool, iron and zinc ores, etc. The French forces maintained in Algeria consist of an army corps numbering 53,306 men. The cost of the colony to France has always been far greater than its revenues. **Revenue**, '88, 44,014,005 fr.; expenditure, 123,614,173 fr. Inhabitants are French and European settlers, about 500,000; a few Jews; about 500,000 Berbers or Kabyles; and the remainder Bedouin Arabs, of nomadic habits. '91. Cardinal Lavigerie at Biskra (April 5th) opened the first establishment of the Armed Brothers of the Sahara, laymen without vows, who will endeavour to reclaim the Sahara, will care for the sick and wounded, and will protect the rescued slaves who may gather round them. The Cardinal in a short speech repeated his own and the Pope's desire for Catholic union based on recognition of the Republic and the promotion of a Government of justice and liberty. A serious plague of locusts occurred in May. Jeanne Weiss, aged 24, was charged (May 26th) at Oran with attempting to poison her husband at the instigation of one Roques, with whom she had an intrigue. Roques shot himself, and the woman, when sentenced to twenty years' hard labour, poisoned herself. The French Chamber voted a credit of 1,500,000 fr. for measures to meet

the locust invasion (June 18th). A great forest fire broke out in the forest of Ammi-Moussa, and burnt for several days; many acres of timber were destroyed. For Governor-General, etc., see DIPLOMATIC.

Algoa Bay. See PORT ELIZABETH.

Allen, Grant, author of "Physiological Aesthetics," "Colin Clout's Calendar," "Vignettes from Nature," "The Evolutionist at Large," "Charles Darwin," "Babylon," "For Maimie's Sake," and many articles in the leading magazines, was b. at Kingston, Canada, 1848. Was ed. at Merton College, Oxford. He is considered one of the best scientific authors of the evolutionary school. He has ably contributed to the exposition of the Darwinian theory. His latest works include "The Devil's Die," "This Mortal Coil" ('88), "Dr. Fallisier's Patient," "Force and Energy," and "Dumaresq's Daughter" ('91). Won a prize of £1000 offered by the proprietor of *Tit-Bits* for a story published in '91, entitled "What's Bred in the Bone."

Allman, George James, M.D., LL.D., F.R.S., was b. at Cork 1812, and ed. at the Belfast Academy. Graduated in Arts and Medicine in the University of Dublin. Appointed to the Regius Professorship of Botany in Dublin University ('44-55), Regius Professorship of Natural History in the University of Edinburgh ('55-70). For his researches in this department of Biology the Royal Society of Edinburgh awarded him ('72) the Bursane prize; he received the Royal medal from the Royal Society of London ('73), and the Cunningham Gold medal from the Royal Irish Academy ('78). On the completion of the exploring voyage of the *Challenger*, the large collection of Hydroids made during that expedition was assigned to him for determination and description, a similar service having been rendered by him in connection with the exploration of the Gulf Stream under the directions of the United States Government. He was President of the British Association in '79.

Allon, Rev. H., D.D., Congregational minister, was b. 1818, at Welton, Yorks. Was ed. at the Countess of Huntingdon's College at Cheshunt. Minister of Union Chapel, Islington ('43) as co-pastor with Rev. T. Lewis; assumed the sole charge '52. Chairman of the Congregational Union '64-5, re-elected '81; D.D. Yale '71, St. Andrews '85. Dr. Allon is also an author, and has published amongst other works "Memoirs of the Rev. J. Sherman," "The Vision of God," and edited a posthumous volume of the sermons of the late Rev. Dr. Binney. Dr. Allon has been instrumental in greatly improving the psalmody of the Congregational Church, his work "The Congregational Psalmist" being used in many of the principal churches. Was also for many years editor of the *British Quarterly Review*. Union Chapel, with which Dr. A. has been connected since '42, was rebuilt in '77 at the cost of £50,000, and was finally completed by the erection of the spire Oct. '89. During the spring of '91 the illness of Dr. A. was the cause of much sympathy. He tendered the resignation of his pastorate in Oct., but was persuaded to withdraw it.

Allotments Rating Exemption Act, 1891. See SESSION, sect. 48.

Allotments and Small Holdings. Table of the number of allotments under one acre detached from cottages as returned in the years '73, '86, and '90:—

Counties.	Acreage of Allotments.		
	1873.	1886.	1890.
England.	No.	No.	No.
Bedford	8,364	12,602	15,194
Berks	5,007	8,309	10,231
Buckingham	8,632	12,146	17,225
Cambridge	9,596	10,576	13,428
Chester	920	2,603	3,239
Cornwall	1,762	3,127	2,539
Cumberland	410	676	1,125
Derby	5,628	7,128	10,702
Devon	7,063	10,264	10,470
Dorset	7,322	9,135	10,895
Durham	1,000	4,204	9,077
Essex	8,269	12,228	12,770
Gloucester	7,552	11,144	14,653
Hants	6,712	8,590	12,614
Hereford	997	1,857	3,440
Hertford	5,197	8,316	10,014
Huntingdon	3,376	5,402	5,080
Kent	4,150	6,013	11,660
Lancaster	992	3,709	4,447

Surrey	1,263	3,153	5,266
Sussex	2,782	4,852	6,822
Warwick	12,794	17,174	17,731
Westmorland	52	295	950
Wilts	15,445	20,760	23,721
Worcester	4,919	7,322	9,983
York, East Riding	1,781	4,333	3,200
York, North Riding	4,731	6,812	8,480
York, West Riding	6,876	10,704	12,985
Total for England	242,542	348,872	441,024
Total for Wales	1,726	4,949	7,562
Total for Scotland	2,130	3,974	6,470
Total for Great Britain	246,398	367,795	455,006

The above figures, from a Parliamentary paper issued Sept. '90, presented to the President of the Board of Agriculture, embody the result of an inquiry into more than 13,500 parishes. The allotments referred to in the report are all areas under one acre in extent, the larger number being under a quarter of an acre. About two-sevenths of the entire number exceed a quarter of an acre. These allotments are distinct from the smallest group of holdings, also under one acre, embraced in the annual returns from which the present statistics have been abstracted. Due care has been taken to avoid duplication.

Allotments Act, 1890, provides the power of direct and immediate appeal to the proper county council in cases where it is alleged that a sanitary authority, other than that of a

borough, have, under such circumstances as made it their duty under the original Act, failed to acquire land adequate and suitable in quality and position for the provision of a sufficient number of allotments. The county council are bound to give immediate attention to the appeal, and, if satisfied of the reasonableness of the complaint, they may assume the powers and duties of the sanitary authority. In the event of any sanitary authority being unable to secure, by hiring or purchase, sufficient land for their purpose at a reasonable price or on satisfactory conditions, they may petition the council, who, on being satisfied of the actuality of the complaint, may make a provisional order authorising such sanitary authority to put in force, as respects the land in question, the provisions of the Land Clauses Acts with regard to the purchase and taking of land otherwise than by agreement. Any county council, moreover, may make, if it be seen to be necessary, a provisional order for the purchase of land on the sole recommendation of a standing committee of their body (which is to be appointed to see to the administration of the Allotments Acts) without waiting for a special petition from the subordinate sanitary authority. In such cases the council are to be regarded as the promoters of any such order.

Alma-Tadema, Lawrence, R.A., was b. at Dourp, in the Netherlands, 1836. Originally intended for one of the learned professions, he devoted himself very largely to the study of ancient classical writers; and in '52 entered the Antwerp Academy as a student. Subsequently he assisted Baron Henry Leys in painting several of his large pictures, and finally came to London, where, in '73, he obtained letters of denisation, having resolved to reside permanently in this country. Since then he has delighted the art-world with his productions, in regard to the majority of which he has put to excellent use his early classical training. Honours of all kinds, and by various countries, have been showered upon Mr. Alma-Tadema. He was elected R.A. '79, and London correspondent in the painting section of the French Academy of Fine Arts. Mr. Alma-Tadema married in '71 Miss Laura Epps, herself an accomplished artist. In the Royal Academy, '91, his picture entitled "An Earthly Paradise" was much admired.

Alpine Railways. (See also last ed. JUNGFRAU RAILWAY, and present ed., VIEGGERMATT RAILWAY.) In the spring of '91 another scheme of Col. Locher, the Alpine railways engineer, was under discussion. After proposing to erect a huge lift to reach the summit of the Matterhorn, a concession for a Matterhorn railway in three sections was demanded from the Federal Government. Another proposed line is the Gornergrat Railway, a combination of wire rope and rack, to lead from Riffelalp-Riffelberg to the summit of the Gornergrat, 10,286 feet. A third line planned is the L  uterbrunnen and Visp Railway in the Canton of Wallis, specially intended for tourists.

Amateur Rowing and Athletic Associations. See AQUATICS and ATHLETICS.

Amatongaland. An independent native state of South Africa. Area about 4000 sq. m. Lies N. of Zululand, and extends to Delagoa Bay; has on W. Swaziland and Transvaal, on E. the sea. The Amatonga people are of Zulu race, and are governed by a Queen, under whom are 17 chiefs of districts.

Ambulance Association, St. John. Established in 1877, by the Duke of Manchester, and the Chapter of the Order of St. John of Jerusalem, for the purpose of disseminating general information as to the preliminary treatment of the sick and injured among all classes of society. A *course of instruction* is given to students. Those who pass the examination receive a certificate of proficiency. Women who have passed the first examination are allowed to attend a second course on home nursing and hygiene. Upwards of 220,000 certificates have been awarded to persons of both sexes. An **Invalid Transport Corps** has also been formed. The work has been extended to the East and West Indies Canada, China, Australia, New Zealand, and different parts of Europe and Africa. **President**, H.R.H. Prince of Wales, K.G. **Chairman**, the Earl of Limerick. **Chief Secretary**, Lt.-Col. Sir Herbert C. Perrott, Bart. **Office**, St. John's Gate, Clerkenwell, London, E.C. The following are the stations of the Association in London: St. John's Gate; St. Paul's Cathedral; General Post Office; Leopold Rooms, Ludgate Circus; Adam Court, Old Broad Street; Burlington Street (Y.M.C.A.), W.; "The Ship," Mortlake.

Ambulance Service for London. See HOSPITALS ASSOCIATION.

America-Asia Railroad. A Toronto telegram of Dec. 15th, '90, stated that steps were being taken in Canada to build a railway from the boundary of the United States and British Columbia to Valley Pelly, or Yakon River, the eastern boundary of Alaska; also to establish a car ferry across Behring's Straits to the coast of Asia, so as to connect with the projected line across Siberia (*q.v.*).

American Copyright Act. See INTERNATIONAL COPYRIGHT.

American International Railway Scheme. In March '90 it was reported that at the International American Conference, held at Washington, a resolution was passed for the construction of a great railroad connecting all or a majority of the nations represented, the line to be declared for ever neutral. (See last ed. under heading **PAN-AMERICAN RAILWAY SCHEME**.) The delegates at the conference were from the United States, Peru, Guatemala, Colombia, Costa Rica, Uruguay, Paraguay, Brazil, Honduras, Mexico, Bolivia, Venezuela, Argentina, Nicaragua, Salvador, and Ecuador. Canada was not represented, and is not mentioned in the report, but it is suggested that the scheme is intended as a set-off against her trans-continental line. As the outcome of the Congress representing the various governments of North and South America, held in '90, it was decided to connect the railways of the two continents, and to form practically one system. In the spring of '91 it was stated that the Commission appointed were already at work, Mr. Shunk, of Philadelphia, having been chosen as engineer in charge of the surveys of the trunk line to connect the States. One part of the scheme provisionally decided upon was to make or connect lines from Quito, Ecuador, through Ecuador and the United States of Colombia to the Isthmus. Several routes were suggested by the Commission for the South American portion, all being west coast lines. One is from Antioquia in Colombia along the Andes to Quito, La Paz, and Jujuj, the present terminus of the Argentine railway system near the boundary of Bolivia. From Antioquia a

north-east branch is proposed to connect with the Venezuela railways; and it may be added that through connection already exists between the City of Mexico and the United States. An extreme west coastline is suggested from Guayaquil to Lima and Iquique, over the railways of the Chilian Government to Valparaiso, connecting there with the Transandine Railway to Mendoza, whence there is a line to Buenos Ayres. The *Times* of Aug. 25th published a long article, with map, describing the railway system proposed. It stated that taking the most southerly point of the railway system in Mexico and going on to Buenos Ayres, the line must be twice or three times the length of the Canadian Pacific (*q.v.*); and in view of the fact that ocean competition will exist on each side of such a railway, it is obvious that the enterprise must be quite as much political as commercial. A lengthy summary of the report presented to and adopted by the Commission on April 21st was given, and it was added that at present the funds would only allow of three Committees of Survey going on with the work, and these had been allotted as follows: the portion designed for the Central States, the section for Colombia and Venezuela, and the third to descend as far as Ecuador and Peru.

American Political Parties. See UNITED STATES POLITICAL PARTIES.

Amirante Islands. A group of low, small coral islands, in the Indian Ocean. They are geographically and politically an extension of the **Seychelles Islands**, forming a part of that dependency of the British colony of Mauritius.

Ancient Monuments. There are in Great Britain many prehistoric and other remains, which our regard for the antiquity of the past compels us to preserve and protect. With this object in view, the **Ancient Monuments Act, 1882**, was passed. It proceeds upon the principle that, provided no right or interest is attacked, owners will assent to placing monuments beyond the possibility of destruction. So soon as a monument has been transferred by the voluntary act of the owner, the Commissioners of the Board of Works have the right of access to it, and can arrange for its preservation, but they can go no further. The public have also right of access, but the effect of the transference in no way lessens the property rights of the owner, except in so far that he and his successors may not destroy it. Nearly half of the monuments originally scheduled by the Act have been placed under Government protection. Among them are **Kits Coty House**, **Silbury Hill**, the **Pentre Evan cromlech**, and stone circles in Cumberland and Derbyshire. Special powers obtained have protected several of the **Scotch Celtic crosses**. Models of upwards of fifty of these (to scale) were recently executed under the supervision of the Inspector-General, and form a unique and valuable series. It is now proposed to extend the **Act of 1882**, and secure further powers, and Sir J. Lubbock has charge of a Bill with this object in view. **Inspector-General of Ancient Monuments**—Lieut.-General Pitt-Rivers, D.C.L., F.R.S., Rushmore, Salisbury.

Ancient Order of Foresters. See FORESTERS.

Anegada. A British West Indian island. Area 14 sq. m. Belongs to the presidency of the **Virgin Islands**, under the federal government of the **Leeward Islands** (*q.v.*).

Anglican Church, The. By the Anglican Church is meant collectively that group of

autonomous Churches which are in communion with or have sprung from the mother Church of England, and have acquired jurisdiction in various parts of the world. Allegiance to the Primacy of Canterbury is not a condition of the union which subsists between these Churches, nor does the Archbishop of Canterbury claim any jurisdiction save in his own Province, but the conditions of inter-communion as recommended by the Lambeth Conference in July 1888, are largely determined by the quasi-patriarchal chair of St. Augustine. The Church of Ireland, the Episcopal Church of Scotland, the Protestant Episcopal Church of the United States of America, the Church of Canada, the Church of Australia, the Indian Church, and the Church of South Africa are all autonomous bodies under the jurisdiction of their own metropolitans, and not amenable to the Ecclesiastical Courts of the Church of England. On the other hand, the Archbishop of Canterbury may claim to act as spiritual arbiter in the last resort in ecclesiastical causes connected with the daughter Churches. Since the death of Dr. Colenso (Bishop of Natal) various attempts have been made to re-establish Royal authority over the **South African Church**, which had hitherto been legally part of the Established Church of England; but the Crown refused to nominate, and the Archbishop of Canterbury declined to consecrate another Bishop of Natal, whose see is now merged in that of Maritzburg, under the Bishop of Capetown, Metropolitan of Africa. In addition to these autonomous Churches in connection with the Anglican Communion there are twelve **missionary bishops** representing the English Church in various remote regions of Asia, Africa, and America; and three or four representing the Protestant Episcopal Church of America. The **American Church** possesses 73 bishops in 50 dioceses and 16 missionary jurisdictions, and 3700 other clergy. It has 430,000 communicants, and upwards of 1,250,000 baptised members. Average annual offerings for Church purposes amount to over \$10,000,000. The **English Episcopate** numbers 34 diocesan prelates and 14 suffragans (see CHURCH OF ENGLAND, DIOCESE and BISHOPS for list of names). There are seven bishops in the **Scottish Episcopal Church**, the Bishop of Brechin (Rev. Dr. Jermyn) being **Primus** (i.e. Archbishop). The Church of Ireland has two Archbishops and 11 Bishops. India and the various Colonies of the British Empire own 63 bishops of the Anglican Church.—**Doctrine and Discipline.** In all essential respects the doctrine and discipline of the Churches in connection with the Anglican communion is the same, differentiations being rather in detail of development than in form or character (see CHURCH OF ENGLAND). One important difference is the **restoration of Diocesan Synods and General Synodical action** which marks the un-Established branches of the Church. The tendency of the American, South African, and Scotch Churches is towards High Churchmanship, and the same may be said in a less degree of the Indian Church; while Broad Evangelicalism is the rule in the Colonies. As in England, the extremes of all three parties are to be found co-existing in every Church, even in the Church of Ireland, which, more than any other, is bound down by its recent constitution and rubrics to a definite "Low" standard of doctrine and ritual. Since the Lambeth Conference of '88 various inde-

pendent movements towards the establishment of good feeling between the Anglican Church and the ancient Churches of the East have received authoritative sanction and expressions of sympathy from the Archbishop of Canterbury, who has himself organised and superintends a mission to the Assyrian Christians. The Archbishop, the Bishop of Lichfield, and the Bishop of Salisbury have taken the deepest interest in the "Old Catholic" movement on the Continent, between which and the Anglican Church a good spirit prevails. Within the past twenty years there has been revived in the Anglican Church—a revival which is now almost general—strong belief in the **Apostolicity of Anglican orders**, upon which the validity of certain priestly ministrations is asserted to depend. This Apostolic Succession of the Anglican priesthood is not questioned by the Eastern Churches, but is not admitted by the Church of Rome. Movements towards the **Reunion of Christendom**, therefore, as favoured by the Lambeth Conference, have been confined to endeavours towards a *rapprochement* with the Greek Church, though a party section in the Anglican Church support a similar movement towards the Church of Rome. This section, however, has a small and insignificant following. The rapid advance of Ritualism (*q.v.*) among High Churchmen, and, in its minor details, among Evangelical and Broad Churchmen, testifies to a gradual upgrowth of feeling in all sections of the Church in favour of the sacerdotal theory of ecclesiastical institutions, as opposed to the Erastian, and is supposed to strengthen the position of the Church of England in view of prospective disestablishment. The **largest diocese** in the Anglican Communion is that of the Bishop of Mid-China, covering as it does 350,000 square miles, and comprising a population of over 100,000,000 souls. The **total number of adherents** of the Anglican Communion is **estimated** (approximately) at 40,000,000. **Angling, '91.** More than in any other outdoor sport the weather is the ruling factor in angling, and this season the vagaries of the British climate have had a more than usually adverse effect upon results. The spring salmon fishing of the Scottish rivers, which should close at the end of April, gave a meagre average. On the Tay—loch and river—the beginning of the season yielded good sport, but it quickly fell off, and no eventual catches fell to any single rod. The Tweed, which used to be, and with better management would be again, one of the finest salmon rivers of the kingdom, gave the same disappointing results that have characterised it of late years, although during April something like a return of the old plenty was experienced. The best fishing was in the Dee, where, on the first day of the season (Feb. 11th), six fish fell to one rod; while, a few weeks later, the remarkable take of thirteen salmon in one day to one rod was recorded. One of the most remarkable **angling exploits** of the year fell to the lot of the Rev. C. P. Roberts, a member of the Manchester Anglers' Association, and vice-president of the Northern Anglers, who, fishing Loch Awe in the early part of June, with a very light 10 ft. trout rod and fine tackle, hooked and landed, after an hour's fight, a fresh-river salmon of 15½ lb. The Irish rivers have afforded about average results. Trout fishing was seriously interfered with by the severe and protracted winter, which extended far into May. On the night of the 17th

of that month a temperature of 14° only, or 18° below freezing point, was registered on the Eamont in Cumberland, and in different parts of Yorkshire. Much snow fell, and conditions generally resembled those of January: trout fishing suffered in consequence, and the great part of the spring angling gave poor results. On the Hampshire and other south-country waters everything was behindhand, and probably few anglers would consider the season up to a fair average. In Derbyshire much the same influences prevailed, and in Wales also climatic conditions affected sport adversely, except on Lake Vyrnwy, the new great reservoir of the Liverpool Waterworks, where trout fishing superior to that of Loch Leven has this year—the first that the water has been open—been obtained. The numerous rivers of Yorkshire yielded average sport among trout, and in a few instances remarkable catches were recorded, but generally the season was uneventful. The autumn grayling fishing was adversely affected by a long succession of floods during September and October, and, on the other hand, late salmon anglers reaped the benefit of the successive freshes, the Whitby Esk yielding plenty of fish of moderate size only. The year has been marked by a steady extension of the number of **angling associations and clubs** in London, and all the great towns of the country. In Scotland also there are evidences of a growing interest in the sport, and signs of a determination to do something in earnest in favour of an annual close time for trout. The great organisation of the north, the **Northern Anglers' Association**, continues to extend its influence over the six northern counties, and now numbers over 7000 members, Mr. T. E. Fritt, of Leeds, being re-elected president, and Mr. Robert Burn, of Manchester, hon. sec., with Mr. George S. Smeath as assistant hon. sec. All the work of the Society has been done free of cost to the members. Early in the year, as the result of negotiations between the Northern Association and gentlemen interested in the fisheries of the Lake District, there was formed the **English Lake District Angling Association**, composed of landowners of the neighbourhood and the general public interested in the conservation and improvement of angling in the English lakes, and particularly in Windermere. Arrangements have been made by which the numerous nets hitherto sweeping the bays of the lake will be bought off from the beginning of '92, and if anticipations are realised, the next few years should see Windermere afford some fine sport among the numerous kinds of fish which thrive abundantly in it.

Anglo-Portuguese Convention.—Subjoined is the full text of this important document, which was signed at Lisbon June 11th, 1891:—"**Article I.**—Great Britain agrees to recognise, as within the dominion of Portugal in East Africa, the territories bounded (1) To the north by a line which follows the course of the River Rovuma from its mouth up to the confluence of the River M'Sinje, and thence westerly along the parallel of latitude of the confluence of these rivers to the shore of Lake Nyassa. (2) To the west by a line which, starting from the above-mentioned frontier on Lake Nyassa, follows the eastern shore of the lake southwards as far as the parallel of latitude $13^{\circ} 30'$ south; thence it runs in a south-easterly direction to the eastern shore of Lake Chiyuta, which it

follows. Thence it runs in a direct line to the eastern shore of Lake Chilwa, or Shiriwa, which it follows to its south-easternmost point; thence in a direct line to the easternmost affluent of the River Ruu, and thence follows that affluent, and, subsequently, the centre of the channel of the Ruu to its confluence with the River Shiré. From the confluence of the Ruu and Shiré, the boundary will follow the centre of the channel of the latter river to a point just below Chikwanga. Thence it runs due westward until it reaches the watershed between the Zambesi and the Shiré, and follows the watershed between those rivers, and afterwards between the former river and Lake Nyassa until it reaches parallel 14° of south latitude. From thence it runs in a south-westerly direction to the point where south latitude 15° meets the River Aroangwa, or Loangwa, and follows the mid-channel of that river to its junction with the Zambesi. **Article II.**—To the south of the Zambesi, the territories within the Portuguese sphere of influence are bounded by a line which, starting from a point opposite the mouth of the River Aroangwa or Loangwa, runs directly southwards as far as the 16th parallel of south latitude, follows that parallel to its intersection with the 31st degree of longitude east of Greenwich, thence running eastward direct to the point where the River Mazoe is intersected by the 33rd degree of longitude east of Greenwich; it follows that degree southwards to its intersection by the $18^{\circ} 30'$ parallel of south latitude; thence it follows the upper part of the eastern slope of the Manica plateau southwards to the centre of the main channel of the Sabi, follows that channel to its confluence with the Lunte, whence it strikes direct to the north-eastern point of the frontier of the South African Republic, and follows the eastern frontier of the Republic, and the frontier of Swaziland, to the River Maputa. It is understood that in tracing the frontier along the slope of the plateau, no territory west of longitude $32^{\circ} 30'$ east of Greenwich shall be comprised in the Portuguese sphere, and no territory east of longitude 33° east of Greenwich shall be comprised in the British sphere. The line shall, however, if necessary, be deflected so as to leave Mutassa in the British sphere, and Massi-Kessi in the Portuguese sphere. **Article III.**—Great Britain engages not to make any objection to the extension of the sphere of influence of Portugal, south of Delagoa Bay, as far as a line following the parallel of the confluence of the River Pongola with the River Maputa to the sea-coast. **Article IV.**—It is agreed that the western line of division separating the British from the Portuguese sphere of influence in Central Africa, shall follow the centre of the channel of the Upper Zambesi, starting from the Katima Rapids up to the point where it reaches the territory of the Barotse Kingdom. That territory shall remain within the British sphere; its limits to the westward, which will constitute the boundary between the British and Portuguese spheres of influence, being decided by a joint Anglo-Portuguese Commission, which shall have power, in case of difference of opinion, to appoint an umpire. It is understood on both sides that nothing in this Article shall affect the existing rights of any other State. Subject to this reservation, Great Britain will not oppose the extension of Portuguese administration outside of the limits of the Barotse

country. **Article V.**—Portugal agrees to recognise, as within the sphere of influence of Great Britain on the north of the Zambesi, the territories extending from the line to be settled by the Joint Commission mentioned in the preceding Article, to Lake Nyassa, including the islands in that lake south of parallel $11^{\circ} 30'$ south latitude, and to the territories reserved to Portugal by the line described in Article I. **Article VI.**—Portugal agrees to recognise, as within the sphere of influence of Great Britain to the south of the Zambesi, the territories bounded on the east and north-east by the line described in Article II. **Article VII.**—All the lines of demarcation traced in Articles I. to VI. shall be subject to rectification by agreement between the two Powers, in accordance with local requirements. The two Powers agree that in the event of one of them proposing to part with any of the territories to the south of the Zambesi assigned by these Articles to their respective spheres of influence, the other shall be recognised as possessing a preferential right to the territories in question, or any portion of them, upon terms similar to those proposed. **Article VIII.**—The two Powers engage that neither will interfere with any sphere of influence assigned to the other by Articles I. to VI. One Power will not, in the sphere of the other, make acquisitions, conclude treaties, or accept sovereign rights or protectorates. It is understood that no companies nor individuals subject to one Power, can exercise sovereign rights in a sphere assigned to the other, except with the assent of the latter. **Article IX.**—Commercial or mineral concessions and rights to real property possessed by companies or individuals belonging to either Power shall, if their validity is duly proved, be recognised in the sphere of the other Power. For deciding on the validity of mineral concessions, given by the legitimate authority within thirty miles of either side of the frontier south of the Zambesi, a Tribunal of Arbitration is to be named by common agreement. It is understood that such concessions must be worked according to local regulations and laws. **Article X.**—In all territories in East and Central Africa, belonging to or under the influence of either Power, missionaries of both countries shall have full protection. Religious toleration and freedom for all forms of Divine worship and religious teaching are guaranteed. **Article XI.** The transit of goods across Portuguese territories situated between the East Coast and the British sphere shall not, for a period of twenty-five years from the ratification of this Convention, be subjected to duties in excess of 3 per cent. for imports or for exports. These dues shall in no case have a differential character, and shall not exceed the customs dues levied on the same goods in the above-mentioned territories. Her Majesty's Government shall have the option, within five years from the date of the signature of this agreement, to claim freedom of transit for the remainder of the period of twenty-five years on payment of a sum capitalising the annual duties for that period at the rate of £30,000 a year. Coin and precious metals of all descriptions shall be imported and exported to and from the British sphere free of transit duty. It is understood that there shall be freedom for the passage of subjects and goods of both powers across the Zambesi, and through the districts adjoining the left bank of the river situated

above the confluence of the Shire and those adjoining the right bank of the Zambesi situated above the confluence of the river Luenha (Ruenga), without hindrance of any description and without payment of transit dues. It is further understood that in the above-named districts each power shall have the right, so far as may be reasonably required for the purpose of communication between territories under the influence of the same power, to construct roads, railways, bridges, and telegraph lines across the district reserved to the other. The two powers shall have the right of acquiring in these districts on reasonable conditions the land necessary for such objects, and shall receive all other requisite facilities. Portugal shall have the same rights in the British territory on the banks of the Shire and in the British territory comprised between the Portuguese territory and the banks of Lake Nyassa. Any railway so constructed by one power on the territory of the other shall be subject to local regulations and laws agreed upon between the two Governments, and, in case of differences of opinion, subject to arbitration as hereinafter mentioned. The two powers shall also be allowed facilities for constructing on the rivers within the above districts piers and landing-places for the purpose of trade and navigation. Differences of opinion between the two Governments as to the execution of their respective obligations, incurred in accordance with the provisions of the preceding paragraph, shall be referred to the arbitration of two experts, one of whom shall be chosen on behalf of each power. These experts shall select an umpire, whose decision, in case of difference between the arbitrators, shall be final. If the two experts cannot agree upon the choice of an umpire, this umpire shall be selected by a neutral power to be named by the two Governments. All materials for the construction of roads, railways, bridges, and telegraph-lines shall be admitted free of charge. **Article XII.** The navigation of the Zambesi and Shire, without excepting any of their branches and outlets, shall be entirely free for the ships of all nations. The Portuguese Government engages to permit and to facilitate transit for all persons and goods of every description over the waterways of the Zambesi, the Shire, the Pungwe, the Busi, the Limpopo, the Sabi, and their tributaries, and also over the landways which supply means of communication where these rivers are not navigable. **Article XIII.** Merchant-ships of the two powers shall in the Zambesi, its branches and outlets, have equal freedom of navigation, whether with cargo or ballast, for the transportation of goods and passengers. In the exercise of this navigation the subjects and flags of both powers shall be treated, in all circumstances, on a footing of perfect equality, not only for the direct navigation from the open sea to the inland ports of the Zambesi, and *vice versa*, but for the great and small coasting trade, and for boat trade on the course of the river. Consequently, on all the course and mouths of the Zambesi there will be no differential treatment of the subjects of the two powers; and no exclusive privilege of navigation will be conceded by either to companies, corporations, or private persons. The navigation of the Zambesi shall not be subject to any restriction or obligation based merely on the fact of navigation. It shall not be exposed to any obligation in regard to landing-station or depôt, or for

breaking bulk, or for compulsory entry into port. In all the extent of the Zambesi the ships and goods in process of transit on the river shall be submitted to no transit dues, whatever their starting-place or destination. No maritime or river toll shall be levied based on the sole fact of navigation, nor any tax on goods on board of ships. There shall only be collected taxes or duties which shall be an equivalent for services rendered to navigation itself. The tariff of these taxes or duties shall not warrant any differential treatment. The affluents of the Zambesi shall be in all respects subject to the same rules as the river of which they are tributaries. The roads, paths, railways, or lateral canals which may be constructed with the special object of correcting the imperfections of the river route on certain sections of the course of the Zambesi, its affluents, branches, and outlets, shall be considered, in their quality of means of communication, as dependencies of this river, and as equally open to the traffic of both powers. And, as on the river itself, so there shall be collected on these roads, railways, and canals only tolls calculated on the cost of construction, maintenance, and management, and on the profits due to the promoters. As regards the tariff of these tolls, strangers and the natives of the respective territories shall be treated on a footing of perfect equality. Portugal undertakes to apply the principles of freedom of navigation enunciated in this article on so much of the waters of the Zambesi, its affluents, branches, and outlet, as are or may be under her sovereignty, protection, or influence. The rules which she may establish for the safety and control of navigation shall be drawn up in a way to facilitate, as far as possible, the circulation of merchant-ships. Great Britain accepts, under the same reservations, and in identical terms, the obligations undertaken in the preceding articles in respect of so much of the waters of the Zambesi, its affluents, branches, and outlets, as are or may be under her sovereignty, protection, or influence. Any questions arising out of the provisions of this article shall be referred to a joint commission, and, in case of disagreement, to arbitration. Another system for the administration and control of the Zambesi may be substituted for the above arrangements by common consent of the riverain powers. **Article XIV.** In the interest of both powers, Portugal agrees to grant absolute freedom of passage between the British sphere of influence and Pungwe Bay for all merchandise of every description, and to give the necessary facilities for the improvement of the means of communication. The Portuguese Government agree to construct a railway between Pungwe and the British sphere. The survey of this line shall be completed within six months, and the two Governments shall agree as to the time within which the railway shall be commenced and completed. If an agreement is not arrived at, the Portuguese Government will give the construction of the railway to a company which shall be designated by a neutral power, to be selected by the two Governments, as being in its judgment competent to undertake the work immediately. The said company shall have all requisite facilities for the acquisition of land, cutting timber, and free importation and supply of materials and labour. The Portuguese Government shall either itself construct or shall procure

the construction of a road from the highest navigable point of the Pungwe, or other river which may be agreed upon as more suitable for traffic, to the British sphere, and shall construct or procure the construction in Pungwe Bay and on the river of the necessary landing-places. It is understood that no dues shall be levied on goods in transit by the river, the road, or the railway exceeding the maximum of 3 per cent. under the conditions stipulated in Article XI. **Article XV.** Great Britain and Portugal engage to facilitate telegraphic communication in their respective spheres. The stipulations contained in Article XIV., as regards the construction of a railway from Pungwe Bay to the interior, shall be applicable in all respects to the construction of a telegraph-line for communication between the coast and the British sphere south of the Zambesi. Questions as to the points of departure and termination of the line, and as to other details, if not arranged by common consent, shall be submitted to the arbitration of experts under the conditions prescribed in Article XI. Portugal engages to maintain telegraphic service between the coast and the River Ruvo, which service shall be open to the use of the subjects of the two Powers without any differential treatment. Great Britain and Portugal engage to give every facility for the connection of telegraphic lines, constructed in their respective spheres. Details in respect to such connection, and in respect to questions relating to the settlement of through tariffs and other charges, shall, if not settled by common consent, be referred to the arbitration of experts, under the conditions prescribed in Article XI. —1. A note shall be addressed to her Majesty's Government by the Portuguese Government, undertaking to lease for ninety-nine years to persons named by her Majesty's Government, land at the Chinde mouth of the Zambesi, to be used under regulations for the landing, storage, and transhipment of goods. Sites, price, and regulations to be arranged by three Commissioners, to be named one by each of the two Governments, and the third by a neutral Power to be selected by them. In case of difference of opinion among the Commissioners, the decision of the majority to be final. A note shall also be addressed to the Portuguese Government by her Majesty's Government undertaking, on the demand of the former, to lease on similar conditions, and for similar purposes to persons named by the Portuguese Government, land in some spot on the south-western coast of Lake Nyassa which shall be agreed upon between the two Governments as suitable for the purpose. 2. Notes shall be exchanged between her Majesty's Government and the Portuguese Government with regard to the traffic rates to be charged on the railway, similar to those exchanged on the 20th August, 1890. 3. Notes shall be exchanged between the two Governments, agreeing that the importation of ardent spirits to either bank of the Zambesi and Shire by those rivers, whether in the British or Portuguese sphere, shall be interdicted, and that the authorities of the two States shall agree upon the arrangements necessary to prevent and punish infractions of this article." See Session, sect. 5.

Angola. Portuguese West Africa, or Lower Guinea. Stated area, 470,000 sq. m.; pop. 2,000,000. Capital St. Paul de Loanda. Divided into the four governments of Angola or Loanda,

Ambriz, Benguela, and Mossamedes; port-towns of same names.

Anguilla. A British West Indian island. Area 35 sq. m., pop. 329. Belongs to the presidency of St. Christopher, in the federal government of the Leeward Islands. Is low and flat, deficient in wood and water. Produces salt from a lake, and phosphate of lime; cattle, ponies, and garden stock.

Annam. An empire in S.E. Asia, now a French protectorate. It formerly included Tonquin, French (or Lower) Cochin-China, and Cambodia. Area of Annam (or Cochin-China proper), 26,923 sq. m. pop. 6,000,000. Capital Hué, near the coast, garrisoned by French troops. Annam (or Cochin-China proper) stretches northward along the coast from French Cochin China to Tonquin. It is inclosed on the west by bare hills, beyond which is the domain of the Moi, or hill tribes, and the land of the Laos, subject to Annam. Principal productions: rice, cotton, indigo, tobacco, sugar, silk, bees'-wax, pepper, cardamoms, areca-nuts, ornamental woods, ivory, lac, bamboos, etc. Edible birds'-nests and trepang are among the exports to China. Gold is washed in the riverbeds, and other metals worked. There is an emperor, with court and dignitaries, but government is really in French hands. Trade is with China and France, a little with Burmah and Siam. Fishing a very important industry. A little silk and cotton manufacture, metal and wood work. The various peoples belong to the Indo-Chinese race, a link between Chinese and Malays. Religion chiefly Buddhism. A railway is proposed. It was stated, Oct. '88, that the result of negotiations between the Governor-General of French Cochin China and the King of Annam is that the towns of Hanoi, Haiphong, and Tourane, with a considerable district round each, have been converted into French concessions, within which the king surrenders all his rights. It is also arranged by the new Convention that French property throughout Tonquin and in the open ports shall be subject to French law alone.—'91. It was reported (Oct. 15th) that continuous warfare was going on between the French soldiers and large gangs of pirates, and that a number of officers and men belonging to the former had been killed.

Annobon. A lofty, basaltic, and volcanic island in the Gulf of Guinea. It is a Spanish possession, and its climate is salubrious.

Anthropology, '91. Among the most important recent researches are those of Mr. F. Galton on finger-marks. The papillary ridges on the skin of the bulbs of the fingers are found to present characteristic patterns in different individuals, and to remain constant throughout life; hence they become of importance in offering a ready means of personal identification. Prints are taken from the bulbs of the ten digits, and in each bulb there are, on the average, at least twenty distinct points of reference. Mr. Galton presided over the section of Demography at the International Congress of Hygiene, where papers were read on statistical Anthropology. Dr. Ogilvie, in discussing the Relation of Occupation to Disease and Mortality, pointed out that in this country the death-rate of clergymen is the lowest, and that of Hotel-servants the highest. The antiquity of man in relation to the ice-age in America, has been fully discussed by Dr. G. F. Wright, who argues in favour of the existence of man in pre-glacial times. Professor Prestwich has submitted to

the Anthropological Institute his views on certain rudely chipped flints, which he regards as exhibiting evidence of human workmanship, and which occur in gravels at a great elevation on plateaux in North Kent. From their geological position it is concluded that they must be far older than the ordinary palæolithic implements of the pleistocene river-drifts. Mr. A. J. Evans has described a cemetery, or urn-field, of the late Celtic period, at Aylesford, in Kent, which he refers to about the date of Cæsar's invasion. Mr. T. Bent, who for several years was engaged with Mrs. Bent in archæological researches in the East, has taken up the study of the antiquities of Mashonaland, and has already made some noteworthy discoveries. Much material of anthropological interest in relation to Eastern races was brought before the Ninth Statutory Meeting of the International Congress of Orientalists (q.v.), chiefly through the instrumentality of Dr. Leitner. The Rev. Dr. Codrington has published a work on the Melanesians, embodying the results of nearly thirty years' study of the people and their languages. The Marquis of Bute has published the paper which he read at the Cardiff meeting of the British Association on the Language of Tenerife. The International Folk Lore Congress furnished a good deal of material of anthropological interest, including addresses by Mr. Andrew Lang and Prof. Rhys. Mr. E. Westermarck, of the University of Finland, has written, in English, a remarkable work on the History of Human Marriage, in which he applies the principles of natural selection to the solution of some difficult problems. Good service to anthropology has been rendered by Mr. Ling Roth in translating Crozet's Voyage, which contains valuable information respecting the Maories. Miss A. W. Buckland has published a volume of Anthropological Studies, being, for the most part, reprints of some of her popular essays on the Science of Man. The Journal of the Anthropological Institute, edited by Mr. Peck, has been improved by the addition of a limited bibliography. Anthropology is represented in this country by the Anthropological Institute of Great Britain and Ireland; Pres. for '91-2, Dr. E. B. Tylor; Hon. Sec., Cuthbert Peck; Office, 3, Hanover Square, W.

Anticosti. A large island in the Gulf of St. Lawrence under the Government of Canada. It is 125 miles long by 30 wide; area, 2600 sq. m.; pop. 600. The coast is rocky, barren, and dangerous. There are lighthouses, fishing and refuge stations, the only organised settlement. The interior is a wilderness of mountain, forest, and swamp, abounding in furred and feathered game. There are tracts adapted for cultivation, and fruit and vegetables raised experimentally seem of first-class quality. Mineral wealth is reported.

Antigua.—i.e. "ancient," so called by Columbus. A British West Indian island. Area 108 sq. m., pop. 34,151. With Barbuda forms a presidency of the Leeward Islands. Its capital St. John, pop. nearly 10,000, is the seat of the federal government. English Harbour is a naval station, and one of the finest harbours in the West Indies. The island is hilly, attaining 1200 feet. It is based on igneous rock on the west, calcareous on the east. Though suffering sometimes from drought, it is very fertile. Produces sugar and rum, arrowroot, tobacco, and at one time cotton. Climate healthy; subject to earthquakes.—Government

is administered by the Governor of the Leeward Islands, assisted by a local council of twenty-four members (twelve elected). Four delegates are sent to the Federal Council. Antigua was settled by British in 1632, seized by the French for a short time in 1666, but has since remained a British colony.

Antilles. Name of the chain of islands surrounding the Caribbean Sea. They are divided into Greater and Lesser. See WEST INDIES.

Anti-Slavery Society. See BRITISH AND FOREIGN A.S.

Apprenticeship, Law as to, '91. In the case of *Leroyd v. Brooke*, Mr. Justice A. L. Smith decided (Queen's Bench Division, Jan. 28th) that a master may discharge an apprentice who is an habitual thief, and that no action for damages or for the return of the whole or part of the premium can be maintained.

Aquatics. The suggestion of the National Amateur Rowing Association that the Amateur Rowing Association should alter their definition of an amateur, so as to permit of members of the latter body competing against working men, was rejected by the committee of the senior association, who held that any lowering of the amateur status would prove detrimental to the sport. At the first annual meeting of the new association, held at the Polytechnic, Regent Street, on Feb. 21st, it was decided to again approach the A.R.A. on the subject, in the hope—a forlorn one—that in the course of time they would adopt the views of the N.A.R.A.—The Oxford and Cambridge boat race, the chief event of the aquatic year, took place on March 21st, in fine but cold weather. Though the result was deemed little short of a certainty for the Dark Blues—in fact, odds of 7 to 2 and 4 to 1 were laid on their winning just prior to the signal for starting—the crowd lining the banks of the Thames from Putney to Mortlake seemed greater than ever. A more gallantly-fought contest could not, by any stretch of the imagination, have been witnessed, and during the long and tiring journey not once was daylight discerned between the boats. The Creek was reached in 1 min. 20 sec., and Craven Steps in 2 min. 41 sec., the nose of the Oxford boat being then just in front. Passing the Old Mile Tree (time 4 min. 47 sec.), the latter had increased their lead to a quarter of a length; but rowing as one man the Light Blues from this point gradually drew level, and it was difficult to say which boat was in front at the Crab Tree (time 6 min. 5 sec.). At Hammersmith Bridge (time 8 min. 56 sec.) the Cambridge crew were leading by a few feet; and along Chiswick it was a case of the one being first and then the other. At Barnes Bridge (time 18 min. 10 sec.) Oxford were half a length to the good, but to maintain this advantage they had to keep rowing at full pressure, notwithstanding that the big bend in the river was all in their favour; and when the firing of the gun announced that the struggle was over, it was the general opinion that Light Blues had not been defeated by more than a third of a length. The full time was 21 min. 48 sec., and it should be stated that the water was rough, and both tide and wind adverse. The crews were constituted as follows:—Oxford: 1. W. M. Poole, Magdalen, 10 st. 7½ lb.; 2. R. P. P. Rowe, Magdalen, 11 st. 11 lb.; 3. V. Nickalls, Magdalen, 12 st. 9 lb.; 4. Guy Nickalls, Magdalen, 12 st. 5 lb.; 5. F. Wilkinson, Brasenose, 13 st. 8 lb.; 6. Lord Ampthill, New, 13 st. 5 lb.; 7. W. A. L.

Fletcher, Ch. Ch., 13 st. 2 lb.; C. W. Kent, Brasenose (st.), 10st. 11 lb.; and J. P. Heywood, Lonsdale, New (cox.), 8 st. 6 lb. Cambridge: 1. J. W. Noble, Caius, 11 st. 5½ lb.; 2. E. W. Lord, Trinity Hall, 10 st. 10½ lb.; 3. G. Francklyn, 3rd Trinity, 12 st. 3 lb.; 4. E. T. Fison, Corpus, 12 st. 7½ lb.; 5. W. Landale, Trinity Hall, 12 st. 11 lb.; 6. J. F. Rowlatt, Trinity Hall, 11 st. 12 lb.; 7. C. T. Fogg-Elliott, Trinity Hall, 11 st. 4½ lb.; G. Elin, 3rd Trinity (st.), 10 st. 13 lb.; and J. V. Braddon, Trinity Hall (cox), 7 st. 12 lb. The race between the two great universities was inaugurated in '29, but continued with irregularity until '56; and of the forty-eight contests so far decided twenty-five have been won by Oxford and twenty-two by Cambridge, that of '77 having terminated in a dead heat. Outriggers were first used in '46; in '57 boats without keels were introduced; in '73, in which year the time occupied by the winners was 19 min. 35 sec., the quickest on record, sliding seats were first utilised. Since '64 the course has invariably been from Putney to Mortlake, a distance of about 4½ miles. The Oxford torpids ended in favour of Brasenose, and Corpus finished at the head of the Cambridge boats.—**Henley-on-Thames regatta**, the chief of river-side regattas, was held on July 7th, 8th, and 9th; and despite heavy showers and thunderstorms, the gathering was the most successful, at least from the oarsman's point of view, of any witnessed in the fifty-two years of its history. A start was made with the first heat of the Grand Challenge Cup between the *Leander* (a crew which included six of the Dark Blues) and the First Thames (amongst which eight were the mighty Muttibury and two representatives of Cambridge in Gardner and Landale). The struggle was a truly Homeric one, and the result was a dead heat, neither boat's nose being ever a quarter of a length in front of the other. On rowing off the *Leander* eight proved successful, and in the final heat the London eight in the fastest time on record (6 min. 51 sec.). Brasenose and Magdalen made a scarcely less gallant fight in the first heat of the Stewards' Cup, victory resting with the latter, who passed the winning post just two feet in front. Equally as much excitement was aroused over the final heat for the Silver Goblets, in which Lord Ampthill and Guy Nickalls, *Leander* Club, defeated F. Wilkinson and W. A. L. Fletcher, Oxford University Boating Club, by a foot. After beating G. Elin, the Cambridge stroke, in the first heat of the Diamond Sculls, V. Nickalls, Magdalen College, Oxford, was allowed to row over in the final, his brother Guy, the holder of the title, being content with the laurels he had already gained. The Visitors' Challenge Cup was awarded to a Trinity Hall four, stroked by C. T. Fogg-Elliott; the Ladies' Plate to a Balliol College eight, stroked by F. N. Rogers; the Wyfold Challenge Cup to a Royal Chester four, stroked by H. Fairrie; the Thames Challenge Cup to a Molesey eight, stroked by H. A. Block; the Stewards' Challenge Cup to a Thames four, stroked by J. C. Gardner. The last-named gentleman resigned the Wingfield sculls, and no one opposing Guy Nickalls, he rowed over the course on July 25th, and thus regained the title of amateur champion of the Thames. Marlow, the Metropolitan, Richmond, Kingston, Molesey, Reading, and the other annual regattas on the Thames, proved as successful as ever; and at the Hamburg reunion, where the London and

Thames rowing clubs were represented, the latter won the handsome Hammonia prize for good, by virtue of a third victory, and also took the Perpetual Challenge Cup, whilst the London men secured the City of Hamburg prize. The Monteuuis sculls were rowed for on Sept. 9th, and won by F. E. Thorn. Mr. W. H. Grenfell resigned the punting championship, a title he had held against all-comers for several years, early in July, and as a consequence, seven entered for the trophy at the first regatta of the Thames Punting Club on the 28th of that month, the course being from below Sunbury Lock to a ryepeck near the Waterworks, and back upstream to Mr. Henry Faia's lawn, a distance altogether of three-quarters of a mile. The final was fought out between N. M. Cohen and A. Hewitt; and after a series of mishaps, the former won in 6 min. 46 sec.—**Doggett's Oat and Badge**, originally instituted by Mr. Thomas Doggett, a well-known actor of his day, in commemoration of the accession of the family of her present Majesty to the throne of England, was rowed on August 1st, from London Bridge to Chelsea. The event is confined to young watermen of the Thames, and the Fishmongers' Company contribute very generously to the prizes. The winner on the last anniversary was William A. Barry, Victoria Docks; Sidney J. Wingate, Battersea, being second, and G. Herbert Pell, Chiswick, third.—**The professional matches** of the year opened with a pair-oared race for £200 and the championship of England, on Feb. 9th, between W. G. East and W. Driver, and J. Corcoran and J. Canty, the course being from Putney to Mortlake. The contest proved very close and exciting up to the Duke of Devonshire's Meadows, where, when dead level, a foul occurred. East and Driver were first away, and their opponents ceasing to persevere, they passed the winning-post three lengths in front, in 22 min. 25 sec. Both appealed on the foul, and the referee declaring it no race, ordered the men to row on the following day. On the second occasion East and Driver won easily, their time being 22 min. 35 sec. Over the same course, on March 16th B. Squires, of Rotherhithe, defeated M. Gibson, of Putney, for a stake of £50, by three lengths, although on passing Chiswick Church odds of 7 to 1 were laid on Gibson. On March 27th C. Stephenson, of New Zealand, beat Neil Matterson, of Sydney, for a stake of £200, over the Parramatta Championship course. On April 28th, over the same course, John McLean and James Stansbury decided a sculling race for the championship of the world and stakes amounting to £400. The former was made favourite, but Stansbury led from start to finish, and won easily in 22 min. 15½ sec. Not satisfied with his defeat, McLean challenged Stansbury to row from Uhr's Point to the Brothers, a distance of about three miles, on the Parramatta, for the championship and £400; and on July 7th, after a good race, the holder of the title won by a length in 18 min. 25 sec. On Aug. 8th, a race for the double sculling championship of the world and £200 a side was rowed at Burlington Beach, Toronto, Canada, between E. Hanlan and W. O'Connor and J. Gaudaur and J. McKay. The course was three miles in length with a turn, and Hanlan and Gaudaur won by four lengths, in 19 min. 26½ sec. On the same afternoon, on the Thames, near Maidenhead, was decided the punting professional championship; and Abel Beesley, the holder of

the title, having retired, as many as twenty-seven entered. The final heat, as in the amateur competition, gave rise to some unpleasantness, and in the result W. Haines, Old Windsor, was successful, W. Morris, Bray, being second, and C. Asplen, Maidenhead, third. **The National Regatta**, established in the previous year, chiefly through the exertions of Mr. E. D. Brickwood, for the encouragement of professional oarsmanship and sculling, was held on Aug. 19th and 20th, on the Thames, and for the six events on the programme there were sixty-six entries. The final heats terminated as follows:—Sculls (Hammersmith to Putney)—S. J. Wingate, Putney, 1; and J. Gibson, Putney, 2. Open sculls (Putney to Hammersmith)—C. R. Harding, Wandsworth, 1; and W. G. East, Isleworth, 2. Heavy fours (Putney to Chiswick Eyo) Kingston—W. Ballard, A. Goulter, F. Sully, W. Skinner (stroke), and A. Eastland (cox.), 1; and Middlesex United Rowing Club—W. Yates, W. Matthews, A. Chambers, W. Pearce (stroke), and C. Hodges (cox), 2. Non-coxswain fours (Putney to Chiswick Eyo), Isleworth—H. Follett, S. Emmett, W. Driver, and W. G. East (stroke), 1; and Tower Hill—S. J. Wingate, G. Green, J. Corcoran, and W. Haines (stroke), 2. Apprentices' Sculls (Hammersmith to Putney)—F. Pearce, Hammersmith, 1; and T. H. Robinson, jun., Putney, 2. Pair oars (Hammersmith to Putney)—W. G. East and W. Driver, Isleworth, 1; and J. Corcoran and W. Haines, Surrey United Rowing Club, 2. A match, arising out of this regatta, was decided on Oct. 19th, over the Thames Championship course, for £50. The competitors were S. J. Wingate and H. Cole, the former winning an exciting race in 24 min. 8 sec. On Oct. 26th A. Goulburn, of the Invicta Rowing Club, won the "below-bridge" Handicap—an annual contest of much interest to Thames-side scullers, and which is promoted by Mr. B. Murphy. On Nov. 2nd, J. Tyrrell, of Clapton, beat D. Godwin, jun., of Wandsworth, in a match for £50, over the Thames Championship course. Consult *The Rowing Almanack*, and "Boating" (Badminton Library), by W. B. Woodgate.

Arabia. Is a large peninsula in S.W. Asia, having an area of about a million square miles, and a population of about twelve millions. The provinces of Hedjaz and Yemen are under Turkish rule, while much of the remainder of the country is under British influence, exercised in the case of Oman through the Sultan of Muscat. In 91 an epidemic of cholera broke out in Mecca in the early part of July; it extended to Jeddah. It was reported (Aug. 24th) that the whole of Yemen, from Sana to Hodcda, was in a state of open rebellion. It was announced (29th) that the rebellion had been totally suppressed, and that the Turkish commander had entered Sana with fourteen camels laden with the heads of the rebellious chieftains. News was received (13th) that unless further troops were sent the Ottoman troops in Yemen would be unable to hold out. It was reported (Oct. 2nd) that the insurrection was spreading. The official despatches from Yemen (26th) announced that the rebels in the country round Sana had been subjugated. But it was reported (28th) from private sources that the rebels were 40,000 strong, and had taken several fortresses; they demand freedom from taxation for five years, and that after that term they should be reduced.

Archæology, '91. The event of the year in this section of science has undoubtedly been the discovery of the text of *The Constitution of Athens* by Aristotle. Upon the face of a papyrus in the possession of the British Museum was the record of farm accounts, A.D. 78, written by a Greek bailiff, Didymus, relating to an Egyptian farm. Upon the back of the same roll, a later writer—possibly an after-possessor of the farm—had copied the hitherto unknown text of the chief of the 158 constitutions of Aristotle. There were already known 91 quotations from the work by other ancient writers, and of these, 78 are found in the roll, others probably occurring in the portion that is mutilated. The text is Greek of the fourth century B.C., and has been already translated by Mr. F. G. Kenyon, M.A., the assistant keeper of the Manuscripts Department in the British Museum. The find is one of astonishing importance, the papyrus having been pronounced genuine by many experts, and giving much internal evidence of its own authenticity. The translation has been published by the Museum Trustees.—The operations at **Silchester** have been successfully continued during the year, and have revealed a rich discovery of Roman remains, including tools and domestic implements, *amphoræ*, *tesseæ*, pots, jars, and the ironwork of doors. The scale beam and carpenter's plane are especially interesting discoveries, and the whole city (two-thirds of the area of Pompeii) is gradually being uncovered. From it, for the first time, the complicated social and municipal life of a Roman military city can be reconstructed. The work is being carried on by the Society of Antiquaries, under Mr. W. St. John Hope—Mr. *Flinders Petrie* (*q.v.*) has made important discoveries at **Tell-el-Hesi**, on the site of the ancient city of **Lachish**, and in **Assyria** the details of life and habit are being rapidly revealed through the astonishing discoveries of cuneiform inscriptions undertaken by the French Government, and translated by Mr. T. G. Pinches and Prof. Oppert.—An important memorial has been presented to Her Majesty's Government respecting the preservation of the ancient monuments of **Egypt**, and a competent official inspector has been appointed to prevent the Arabs from destroying and damaging the sculptures and hieroglyphics of the country.—A vast tomb of the **High Priests of Ammon** has been found west of Thebes, and already 240 sarcophagi have been discovered within it. There are great quantities of papyri, which are being conveyed to Cairo, and are expected to contain important information. The oldest sarcophagus is of the eleventh dynasty, 2500 B.C.; the mummies are principally priests and priestesses of Ammon; and the find has been under the supervision of M. Grebaut.—The decease of **Dr. Schliemann** has removed the most successful excavator of the day, but work is being still continued in the Troad; and in **Athens**, near **Kera Meikon**, several tombs have been found, and the largest *amphoræ* yet found in Greece removed therefrom.—The **Society of Antiquaries**, in January, had a noteworthy paper by Mr. Fox on the Roman wall and 14-feet-deep fosse found in Aldersgate Street, London. A fine collection of cinerary urns from an Anglo-Saxon cemetery at Saxby was exhibited by Rev. Dr. Cox in April, and in May an important discussion on the Municipal Insignia and Sword Stands of London was introduced by Messrs. Hope and Freshfield, and illustrated by many

of the actual items described. The third annual **Congress of Archæological Societies** was held at the Society's rooms, Burlington House, on July 23rd. Delegates from very many societies were present. General Pitt-Rivers introduced the subject of the Ancient Monuments Act, and resolutions in favour of greatly extending and increasing its powers were passed. A strong committee to deal with the question of parish records and registers was appointed, and good progress reported as to the Archæological Survey of England. The question of a classified index of archæological papers, and that of a scientific and archæological **Year Book**, were carefully debated, and important papers were read by Dr. R. Evans on the "Forgery of Antiquities," and by Dr. Cox on "Field Names." An interesting exhibit at the Society of Antiquaries was what was claimed as a relic of **The True Cross**, exhibited by Sir Chas. Robinson in an extremely fine fourteenth-century reliquary, and forming a double cross.—The **Royal Archæological Institute** held their annual meeting in Edinburgh this year during August. They were received by the Society of Antiquaries of Scotland, and in their honour there was brought together a most remarkable heraldic exhibition. It included standards and banners, armour, books, manuscripts, relics, seals, and glass, all illustrating heraldry and royal and family achievements. Excursions were made to the shrine of St. Margaret, Rosslyn, Dalmeny, Borthwick, and important churches. Especial attention was given to the beautiful Sacrament House in St. Salvador's College, and to Bishop Kennedy's mace of 1461.—The **British Archæological Association** assembled this year at York, and had a very important meeting from Aug. 17th to Aug. 24th; visited Beverley, Ripon, Kievaux, Selby, and Scarborough.—Amongst noteworthy incidents in connection with the two societies must be mentioned, the discovery of a fine brass in Godney Church; of a huge milearium weighing 20 tons, in Bawsworth; of two remarkable stone bowls at Ancaster; of a Roman sarcophagus at Plumstead; and of a quantity of fine Roman remains in Copthall Avenue, E.C., and Godman Street, St. Paul's. A quantity of pottery, found at St. George's, Southwark, has also been described, and a very important paper on the brasses of the City of London contributed by Mr. Oliver. The **Royal Society of Antiquaries of Ireland** (*q.v.*) held their meeting in July at Athlone, and earlier in the year visited Dublin to inspect in the City Hall the charters. The water supply of Ancient Dublin was the subject of an important paper by Mr. Berry. The first quarterly issue of the Society's journal commenced in May, and a remarkable case, attributed to witchcraft at Dunganon, in June '90, was described.—Of the smaller and local archæological societies we may mention in order of meeting the **Norfolk Society**, which exhibited some manacles from Norwich Castle, and had an important paper on the Keep. The **Derbyshire Society** has given especial attention to the barrows and the charters in their county. The **Belfast Society** has discovered some interesting early grave slabs at Dundonald. The **Lancashire and Cheshire Society** has published a very fine volume of Proceedings, with an address of profound importance by Prof. Sayce. The **Plainsong Society** has issued valuable publications of old madrigals and songs. The **Oymrodorion Society** is

systematically working at a classification of Welsh archaeology and books. The **Cumberland Society** has been specially studying Carlisle and Westmorland printers and family pedigrees. The **Warwickshire Society**, always somewhat behind-hand, has only just issued its '89 report, but it contains a few valuable short papers. The **Newcastle Society** is hard at work, and has issued, splendidly illustrated, a fine article by Mr. Bates on the Border Castles. The **Cambridge Society** has been investigating in connection with the Roman roads. The **Yorkshire Society**, which has suffered much from death of members, is suggesting and preparing for a county bibliography. The **Penzance Society**, under Mr. Bolitho, is prospering, and is turning a careful attention to preserving its own ancient monuments. The **Shropshire Society** has done splendid service in preventing the removal of the open-air pulpit at Shrewsbury Abbey, and is examining and registering 2277 rolls of Shrewsbury borough records of great historical value. The **Ecclesiastical Society**, under Dean Gregory, is advancing, but is behind-hand in issuing its Proceedings. It has been studying screens and visiting churches with great advantage to itself. The **Brass Collectors Society** has lost its moving spirit by the sudden death of Mr. Lewis, but is safe to succeed in the hands of Mr. J. Willis Clark, and its publications are of great value. The **Memorials of the Dead Society** is growing slowly, but has done good work to about forty tombs during the year. The **Glasgow Society** issued in April their new part, a book of 575 pages, replete with interest; and are starting and using an "Old Mortality" Fund at their Cathedral. The **Burnley Society** has at last thrown great light upon Hesketh End and its unique inscription. The **Huguenot Society** has issued some more registers and pedigrees of interest. The **Order of the White Rose** studies history in its bearing on Stuart sovereignty, and reveals many a hidden bypath in the archaeological side of the history of our country. It is doing good and useful service. The **Leicestershire Society** has protected its Jewry wall and Roman pavement from the Railway Company. The **Thoresby Society** is publishing the *Coucher* book of Kirkstall Abbey. The **Yorkshire Society** gives great attention to its local abbeys, and wisely spares no pains to protect them. The **Essex Society** has completed a great book on the county monuments. The **Sussex Society** is awake at last, and is reporting about the Wilmington Giant, cataloguing its library, altering its subscription, and publishing a handbook by Mr. Somers Clark to the Castle and Museum. The **Surrey Society** is very active, and has issued some excellent transactions. It is cataloguing its church plate, copying its local wills and visitations, making its library more complete and accessible, and showing good cause for its existence. The **Powysland Society** studies Montgomery Nonconformity, Oxford Welshmen, and the house of the Herberts. The **Gypsy Lore Society** has issued an astonishing number, of wonderful interest. The **Kent Society**, as usual, issues excellent volumes, full of painstaking and remarkable value. The **Bradford Society** is publishing its town record. The **Henry Bradshaw Society** is completing the *Westminster Missals*, and printing the old Ambrosian liturgy. The **William Salt Society**, with infinite credit, is preparing materials for

a history of Staffordshire. The **Maidenhead Society** studies primitive man in the valley of the Thames. The **Biblical Archaeological Society** is working at the Targums. The **Wiltshire Society** is proud of having in its midst the unrivalled Rushmore museum, to which much attention has been drawn during the year. The **Devonshire Society** met at Tiverton, and their papers were of exceptional and very high merit. The **Cambrian Society** went to Killybegny, and the excursions were not mere holiday jaunts, but full of sound practical result. The **Oxford Society** is all behind in archaeology, as it has always been, and an article on Witney Church Plate forms about its only good work. It should learn from Glasgow, Surrey, and Kent. The **Berkshire Society** is greatly excited about Silchester, and hopes to secure the remains discovered for Reading museum. The **Durham Society** met at Richmond, and good papers were read at the meeting. The **Somerset Society** is flourishing magnificently, and its Crewkerne meeting produced very valuable and noteworthy papers. The county records are being published, and those of Glastonbury are of especial value. The **Cornwall Society** is flourishing, and its Royal Institution has just issued a strong number worthy of especial attention.—Amongst discoveries we record some important ones at **Lincoln** of Roman columns, a grotto Roman temple at **Vienna**, a quantity of coins at **Trowbridge**, some three hundred English gold coins in an old box at **Aveton Cliford**, the basilica of St. Sylvester in the *Via Salaria*, Rome; some important stonework at Delphi, and a fifteenth-century chapel at Pershore of most interesting stonework. As an incident, the funeral by midnight of Colonel Dyott, at Lichfield, in pursuance of the very old family custom, must not be overlooked. In the department of archaeology more distinctly Foreign, we must refer to the mosaic discovered at Rheims, and the completion of the excavation of *Insula IV-V.*, at Pompeii. The grant of the French Government toward the work at Delphi of 500,000 francs marks a distinct epoch. Important work is going on in Crete, and the Athens museum is receiving large contributions from recent excavations, including one magnificent statue. The city of Florence has revealed its ancient Roman bath, and at Syracuse evidence as to early ornamentation is coming to light. Some exquisite gold ornaments have been found in Sicily, and Italy has translated and published some of the sacred books of the Egyptians. Russia is excavating in Abyssinia with great success, and Italian workers are continuing their labours in Crete. In Russia a splendid deposit of funeral objects has been found at Bogodar. Of important Archaeological Books we must mention:—"Cornish Feasts and Folk Lore," by Miss Courtney; "Old Church Lore," by Mr. Andrews; "Rush Bearing," by Mr. Barlow; "Prælia Eboracensia," by Mr. Leadman; "Lawford Hall," by Nichols; "Corstorphine," by Mr. Selway; "Kidderminster," by Mr. Burton; "Arcana Fairfaxiana," by Mr. Weddell. The 13th volume of the Greek Coin Catalogue, Brit. Mus., Wroth. The Catalogue of the Greek Coins in Paris Mus., by Babelon. Father Palmer's book on the Black Friars; and the monumental work on "Traders' Tokens," by Mr. G. C. Williamson. Very many societies have issued most important catalogues of Church Plate, especially Leicester, Salop,

Dorset, Carlisle, and Surrey. There are also the noteworthy county publications known as *Notes and Queries* for each county, and the *Antiquary* and *Bookworm* among magazines; while amongst society journals the *Numismatics Chronicle* deserves particular attention. The **British Museum** have this year secured a **Caxton**, which until 1874 was quite unknown. It is the letters of Pope Sixtus IV., printed in 1483, the first independent publication ever made of diplomatic correspondence. Only two of Caxton's works do not now exist in England. The **Great Sales** of the year have been the Hailstone, Bolckow, and Lakelands Sales. The silver lace and glass in the first were noteworthy, but the collection was miscellaneous rather than choice. In the second, the pictures fetched extraordinary prices. The watercolours included seven by Landseer and six by Turner. Some old Limoges enamel and Sèvres porcelain were noteworthy. The Lakelands library included many rare books. The whole sale realised £22,000, and some magnificent illuminated Hours, early folios and works on vellum, were the special items. The **Thebes Ammon** discovery is still yielding astonishing results, and this bids fair to be the archaeological event of the winter. In mummies, papyri and sarcophagi it is unusually rich.

Archbishop's Court. See ECCLESIASTICAL COURTS.

Archbishops, English. See CHURCH OF E. ARCHDEACON. See DIOCESE.

Archery. (For earlier details see ed. 87.) The open meetings of '91 were, with one or two exceptions, well attended, but the club gatherings did not prove so attractive as in the preceding year; the shooting all round, however, was fully up to the average. The competition for the **Butt medal** of the Royal Company of Archers was commenced at the Butts, Edinburgh, on Feb. 20th, and 21 ends of two arrows each were shot, as usual, at 100 feet, at a 4-inch target. Mr. J. T. Hutchison won easily with 24 points, Mr. C. Stewart coming next with 17. The **first target** of the season was held by the John o' Gaunt's Bowmen at Springfield Park, Lancaster, on April 22nd, when the York round in the first class was credited to Captain Garnett, who also took the subscription gold at 100 yards; and in the second class Mr. C. Walker was successful. Mr. Eyre W. Hussey and Miss Eyre Hussey were accorded highest honours in their respective classes at the first bow meeting of the **Cheltenham Archers**, in the Montpellier Gardens on April 29th; and at the second gathering of the John o' Gaunt's Bowmen, on May 20th, Mr. Gregson and Mr. Walker were the highest scorers. At the **Leamington and Midland Counties Meeting**, in the Jephson Gardens, Leamington, on June 17th and 18th, a handsome cup was presented by Major Hawkins Fisher to be shot for annually, and held by the archer making the highest actual score; it was won for the first time by Mr. Gregson, with the actual total of 560 on the double York round. Mr. C. E. Nesham was only a few points behind; but neither of these gentlemen being qualified by residence for championship honours, these fell, as in the two preceding years, to Mr. Eyre W. Hussey, with a score of 812. Mrs. Piers F. Legh, however, failed in her attempt to win the **ladies' championship** three years in succession, the title on this occasion being gained by Mrs. C. Bowly with a total of 768, Miss Legh coming next with 692, and the holder third with 683.

Neither Mrs. nor Miss Legh took part at the **Crystal Palace** fixture on July 9th and 10th, and, as a consequence, Mrs. Bowly had matters all her own way. At the close of the double round, this lady was 198 ahead of Mrs. Haigh, her nearest rival; but her total of 786 fell considerably short of Miss Legh's memorable 862, which is the record for double round at the Crystal Palace. The shooting amongst the gentlemen was much closer, the three highest scorers being Mr. A. Newall 840, Mr. Gregson 838, and Mr. F. L. Govett 814. At the **Grand Western Meeting**, held at Seaton, Devon, on July 22nd, 23rd, and 24th, Miss M. A. Winwood and Mr. A. Newall won the respective championships of the West, and Mrs. Eyre Hussey secured Mrs. Ellis's challenge prize; whilst the contest between Somerset and Devon terminated in favour of the latter. The forty-eighth **Grand National Meeting** was held on the County Cricket Ground at Boughton, Worcester, on July 29th and two succeeding days. Miss Legh was in excellent form, and gained her title of championess for the seventh time by scoring the grand total of 798 for 138 hits. Mrs. Bowly coming next with 760 for 136 hits. Mr. Nesham was unable to compete, and the championship was awarded to Mr. Govett with a total of 838 for 188 hits, his most dangerous opponents being Mr. Gregson, with 754 for 166, and Mr. G. Bird, with 736 for 168 hits. Mr. Govett also secured the **Spedding Memorial Challenge Cup**, presented by the Royal Toxophilite Society for the highest gross score. Gloucestershire again won the **County Challenge Prize**, and Middlesex retained the **County Challenge Cup**. Miss and Mrs. Legh, and Mr. J. B. Wilson, were the best of the competitors at the **Cheltenham** reunion, held on August 14th; and five days later was commenced the **Grand Northern Meeting**, on the cricket ground at Preston, where Mrs. D. Ainsworth and Colonel Burton gained championship honours, the former with a total of 643 for 131 hits, and the latter with 598 for 126 hits. The list, however, was headed by Mr. F. L. Govett, who was credited 903 for 191 hits, this being the highest score made during the year at a public meeting. The gentlemen's bronze medals of the Grand National Society for Lancashire and Cheshire were awarded, on the scores made on the first and second days' shooting, to Mr. George Bird and Colonel Burton. The open fixtures were brought to a close with the **John o' Gaunt Meeting**, on the Great Axe Field, Lancaster, where the top scorers in the three events on the programme were Mr. Gregson, Mr. C. Walker, and Colonel Burton. The Grand National bronze medals for Surrey were competed for at Beddington Park on Sept. 26th, and Mrs. Marshall won the ladies' with 60 hits, 282; and Mr. Nesham the gentlemen's, with 92 hits, 376 score. Consult "The Archer's Register," edited by Mr. Fred. P. Follett, of the *Field*, and Ford's "Theory and Practice of Archery," edited by Mr. W. Butt, of the Royal Toxophilite Society.

Arches, Court of. The statutory court for the trial of causes ecclesiastical in the Province of Canterbury (see ECCLESIASTICAL COURTS). Formerly a purely canonical authority, with jurisdiction in certain matrimonial and probate causes, the Dean of Arches held his court in the church of St. Mary-le-Bow, or *Sancita Maria de Arcubus*, receiving and determining appeals from inferior ecclesiastical courts within the Southern Province. By the **Church Discipline**,

Act '42, and the Public Worship Regulation Act '74, Parliament effected considerable modifications of the Court of Arches, supplementing the ecclesiastical by civil powers. By the latter Act (7th section) provision was made for the union of the Courts of the two Metropolitans. The two Archbishops were required to appoint a barrister of ten years' standing, or a judge of one of the Superior Courts, to be a judge of both Courts. Every person appointed must be a member of the Church of England, and when entering upon his office must sign a declaration to that effect. He retains the title of **Dean of the Arches**, but when sitting in the Northern Province is styled **Official Principal of the Province of York**. Lord Penzance, the first Dean of the Arches appointed under this section, still holds the office. He has no Court, and usually sits in his dressing-room in the House of Lords—a circumstance which has entailed many disputes on points of jurisdiction. In connection with the trial of the **Bishop of Lincoln (q.v.)** the question of jurisdiction arose, when it was contended that the Archbishop's authority to sit as a supreme ecclesiastical tribunal had lapsed, partly through non-user and partly by statute. The Archbishop, however, ruled that he possessed jurisdiction, and thus there are two Archbishops' Courts.

Architects, Royal Institute of British. See **ROYAL INSTITUTE OF BRITISH ARCHITECTS**.

Architectural Association, The, 56, Great Marlborough Street, and 9, Conduit Street, has for its objects to promote and afford facilities for the study of architecture, and to serve as a medium of friendly communication between the members and others interested in the progress of architecture. These objects are carried out by means of papers and discussions, lending and reference libraries, a monthly publication, instruction to students in a studio, lectures, classes, and visits to ancient and modern buildings. Prizes, medals, and a travelling studentship are open to competition amongst members. The association was constituted in 1847. The number of members is between 1100 and 1200. The entrance fee is £2 2s, and the annual subscription £1 1s. The ordinary meetings are held between October and May on alternate Fridays at 7.30 p.m., at 9, Conduit Street, and each member may introduce a visitor. Competent lecturers give instruction in the history of architecture, construction, stresses and strains, water-colour, decoration, quantities, specifications, land-surveying, etc. Instruction in drawing and design may also be obtained in the studio. The Association Sketch Book is published monthly. **President,** Mr. F. T. Baggallay. **Hon. Secs.,** Ernest S. Gale, Falcon Court, 32, Fleet Street, E.C., and F. T. W. Goldsmith, 10, Gray's Inn Square, W.C.

Arctic Railway. This line has the distinguished honour of being the most northern railway in the world. The **Luleå-Ofoten Railway**, which is the property of the Swedish and Norwegian Railway Co., appears to have its *raison d'être* in bringing down the enormously rich iron deposits of the far north to the port of Luleå. The whole scheme of the railway is to continue the line from the Iron Mountain, through the rich ore deposits of the neighbourhood, through Norwegian territory to the Ofoten Fjord. In consequence of the proprietors of the line becoming involved in difficulties, the Swedish Government in the session of '90 introduced a Bill for the purchase

of the railway. (See last ed.) A telegram dated Brussels Jan. 9th, '91, reported that the Swedish Government had declared its willingness to purchase for 64 million crowns the railways constructed on its territory by the Swedo-Norwegian Railway Co. In Oct. it was added that the construction of the line was going on.

Ardrossan New Harbour Works. The approaching completion of these works, begun in '87, was announced in Sept. '91. They consist of a new wet dock of 9½ acres, a tidal basin of 5 acres, a breakwater 1400 ft. long and rising 6 ft. above high water, also a pier along one side of the dock, and the outer basin 160 ft. in width, at which passenger steamers can lie, and on which the Lanarkshire Railway runs. The cost of the new works was estimated at £200,000, and the completion was entrusted to Messrs. Lucas and Aird, under the direction of Messrs. Strain, Robertson and Thompson, engineers to the Ardrossan Harbour Company.

Argentine Republic. A group of 14 states and 9 territories, with an extensive seaboard on the east coast of South America. The constitution is, with some exceptions, identical with that of the United States. It vests the executive power in the hands of a President, elected for six years, not being re-eligible; and the legislative authority in that of a Senate of 30 members, 2 chosen by the capital and 2 by each province, and a House of Deputies of 86 members elected by the people. The provinces elect their own governors and legislators, and have complete control over their internal affairs. The State religion is Roman Catholic; but all others are tolerated. Education is highly developed. There are 3,042 elementary schools, with 259,695 pupils. Area, including Patagonia, 1,124,086 sq. miles; population, 4,000,000, the great majority of Spanish origin and of other European countries. **Capital** of the Republic, **Buenos Ayres**, with 561,160 inhabitants (census July '90). **Capital** of the Province of Buenos Ayres, **La Plata**. The climate of the country is temperate and healthy. By the Budget estimates, the total revenue for '90 was fixed at \$74,676,706 currency; and the total expenditure at \$59,687,544. The **National Debt** (external) (March 31st, '90) was \$122,283,176; 5 per cent. (internal) was \$1,153,197. **Army**, 5,585; national guard, about 350,000. **Navy**, 3 ironclads and 15 other ships. **Principal productions** in '89 were 312,555,919 lb. of wool; 8,514,012 cwt. of maize; 448,971 cwt. of wheat, as against 3,254,160 in '88. The imports during the last twelve months were to the total amount of \$164,569,884, while the exports were \$122,815,057. The rich mineral resources are beginning to be developed. Length of **railways**, 6,600 miles, connecting the capital with the principal cities of the Republic. **Telegraphs**, 13,045 miles, connecting all the Republic. During '89 there were 76,724,431 letters and printed matter carried by the Post Office. Two cables (one by the Atlantic and the other by the Pacific) connect the Republic with all the cities in the world. The canal at Cordova burst (Dec. 21st, '90); one hundred persons were drowned and hundreds of houses were destroyed.—'91. A plot to overturn the Government was discovered. The rebel forces at Entre Rios were disarmed (Jan. 16th). A Bill was (26th) passed imposing a tax of 2 per cent. on deposits in private banks, and 10 per cent. on the profits. An attempt was made (Feb.) to assassinate General Roca, by a boy

fifteen years old. The Government decided to issue a national loan of 100,000,000 pesetas, to bear interest at 6 per cent. (March). Generals Roca and Mitre formed a coalition, and Señor Costa, Governor of Buenos Ayres, having joined it, the political state of the country became settled. The National and Provincial Banks (April 8th) suspended payment till June 1st. A revolution broke out in the province of Cordova (May 21st), but was suppressed by the Government the next day. In the street firing twenty-five persons were killed. An insurrection occurred in the province of Catamarca (June), when the Provisional Government was overthrown and a new one installed; there was no serious disturbance. Government troops were sent to the city, and the Provisional Government re-established. During the month there was a conspiracy to ruin the private banks by causing a run on them, but it was unsuccessful; some of the banks closed their doors, but the London and River Plate Bank did not do so. The Government (Oct.) decreed a forced paper currency, fixing the premium on gold at 150 per cent., and authorising the suspension for two years of payments in gold. The Senate unanimously rejected (15th) the forced currency proposals. The coalition between Generals Mitre and Roca. The Senate (18th) censured Dr. Pellegrini, the President of the Republic, for requesting General Mitre to abandon his intention of withdrawing his candidature for the Presidency. Baron Hirsch bought 7,000,000 acres of land in the Republic for the purpose of colonising it with Jews, each family going there to receive 150 acres of land and be provided for for a twelvemonth. Election riots occurred at Cordova and Tucuman (25th); the soldiers were compelled to fire on the people, many of whom were killed or wounded. The Chambers passed a Bill providing for the conversion of the Five per Cent. Gold Cédulas of the National Mortgage Bank into Eight per Cent. Paper Cédulas (20th).

Argyll, George Douglas Campbell, P.C., 8th Duke (of creat. 1701); Baron Sundridge and Hamilton (1766), by which title he holds his seat in the House of Lords; K.G. (1884). Was b. '23, and succeeded his father in '47; **Lord Privy Seal** (Jan. '53), and Postmaster-General (Nov. '55); again **Lord Privy Seal** (June '59 to July '66); **Secretary for India**, and **President of the Council of India** (Dec. '63); the third time **Lord Privy Seal** ('80 to April '81); is Hereditary Master of the Queen's Household in Scotland, and Hereditary Sheriff of Argyllshire. Was **Chancellor of the University of St. Andrews** ('51), and **Rector of the University of Glasgow** ('54); is chief of the great family of Campbell. The Duke is a prolific writer upon scientific, political, and social subjects, and a frequent contributor to the leading periodicals. He is the author of various works, among which may be mentioned "**The Reign of Law**," "**The Unity of Nature**," and "**Scotland as it Was and Is**," '88.

Armenia. It was reported from Erzeroum (Jan. 6th, '81) that a band of Khurdish brigands had attacked a wedding party in the Armenian village of Vartou, near Mouch, and endeavoured to carry off the bride. The Armenians, however, offered a vigorous resistance, and a sharp fusillade ensued, which resulted in several persons being wounded on each side. The brigand chief was killed, and his followers fled to Mouch, where they represented to the authorities that the Armenian

villagers had murdered their leader. A detachment of troops was consequently despatched to Vartou, which surrounded the place and arrested eighty Armenians. Sixty-two of these were subsequently released, but the remaining eighteen were each sentenced to fifteen years hard labour. The Sultan (17th) called for the Armenian Patriarch and the Minister of Police, and announced a general amnesty to all the Armenians concerned in the disorder. The hamlet of Adil-Djevo was destroyed by an earthquake (April 3rd); 146 houses were destroyed, and 240 other buildings much injured, and hundreds of lives lost.

Armies, Foreign. See FOREIGN ARMIES.

Armitage, Edward, R.A., historical and mural painter, was b. 1817. Educated in France and Germany. A pupil of Paul Delaroché, of Paris. In '40 he contributed "The Landing of Julius Caesar in Britain" to the Cartoon Exhibition in Westminster Hall, and obtained a first-class prize of £300. In '45 he took a £200 prize for a cartoon and coloured design, "The Spirit of Religion," and ('47) another first prize of £500 was awarded him for "The Battle of the Marston," now the property of the Queen. He afterwards visited the Crimea, and painted "The Charge of Balaklava" and "The Guards at Inkermann." Among his still later achievements were a colossal figure, entitled "**Retribution**," representing the suppression of the Indian mutiny, as well as a series of monochrome wall paintings at University Hall, Gordon Square. Elected R.A. '72. Has been a regular contributor to the Academy since '48.

Armoured Ships. See NAVY, BRITISH, and NAVIES, FOREIGN.

Armour Plates and Ordnance. (For previous history see '90 ed.) To resist guns of the present day, plates require to be so thick that complete armour, such as that on the *Thunderer* or *Dreadnought*, have gradually given place to armour of much greater thickness, amounting to 20 in. of steel-faced iron or 24 in. of iron, confined to the so-called **vital parts of a ship**. These consist of the engines, magazines, principal guns, and sufficient hull to insure the floating of the vessel. Protection is also partly given by horizontal armour—that is, by steel decks. These features are embodied in the *Inflexible* and the *Admiral* classes of so-called citadel ships, as well as the *Victoria* and *Nile* classes, and the belted cruisers and protected ships in a greater or less degree. It is only necessary here to notice the **general principle on which a ship is plated**, with many exceptions, however—namely, that the deck plates should resist the same shot glancing on it at an angle of ten degrees that the side armour resists striking direct. It follows, then, that unless a ship heels over to an angle of ten degrees, or unless she is subject to a plunging fire at a falling angle of ten degrees, her deck is stronger than her side armour. Beyond this angle the deck is weaker, but it is only likely to be struck by high-angle fire or under very special circumstances. With regard to the protection afforded by armour, it is doubtless true that guns are now afloat which are capable of piercing the side of any armoured ship. The 111-ton guns of the *Bendow* perforate about 35 inches of iron or 28 of steel, if close to the muzzle. The 67-ton guns of the *Camperdown* or *Rodney* perforate 30 inches of iron or 24 of steel; and many guns of less

power would perforate most of the armour afloat under favourable conditions. It is to be remembered, however, that in action a ship is generally struck obliquely, when armour will keep out shot which would perforate easily if striking directly; and more especially that the entrance of "dead metal" into the interior of a ship is a small evil compared with that of "live shell"; so that armour capable of keeping shell alone out, performs its most important function. An unarmoured ship is liable to be burnt and torn by common shell bursting in the interior, and the men swept down wholesale by shrapnel shell bullets, as was shown in the *Shannon* trials at Shoeburyness in '75. Two great principles are recognised in the new vessels, which were laid down in 1889: (1) the necessity of providing ships with a powerful secondary armament of quick-firing guns, and (2) the necessity of protecting portions of the ship which do not come under the term "vital parts" by means of thin armour, in order to prevent their wholesale destruction by quick fire guns of light calibre; or, on the other hand, by the entrance of steel shells containing charges of any so-called "high explosive," such as blasting gelatine, Lyddite, Roburite, Bellite, or Melinite. The necessity for this protection against quick fire is apparent from the fact that at Shoeburyness a target, six feet square, was struck five times running at 1300 yards range in 31 seconds by a single piece in action. Three 4½-inch guns fire 72 rounds in two minutes. A steel shell containing high explosive has passed intact through six inches of steel-faced armour, bursting on the far side. This re-introduction of thin armour, accompanied by other protective devices, such as that termed Woodite, is a marked change to note in connection with the year '89. Owing to their extensive surface of thin armour, as well as to their capability of speed, vessels of the *Minotaur* class have been accorded a new "lease of life" with fresh engines. The most effectual protection to a ship appears to be armour sufficiently hard to break up the projectiles which strike it, even though this result be effected at the cost of considerable cracking and even fracture of the plates themselves. The behaviour of chilled iron distinctly indicates the possibility of this alternative to that of exposing the ship without protection against the terrible attack of shells. It should be borne in mind that a wide distinction exists between the functions to be performed by ship's armour and that of forts. A naval action between ships is necessarily of short duration, and the number of blows received by a ship's armour must be limited. At the same time it is to be noted that they may be given by the heaviest projectiles existing. Consequently it appears desirable, even at the cost of considerable damage to her armour, to keep projectiles from entering a ship, which, under some circumstances, might destroy her by a single round. With inland armoured forts, such as the cupolas which are erected in some important points in continental forts, the conditions are entirely different. Here the attacking siege guns are likely to be of insignificant power compared with those mounted on board ship. The fire in a siege is formidable from the fact that it is continued with great accuracy for days, or even weeks, in succession, rather than from the power of each individual shell. Here, clearly, a softer kind of plate may be preferred, such as

may only resist perforation by shells of medium power, but such as will bear to be struck all over without cracking and stripping off from the structure it covers. The case of coast forts may be classed as intermediate between the two above mentioned. They may be attacked by war vessels carrying the heaviest guns existing, but a fort cannot, at all events, be sunk like a ship, nor has it all the complicated parts vital to the existence of a ship. Engagements between ships and forts are apt to last longer than those between contending fleets, but their duration is necessarily limited, for a ship can seldom, or never, remain in action day after day, and her supply of ammunition is very limited. Hence it has happened that Gruson's chilled iron armour has been largely adopted for coast batteries. Against this every kind of projectile breaks up, but the armour itself gradually yields by fracture, and has not been, therefore, generally adopted for inland forts. Forged steel projectiles, of which those of Holtzer are the most celebrated, have latterly proved "unbreakable" by direct impact against solid steel, but have recently been repeatedly broken up by a specially hard face given by a new process to compound armour. At the competitive trials between compound and solid steel plates, 10½ in. and 10 in. thick, which took place at Annapolis, U.S., in Sept. '90, and at Ocha, near St. Petersburg, on Nov. 11th, '90, Holtzer projectiles struck the plates with velocities exceeding 2000 ft. per second, and after penetrating as far as their energy drove them, rebounded almost uninjured. In these competitions the solid steel plates exhibited greater resistance than the English steel-faced or compound plates. This has been attributed to the fact that the objection to "through cracks" in this country has caused the backs or bodies of our plates to be made too soft. The prospect of success for compound armour depends, first, on whether a harder steel face can be given to armour by attaching a layer of hard steel than by any process of hardening such steel as is suitable for the body of the plate; and, secondly, on whether such attachment can be thoroughly depended on. Until recently, Schneider of Creusot, was the sole maker of solid steel armour. Vickers of Sheffield, however, successfully competed with him at Ocha last winter, and has for over two years been making steel plates for England. During the present year the first steel plates made by the Bethlehem Works, U.S., were successfully tested. The value of Nickel in steel armour is the subject of experiment at present. Elswick, Whitworth, and Krupp have made howitzers for the attack of the steel decks of ships at high angles, which have produced good results. This subject is important, both as concerning English ships and the defence of English coaling-stations against foreign ships. The employment of costly forged-steel shells in vertical fire, which is scarcely applicable to ships in motion, is, however, open to question.

Armstrong, Henry Hugh, R.A., sculptor, was b. 1828. Elected A.R.A. '75, R.A. '79. As a draughtsman, modeller, and chaser of silver, gold, and jewellery, he has executed a large number of works. His productions in marble, bronze, stone, and wood include the south and east sides of the *Albert Memorial*, Hyde Park, representing great musicians, painters, and poets, and four large bronze figures of the *Albert Memorial*, representing

chemistry, astronomy, medicine and rhetoric. Mr. A. also designed the carved oak panels, beneath Dyce's frescoes, in Her Majesty's robing-room at Westminster Palace, illustrating the life of King Arthur and the history of Sir Galahad. Two excellent busts were exhibited by Mr. A. in the Royal Academy, '91.

Army Athletic Championships. See ATHLETICS.

Army, The British. The total cost of the Army for the financial year '91-92 is £17,545,300 against £17,827,400 in '90-91. The various heads of expenditure are:—

Effective services:—	
Pay, etc., of army (general staff, regiments, reserve and departments)	£ 5,632,700
Medical establishments: Pay, etc.	292,800
Militia: Pay and allowances	549,000
Yeomanry cavalry: Pay and allowances	74,400
Volunteer corps: Pay and allowances of staff, capitation grant, equipment fund, etc.	761,000
Transport and remounts	631,700
Provisions, forage and other supplies	2,605,000
Clothing establishments and services	820,600
Warlike and other stores	1,847,100
Works, buildings, and repairs	716,700
Military education establishments	112,500
Miscellaneous effective services	160,000
War Office establishment	257,000
	14,453,300

Non-effective services:—	
Non-effective charges for officers	1,551,100
" " " " " men	1,380,800
Superannuation, compensation and compassionate allowances	160,100
	3,092,000

These amounts represent the following decreases on the sums voted in the previous year. Medical establishment, £1,400. Militia pay, etc., £70; Yeomanry pay, etc., £60; Volunteer corps, £179,470; transport and remounts, £15,200; provisions, etc., £37,804; warlike stores, £202,504; War Office, £180. Non-effective charges for officers, £1,834; superannuation, etc., £2,500. The increases are—Pay of army, etc., £41,984; works, buildings, etc., £51,500; miscellaneous charges, £61,304. Non-effective charges for men, £4,134. The War Minister, in issuing the estimates for the year, gave the following official explanation of the several votes:—The increase of £41,984 for pay, etc., was mainly due to the large number of men who, after the termination of their seven years engagement, have been receiving their deferred pay and are passing into the Reserve; by the occurrence of leap year; and by a scheme brought in during the year for improving the position and training of garrison artillery. The increase doubtless would have been greater but for the larger contributions made by Ceylon and the Straits Settlements, which formed the subject of several questions, and ultimately a debate in the House of Commons during the Session. The reduction in the vote of warlike stores was almost entirely due to the approaching completion of the programme undertaken in 1888 under the Imperial Defences Act for the improvement of the defences of our ports and coaling stations. The increase of £51,500 under

the head of Works may be accounted for as follows:—£10,000 was taken towards the provision of range accommodation, which is becoming a more urgent matter year by year in view of the improvement in small arms. £6,884 was required for the carrying out of the Aldershot Roads Act of 1890, by which ranges of paramount importance were to be permanently secured to the Regular Army, Militia, and Volunteers, by the closing of old roads within the danger zone, and others substituted at public cost. A large increase was also occasioned by the demands for new sanitary services and the general improvement of existing barracks. The reduction in the vote for provisions of £37,804 is attributable to the fall of prices. The swelling of the vote for miscellaneous services to the extent of £61,304 is due to the charge for interest on the Imperial Defence and Barrack Loans. In the latter case arrangement was made for a sinking fund, which will pay off the whole amount in twenty years. Contributions in aid. The amounts charged on contributing Colonies towards the expense of their defence are: Natal, £4,000; Mauritius, £30,750 (raised from £30,000); Hong Kong, £40,000; Straits Settlements, £100,000; Ceylon, £72,500 (raised from £34,400); Malta, £5,000. The Government of Egypt contributes £87,000 (reduced from £100,000). The total military expenditure incurred on behalf of the respective Colonies, etc., is—America and West Indies. Bermuda, £139,842; Halifax, W.S., £125,547; Jamaica, £104,023; Windward and Leeward Islands, £90,467; Bahamas, £4,214. South Africa: Cape Colony and Natal, £293,330; St. Helena, £12,986; Mauritius, £50,984; West Coast of Africa, £57,155. China, Ceylon, etc.: Hong Kong, £140,333; Straits Settlements, £103,725; Ceylon, £94,914. Mediterranean: Gibraltar, £324,594; Malta, £471,344; Cyprus, £47,001; Egypt, £227,122. **Army recruiting.** The effective strength of the Army by last returns published from the War Office June '91 was 202,116 non-commissioned officers and men, as compared with 201,848 in the previous year. But at the end of '90, we were short of the prescribed establishment—deducting a deficiency in the Colonial Corps arising from causes that are no value in the way of general argument—by some 2,306. The only corps which are satisfactorily manned are the Royal Engineers, and the Departmental Corps, for which an adequate supply of eligible recruits is generally secured. The recruiting for the Cavalry is satisfactory, corps being nearly full, but there has been a difficulty in filling the ranks of one or two medium regiments needing superior physique. The Artillery, although its wants are fairly met—the gross strength of the corps being within seventy of its establishment—is deficient in Garrison Artillery, whose duties require men of larger mould, to the extent of about 400. The Infantry of the Line is some 1,700 short of its establishment. In the Guards 404 of the men whose three years' colour service expired went to the Reserve in '90-91, and 402 extended their Army service to seven years. In the Royal Engineers, Army Service Corps, and Medical Staff Corps, a larger proportion extend their service, the number being 766, as compared with 631 who passed into the Reserve at the end of their three years. But while these corps are full, the Brigade of Guards are shown to want 367 men to complete the establishment. No relaxation in the general standard has been

made of late, but the relaxations authorised in the year '89 are still in operation. The reports of the general officers commanding districts are for the most part unsatisfactory, as regards the physical efficiency and maturity of the recruits. The proportion of rejections is about 366 per 1,000. The number of Militiamen joining the Regular Army in '90 was 12,646, of whom about 47 per cent. joined the territorial regiment. The Volunteers contributed 1,805 men to the Regulars, a number not materially varying from that of each of the preceding five years. Recruiting in Ireland is progressing, but, on the other hand, the numbers raised in Scotland have not nearly sufficed for the requirements of the Scottish regiments, which, accordingly, have recourse to English districts. The proportion of recruits to 10,000 contributed by the three countries respectively is—England, 8·4; Ireland, 7·6; and Scotland, 6·01. Fraudulent enlistments appear to be on the decrease, while desertions and discharges remain about the same as in recent years. **The general state of recruiting.** The effect of the continued exodus of the working classes into the great industrial centres is but too plainly marked by the decreasing numbers contributed by the rural districts. In the hope of stimulating local enlistment, an increased rate of levy money was granted in the year '89 to ordinary recruits detached from head quarters: but the increase in numbers has since proceeded, with hardly an exception, from a few of the largest towns, demonstrating clearly that the idea of a territorial army such as it has been sought to create is impossible under the present system of voluntary service. London, which is naturally the most important of our recruiting centres, heads the list with 5,032 recruits, as against 4,660 obtained in the previous twelve months. This is the largest number ever produced by the metropolis under the short service system, and was obtained in face of diminished returns of pauperism. Of the 2,893 recruits raised for the Cavalry, London gave no less than 1,004, the men going to the mounted service of their own free will. The London recruit, it is satisfactory to know, compares favourably in point of physique with the recruits raised elsewhere, and "in the matter of intelligence is superior." With regard to our probable requirements in the immediate future, the Inspector-General of Recruiting estimates in his last report that in each of the next three years we shall want 34,000 recruits for the Regular Army, and he does not conceal his opinion that this supply cannot be obtained under existing conditions without having resort to immature lads, not fulfilling what he considers the not exacting conditions of eighteen years of age, 5 feet 4 inches height, 33 inches chest measurement, and 8 stone 3 lb. weight. Military service does not offer the same material advantages as "the average wages an able-bodied young man can readily obtain." The recruiter must content himself with an inferior article, and recent measures have "made no appreciable addition to the number of recruits up to standard. The maintenance of the Army at its established strength, and more especially the furnishing of the reliefs for India, which must be composed of trained soldiers of twenty years of age, "becomes a pressing difficulty if immature lads are accepted as recruits." The Inspector-General's view of the remedy may be gathered from the concluding paragraph of the report:—"Remedial measures, possibly involv-

ing important issues not falling within the scope of this report, would not be justified if the causes of the difficulty were of an unstable or fleeting nature, such as the fluctuations of the labour market; but it must be borne in mind that the pay, and its equivalent, of the soldier was adjusted in bygone days, when every man served on until entitled to a pension, and that, while a vast improvement in the average rate of wages for unskilled labour has in the meantime been secured to the working classes, the pay of the private soldier, except in the grant of deferred pay, has undergone no material alteration." The subject, indeed, was considered of so much importance that the Secretary of State for War appointed a committee early in the Session to review the whole question. The duties of President were entrusted to Colonel Lord Wantage, V.C., an officer who served with the Scots Guards in the Crimea, was Financial Secretary of the War Office for some time, and is now a prominent Volunteer Colonel, as well as a leading spirit in connection with the National Association for the employment of discharged soldiers and Reserve men. The committee was still sitting at the time we went to press. A return of the First Class Army Reserve shows that of the 59,280 men of the First Class Army Reserve borne on the rolls at the commencement of this year 9,742 are entitled to their discharge during '91 and 10,769 in '92. Of the total of 59,280, 34,895 are under 30 years of age, 20,940 between 30 and 35, 3,077 between 35 and 40, 308 over 40, and of 60 the age has not been reported. In '93 and '94, 25,547 of the men now in the First Class will complete their time, the number gradually diminishing up to '91, when of the men included on the 1st January of this year only two will be left for discharge. Of the Second Class Army Reserve, a rapidly decreasing body, there are now but 953 left, 940 of whom are over 40 years of age; 792 are enrolled pensioners, the remainder belonging to the class 2 of '67 and the reserve of '59. In the cavalry the proportion of Reserve is 4,000—400 above the total shown a year ago; the Royal Artillery Reserve at 5,000, is greater by 1,000 men than it was then; the Royal Engineers, however, have 1,300, the same Reserve as before, though the Railway and Telegraph Reserves have since then been added. The Foot Guards, whose colour service is six years, have now the large reserve of 3,600 men for seven battalions. The Reserve of the Line regiments, Rifles and Highlanders, is 37,700. The Army Service Corps and the Medical Staff Corps have also increased. The "Section B," representing the men first to be called upon for service, shows the very substantial addition of 3,000 men, from 42,500 to 45,500; the "Section C" has decreased from 5,500 to 4,400; and the "Section D" has gone up from 4,500 to 6,800. Only four of the Cavalry regiments have a reserve of less than 100, and some exceed 200. The Horse Artillery has 900 reserve men, the Field Artillery 2,600, and the Garrison 2,000. The Grenadier Guards—three battalions—have the largest reserve amongst the Infantry, nearly 1,600 strong; the Rifle Brigade—four battalions—has 1,200; the Kings Rifles—also four battalions—nearly 1,000; and no Infantry regiment goes below 3,000. The Second Class Army Reserve is nearly extinct, having gradually, but steadily dwindled down to about 1,000 men. **Distribution of the Army.**—The most recent return of the distribution of the Forces at home

and abroad, shows that the number of troops has increased in comparison with the strength at the time the previous return was issued. The increase amounts to about 12,000 men, there being now slightly over 211,000 officers and men on the rolls, to compare with less than 210,000 in the last return. The 211,000 is a greater total by 11,000 than that of five years back. The Cavalry are reckoned at 19,000; the Artillery of all kinds at 35,400; the Engineers at 7,300; the Foot Guards and Infantry of the Line at 140,000; the Army Service Corps at 3,400; the Medical Staff Corps at 2,400; and the Ordnance Store, Armourers, and Ordnance Artificers Corps at 1,200; the remainder to complete the 211,000 being made up of the West India, Maltese, and Colonial Corps. By this calculation it appears that the Artillery, Engineers and Infantry have increased in strength, while the Cavalry and Departmental Corps remain as they were a year ago. All the regular troops being now chiefly confined to the British Isles, India, and the Crown Colonies, the great territories of Canada and Australia practically have no imperial troops save about 1,400 in Nova Scotia; but with these colonies eliminated, the remaining territory is so extensive that it leaves the proportion at about one soldier for every ten square miles of home, colonial and Indian territory—a proportion altogether inadequate were it not supplemented by local troops, varying in quality from the well-trained Indian native army, and the excellent troops of Canada and Australia, to the often loosely held Militia of the minor colonies, and making up a total which in its entirety is unknown. India always employs a very large proportion of the British Army, and the force under the command of Sir Frederick Roberts is now rather smaller than it was a year ago, numbering about 73,000, the reduction being due to the greater order prevailing in Burmah. Bengal invariably absorbs the greater portion of the European garrison, and by recent calculation there were in that portion of India 45,500 officers and men, representing six regiments of Cavalry, 51 batteries of Artillery, and 33 battalions of Infantry. In Bombay there are 12,500, including one regiment of Cavalry, 21 batteries of Artillery, and 9 battalions of Infantry. Madras, which includes the forces in Burmah, has nearly 15,000 European troops, a greater number than twelve months ago, when, however, there was a Burmah Field Force still in existence as a distinct organisation. The Madras establishment consists of two Cavalry regiments, 10 batteries and 11 Infantry battalions. Each of the three presidencies has also a company of Royal Engineers and a detachment of the Corps of Armourers. At home the regular troops in Ireland numbered nearly 27,000, reduction being shown chiefly in the Dublin and Cork commands, the former having now 13,500 soldiers, and the latter 9,000; the Belfast division remaining at a little over 4,000. The composition of the troops under Lord Wolsley's command is six regiments of Cavalry, 10 batteries of Artillery, 5 companies of Engineers, and 26 battalions and 8 depots of Infantry, besides Artillery of the Coast Brigades and depots, divisions of the Medical Staff, companies of the Army Service Corps, and numerous departmental details. In Scotland the number of regular troops is always much smaller than in Ireland, but the total is at present about 300 higher than it has been for some time. The troops consist of one regiment

of Cavalry, 2 battalions and 10 depots of Infantry, a battery of Artillery, and small detachments of other troops. In England and Wales there are 73,000 regulars, including the depots of the departmental corps at Woolwich, Aldershot and Chatham. The 73,000 consist of 12 regiments of Cavalry, 7 batteries of Horse Artillery, 27 of Field, 1 of Mountain, and 33 of Garrison, 24 companies of Engineers, besides the Bridging and Telegraph battalions and depots, 41 battalions and 52 depots of Infantry, 23 companies of the Army Service Corps, 11 divisions of the Medical Staff Corps, and the bulk of the Ordnance Store, Ordnance Artificers and Armourers Corps. Aldershot is naturally the largest military district, with 14,000 men; but the Home (London) district contains 8,000, the Western (Devonport) nearly 7,000, and the other smaller numbers. Woolwich has the largest proportion of Artillery, and Thames, (Chatham) of Engineers, the depots of these services being at those places. The Channel Islands do not employ many regular troops for garrison purposes, there being less than 2,000, consisting principally of Artillery and Infantry. The British garrison in Egypt has been reduced lately by 1,000 men, and now stands at little more than 3,000; the greater portion of the reduction being caused by the withdrawal of one battalion of Infantry. Of the ordinary Mediterranean garrisons there are at Gibraltar 5,000 of all ranks, and at Malta nearly 8,000; while at Cyprus there are 600. In South Africa the force has been still further reduced to 3,000; in the West Coast Settlements it is 700, the greater portion being coloured West Indian soldiers, and at the Mauritius about 700. Hong Kong has a garrison of 1,700; the Straits Settlements, 1,400; Ceylon, 1,200; Canada, 1,400; the West Indies, 2,300; and Bermuda, 2,600, the total here having been increased considerably by the addition of the 2nd Grenadier Battalion. In several of the colonies there are local regular troops, as at Malta a special Artillery corps, and on the West African Coast, Mauritius, Ceylon, Hong Kong, the West Indies and Singapore native companies of Artillery and Infantry. **Regimental establishments of the Army** are as follows for the present financial year: Cavalry 433 of all ranks and 275 horses: Three regiments of Household Cavalry, 706 of all ranks and 424 horses: 4th and 5th Dragoon Guards, 2nd Dragoons, 4th Hussars, 9th Lancers, 19th and 20th Hussars—all on home service. 630 of all ranks and 525 horses, with depot of 127 of all ranks and 37 horses: 1st, 2nd, 3rd and 7th Dragoon Guards, 5th Lancers, 7th Hussars, 16th Lancers—depot 106 of all ranks only—18th and 21st Hussars, all in India. 627 of all ranks and 350 horses: 1st Dragoons, 3rd Hussars, on home service. 552 of all ranks and 325 horses: 15th Hussars, on home service. 498 of all ranks and 360 horses, and depot and 148 of all ranks and 35 horses: 11th Hussars, in South Africa. 463 of all ranks and 217 horses; 17th Lancers, on home service, but one squadron in Egypt: 415 of all ranks and 270 horses; 6th Dragoon Guards, 6th Dragoons, 8th Hussars, 12th Lancers, 13th and 14th Hussars. Foot Guards, 845 of all ranks: 1st Scots. 839 of all ranks: 1st Grenadier, 1st Coldstream and 2nd Scots. 833 of all ranks: 2nd and 3rd Grenadier and 2nd Coldstream. Infantry of the Line—1,009 to 1,112 of all ranks, battalions in India: 2nd Royal Scots, Malta; 1st and 2nd Queen's, home and India; 1st Buff's, India; and 2nd Royal, Lan-

caster, India. Those in the Mediterranean which are on the 1st Army Corps, and those at home which are first for "foreign service": 892 of all ranks. Battalions in the Mediterranean and which are not in 1st Army Corps, and at Bermuda, Cape, Ceylon, Egypt, and West Indies: 801 of all ranks. Battalions on home service, not first for service. **The Army in India.** The actual strength of the army in India by last returns was:—British troops, 71,083 men; cavalry, nine regiments; Artillery, 88 batteries; Infantry, 53 battalions; Royal Engineers, 3 companies. Native troops, 149,558 men; Cavalry, 43 regiments; and Infantry, 152 battalions, making a total of 220,641 men. The force employed in Upper Burma varied from 12,483 men at the beginning to 12,928 at the end of the last financial year. The number of volunteers enrolled was 21,725, of whom 19,093 were returned as efficient, showing an increase of more than 1,000 "enrolled," and 1,500 "efficient." The net expenditure on the Army was 19,733,000 rupees. **Army remounts.** It is satisfactory to note that, according to some returns furnished to the War Office by the Remount Department, the efforts which have lately been made to increase the supply of riding and draught horses for use in the army have been to a considerable extent, successful. The military authorities, we learn, now possess for all the different branches of the army about 25,000 horses and mules. The proper establishment, as set down in this army estimates, is a little over 26,000, so we are still a number of animals short; but, notwithstanding this, the Government possess a thousand more mounts than they did this time last year. The cavalry requirements naturally absorb more of the animals than any other service, having about 12,500 in the 31 regiments; but the Royal Artillery also takes a large share, its total reaching to nearly 11,000. The number with the Army Service Corps is less than 1,500, and the Engineers, Infantry, Medical Staff Corps, and minor requirements use up the remainder. In the Artillery nearly 3,000 riding and draught horses are used by the 20 Royal Horse Batteries, with their depôts, riding establishment, and staff; and not far short of 8,000 by the 80 field batteries, more than 6,000 of the combined totals being in India. In the cavalry service the stock of horses is lamentably short, the supply being only sufficient to allow of two-thirds of the men to be mounted at one time. There are over 18,000 non-commissioned officers and men in the cavalry with but 12,500 mounts between them, and though in every regiment there is always a large percentage of men in hospital or doing dismounted duty, the number is not sufficient to represent the difference between the totals of the men and the horses, some of the latter also being usually in hospital. In India, where always every means are supposed to be taken to keep the cavalry corps as completely horsed as possible, the difference is still greater. It is an old complaint, the scarcity of horses for the army, but the War Secretary evidently relies on his plan of registration to supply all wants in any emergency: but we must confess we have not the faith in his plan Mr. Stanhope has. **Terms of Enlistment.** A recruit is enlisted for any regiment of Cavalry or Infantry for which the recruiter to whom he offers himself is authorised to raise men, or he may enlist for general service in the Cavalry or Infantry, in which case he is appointed to a Cavalry or

Infantry regiment, but is liable to be transferred within three months of the date of his attestation to any corps of the same arm of the service. The Army Service Corps is composed of drivers, clerks, and artificers. Recruits for the corps will, as a rule, be trained as mounted men, and when dismissed drill, with those who are qualified as clerks, bakers, butchers, wheelers, saddlers, shoeing smiths, carriage smiths and drivers, will be employed as far as possible, in those trades. The Medical Staff Corps is under the immediate command of the Director-General of Army Medical Department, and is intended for the performance of duties connected with the management of military hospitals, and for rendering assistance to sick and wounded in time of war. The Corps of Ordnance Artificers is established for the purpose of providing qualified artificers for the repair and maintenance of the material belonging to the Garrison Artillery, Siege Train, etc. Men enlisted for the corps are required to serve on probation for a period not exceeding twelve months. They must be men of good character, and must be competent "fitters," with some knowledge of mechanical drawing. Recruits for the Post Office Corps are selected from the members of the Post Office Rifle Volunteers, 24th Middlesex R.V.C., who on enlistment will cease to belong to that Volunteer regiment, but will remain attached to it as supernumeraries. The requirements as to age, height, chest measurement, and weight for recruits are: Age, limits of age for all arms of the service, except those hereafter named, 18 to 25 years; Corps of Ordnance Artificers, 21 to 30; Medical Staff Corps, 18 to 28; Post Office Corps, 19 to 30; Military Mechanists, R.E., 21 to 30; Post Office Telegraphists, R.E., enlisted for immediate transfer to Army Reserve from 24th Middlesex R.V.C., 19 to 30. Men who have been discharged from the Army, Marines, Navy, or Irish Constabulary may re-enlist upon the age of 28, provided they were not discharged for misconduct or as invalids, or not pensioners, and did not receive bad characters on discharge. They are, however, required to refund any deferred pay they may have received. The height for would-be recruits varies according to the arms of the service. In Heavy Cavalry it is 5 ft. 8 in. to 5 ft. 11 in.; in Lancers, 5 ft. 7 in. to 5 ft. 9 in.; in Light Cavalry, 5 ft. 6 in. to 5 ft. 8 in.; in Royal Artillery, 5 ft. 6 in.; and upwards for gunners, and 5 ft. 4 in. to 5 ft. 6 in. for drivers; in Royal Engineers, 5 ft. 6 in., and upwards for sappers, and 5 ft. 4 in. to 5 ft. 6 in. for drivers; in Foot Guards, 5 ft. 8 in. and upwards; and in Infantry of the Line, 5 ft. 4 in. and upwards. The minimum chest measurement is fixed at 33 in., and the minimum weight at 115 lb. Terms of service: Long service, i.e., 12 years' Army service; or short service, i.e., 7 years' Army and 5 years' Reserve service, which is extended to 8 years' Army service and 4 years' Reserve service, if the period of Army service expires whilst the man is serving abroad. In the Foot Guards, short service consists of 3 years' Army service and 9 years' Reserve service. Re-engagement: Soldiers serving with the colours, who are medically fit for the service, are permitted to re-engage under the following conditions:—Warrant officers and sergeants after 9 years' service have the privilege of re-engaging in order to complete 21 years' service for a pension. Corporals, bandsmen, and artificers are permitted to re-engage on the

recommendation of their commanding officers. Other soldiers, if of good character and recommended by their commanding officers, are allowed to re-engage during their twelfth year of service. **Deferred pay.** An addition of £3 a year is made to the daily pay of a soldier during the first 12 years of his Army service; but the issue of this is deferred until he completes his Army service, whether on final discharge or transfer to the First Class Army Reserve. Soldiers who enlist for 3 years only, and do not extend their Army service beyond that term, are not, however, entitled to any deferred pay; and non-commissioned officers who re-engage for a second period of service are granted deferred pay up to 21 years service, if they are not reduced for misconduct. Pensions: A soldier serving for 21 years is entitled to a pension for life, varying from 1s. 1d. to 2s. 9d. a day, or if a warrant officer from 3s. to 5s. a day. Service in Army Reserve: Men enlisted for short service, who are not permitted to extend their Army service, are transferred to the Army Reserve on expiration of their period of service with the colours. Men serving at home may, should the exigencies of the service permit, be allowed to pass to the Reserve after five years' service. While in the Reserve a man receives pay at the rate of 6d. a day: viz., 4d. a day ordinary pay and 2d. a day deferred pay. They are liable to be called up annually for training for a period not exceeding 12 days or 20 drills. While in the Reserve they are liable to be recalled to the colours in case of national danger or great emergency, and if so recalled are treated in every respect as soldiers, and are allowed to regain the rank they held on transfer to the Reserve and to resume the good conduct pay they were in possession of when transferred. Discharge: A soldier during the first three months of his service who may desire to leave the Army may claim his discharge on payment of £10. After three months the sum is £18, and the permission of the officers commanding the regiment, battery, or battalion, is necessary. **Crime and Court Martial.** Of the military offences charged against soldiers at home during last year, 5,814 court martials were held for the trial of 9,153 offences, 2,086 of the latter being for making away with necessaries, 1,514 for desertion, 2,086 for absence without leave, 352 for fraudulent enlistment, 809 for violence and disobedience to superiors, 829 for minor insubordination, 146 for quitting or sleeping on post, 333 for drunkenness on duty, 306 for drunkenness, 403 for disgraceful conduct, and the remainder for miscellaneous offences. In all 5,681 sentences were given by court-martial, punishment being inflicted in 5,590 cases, the sentences quashed in 24 cases, and wholly remitted in 67. Beside the trials for drunkenness 4,684, or 46 per 1,000 of the average home strength were fined for drunkenness, 8,053 fines in all being inflicted; 2,769 men were fined only once, 1,061 twice, the numbers diminishing to four men fined nine times. **Mobilisation.** A scheme has been drawn up for the mobilisation of the forces. Under this arrangement one Army Corps will always be held in readiness for embarkation should the despatch of an expedition be rendered necessary. The regiments are maintained at an establishment of—Cavalry from 628 to 706 of all ranks, and 350 to 424 troop horses, Foot Guards 840 of all ranks, Infantry 1000 to 1112 of all ranks. Their Reserves are liable to be called

up at any moment, and their Militia battalions would be embodied on the despatch of the Line battalions from England. Every arrangement has been made so that the regiments might be "put on board" with the utmost despatch, and with this view they are kept as much as possible consolidated—i.e., not on detachment duty. They occupy stations at Aldershot and such places as would enable them to embark without delay, and are classed among the corps "firs for foreign service," i.e., in readiness for embarkation for India or the Colonies, as required. **The Barracks Bill.** The detailed expenditure proposed under the Barracks Bill, for the carrying out of which £4,100,000 was recently voted by Parliament, is as follows:—Aldershot, rebuilding of main part of camps, and addition to camps and permanent barracks, £1,475,000; the Curragh, rebuilding of large part of camp, £420,000; Shorncliffe, rebuilding of large part of camp, £165,000; Colchester, part rebuilding and improvements to camp, £50,000; Woolwich, rebuilding huts, etc., £60,000; Strensall, additions to camp for training, £20,000; site undetermined—new cavalry barracks to replace that in Manchester, with land necessary, £145,000; Dublin, new infantry barracks, completion of, and addition to other barracks, £286,000; Belfast, new barracks and concentration of troops, £101,000; Portsmouth, new barracks for Royal Artillery and completion of infantry barracks, £143,000; Plymouth, reconstruction of citadel and other barracks for concentration of troops, £120,000; London, new married soldiers' quarters, and improvements at Regents Park Barracks, £53,000; Woking, acquisition of prison, etc., for barrack purposes, £57,000; Enniskillen, accommodation for a whole infantry battalion, £50,000; additions and improvements in various barracks in Great Britain and Ireland generally, to enable them to contain complete battalions, etc., £104,000. Colonies: new barracks, etc., at Malta, £195,000; new barracks at Cape Town, £80,000; additions at Gibraltar and Bermuda, £82,000. Married soldiers' quarters, in reduction of the present lodging allowances, £294,000; contingent expenses, £200,000—total, £4,100,000. **The new Magazine Rifle.** There has been much discussion in Parliament and elsewhere, on the subject of our new service rifle. As a result a committee was appointed to report upon Mark I., and suggest improvements. Of this committee Lieut.-General Sir Reginald Gipps, K.C.B., was appointed President. The committee, after sitting some time, issued a report and recommended certain alterations to be carried out in Mark II., which is now being manufactured. The new rifle weighs, with magazine empty, 9 lb. 8 oz. The sword bayonet weighs 15½ oz., its scabbard 4½ oz.; the magazine empty, 4½ oz., filled 13 oz.; the rifle is 4 ft. 1½ in. long, or with sword bayonet, 5 ft. 1½ in. long, the length of the sword bayonet being 1 ft. 4½ in. The breech action is on the "bolt" system. Covers are fitted to the bolt and head to protect the action from sand and dirt. A safety catch secures the rifle from being accidentally discharged if at full cock. The barrel is 30½ in. long, the calibre .303 of an inch; the rifling is in 7 grooves—¼ in. deep, on the Metford system, the twist being left-handed, 1 turn in 10 in., or in 33 calibres. The magazine will contain 8 cartridges, and may be filled when in position, in the rifle or when detached, by inserting the cartridges one by

one. A "cut off" is fitted to the right side of the body, which, when pressed inwards, stops the supply of cartridges from the magazine, so that the arm may then be used as a single-loader. The rifle is provided with two sets of sights; the ordinary sight is graduated up to 1,900 yards. There are also extreme range sights which provide for ranges from 1,800 to 3,500 yards, so that the rifle may be used at just two miles. Unlike the Martini rifle, the new weapon is being manufactured with stocks of one uniform length, the butt of the magazine rifle being just $\frac{3}{8}$ in. shorter than the short-pattern Martini butt. **Artillery reorganisation.** An important change was carried out from August 1st, '91, affecting the organisation of the artillery arm, when a separation was made of the long existing Royal Regiment of Artillery, and the Garrison or Fortress Artillery was constituted a distinct branch, the term company being substituted for battery. In order to attract officers to the Garrison branch, the pay was at the same time improved by the addition of "armament pay."

Army Schools Act, 1891. See SESSION, sect. 48.

Arnold, Sir Edwin, K.C.S.I., poet and journalist, was b. 1832. Educated at King's School, Rochester; King's Coll., London, and Univ. Coll., Oxford, where he graduated, '54. He was subsequently appointed second master of King Edward the Sixth's School, Birmingham, and afterwards proceeded to India as Principal of the Government Sanskrit College at Poona. On his return to England, in '61, he joined the *Daily Telegraph*, with which he has been connected for many years. Sir E. A. has devoted much attention to the study of Indian literature. His best known works are "The Indian Song of Songs," a metrical paraphrase from the Sanskrit, and "The Light of Asia," an epic poem upon the life and teaching of the great Indian prophet, Buddha, which has been set to music by Mr. Dudley Buck. Sir Edwin's later productions include a volume of poems entitled "Lotus and Jewel," "Selected Poems: National and Non-Oriental," "Death and Afterwards," "With Sa'di in the Garden," and "In my Lady's Praise." Created a Companion of the Star of India '77, and K.C.S.I. Jan. '88. He started in Aug. '89 on a tour round the world. A record of his travels appeared in the pages of the *Daily Telegraph*, and was republished in Oct. '91 as a book, entitled "Seas and Lands." His new poem, entitled "The Light of the World," appeared in the early part of the year. He returned to London in the spring, but visited the United States on a lecturing tour in October.

Art in '91. Our record of the Art of 1890 began with the announcement of a gift of pictures to the nation by Mr. Henry Tate, to form the nucleus of a National Gallery of British Art. The record of '91 may fitly be introduced by mention of Mr. Henry Tate's further offer of £80,000 for the erection of a suitable gallery at South Kensington, subject to certain conditions. These conditions were accepted by the Government, but the choice of the site in Exhibition Road aroused considerable opposition in certain quarters—particularly from scientists—who had regarded the vacant land as destined for their uses. An alternative proposal to acquire a site on the Thames Embankment fell through, so, in the absence of other developments, South Kensington will be the home of the National Gallery of British Art. The interference of the

House of Lords with the Royal Academy must be noted as an incident of the year. When it became known that Good Friday had been appointed as a sending-in day, loud were the complaints from artists, both from religious motives and on account of the Easter holiday. The Royal Academy, however, ignoring the popular voice, made no sign till the eve of sending-in, when the House of Lords considered the question. Then it was announced that porters, carriers, and frame-makers would not be asked to work on Good Friday. Another feature of the year was the inauguration of the **Society of Portrait Painters.** The exhibition was held late in the summer, at the Institute, when we renewed acquaintance with several old friends and made some new ones. It is understood that the next exhibition will not partake so much of the character of a *réchauffé* of old successes. Hardly had the Grosvenor Gallery ceased to be a centre for the diffusion of High Art, when it was announced that another institution would rise in the interest of the old Grosvenor clientele—the Grafton Gallery; but the opening will not be just yet. Another incident of the year was an attack on Professor Herkomer, *apropos* his book entitled "An Idyl." His opponents maintained that certain of the illustrations described in the prospectus as "etchings" were not etchings at all, but simply reproductions of pen drawings. Launched in the columns of the *National Observer*, the correspondence, after a long and lusty life, finally expired in letters to *The Times*. The discussion, perhaps, was hardly to the advantage of the Professor.—The twenty-second exhibition of **Old Masters** at the Royal Academy proved not a whit less interesting than its predecessors; in fact, it may be said to have been rather more so, by reason of a speciality—one hundred and sixty drawings illustrating the progress of water-colour art in England. Cozens, Girtin, David Cox, William Hunt were among those represented, and special prominence was given to the brilliant Oriental studies of J. F. Lewis, and the graceful and pathetic art of Fred. Walker. Good examples of Sir Joshua Reynolds, Gainsborough and Romney were not lacking in the exhibition; Velasquez had three pictures attributed to him, and, for the rest, there were many Dutch, Italian, and Flemish works.—At the New Gallery a **Guelph exhibition**, with many portraits, miniatures and relics, aroused fully as much interest as its predecessors, and that is saying a good deal. The opening of the **Royal Academy** was heralded by rumours that a result of the Cimmerian darkness of the previous winter would be a paucity of good pictures, and also that some of the younger men, particularly the Newlynians, were badly hung. The former proved to be a false alarm—the latter was true enough. The exhibition itself may be described as one of a fair average. The popular success was undoubtedly "The Doctor," by Mr. Luke Fildes, and few would deny to Mr. Sargent's "La Carmencita" the right to be styled the cleverest painting. Sir Frederick Leighton presented two examples of his peculiar art "Perseus and Andromeda," and "The Return of Persephone." From Sir John Millais we were favoured with another Scottish landscape, "Lingering Autumn." Mr. Orchardson was represented by a small genre picture, called "An Enigma" and portraits. Mr. Alma Tadema, in "An Earthly Paradise," came within measurable reach of painting the most

popular picture of the year. Not so with his presentment of Mr. Balfour. Mr. Herkomer, as usual, was responsible for several portraits, and a not very pleasing picture of a family on strike; Mr. Gow again rendered an historical subject; Mr. David Murray, the new associate, showed distinctly to advantage; Mr. Solomon was represented by a very taking "Judgment of Paris," Mr. Waterhouse, with "Ulysses and the Sirens," once more showed his capabilities; Mr. East was delicate as ever; Mr. Dicksee painted "A Crisis" and an imaginative "Home of the Winds"; Mr. Hacker, a clever artist, steadily advancing, was represented by a beautiful rendering of a Scriptural subject. The dense crowds that thronged the galleries in the last week, when the exhibition, as usual, was open in the evening, showed that the Academy is still far-and-away the most popular Art institution in the country. The purchases by the Trustees of the Chantry Bequest included "St. Elizabeth of Hungary's Great Act of Renunciation," by Mr. P. H. Calderon, R.A., for £1,200. The announcement of this purchase raised a storm of indignation in the Romish papers, and afterwards in the columns of the *Times*. It was alleged that the picture was not historically accurate, and that it was offensive to a large number of devout people. The painter defended himself and explained, but his explanation did not hinder the leading Roman Catholics from presenting a memorial to the President of the Royal Academy, asking that the picture should not be exhibited in the Chantry collection. To this demand the President returned a courteous but emphatic negative, and there the matter ended. Other Chantry purchases were "Pandora," a statue by Mr. Harry Bates, and a picture called "The Winter Sun in Wild Woodland," by Mr. North, from the New Gallery. The hanging committee consisted of Mr. Pettie, Mr. Faced, Mr. Peter Graham, Mr. Herkomer, and Mr. Horsley.—The *New Gallery*, in its Spring Exhibition, made no attempt to draw to the fold the exponents of the newest phases of British Art, but relied almost exclusively on the old giants. Mr. Burne Jones was represented by a huge and curious "Star of Bethlehem" that has since found a home in the Birmingham Art Gallery, and a decorative subject called "Spousa de Libano." Mr. Watts sent "The Deluge: the Forty-first Day"—a familiar work to visitors to his studio, where it has hung for some years. Mr. Saunt was represented by a remarkable portrait of a girl, in white robes. Mr. Richmond was given an important position for an allegorical work, "Amor Vincit Omnia"; likewise Mr. Alma Tadema, for a typical picture "Love or Idleness." Mrs. A. L. Swynnerton gained no small praise for a rendering of the Cupid and Psyche legend, and Mr. Swan for a portrait of Mrs. Hamilton. Mr. Waterhouse showed a "Circe." The best landscape of the Exhibition, if not of the year, was undoubtedly Mr. Adrian Stokes' "The Setting Sun." Some sensation was caused at the private view of the Royal Academy by the news that Professor Herkomer, R.A., had been appointed to the duty of purchasing works of art for the *National Gallery of Melbourne*. The works selected by Mr. Herkomer were: "Ulysses and the Sirens," by J. W. Waterhouse, A.R.A.; "The Crisis," by Frank Dicksee, R.A.; and a cattle picture, by R. Meyerheim. Another noteworthy purchase, somewhat later in the

year, was that of Mr. Whistler's portrait of Carlyle, by the Corporation of Glasgow.—The smaller public exhibitions included the Old Water Colour Society's, the Institute of Painters in Water Colours, the Institute of Painters in Oils, and the Royal Society of British Artists, and need not detain us long. Year by year, and twice a year, they throw open their doors, the Old Water Colour Society, at least, seldom falling below the level of merit its veterans lead us to expect. The old complaint of overcrowding was again heard at the Institute, but the authorities have apparently made up their mind never to be less than generous to the outsider. No falling-off was shown in the exhibition of the *Royal Society of Painter-Etchers*, but from the attendance it would seem that the general public are not yet educated to appreciate original etching. The *New English Art Club* returned to their old quarters in Piccadilly, and, though the defection of certain artists was somewhat noticeable, there was no lack of experiment, eccentricity, and talent.—In the autumn of the year, certain galleries at the *South Kensington Museum* were again filled with selected drawings in the National Art Competition of Schools of Art and Art Classes. Two thousand and fifteen works were exhibited, the prizes consisting of gold, silver, and bronze medals and books. Throughout the year, with the exception of the months of August and September, when a remarkable lull takes place in matters artistic, the private galleries held, as usual, a succession of small exhibitions. It is impossible to refer to all, but we may mention, at Messrs. Dowdeswells', a collection of pictures by masters of the Early English school, including examples of Crome, Cotman, Constable, Morland, and Bonington. In these galleries, also, Mr. Mortimer Menpes exhibited the work he had accomplished in India, Burmah, and Cashmere. At Goupil's was held an interesting exhibition of the works of Mr. George Hitchcock, the American painter; some examples by Mr. John Lavery, a prominent member of the Glasgow School of Colourists, and a collection of the works of Diaz, the French painter. The galleries of the *Fine Art Society* were crowded for many weeks in the early spring by admirers of Mr. Charles Keene, many of whose *Punch* drawings were there collected. Mr. A. N. Roussoff was again represented here, this time with water drawings of Cairo and the Nile. Another exhibition of Mr. Walter Crane's designs for book illustrations and wall decorations was also held. Among other artists represented at this gallery were Miss Kate Greenaway, Mr. Hugh Thompson, and Mr. Alfred Parsons, who exhibited paintings and drawings of the gardens of England. An interesting collection of examples from the stores in the *Print Room of the British Museum* were hung in the new galleries of that institution. Roughly speaking, they illustrated European art during the last five hundred years, as expressed by pen and pencil. Messrs. Tooth and Mr. Maclennan also held their usual exhibitions of pictures by various English and Continental artists.—At last there is some chance of the completion of the *South Kensington Museum* buildings. From several plans submitted, the committee decided in favour of those by Mr. Aston Webb. The cost of the building is estimated at between £300,000 and £400,000.—Honours to artists have been many and various. Early in the year Mr. Thomas Brock and Mr.

Andrew Gow were elected to full membership, and Mr. David Murray to associatehip, of the Royal Academy. In the final voting for the first R.A. chair, Mr. Brock secured 29, and Mr. A. Gilbert 24 votes; for the second vacancy, Mr. Gow received 34, and Mr. Gilbert 10. For the vacant associatehips nearly 150 painters, sculptors and architects were nominated. Messrs. Stanhope Forbes, A. Moore, Swan, and Lawson approached nearest to Mr. David Murray. Later in the year Mr. Frank Dicksee was promoted to the rank of Royal Academician. He had been an Associate for ten years. Over eighty candidates presented themselves at an election to the **Old Water Colour Society**, from which number there were chosen Mr. Hughes, Mr. Rooke, and Mr. Fripp. At the same time the Earl of Carlisle was elected an honorary member. At the **Salon**, Mr. A. Chevallier Taylor was granted a medal of the second class for his picture "The Last Blessing." Messrs. Guthrie, Brangwyn, and Grier were awarded third-class medals; and Mr. Harry Tuke an honourable mention. The jury of the **Berlin Art Exhibition** awarded Messrs. Stanhope Forbes, Shannon, and A. Waterhouse, R.A., large gold medals; and the smaller gold medal to Messrs. Pettie, Marcus Stone, Colin Hunter, and Onslow Ford. Sir Frederick Leighton was awarded a diploma of honour; Mr. Richmond a distinction equal to a medal of the second class, and honourable mentions were given to Messrs. Alma Tadema, Waterlow, East, Parsons, Aumonier, Haig, Menpes, Masse, Batley, Robinson, Aitchison, Mountford, and George Peto. The jury of the **Munich Art Exhibition** awarded first-class medals to Mr. W. Q. Orchardson and Mr. Melville; and second-class medals to Messrs. David Murray, E. J. Gregory, East, Stott, Vos, Brown, and Roche.—The art obituary of the year includes Mr. Edwin Long, R.A., one of the most popular members of the Academic body; Mr. Charles Keene, of *Punch*; Mr. T. Collier, R.I.; Mr. Keeley Halswelle; Sir William Fettes Douglas, President of the Royal Scottish Academy; Mr. Frank Miles, who had a vogue some years ago with his drawings of ideal feminine heads; Mr. W. Theed, the sculptor; Sir John Steel; and Mr. Paul Naffel, for many years a member of the Old Water Colour Society.—Among provincial items we may note the following: In Edinburgh a new society was formed, the Society of Scottish Artists, started at the instigation of the younger members of the profession. Mr. George Reed was elected President of the Royal Scottish Academy, in the place of Sir William Fettes Douglas. Forty-three persons subscribed £46,000 for the erection of new art galleries in Glasgow. Altogether £120,000 is to be expended upon them. In the latter part of the year Mr. Seymour Lucas was injured in a railway accident in Spain while travelling to Madrid to complete a picture. The retirement of Mr. Wallis, Keeper of the Art Collections at the South Kensington Museum, was announced, and the appointment of Mr. Purdon Clarke in his place. Mr. Wallis died shortly after his resignation. The usual exhibitions were opened in the autumn, including the Royal Society of British Artists and the Institute of Painters in Oil Colours, but they do not call for detailed notice.

Artillery. (A concise history of artillery from early times is given in ed. '87.) On Her Majesty's accession, fifty years ago, all the

guns in use by the army and navy were so simple in construction, and of so few patterns, that they might all be fully and accurately described in a single column of this book. For many succeeding years, and till the introduction of **rifled cannon**, all matters connected with ordnance remained almost in a state of torpor. Since then the wave of improvement and progress, set in motion by that change, has rolled on rapidly, sweeping away in its course nearly everything that was unfit to stand the tests of experiment and comparison. Improved means of forging and working large masses of iron and steel, and consequently of making guns of dimensions which seemed, and indeed were, unattainable ten years ago, have been utilised to the utmost. When the **80-ton gun**, popularly styled the **Woolwich Infant**, made its appearance, it was an object of general admiration, and the opinion was freely expressed that there would be no use in attempting to make a larger gun. While the size, range and accuracy of guns have been greatly increased, progress has been made, *pari passu*, in other directions. The appliances for **mounting, loading and moving big guns** have been so much improved, that all necessary work with them is now done with less expenditure of manual labour than was formerly required to work guns of comparatively small size and weight. An inevitable result of adopting ingenious mechanical contrivances, instead of simple muscular exertion, and of utilising steam and hydraulic pressure in the service of artillery, is **increased complexity in appliances**, and the necessity of far more training and skill of **naval and military gunners**. The power of guns has been enormously increased. What are termed "new type guns" now discharge projectiles with an energy of force greatly in excess of that of the earlier rifled pieces of the same weight. For example, the old type 12-in. gun of 25 tons weight, which was introduced about 1867, discharged a projectile with an energy, as it left the muzzle of the piece, of 7000 foot tons—that is, a force equivalent to lifting 7000 tons 1 ft., or 1 ton 7000 ft. The shell of the new type 9½-in. gun, of from 24 to 22 tons weight, has a muzzle energy of 11,230 foot tons. This result is achieved by increase of length of the bore, and by the use of powder which burns slowly; and while it at no one instant exerts a high pressure, continues to generate gas in such a way as to follow up and press against the shot till it leaves the muzzle to an extent which utilises the full length of the gun. In this development in power England is said to have taken the lead, Captain Andrew Noble, of Elswick, having taken the initiative in working out the question. England, however, was crippled, and kept back in the development of her guns by an obstinate adherence to muzzle-loading, until 1880. Since that date rapid improvement took place. The system of loading at the breech not only favours speed, but also does away with many inconveniences which otherwise attend the use of very long guns, such as running in the guns far enough to reach the muzzle, the provision of head room close to the port, and the actual passage of the shot down the bore. In the keen rivalry which has since obtained between English and continental makers of ordnance the pieces have been overtaxed, and some fatal accidents have occurred both with French and English guns. There are various reasons for this. The treatment of steel for guns is a subtle problem,

and flaws may be produced in the processes of casting, working, and oil hardening, which are very difficult to detect. Then, as to the powder, should anything so far alter its condition as to upset its gradual action, the piece is exposed to a terrible strain, because the charge is much larger than was formerly used. For example, the new type 9 $\frac{1}{2}$ -in. gun mentioned above has a charge of 170 lb., while that of the old type 12-in. gun, of even greater weight, is only 85 lb. Then, again, the slow-burning principle has at times been pushed too far, so that guns have been overstrained, and given way near the muzzle. Another serious difficulty exists. The rush of gas, especially in very large guns, eats out the bore so fast that it is estimated that a very heavy gun will only fire about eighty rounds before relining becomes necessary. These difficulties are being grappled with, but cannot be said to be overcome at the present time. Guns can be made stronger by applying the wire-coil principle, long advocated by Longridge. This is, after long delay, being adopted, and it is hoped that guns on the wire principle may soon be made for the regular supply of the service in Woolwich arsenal. The increased strength obtained on this system is available for greater margin of safety, increase of effect, or decrease of weight of gun as may be deemed most desirable. The largest gun yet made in England is that called the 111-ton gun. Without going into many figures, or quoting any of those calculations which have no attractions for general readers, it may be stated roughly that this enormous gun is 43 $\frac{1}{2}$ ft. long, weighs 110 tons, fires a shot of 1800 lb., with an energy of 57,580 foot tons, implying an amount of work equivalent to lifting the heaviest French armour-clad ship bodily to the height of 5 ft. It has a service-charge of 660 pounds of powder, and the shot will penetrate an armour plate nearly a yard in thickness at 1000 yards. The destructive effects in war of a shot or shell from such a gun must be for the present a matter of speculation, and we must wait for the next great war to realise them. But it may be safely predicted that the shell bursting in an earthwork would act like a mine, and would demolish, like a house of cards, a building that would withstand almost uninjured the explosion of any shell hitherto tried in war. Its shot would pass through and through an iron ship on the sides of which a shot from the Woolwich Infant would make but a slight impression, and from which the old spherical shot would rebound like peas, or crumble like snowballs. The 111-ton gun has, in certain instances, shown a tendency to droop at the muzzle. This has been remedied; but the opinions of naval experts are in favour of smaller guns for sea service. The piece mounted on our newest first-class armoured ships is that of 13 $\frac{1}{2}$ in calibre, weighing 67 tons. This is actually more powerful than the old 100-ton muzzle-loading gun. In field guns we have still several patterns of muzzle-loaders; and seven patterns of breech-loaders, from 20-pounders to 6-pounders. Although the superiority of breech-loaders for horse artillery and field batteries has long been admitted, the complete re-arming of these batteries has been delayed, from considerations of economy. The new 12-pounder, intended at first for horse artillery only, but now issued to field batteries also, is, we are assured, notwithstanding the disadvantage of its excessive recoil, by far the best light field

gun in existence. It weighs only 7 cwt.; and, with a charge of 4 lb., has a muzzle velocity of 1710 per second, and a range, with 25° of elevation, of 7930 yards. In all these particulars it claims to be superior to any foreign gun of similar size and weight. The arming of our horse and field batteries with this gun is now complete. A new 20-pounder has also come in, and is a powerful gun, but it is intended for heavier work than that of regular field batteries. Some, however, would no doubt be equipped with it in time of war. High-angle fire from siege guns has also been much developed, and rifled mortars have an accuracy unattainable by smooth-bores. These are likely to form an important element in coast defence, being mounted with the view of attacking ships' decks. A much more important factor in coast defence is the introduction of the Watkin system of "position finding." On this system a group of batteries are electrically connected, and all directed and fired from a single observing station with such remarkable success and certainty of hitting even a moving object, that one gun is calculated to produce the effect of sixteen fired in the ordinary way. The ranges at which guns of all kinds can be fired with effect have lately been increased to such lengths, that man's unaided vision can no longer trace the full effect of the guns. And here it may be mentioned that a shot from a wire gun, at a high elevation, attained the extraordinary range of 12 miles! The advantage of telescope sights for long distances has been fully proved for several years; but, till the conviction of the expediency of fitting all guns with such sights becomes general among artillery officers, much of the accuracy of fire of our guns will be lost by the adherence to the rough modes of aiming that were only good enough for the erratic old smooth-bores. The objection that telescope sights may be shot away, and are easily damaged, is not a valid one; for when the telescope can no longer be used, the ordinary sights will be available. If wonderful practice can be made with ordinary rifles fitted with telescope sights—and this has been done in war as well as on ranges—what degree of accuracy may not be attained with cannon so fitted when most of the errors caused by defective vision, and all the deviations caused by unsteadiness or nervousness, are eliminated? Scott's telescope sights have been tried for some years, and have been highly approved; but they have a grave defect. They are not constructed to stand the concussion of firing, and must therefore be removed after laying the guns and before firing. Fixed telescope sights are needed to utilise fully the accuracy of all rifled cannon. Captain Grenfell has invented sights which are illuminated by electricity for night firing, which have recently been adopted both by England and other powers. Whether machine guns should be entrusted to artillery, or to cavalry, or to infantry, or to each arm of the service according to circumstances, is a question the decision of which seems remote. Perhaps our next great war will solve it. In the meantime the improvements which are being made in the construction and working of machine guns, and of "quick-firing" shell guns, are enlarging the sphere of utility of these guns, and keeping professional opinion as to their use in a state of constant transition. Of machine guns we have already in the service several patterns of

the Nordenfeldt, the Gardner, and of the Gatling; and of "quick-firing" guns we have the Nordenfeldt 6-pounder, and the Hotchkiss 6-pounder and 3-pounder. But the 36-pounder and 70-pounder guns lately made at Elswick are far more formidable weapons than those just named. These guns can fire from 10 to 15 well-aimed shots per minute, and can pierce an armour plate 5 inches thick at 1000 yards. The Maxim gun discharges 600 rounds per minute from one rifle barrel, and will fire away as long as it has any ammunition, though all that worked it be killed. Capt. Zalinaki's dynamite tube gun has not attracted much notice lately, though it has been tried during the last few months at Shoburness. A large steamer called the *Vesuvius* was specially built for this novel armament. She carries three 15-in. guns, fixed at an angle of 15°, all parallel to the keel and pointing forward. The direction is given entirely by the steering, and the range is regulated by the quantity of compressed air admitted at each discharge. The fire from these tubes, while vastly inferior in range and accuracy to that of rifled cannon, should prove awfully destructive within their present effective range of a mile. It should be remembered that this invention is yet in its infancy, and the Secretary of the United States Navy in his last report states that, owing to the inability to supply projectiles, but little progress has yet been made. The nature and quality of ammunition are intimately, indeed inseparably, connected with the construction and patterns of guns. The use of some of the "higher explosives" has been successfully tested, at least for filling shells; and the secrets of making melinite and other compounds have been acquired from France and Germany. On the Continent experiments during '90 with shells containing wet gun-cotton have produced results which bid fair to upset all previous calculations as to the resisting powers of forts, and having a special bearing on the defence of the French and German frontier defences. In England in '90 the power of shells charged with high explosives was exemplified in a series of firing trials, conducted at Portsmouth against the old armoured vessel the *Resistance*. The results obtained have been kept in strict confidence, but are known to have been very striking. In a work recently brought out at Elswick, which firm was well represented at the *Resistance* trials, the following words are used: "None but those who had witnessed the trials could picture the wholesale destruction caused by these shells. Of the dummy men, scarcely one in the vicinity of a bursting shell escaped; but one of the most remarkable features was the terrible smoke and fumes after each explosion, which set fire to the ship, and prevented any one approaching the spot in some cases for twenty minutes after the shell had burst." Many kinds of smokeless, or nearly smokeless, gunpowder have been tried lately with success. Doubts are felt about the permanence of the qualities of these powders, which chiefly consist of some form of gun-cotton and nitro-glycerine, when exposed to the action of variations of temperature and diversities of climate; but improvements in the processes of making them will, in all probability, soon remove any such disadvantages. The use of smokeless powder will revolutionise the aspect of battle-fields, but it will not prove an unmixed advantage to assailants. With so many and so startling inventions for

attack and for defence as have lately been made public, and with others the destructive powers of which are darkly hinted, the future of warfare—even the near future—defies calculation, and must be a subject for vague but intensely interesting conjecture to those by whom, and on whom, these new agents of destruction may be tried.

Artists, Musicians, and Actors Deceased. See OBITUARY.

Ascension Island. In the South Atlantic, 960 miles from African coast, and is a British possession. The port is called Georgetown, and is furnished as a naval station with batteries and storerooms. Used as a sanatorium for people from West Africa. The Governor is a naval officer appointed by the Admiralty. See BRITISH EMPIRE (table).

Ascot Gold Cup. See TURF.

Ashbourne, Edward Gibson, P.C., 1st Baron (creat. 1885), Lord Chancellor of Ireland, was b. in Dublin '37. Graduated with high honours at Trinity Coll., Dublin, and ('75-85) represented the University of Dublin in parliament. Called to the Irish bar ('60), and for years practised in Ireland, and gained a high reputation in his profession. On entering parliament he took a prominent part in debates, and rendered valuable service to the Conservative party, especially in connection with its Irish policy. Was **Attorney-General for Ireland** ('77-80) and **Lord Chancellor of Ireland** ('85-6), being re-appointed in '86.

Asquith, Herbert Henry, Q.C., M.P., was b. 1852. Ed. at City of London School, and Balliol College, Oxford, where he graduated B.A. '74, 1st class Classics, and Craven University Scholar. Called to the bar at Lincoln's Inn '76. Elected as Liberal member for East Fife '81. His maiden speech in Parliament attracted much attention, and has been followed by successes on the public platform and at the bar. Mr. A. was engaged with Sir C. Russell on behalf of Mr. Parnell at the **Parnell Commission** Q.C. '90. He appeared also in the "Baccarat" trial, '91.

Assiniboia. Named after the Assiniboine river. A district of the **North-West Territories**, and a future province of the Dominion of Canada. Lies directly west of Manitoba along the United States boundary. Area 57,000 sq. m. Capital **Regina**, which is the present seat of government for the Territories generally.

Astronomy, '91. In the early part of the year the members of the **Astrophotographic Congress** reassembled in Paris, with a view to making final arrangements for starting on the real work of charting the heavens. After an exhaustive discussion, it was agreed that the plates intended for catalogue work should be exposed sufficiently long to enable stars of the 11th magnitude to register themselves on the photographic film, while plates intended for the chart should be exposed until stars of the 14th magnitude became imprinted. The observatories co-operating in the work are now in readiness (see article PHOTOGRAPHIC CHART OF THE SKY).—**Solar phenomena** in general are now increasing in activity, the number of days on which the sun was free from spots being 49 as compared with 209 in '90. A very fine prominence was observed on June 17th, 18th, 19th, by Messrs. Trouvelot, Feeny, and Evershed. Prof. Hale has secured some excellent photographs of prominences on the H and K lines, and has also detected bright lines in prominence spectra corresponding to the dark hydrogen

lines in the ultra-violet of the spectrum of Sirius. We drew attention in our last issue to Prof. Schiaparelli's observations of Venus, from which he deduced a period of rotation of 225 days—i.e. coincident with its period of revolution round the sun. Great divergence of opinion, however, exists as to the interpretation of the observations of this planet. M. Perrotin, of Nice, makes a period of 195 days, while the astronomers at Brussels favour the 24-hour period. M. Belopolsky considers that the rotation of Jupiter's surface varies with the latitude. He makes the period of the equatorial belt 9h. 51m., and for the remaining surface 9h. 55m. The apparent duplicity of Jupiter's first satellite has attracted great attention to the Jovian system. The phenomenon is probably due to a wide equatorial belt similar to that of Jupiter itself. The total number of minor planets is now (Oct. 15th) 320, as many as five being discovered in September. Five comets have been under observation. An interesting discovery in this branch was made by Dr. Spitaler while looking for a comet discovered by Prof. Zona on the previous night (Nov. 15th). He found a comet which appeared too faint to be the one referred to in his telegram, so he searched some time longer and found the original comet. This is the first time on record that two comets not physically connected have been seen within a degree of each other. Dr. Spitaler's comet is of short period. The first comet of '91 was discovered independently by Barnard, of America, on March 29th, and Dunning, of Bristol, on March 30th. Wolf's comet (c 1883 and b 1891) and Encke's comet have returned, and are now under observation. A sharp look-out has been kept for the return of the Tempel-Swift comet, and both it and another comet have been (Oct.) found independently in America (Barnard), and by Dunning, of Bristol, Oct. 1st.—Photography still advances, and we may instance Dr. Russell's (Sydney) photos. of the "Coal Sack" region in the Milky Way, which show numerous stars in this apparently deserted spot; his photos. of the greater Magellanic Cloud, which he shows to be spiral; also his photos. of the neighbourhood of η Argus, where some prominent portions of nebulae seem to have disappeared. Again, a careful study of photos. of spectra of β Aurigæ and β Ursæ Majoris, prove these stars to be double (see '90 edition). Prof. Pritchard (Oxford), by photography, makes the parallax of β Aurigæ + 0".002. In introducing Mr. Lockyer's *Meteorite Theory* (ed. '88), we remarked that it could not be judged of hastily, and recent events show how dangerous it is to be too easily satisfied. Dr. Huggins, in conjunction with his gifted wife, has proved Mr. Lockyer's interpretation of observations to be erroneous. Messrs. Liveing and Dewar also show that the meteoric explanation of the spectrum of Aurora is not in accordance with theory; while Mr. Keeler, of the Lick Observatory, using a very large dispersion, confirms Dr. Huggins' statement that the chief nebular line does not coincide with the magnesium fluting. Mr. Lockyer's deductions from this assumed coincidence do not therefore hold good. The Harvard College Observatory, under Prof. Pickering, has published an excellent piece of work entitled "The Draper Catalogue of Stellar Spectra," which contains photographed spectra of over 10,000 stars, all classified, as far as possible, under the various types according to Secchi.

Prof. Pickering has, however, found that, while stars appeared to the eye of the same type, the photographed spectra showed differences in the violet region, and this has necessitated subdivisions. The chief result, so far, of the work is the discovery that the Milky Way is composed chiefly of stars of the Sirius type (Type I.). This explains the systematic differences in the brightness of the Milky Way stars as estimated by Dr. Gill, of the Cape Observatory, from photographs, and the brightness ascribed by Dr. Gould from eye-estimates. The Sirius stars are richer in the violet or photographic rays. Great improvements have also been introduced into the spectroscopy employed in determining the motion of stars in the line of sight. Mr. Keeler, of the Lick Observatory, and Prof. Vogel, of Potsdam, have both made some excellent observations, which quite eclipse those made at our national Observatory, which does not possess a spectroscopy fit for the work. We may reasonably hope for further developments in this branch.—A series of lunar and planetary observations on tablets have been discovered at the British Museum, clearly showing that the Babylonian astronomers were very far advanced in the science.—The Astronomical Society of the Pacific, and the British Astronomical Association, have both made a wonderful development, and have already taken a leading position in astronomical science.—The *Obituary of Astronomers* includes Dr. Schönfeld, Director of the Bonn Observatory, Dr. Brunnnow, and Emile Gautier, of Geneva.—**Coming Events:** Total eclipse of the Moon, Nov. 15th, visible at Greenwich; begins 15d. 11h. 37m., ends 15d. 13h. A list of stars which will be occulted during the eclipse may be had on application at Greenwich. Total eclipse of the Sun, April 26th, 1892, invisible at Greenwich; partial eclipse of the Moon, May 12d. 9h., visible at Greenwich; total eclipse of Moon, Nov. 4th, visible as a partial eclipse at Greenwich at 2h. in morning. Uranus will be occulted by the Moon on March 16th, 12h. 30m., and on July 3rd, 9h. 10m. Consult the *Observatory*; *Astronomische Nachrichten*; "General Astronomy," by Young; Proctor's Works; Newcomb's "History of Astronomy"; the *Sidereal Messenger* (for American astronomy); and *Journal of British Astronomical Association*.

Asylums Board, Metropolitan. See Poor-Law.

Athabasca (Indian, "swampy"). Named from its great lake. A district of the North-West Territories, and future province of the Dominion of Canada. Lies north of Alberta and east of British Columbia. Takes in the celebrated Peace River district. Area 122,000 sq. m.

Athletics. So high a standard of excellence have our amateurs attained in running, walking, and jumping, that but few records can be hoped for in the immediate future; but the season of '91 has nevertheless proved exceptionally exciting, and not the least interesting feature was the visit of a strong contingent of American athletes. Both the Amateur Athletic Association and the Southern Counties Cross Country Association have been much occupied in the matter of legislation, with reference to cases touching the status of amateurs and charges of importation. Both governing bodies were equal to the occasion, and their decisions will doubtless be attended by the beneficial results anticipated. Appended are

the most noteworthy performances of the season, arranged in chronological order, the cross-country championships of various districts being the first to command attention. They commenced with the championships of the Midland and Southern Counties in February last. The senior championship of the Southern Counties ended, after an exciting finish, in favour of the Finchley Harriers, by one point only from the Spartan Harriers, who had won the year before. The Bradford-Trinity Harriers won the junior championship of the Northern Counties; the Beaumont Harriers (now known as the Essex Beagles) were similarly successful in the junior championship of the South; the Birchfield Harriers beat the Harriers of Worcester (winners in '90) with the utmost ease in the Midland Counties championship; the Salford Harriers won the senior championship of the Northern Counties; and the National championship, the most important event of all, ended in favour of the Birchfield Harriers. This last event took place on March 7th at Birkenhead. The Finchley Harriers were placed second with 88 points, or 18 points worse than the winners; and the Spartan Harriers, with 96 points, third. The Salford Harriers, of whom great things had been expected, could finish no nearer than fourth. J. Kibblewhite, of the Spartan Harriers, was the first man in, E. W. Parry, of the Salford Harriers, being second. On the same day the inter-hospital competition was decided over a cross-country course at Raynes Park. H. A. Munro, an old Oxford runner, and a member of the Lea Harriers, was the first man home. He ran as a representative of Guy's Hospital, but St. Bartholomew's Hospital won by 11 points to Guy's 19. The Scottish cross-country championship was held at Glasgow, on the same afternoon, and was won by the Edinburgh Harriers, A. Hannah, of the Clydesdale Harriers, being the first man home. The senior championship of Ireland was competed for, at Dublin, towards the close of the month, with the result that the Dublin University Harriers won with 61 points, Haddington coming next with 67. This, practically, concluded the cross-country season; and the athletic season proper commenced forthwith. The annual inter-varsity contests between Oxford and Cambridge took place at Queen's Club Ground, on March 20th. It was their 28th annual meeting, and ended in favour of Cambridge by the large majority of 6½ points to 2½—one of the items (the 100 yards race), which ended in a dead heat, having to be divided. Some of the performances were extremely good, but nothing was more so than the mile race, which went to B. C. Allen, of Corpus, Oxford, in 4 m. 26½ s. The ½-mile was won in brilliant style by P. R. Lloyd, of Pembroke College, Oxford, in 50½ s. Lloyd's running in this event was, in the opinion of many, the feature of the meeting. With the Easter Monday Meetings, athletes were found to be competing in larger numbers than were ever known before. H. Curtis was now showing excellent form in the walking way, as also was W. J. Fowler as a runner. The latter won the ½ of a mile handicap, from scratch, at the Finchley Harriers' meeting, at Faddington, on March 30th, in 3 m. 16½ s.; and H. Curtis was successful, from scratch, in the 2 miles walking handicap in 14 m. 24s. The first of the flat racing championships was at 10 miles, held at Hampden Park, Glasgow, on April 2nd. A Hannah

finished first in the Scottish record time of 54 m. 18½ s. He was seen competing in the English championship at 10 miles, a few days later, but had to put up with defeat. The winner on this occasion was W. H. Morton, of the Salford Harriers. His time was 52 m. 33 s., Sid. Thomas, of the Ranelagh Harriers, being beaten by 5 s. only, for first place with Hannah, 3rd; and E. M. Parry, of the Salford Harriers, 4th. One of the first records of the season was that made by H. Curtis, for a 2 miles walk, at the Spartan Harriers Sports, at Tufnell Park, on the 18th of April. Curtis did not succeed in winning the handicap, but covered the distance in 14 m. 10½ s. The Public Schools ½ of a mile championship was run for at Stamford Bridge, and was won by B. Whittaker, of Charterhouse, T. C. Eastley (the holder) of Haileybury being second. The 200-guinea challenge shield of the National Physical Recreation Society was won by the representatives of the Liverpool Young Men's Christian Association Gymnasium, who defeated those of the Newport (Mon.) Junior Conservative Association Gymnasium in the final at Exeter Hall, Strand, on May 9th, by 10 points. The annual contest between Sandhurst and Woolwich took place on the 15th of May. H. G. Lloyd, of Woolwich, won the ½ of a mile hurdles in 1 m. 16 s., and the 120 yards hurdles in 17½ s. For the third year in succession Woolwich won, their score being 5½ points to 13 for Sandhurst. One of the best contests at the third spring meeting of the London Athletic Club, on May 23rd, was that which ensued in the 120 yards, the final of which went to E. K. House from scratch in 21½ s. Just about this time Luther Cary, of Princetown College, and the Manhattan Athletic Club, New York, was reported to have done some very fine performances in America. Considerable interest attached hereto, by reason of the announcement that he was likely to visit England. One of his new records was that at 75 yards, for which the majority of watches made the time 7½ s. A few days later the statement that the Americans intended to take part in the English championships was confirmed by the departure from America of Mr. Remington, H. Hallock, C. L. Nicoll, J. A. C. Queckberner, M. W. Ford, Luther Cary, J. R. Roddy, E. D. Lange, and H. L. Dadman. On June 10th, an inter-club contest came off in Ireland between Dublin University and the London Athletic Club. The result was a victory for the Londoners, the solitary event in which they were beaten being in the long jump, which D. D. Bulger, a grand all-round athlete, won with a leap of 22 ft. 2 in. E. K. House was of considerable service to his side, as he won the 100 yards in 10½ s., and the ½-mile by 3 in. only, from C. Dickinson, of Dublin University, in 52½ s. G. B. Shaw's 16½ s. for the 120 yards hurdles was also a fine performance. On June 20th, both the Irish and Scottish Championships were decided. B. C. Green, of the London Athletic Club, being qualified to compete at the latter gathering, went over, and carried everything before him. He won the 100 yards, the 120 yards hurdles, and the broad jump. The Irish championships were mainly noticeable for J. M. Ryan's high jump of 6 ft. ¾ in. On the same day, the Huddersfield Athletic Sports took place, and the large muster of fourteen thousand spectators was undoubtedly due to the presence of the

American athletes, Cary and Remington, who created a very favourable impression; and it was generally conceded that since the visit of L. E. Myers, England had not been favoured with the presence of two American sprinters of such high class. L. Sarre, of the Manhattan Athletic Club, competed in the $\frac{1}{2}$ -mile Northern Championships hurdle race, but was easily beaten by G. Shaw, of New Zealand. H. L. Dadman, another Manhattan, was simply thrown in, as regards the $\frac{1}{2}$ -mile handicap, which he won with the utmost ease from a start of 18 yards in 51 s. The **Amateur Athletic Championships** were decided at Old Trafford Grounds, Manchester, on June 27th. Rain descended in torrents during the day, and as a consequence the track did not allow of any sensational performances. The Manhattan contingent scarcely performed so creditably as they had done at Huddersfield; and, far from sweeping the board, they only scored three wins, whilst only one standard prize was qualified for by any of their members. Cary won the 100 yards race, but was closely hunted home by E. K. House, of the London Athletic Club; W. J. Holmes, a north-country runner, easily defeated all the Americans in the $\frac{1}{2}$ -mile; J. P. Shuter, of the London Athletic Club, although losing to Remington in the $\frac{1}{2}$ -mile, was not disgraced; T. Jennings, of Cambridge University, beat H. L. Hallock, the American, in the high jump; H. Curtis, of the Highgate Harriers, did much as he pleased with the Americans, C. L. Nicoll and E. D. Lange (both of the Manhattan Athletic Club), in the 7-miles walk; J. A. C. Queckberner, although winning at throwing the hammer, was easily beaten by W. J. M. Barry, of Queen's College, Cork, at putting the weight; and D. Bulger, of Dublin University, succeeded in tying with W. Ford, of the Manhattan Athletic Club, for long-jumping honours at 20 ft. 4 in. The 2-mile steeplechase was won by E. W. Farry, of the Salford Harriers; the 4-miles run was credited to M. W. Morton; and the mile ended, after a desperate race, in favour of J. Kibblewhite, of the Spartan Harriers, W. J. Fowler, of the Finchley Harriers, only losing by a yard. The next journey on the part of the Americans was to Paris, where Cary, Dadman, Remington, Roddy, and Queckberner, simply carried all before them. Another meeting by the **London Athletic Club** was shortly afterwards held; and here, again, the Americans, with the exception of L. Cary, competed. The open 100 yards race went to M. Remington in very little worse than 10 s.; and one of the most interesting items was the 1-mile invitation walking race, in which Curtis was at scratch, having to concede Nicoll 25 yards and Lange 50 yards. The result was a win for the Englishman by 20 yards from Nicoll in 6 m. 36 s., or 8 s. faster than the previous best on record. Hallock, of the Manhattans, won the high jump at 6 ft.; C. W. Haward, of the London Athletic Club, succumbing after clearing 5 ft. 11 in. M. W. Ford, also of the Manhattan Athletic Club, was disappointing in the long jump, although he obtained second place with 20 ft. 7 in., to 20 ft. 8 in. on the part of B. C. Green. The best race of the day, and the best performance, was undoubtedly that accomplished by M. Remington in the $\frac{1}{2}$ -mile scratch race, which he won by 4 yards, from D. Basan, in 49 s. Cary was meanwhile successfully competing for the 100 yards championship of the

Northern Counties at the North Durham Cricket Club Sports. A singular coincidence was that his time and Remington's time at the London Athletic Club were identical. The Manhattans competed shortly afterwards at a meeting of the Polytechnic Harriers; and, still later, at the Salford Harriers Sports. Queckberner put in an appearance at both these meetings; and with a peculiarly constructed handle to his hammer, was constantly beating bests on record. At the Polytechnic Sports, for instance, he threw the missile 134 ft. 23 in., which was said to be better than had ever been done before. A meeting by the **Highgate Harriers** at Paddington, on July 18th, was noticeable for the fact of an 8-miles invitation walking handicap finding a place in the programme. H. Curtis was at scratch; and, although he succeeded in beating the record for the full distance, which he covered in 1 h. 3 m. 6 s., he failed to get nearer than third in the handicap, E. D. Lange, of the Manhattans, winning easily with 3 m. 30 s. start, and walking nearly as fast as Curtis towards the end. On the same day the Essex Championships took place at Chelmsford. The leading item was H. J. Cheverton's win in the 2-miles walk doing 34 m. 25 s. The majority of the Bank Holiday meetings on the first Monday in August were largely attended, and the number of runners who competed in various parts was larger than had ever previously been known. During the second week in August the **Army Championships** were decided at Aldershot, this being the one meeting at which amateur and professional athletes were permitted, by the Amateur Athletic Association, to run together. Some very fine performances were accomplished, especially in the 100 yards scratch race, where Sergt. J. J. Hartley, who has competed in Sheffield handicaps, won in a very little worse than 10 s. Sergt. Donlay, of the 1st Irish Regiment, also showed up well in the long distance races, whilst amongst the well-known amateurs who competed in the officers' races, was Lieut. A. H. Bethune, of the 2nd Gordon Highlanders, who won the 100 yards, the high jump at 5 ft. 5 in., and the long jump at 19 ft. 4 in. On Oct. 5th, J. Ray (son of the professional runner of that name in the days of the renowned "Deerfoot") and W. Simpson started on a 50-miles' walking match for £100 at Kensal-rise, but after the latter had travelled 15 miles he retired, Ray being then nearly a mile in advance. On Oct. 19th the Manchester Pedestrian Company's £100 handicap of 130 yards, was won by J. Sunderland, of Radcliffe, with 164 yards start.

Auckland. Chief town in North Island of New Zealand (*q.v.*), and capital of province of same name. Pop. 36,000.

Aumale, Duc d', fourth son of King Louis Philippe, was b. 1822. When only a youth he took part in several campaigns in Algeria '40, '42, '43, and '44. He was **Governor-General of Algeria** when the revolution of '48 broke out in Paris, but at once resigned and joined his father in England, where he chiefly resided until the law banishing the Orleans princes was repealed in '71, after his election to the National Assembly. He was chosen one of the **Forty** in '71, and was made a **General of Division** in the following year. He was president of the Council of War which tried and condemned Marshal Bazaine. The Duke is the author of a **History of the Princes of the House of**

Condé. When the Expulsion Bill passed, in '86, he left France, having been at the same time struck off the roll of the French army by the War Minister, then General Boulanger. Shortly afterwards, it was discovered that he bequeathed his beautiful *Château de Chantilly*, with its art treasures, to the French nation. The decree banishing the Duke from France was revoked March '89. The hon. degree of D.C.L. was conferred upon the Duc by Oxford University (June '91).

Austin, Alfred. was b. 1835. Published his first poem, entitled "The Season," in '62. Acted as war correspondent for the *Standard* during the winter of '70-71 at Versailles. He has since been on the editorial staff of that journal. His poem "*Madonna's Child*" is considered to be his best work. His other works include "Interludes," "The Human Tragedy," "Savonara," "Soliloquies in Song," "Prince Lucifer," and "Love's Widowhood and other Poems," '89. He is the editor of the *National Review*, and has contributed many political articles to the *Quarterly Review*. Published in '91 "Narrative Poems."

Australasia. A loose term variously applied. It usually signifies (1) the Australian colonies, together with Tasmania, New Zealand, and Fiji; or (2) Australia, Tasmania, New Zealand, New Guinea, New Britain, and New Ireland, Solomon Islands, New Caledonia, and New Hebrides.

Australasian Federal Convention. See AUSTRALIAN FEDERATION.

Australia. The largest island in the world. Is situated south-east of Asia, dividing Pacific from Indian Ocean. Extends 2,400 miles west to east, and 1,971 miles north to south. Area computed at 3,031,169 sq. mls., or twenty-six times the size of Great Britain and Ireland. Present total population 2,819,307. Wholly British possession. Divided into the colonies of **Queensland**, capital Brisbane; **New South Wales**, capital Sydney; **Victoria**, capital Melbourne; **South Australia** (including Northern Territory), capital Adelaide; and **Western Australia**, capital Perth. Australia is a great plateau, elevated on the east and inclined towards the west. The eastern half and most of the other territories bordering the coasts on north and west are extremely fertile, and well adapted for grazing. Wool still continues to be the staple export. The great central depression is sterile, and almost impassable on account of want of water, together with prickly growths; having no drainage, the rainfall collects in extensive salt lakes and marshes. In the habitable districts there is a rich and unique flora and fauna. Coal abounds in various districts, particularly in New South Wales and Queensland. Gold, silver, tin, iron and copper are extensively worked. Climate varies from tropical to temperate. Rainfall capricious: in some years excessive, in others prolonged drought. The average annual rainfall in parts of the north-east coast is over 70 inches; but in the centre, and over a large portion of the south of Australia, it is less than 20 inches. Principal rivers, the Murray and its affluents, navigable many hundreds of miles in wet seasons. There are 9000 miles of railroad, and 65,000 miles of telegraph, several large cities, and many towns. The black aborigines are few, and rapidly

disappearing. For latest statistics see **BRITISH EMPIRE**, etc. (table).

Australian Federation. This subject, for some years past, has been discussed in the Australian press and on public platforms in the Colonies. On Oct. 30th, 1889, Sir Henry Parkes, Premier of New South Wales, in reply to a letter from Mr. Duncan Gillies, Premier of Victoria, containing suggestions for carrying out Major-General Edwards' recommendations for the federalisation of Australian troops, wrote advising "a national convention for the purpose of devising and reporting upon an adequate scheme of Federal Government." The matter was taken up by all the Australasian governments, with the result that on Feb. 6th, '90, a conference met in Melbourne. New South Wales was represented by Sir Henry Parkes (Premier) and the Hon. W. McMillan (Colonial Treasurer); New Zealand by the Hon. Capt. Russell (Colonial Secretary) and Sir John Hall; Queensland by Sir S. W. Griffith and the Hon. J. M. Macrossan (Colonial Secretary); South Australia by the Hon. J. A. Cockburn (Premier) and the Hon. T. Playford; Tasmania by the Hon. A. J. Clark (Attorney-General) and the Hon. R. S. Bird (Treasurer); Victoria by the Hon. D. Gillies (Premier) and the Hon. A. Deakin (Chief Secretary); and Western Australia by Sir J. Lee Steere (Speaker). Mr. Gillies was elected Chairman. The Conference sat till Feb. 14th, when an address to Her Majesty, embodying the resolutions passed at the Conference, was adopted. The **Australasian Federal Convention**, which assembled at Sydney (Mar. 2nd, '91), marked an important advance. Its object was to frame a Constitution for the Dominion of Australia. The absence of Mr. Jas. Service, who has always taken a prominent position among colonial federalists, caused much comment, but otherwise the delegates comprised all the well-known advocates of unity in Australasia. The general public hardly evinced so much enthusiasm as their representatives in relation to "the crimson thread of kinship." The Chamber of the New South Wales Legislative Assembly was the scene of the Convention's deliberations. **Sir Henry Parkes** (q.v.) was unanimously selected as President. Representing **New South Wales** there were: The Hon. Sir H. Parkes, the Hon. W. McMillan, Mr. J. P. Abbott, Mr. G. R. Dibbs, the Hon. W. H. Suttor, the Hon. Edmund Barton, and the Hon. Sir P. A. Jennings. Representing **Victoria**: the Hon. J. Munro, the Hon. D. Gillies, the Hon. A. Deakin, the Hon. H. J. Wrixon, the Hon. Lieut.-Col. W. Collard Smith, the Hon. H. Cuthbert, and the Hon. N. Fitzgerald. Representing **Queensland**: the Hon. Sir Samuel W. Griffith, the Hon. Sir T. McIlwraith, the Hon. J. M. Macrossan (who died March 30th), the Hon. A. Rutledge, the Hon. T. Macdonald-Paterson, the Hon. A. J. Thynne, and the Hon. J. Donaldson. Representing **South Australia**: the Hon. T. Playford, the Hon. Sir J. C. Bray, Mr. J. A. Cockburn, the Hon. Sir J. W. Downer, the Hon. C. C. Kingston, the Hon. J. H. Gordon, and the Hon. K. C. Baker. Representing **Tasmania**: the Hon. P. O. Fysh, the Hon. B. S. Bird, the Hon. A. I. Clark, the Hon. W. Moore, the Hon. W. H. Burgess, the Hon. A. A. Douglas, and the Hon. N. J. Brown. Representing **New Zealand**: Sir George Grey, the Hon. Sir H. A. Atkinson, and Capt. W. R. Russell. Representing **West Australia**: the Hon. J. Forrest,

the Hon. W. E. Marmion, the Hon. Sir J. G. Lee-Steele, the Hon. J. A. Wright, the Hon. J. W. Hackett, Mr. A. Forrest, and Mr. W. T. Loton. On April 9th,—than which, the *Times* remarked, "it is very possible that in the distant future of the British Empire and the English-speaking race there will be few more famous dates,"—the Convention passed the Bill which establishes a Federal Constitution for Australia. By this Bill, which is subject to consent from the Imperial Parliament and the various colonies, a Federal Constitution will come to pass for the Commonwealth of Australia, over which a Governor-General appointed by the Sovereign will hold sway. Each colony (or State) will contribute to the Commonwealth Parliament representatives from its individual Legislature. This Parliament will comprise a directly elected House of Representatives and a Senate composed of delegates from all the colonies. A salary of £500 will be paid to the members of both Houses. Seven Ministers, to be known as "the Queen's Ministers of State for the Commonwealth of Australia," will assist the Governor-General. Like the United States of America, there will be a Supreme Court, whose functions will render unnecessary the Privy Council. Freedom of Trade between the various colonies was also decreed by the Convention, which also dealt with other important questions prior to concluding its deliberations on April 9th, '91. An official report of the proceedings and debates of the National Australasian Convention has been issued as a Blue Book.

Austria, Emperor of. See FRANCIS JOSEPH.

Austria-Hungary is an empire under the rule of Francis Joseph I. of Hapsburg, Emperor of Austria and King of Hungary, and is composed of a Cisleithan portion, officially known as Austria, and a Transleithan portion known as Hungary, each possessing a separate parliament, but uniting under a common sovereign in the establishment of a common army, navy, financial, diplomatic, postal and telegraphic services, administered by delegations composed of 120 deputies chosen half by Austria and half by Hungary—the upper house in each country selecting 20 and the lower 40 members. For army and navy see FOREIGN ARMIES AND NAVIES. **Austria** (capital Vienna)—area 115,903 sq. m., estimated population in '87, 23,447,192—is governed by an Emperor and a Reichsrath or federal parliament, consisting of a house of peers partly hereditary and partly nominated by the Crown or life, and a house of deputies chosen by popular election. Purely local matters are administered by the seventeen provincial diets (viz., of Upper and Lower Austria, Salzburg, Styria, Carinthia, Cariola, Tyrol, Vorarlberg, Gorizia, Istria, Trieste, Dalmatia, Bohemia, Moravia, Silesia, Galicia and Bukovina). **Hungary** (capital Buda-Pesth) area 125,039 sq. m.; census population ('91), 17,500,000—embraces the kingdoms of Hungary, Croatia, Slavonia, and Transylvania, and is governed by a King (the Emperor of Austria) and a parliament composed of an upper and hereditary house and a lower and elective house. **Bosnia-Herzegovina** (area 23,262 sq. m., pop. 1,504,091), though in strictness still a province of the Porte, has since the Treaty of Berlin in '78 been occupied and administered by Austria-Hungary, and may fairly be considered as belonging to that empire. Since the reconciliation of the Magyars with the House of

Hapsburg, in '67, great progress has been made in reconciling the various races in different stages of civilisation which inhabit this heterogeneous empire (so much so that it is by no means unlikely that Austria-Hungary may be the political heir to a considerable part of the European dominion of the Ottoman Empire, and the possible head of a South Slavonic confederation).—Total estimated expenditure for '92 for the common affairs of the monarchy is 135,614,232 fl., leaving, apart from the amount (40,669,550 fl.) furnished by the customs revenue, 92,256,387 fl. to be raised, of which sum Austria will contribute 63,257,881 fl., and Hungary 27,123,377 fl. Common debt of Austria and Hungary at end of '89 was 2,777,778,513 fl., and that of Austria alone 1,056,703,231 fl., the yearly interest on both amounts being 166,589,264 fl.—**HISTORY, '90. POLITICAL.** The Italian population of Zara demonstrated (Nov. 30th) against the proposal to incorporate the province of Dalmatia with Croatia. The delegates to negotiate the treaty of commerce between Germany and Austria met at Vienna (Dec. 2nd). The budget was introduced (4th), setting down the revenue at 566,759,572 fl., and expenditure at 564,303,935 fl., giving a surplus of 2,455,637 fl. It was announced (21st) that the Emperor had presented a small island off the Dalmatian coast to the Dominican Order. The gift included the Imperial farm on the island. It was stated (29th) that conferences between Austria and Germany were being held relating to the question of imposing penalties for Anarchist and Nihilist outrages, and granting extradition in cases of political murders, for international protection.—'91. A letter from the Governor of Bohemia to the Diet of Prague (Jan. 6th) announced that the Government would not countenance the disuse of German as the official language of judicial administration. The Italian members of the Innsbrück Diet resigned their seats (21st) as a protest against the refusal of the Diet to grant a separate administration for the Italian-speaking Trient district. The Reichsrath was dissolved by Imperial decree (25th), because of the failure of the Czecho-German compromise. The total revenue of Austria from all taxes in '90 amounted to 336,611,833 fl., as compared with 327,014,478 fl. in '80, the total increase being 9,597,355 fl. The net Customs' receipts amounted to 45,583,353 fl., being an increase of 548,117 fl. over the preceding year. The military official, Marek, accused of stealing plans of a fortification, was (Feb. 11th) found guilty of high treason, and sentenced to fifteen years' imprisonment. The Hungarian House of Magnates passed (March 10th) the Sunday Rest Bill, the term Sunday rest signifying from Saturday night till 6 o'clock on Monday morning. The newly elected Reichsrath was opened by the Emperor (April 11th), who in his speech anticipated continued European peace, and expressed a desire for concord among parties. The Emperor issued a decree (May) abolishing the composition money which the Princes of Hungary received in lieu of their ancient right to levy duty on the coinage. The May-Day demonstrations passed off quietly, except in the town of Oroshaza, where the chief magistrate was brutally treated; the soldiers were called in, and several of the rioters were run through with the bayonet. A new treaty of commerce between Austria and Germany was signed (3rd). A deadlock in the Reichsrath

(7th) occurred through the impossibility of getting a majority to vote for an address in reply to the speech from the Throne. It was got over (8th) by the President moving a simple expression of thanks to the Emperor. The Emperor subsequently expressed satisfaction at the course pursued. An Imperial decree (June 9th) renounced the right of the Government, under the law of '84, to institute domiciliary searches, to confiscate letters, dissolve public meetings, and order arrests without warrants in Vienna, Wiener, Neustadt, and Korneuburg. The Metropolitan Dionysios, of Dolin Touzla, Exarch of Dalmatia, was dismissed by the Government for simony and political intrigue. The Emperor signed a formal ratification of the renewal of the Triple Alliance for six years (29th). It was decided (July 17th) that the gold coinage should be altered so as to show the duality of the kingdom. The Lower House having decided, by 188 to 88, to close the discussion on the principle of the Administrative Reform Bill, twenty members of the Opposition brought in counter-bills which, under the rules, would have to be disposed of before going into committee on the Government measure. The Hungarian Lower House read the Administrative Reform Bill a third time (Aug. 8th). The autumn manoeuvres began at Cilli in Styria (31st) in the presence of the Emperor; they finished Sept. 1st. The Emperor went to Horn (3rd), where he met the German Emperor and the King of Saxony. The manoeuvres terminated (7th). The Emperor went to Bistritz to attend the manoeuvres (14th) of the Hungarian Army, proceeding to Prague (27th) for the Exhibition, and to Reichenberg (30th). An attempt was made to blow up a bridge on the railway along which the Emperor travelled; little damage, however, was done. The Emperor returned to Vienna (Oct. 2nd), which was decorated and illuminated for the occasion. The Session of the Hungarian Parliament opened (2nd). The Hungarian Budget for '92 sets down the expenditure at 395,340,941 fl., and the revenue 395,339,361 fl. The Austrian Reichsrath passed a Bill providing for the indemnification of persons who shall have been the victims of judicial errors. The Austria Budget was presented (10th). Expenditure was set down at 584,620,378 fl., and the revenue 585,238,262 fl. The President of the Austrian Reichsrath was engaged (14th) in investigating a charge against Herr Schneider, the anti-Semite, of altering ballot papers. The charges against Herr Schneider were held to be proved, and a vote of censure was (15th) carried against him by 159 to 9. Count Taaffe (28th), in reply to a question, said that the request of the Czechs that the Czech language should be the official language in Bohemia could not be granted. Arch-Abbot Claude Vaszara was (Nov. 1st) nominated to the See of Grau.—**GENERAL.** In Nov. '90 the Moldau overflowed its banks, and the waters in Bohemia generally rose. The damage by floods in Bohemia amounted to 7,000,000 fl.; to meet this the Government contributed 1,618,000 fl., the Diet of Prague, 1,500,000 fl., and private subscribers 500,000 fl. The Hungarian Social Democratic Congress met at Buda-Pesth (Dec. 8th); there were eighty-seven delegates from capitals and thirty-four from provincial cities. The Emperor of Germany requested Baron Falkenhäusen to inquire into the alleged cure of diphtheria by the peasant physician Reijer,

of Glogau, in Silesia, and he subjected his children to the treatment with the happiest results. The charge of partiality made by Count Koloman Szechenyi against the Chief Justice of Hungary was decided by a commission (11th) to be unfounded. Dr. Toremboviz discovered a number of MSS. in the National Library at Cracow, of Spanish songs, romances, comedies, and novels hitherto unknown, dating from the sixteenth century. A severe epidemic of scarlet-fever occurred at Buda-Pesth during the month. A decree was issued by which the boundary of Vienna was enlarged to 177 square kilometres, and which necessitated the election of a new council with 135 members. The Government decided to plant with vines the Dellblat sand region, and establish there 3,000 families of vine-dressers, as the phylloxera does not attack vines on sandy soil. The Academy of Sciences published a 16th-century poem, dealing with the same subject as *King Lear*. The Emperor opened (30th) the new iron bridge over the Danube at Pressburg. A terrific storm raged over Trieste for several days, doing great damage. At Troppau, Silesia (31st), the thermometer registered *minus* 31° Fahrenheit, or 28° Réaumur below zero. A workman at Szegedin discovered about a year ago 267 pieces of harness, car-rings, etc., supposed to have belonged to a chieftain of the tenth century. The Government only heard of them at the end of December, and claimed them as treasure-trove. It was settled that the governing body of the Jewish schools which Baron Hirsch founded in Galicia was to consist of eighteen members, fourteen to be nominated by the founder, and four by the Government. In '91 fifty men were killed by an explosion in a coal mine in Polish Austria (Jan. 3rd). The Danube was frozen for miles above and below Vienna. At Buda-Pesth a large crowd was on the ice when it broke; many persons were drowned. The '91 census placed the population of Vienna at 809,447. Snow fell heavily (6th and 10th), interrupting railway traffic. Dr. Koch described in the *Deutsche Medizinische Wochenschrift* (14th) the composition of his lymph; briefly it was a glycerine extract from the pure cultivation of the tubercle bacilli. Shoemakers, to the number of 12,000, struck at Vienna (Feb. 2nd). Seditious pamphlets were found in the streets of Vienna (5th). The shoemakers' strike collapsed. Twenty men were eaten by wolves at Szolnok, Hungary. The Danube burst its banks at Buda-Pesth (March 13th), and 900 houses were inundated and others threatened. The ninth German Geographical Congress was opened at the Vienna University (April 1st). An exhibition of tapestry and carpets was opened at the Oriental Museum, Vienna. It contained some Turkish carpets at least 200 years old. The Viennese journeymen bakers, to the number of 1600, struck (10th). Dr. Prix took the oath as the first Burgomaster of Greater Vienna (May 5th). The printers and composers went on strike in Vienna, and several newspapers were unable to appear. The Governor of Lower Austria prohibited all business undertakings connected with betting, and small private betting establishments were closed; the *totalisateurs* was not interfered with. About sixty Arnauts attacked the village of Sevtze, killing some Christians and wounding many. The International Postal

Congress was opened at Vienna (20th) by the Marquis von Bacquehem, Minister of Commerce, in the name of the Government. Another outrage was reported (22nd) at Nova Varosb. The treaty under which the Hungarian Government proposed to purchase the 1550 kilometres of railway lines from the Austro-Hungarian States Railway Company was signed (June 7th). A cyclone in Brody, Galicia (70th), killed thirty people and did great damage. An Austrian working-men's congress was opened at Vienna (28th). The Postal Congress terminated its discussions, having agreed as to a uniform way of labelling registered letters, to the transport of visiting cards with the usual conventional letters printed on them as printed matter, and to the admission of certain fluids in proper cases as samples. The hundredth anniversary of the death of Mozart was celebrated at Salzburg (July 17th-20th). The valley of Eisach was flooded (Aug. 18th), doing enormous damage; the village of Kollmann was entirely carried away. Many persons were killed. A chair of Modern Greek was founded at the Commercial Academy at Buda-Pesth, and it was filled by Dr. Russopulo. The International Meteorological Congress was opened at Munich (20th). It was reported (31st) that a great landslide was taking place in the valley of the Drave, on one of the mountains which enclose the Lemzer Blaure. Great efforts were made and serious damage was prevented. Three hundred students left Cracow (21st) on a pilgrimage to Rome. The remains of General Count Lassalle, one of Napoleon's favourite officers, who fell at Wagram, were removed from the St. Mark Cemetery (23rd) to the Dome des Invalides. The Emperor of Austria personally ordered that the funeral service should be with the full military honours due to the rank of the General. The third biennial session of the International Statistical Institute was opened at Vienna (28th), under the presidency of Sir Rawson Rawson, and closed (Oct. 3rd). There was an attempt made (4th) to blow up the Episcopal Palace at Trieste. Since the introduction of the zone tariff the passengers on the Hungarian railways increased by 21,000,000, and the receipts by 5,600,000 fl., the extra working expenses being 1,500,000 fl. The students at Budapest demonstrated against the Minister of Commerce, M. Baross; they were met by the police, and conflicts took place (9th and 20th). Eighteen students and six artisans were fined from 20 fl. to 30 fl. each. The International Congress of Analytical Chemists and Microscopists sat at Vienna (12th and 13th). The Emperor inaugurated (17th) the Museum of Fine Arts on the Ring. The municipal budget of Vienna for '92 showed a deficit of 2,319,370 fl. The Exhibition at Prague closed (18th). The Minister of Commerce informed the directors of the Southern Railway (24th) that the Government were prepared to take over the management of the line and to pay an annual rental calculated on the net receipts of the past few years. The stewards of the Vienna and Budapest Jockey Clubs interdicted (27th) T. Busby and R. Coates from racing in all countries where Newmarket Jockey Club Rules were in force, and fined and cautioned Bell, Chandler, Martin, Sharp, Warne, and Smith, for suspicious running.—**SOCIAL.** Dr. Luejer, leader of the anti-Semite party in the Reichsrath, obtained a verdict of 1000 fl. against the editor of a news-

paper for libel, contained in disclosures as to his character. Herr Waldemar Meyer, the violinist, gave a concert in Vienna (Dec. 14th), in which he performed on the Stradivarius which belonged to George I. Baron von Preiss, formerly Minister of Finance, died (15th) at the age of 62. M. de Szogyenyi-Marisch, who succeeds Baron Orczy as Minister attached to the person of the Sovereign, took the oaths as a member of the Hungarian Cabinet (29th). Baron von Ameth, on completing his fiftieth year as Keeper of the State Archives and President of the Academy of Sciences, was decorated with the Grand Cross of the Legion of Honour. A Bulgarian agent, named Waldapfel, was arrested (31st) on a charge of hoaxing Count Franz Sickingen with an offer of the Bulgarian crown; the latter was also imprisoned for swindling a lady by borrowing money from her on the expectation of the throne. In '91, D. Luckanoff, son-in-law of Dragan Zanoloff, the Bulgarian agitator, was expelled from Vienna (Jan. 6th). The one hundredth anniversary of the birth of Grillparzer, the dramatist, was celebrated (15th). The Archduke Francis Ferdinand paid a visit to Russia (Feb.), where he was cordially received and entertained by the Czar. Mr. Gustav Nathan, Her Majesty's Consul-General at Vienna, had the dignity of knighthood conferred on him (May). The Austro-Hungarian Yacht Club was sanctioned by the Government; it is under the patronage of the Emperor, and is to be called Imperial and Royal, and fly the flag of the Imperial Navy. A great concert was given at the Prater (June 7th) in honour of Herr Johann Strauss, who composed the "Blue Danube" waltz twenty-five years before; the audience was over 15,000. Prince Ferdinand of Bulgaria was received in private audience by the Emperor (17th). The Emperor visited Fiume (23rd), which was gallily decorated for the occasion, to witness some manoeuvres by the Fleet. A British squadron under Admiral Hoskins was present, who received telegraphic notice of his promotion the previous day. The Emperor inspected several British vessels, and lunched on board the flagship *Victoria* (24th). The two sons of the Archduke Joseph were struck by lightning at Alcsuth (July 30th), but neither was seriously injured. King Alexander of Serbia paid a visit to the Emperor at Ischl (Aug. 11th). The Prefect of Police in Vienna directed all the commissaries of police to make inquiries as to the inconvenience of ladies wearing long trains in the streets, requesting them to pay attention to the possible transmission of contagious diseases by this means (14th). The Emperor's birthday was publicly celebrated (18th). Fraulein Marie Wilt, once a well-known public singer, committed suicide at Vienna (24th). The famous painter, Munkacsy, is to receive 220,000 fl. for painting a large picture of the "Magyars taking possession of Hungary," which is to adorn the great hall of the new Parliament house in Budapesth. General Bauer, Minister of War, completed 50 years of service (19th), and was received in special audience by the Emperor. Prince Francis Joseph, the youngest brother of Prince Alexander of Battenberg, was gazetted major in the 13th Regiment of Dragoons (23rd). The young Archduchess Sophia, daughter of the Archduke Charles Louis, and Abbess of the Community of Noble Ladies of Prague, was reported (24th) to be seriously ill with typhoid

fever.—**COMMERCIAL.** The new Austro-Swiss Veterinary Convention was signed (Dec. '90). There was a demonstration of mother-of-pearl workers, who had been affected by the McKinley Act, outside Count Taaffe's residence (25th); they were dispersed. The commercial treaty between Austria and Italy was extended for one year to Jan. 1st, '93. The trade of Trieste fell off much in '90, the arrivals being only 7875 against 8213 in '89, and the departures 7856 against 8192. The gross value of the Austro-Hungarian exports in '90 was 800,000,000 fl.

Austrian Political Parties and the Reichsrath. The "Reichsrath," or Council of the Empire, is the central legislative body of Austria, or "Cisleithania." It consists of an **Upper House** (*Herrenhaus*) and a **Lower House** (*Abgeordnetenhaus*). The Reichsrath, like the legislative body of Hungary or "Transleithania," has its own ministers and government, and exercises full parliamentary functions on all matters within its competence—from which, however, **Foreign Affairs and War** are excluded. These latter questions are dealt with by a supreme body known as the **Delegations** composed of 60 members representing the legislative body of Austria, the upper house returning 20 and the lower house 40 delegates, and of an equal number, similarly chosen, representing the legislative body of Hungary. But political treaties concluded by the Emperor are not valid without the consent of the Reichsrath. The present **Upper House** of the Austrian Reichsrath contains 245 members. It is composed of the Princes of the Imperial family who are of age, of whom there are 21, of 68 hereditary nobles, of 17 archbishops and bishops, and of 139 members nominated by the Emperor for distinguished services in science or art, or to the Church or State. The **Lower House** contains 353 members, who are the popular representatives of the seventeen provinces

which comprise the Austrian Empire. Each of these provincial divisions, however, has its own **separate Diet**, consisting of one chamber only, for dealing with purely local matters. The conflict of parties may be said to attain its highest pitch in the lower house of the Reichsrath, which naturally includes members of widely varying race and creed. The unexpected dissolution of the Reichsrath in Jan. '91 caused many conjectures as to Count Taaffe's probable course. An Imperial decree was issued (Feb. 4), appointing Dr. Emil Steinbach in the place of M. de Dunajewski, who had resigned the office of Finance Minister. The elections to the Lower House commenced on March 1st. The seats held by the Old Czechs were all contested by the Young Czechs. The overthrow of the Old Czechs was crushing, and Dr. Rieger himself was defeated. Dr. Gregr is the leader of the Young Czechs, who are desirous of seeing the Emperor crowned King of Bohemia. The final disposition of parties in the Reichsrath was as follows: German Liberals, 110; National Germans, 16; Anti-Semites, 15; Poles, 57; Ruthenians, 8; Young Czechs, 40; Old Czechs, 10; Independent Czechs, 3; Left Centre, 8; Clericals, 31; Slovenians and Serbo-Croats, 23; Bohemian Feudal Conservatives, 18; Moravian Central Party, 5; Italians, 9; Roumanians, 2; and German Conservatives, 2.

Authors, Society of. See INCORPORATED SOCIETY OF AUTHORS.

Azores. The. A group of islands in the North Atlantic; belong as an integral part to the kingdom of Portugal. Area 1005 sq. m., pop. 269,401. Capital **Ponta Delgado**, on San Miguel Island; but the Governor usually resides at Angra, in the island of Terceira. People Portuguese and Spanish, mostly very poor. Governed as a province of Portugal. Discovered 1499. Called also Western Islands or Terceiras. See COLONIES OF EUROPEAN POWERS.

B

"Baccarat Case." See LIBERT, LAW AS TO. **Bacteriological Laboratories.** These institutions have primarily for their object the study of **micro-organisms** in relation to the diseases affecting the human body. Here, also, are carried on researches which benefit many of our great industries by the light they throw upon the action (hurtful, or otherwise) of minute organisms. For example, the chemistry of disinfection, the chemical bacteriology of sewage, the examination of potable waters, changes in soils, and so on. Many objections have been raised against the establishment of bacteriological laboratories or institutes, and frequently the noisy clamour of the ignorant has for a time frustrated the wishes of those interested in research. This was notably the case in '89, when the idea of establishing an institute similar to the **Pasteur Institute** in Paris was mooted. The chief objection is to **experiments upon animals**, which it is almost needless to say is an important feature in these laboratories. In this country stringent restrictions exist as to them; it being necessary to obtain a **licence** from the Home Office, and to comply with many regulations. It is a regrettable fact

that although England in **sanitary science** has always been foremost among the countries of the world, in the science of bacteriology (which is akin in some respects) few facilities exist for its proper study, and it is even sought to harass and impede its progress. In Germany and France there are laboratories of the highest character; witness, in the former, the great **Hygienische Institut**, in Berlin. In the United Kingdom they are of a more or less fugitive nature, and do not fulfil many requirements. At Cambridge is the new Jenner-Pasteur Institute; the laboratories of the Royal College of Physicians at Edinburgh are important; as also (in London) those at University College, the College of State Medicine, the joint laboratory of the Royal College of Physicians and Surgeons, and that at King's College under Prof. Crookshank. This year the founding of a **National Bacteriological Laboratory** has been carried to a successful issue by the incorporation of the **British Institute of Preventive Medicine**. Much opposition was shown to the scheme; the Board of Trade, in the first instance, refusing its desired registration as a company. It is intended to place this institute in the front rank,

and to give it national importance and standing. **Hon. Sec., Dr. Armand Ruffer**, 19, Idlesleigh Mansions, S.W.

Baden. See DIPLOMATIC.

Bahama Islands. Older name Lucayos Islands. Stretch between Florida and the Greater Antilles. Comprise 700 islands or rocky islets, 25 of which are inhabited. The chief island politically is **New Providence** (85 sq. miles), on which is the capital, **Nassau**, pop. 12,000, a large and handsome city, and a winter health resort for Americans and West Indians. Other islands are Andros, Eleuthera, Great and Little Bahama, Abaco, Inagua, etc. The southernmost, **Turk's and Caicos Islands**, have been annexed to **Jamaica**. Formation of calcareous rock, generally low. Small islands, called Cays, are of coral. Hurricanes and long droughts occur, but climate healthy. Water found by sinking. Much forest and valuable timber. Cattle largely reared. San Salvador (either Cat Island or Watling Island—probably the latter), where Columbus first landed in America, is one of the Bahamas. **Chief exports**, sponges, turtles, pineapples, and other fruit, a little sugar, cotton and coconut. Resources very inadequately developed.—Government is representative. There is a Governor and Executive, a Legislative Council and a House of Assembly. In '91 the Legislature passed a Bill authorising the laying of a telegraph cable between the Islands and Florida (June 11th). For latest statistics see **BRITISH EMPIRE**, etc. (table).

Bain, Alexander, LL.D., was b. at Aberdeen, 1818, and ed. at the University of that city, where he graduated '40. In '45 he accepted the chair of Natural Philosophy in the Andersonian Univ. of Glasgow, which he occupied only for a few months. He was appointed Assistant-Secretary to the Metropolitan Sanitary Commission in '47, and to the General Board of Health in '50. The publication of "**The Senses and the Intellect**," in '55, and "**The Emotions and the Will**," established his reputation as one of the profoundest investigators of psychological problems. His other important works include "**Mental and Moral Science**"; "**Logic, Deductive and Inductive**"; "**Mind and Body—Theories of their Relation**"; "**Education as a Science**," "**English Grammar**," and "**English Composition and Rhetoric**." Appointed **Regius Professor of Logic** in the Univ. of Aberdeen, '60, and **Lord Rector** of that Univ. in '81, and re-elected '84. Appointed Examiner in Logic ('57) and Moral Philosophy in the Univ. of London, and in '58 Examiner in Moral Science at the India Civil Service Examinations.

Baker, Maj.-Gen. Sir Thomas Durand, K.C.B., Quartermaster-General of the Army, was b. 1837. Ensign '54. He has served in the Crimean, Indian Mutiny, New Zealand, Ashanti, Afghan and Burmese wars, and has received many medals and other decorations. All his regimental service has been in the 18th Royal Irish Regt. He has held many staff appointments, and commanded a district in Bengal from Feb. '87 till Oct. '90, when he succeeded Sir Redvers Buller as Quartermaster-General.

Baker, Sir Samuel White, F.R.S., was b. in London in 1821. He was first brought into notice by the establishment of a mountain colony in Ceylon, at Newera Ellia, in '47, of which an interesting account is given in his "**Eight Years' Wanderings in Ceylon**." In '61 he organised at his own cost and conducted

an expedition for the discovery of the **sources of the Nile**. In this expedition he was accompanied by his wife, who is a daughter of M. Finnian von Sass. Having reached the junction of the Atbara with the Nile on June 13th, he explored the basin of the Blue Nile, and in June '62 made his way to Khartoum, where he organised a party to explore the course of the White Nile. He set out on this journey in Dec. '62, and in the following February arrived at Gondokoro, where he met Captains Speke and Grant, who had started from Zanzibar on a similar quest, and reported having reached Victoria Nyanza, which they believed to be the source of the great river. Baker having assisted them to go on to Khartoum, resolved to follow up their discoveries, and without either interpreter or guide, and in face of many difficulties and dangers, set out from Gondokoro on March 26th, '63, and a year afterwards sighted the waters of a great lake which he called the **Albert Nyanza**. For this discovery the Royal Geographical Society awarded him the Victoria gold medal, and Her Majesty conferred upon him the honour of knighthood. In '69 he undertook a successful expedition into Central Africa on behalf of the Khedive, and in '79 was sent by the British Govt. to investigate the resources of Cyprus. Published (Oct. '90) "**Wild Beasts and their Ways**."

Balfour, Rt. Hon. Arthur James, M.P., P.C., F.R.S., Chief Secretary for Ireland, was b. 1848, and educated at Eton and Trin. Coll. Camb. He entered Parliament in '74 as M.P. for Hertford, which constituency he represented until '85, when he was elected for East Manchester, for which he still sits. By his work entitled "**A Defence of Philosophic Doubt**," Mr. B. gave promise of abilities which could hardly have failed to win recognition by the Conservative party, even had he not been connected by family ties with Lord Salisbury. Mr. B.'s mother is a sister of the noble Marquis. He acted as private secretary to his uncle at the Foreign Office during the critical period '78-80, when the Berlin Treaty was negotiated. In the early portion of his parliamentary career he acted for a time with the "Fourth Party," but did not come into prominent notice until '85, when he became **President of the Local Government Board** in Lord Salisbury's first Administration, and on the return of his lordship to power in '86, after serving for a short time as **Secretary for Scotland**, was appointed **Chief Secretary** to the Lord Lieutenant of Ireland. Mr. B. introduced the Crimes Act of '86, and since its adoption has energetically devoted himself to the enforcement of its provisions. His reputation as a parliamentary debater rose considerably during the animated debates which preceded and followed the enactment of that measure. He is an **hon. LL.D.** of Edinburgh and of Cambridge. The right hon. gentleman has long been known for his interest in golf, and on this subject he wrote for the Badminton Series. It is not generally known that he has written able cyclopædic articles on musical subjects. The degree of **LL.D. honoris causa** was conferred on the Chief Secretary by Trinity Coll., Dublin, on Feb. 10th, '81. In connection with the Land Purchase (Ireland) Bill, the progress of which he conducted with ability, Mr. B. delivered many speeches in the House of Commons. Received (June) the hon. D.C.L. degree from

Oxford Univ. Spoke on the subject of Thrift at the City Terminus Hotel (20th). Addressed a great meeting at Plymouth (Aug. 10th). In the recess, he delivered many speeches in the provinces. On the decease of Mr. W. H. Smith it was announced (Oct. 16th) that Mr. B. would succeed him as First Lord of the Treasury and Leader of the House. He was appointed Chancellor of Edinburgh University (30th).

Balkh. A large territory N. of the Hindoo Koosh, called Afghan Turkestan, the capital of which is Balkh (*Mazar-i-Sherif*). The Ameer maintains a strong garrison at Balkh, and from it despatches the troops that garrison the rest of the territory between the Hindoo Koosh and river Oxus.

Ball, Sir Robert Stawell, LL.D., F.R.S., was b. at Dublin July 1st, 1840, and was ed. at Chester by Dr. Brindley. Appointed Andrews Professor of Astronomy in the University of Dublin, and Royal Astronomer of Ireland ('74). He is the author of several works, besides many papers on mathematics, astronomy and physical science in various publications. He has frequently lectured on astronomy in the leading institutions in the United Kingdom, and delivered "Christmas Lectures on Astronomy" at the Royal Institution ('81-2). His "Story of the Heavens" is the most popular of his works. The honour of knighthood was conferred upon him in '86.

Ballarât. Mining centre in Victoria (*q.v.*); pop. 41,965.

Ballooning. The art of aerial navigation, or rather of researches into its principles, is said to date from the fourteenth century. The first ascent recorded was by the brothers *Montgolfier* by means of a fire balloon, at Aunonay, in 1783; and *MM. Robert and Charles* were the first to use a hydrogen balloon for a similar purpose at Paris in the following month.—'91. In August, *Higgins*, whose aeronautical exploits have been chronicled in previous editions, lost his life after making an ascent at Kirkstall, near Leeds (8th). The ascent had been undertaken voluntarily by Higgins, in consequence of a previous disappointment in the same district. The wind was high, and the balloon drifted near to some telegraph wires, throwing Higgins to the ground. He survived the fall for only fifteen minutes. *M. Mouchin* also lost his life with the balloon *Ostrevant* (Aug.), after starting from Boucha in France. On Sept. 17th, '91, the military balloon was officially recognised in the French army as an instrument of war. Messrs. *Krebbs and Renard* have constructed a balloon which, when not inflated, is easily carried by a soldier, and which can be filled with hydrogen at any moment.

Baltic and North Sea Canal. The German Emperor performed the ceremony of opening the gates of this canal, which has been described in our former editions, in the spring of '91. He again visited the works in the summer. The canal starts at Holtenau, on the north side of Kiel Bay, and joins the Elbe fifteen miles above its mouth. It is 6½ miles long, 200 ft. wide at the surface, and 85 ft. at bottom, the depth being 28 ft. No locks are required, as the surface of the two seas is level, but there are sluices and floodgates where the canal passes the river Eider, and at its termination. The cost is estimated at eight millions sterling. The advantages gained for the Baltic trade, apart from the dangers of the old journey by the Skagerrack and the Kattegat, are immense

the saving of distance alone being for a journey to the Thames 250 miles, to Lynn or Boston 220, to Hull 200, to Newcastle or Leith 100. It is computed that from thirty to forty thousand vessels pass through the Sound annually.

Bangor, Rt. Rev. Daniel Lewis Lloyd, Lord Bishop of, was ed. at Jesus Coll., Oxford, and took a 2nd class in Moderations 1865, graduating M.A. '71. Dr. Lloyd was ordained '67, and commenced an educational career, becoming head master of Dolgelly School, and holding a curacy at Dolgelly. After remaining there for five years he filled the position of headmaster of the Friars School, Bangor, and finally became headmaster of Christ Coll., Brecon. His appointment to the bishopric was announced May '90; he was consecrated in St. Paul's Cathedral, June 24th. The ceremony of enthroning the Bishop, after a long delay, took place at Bangor (Dec. 19th, '90).

Bangweilo Lake. See CONGO FREE STATE.

Bank of England (for its history see ed. '87). Projected by *William Paterson*, whose proposal for the same was laid before the Government in the year 1691. Three years later the Bank was established, starting its operations with a loan to the Government of £1,200,000 at 8 per cent., secured on taxes. The Bank Charter, granted for eleven years, appointed a governor and twenty-four directors to be elected annually from members of the company possessed of at least £500 stock (see MONEY MARKET and BANKS AND BANKING).

Bank Holidays. The Act, which declared that certain days in the year should be kept as public holidays, was brought in by Sir John Lubbock, and passed May 25th, 1871. The holidays are, in England and Ireland: Easter Monday, Whit Monday, First Monday in August, and Boxing Day (unless Sunday). Scotland: New Year's Day, Christmas Day (but should either fall on Sunday, then the following Monday), Good Friday, First Monday in May, and First Monday in August.

Banking Law in '91. A final decision in the important case of *Vagliano Brothers v. The Bank of England* was given in the House of Lords on March 5th, '91. In the year '87 a Greek clerk in the plaintiffs' service lodged forty-four bills of exchange for sums amounting to £71,000, and obtained payment for them from the Bank of England. They professed to be drawn by *Vucina*, a merchant at Odessa, who had extensive dealings with Messrs. *Vagliano*, and were made payable to *Petridi & Co.*, also an existing firm. The books and letters in Messrs. *Vagliano's* office were manipulated, so as to show that the bills were being forwarded, and when laid before the acting partner he put his name to them as acceptor without demur. They were then included in letters of advice sent by Messrs. *Vagliano* to the bank, and, after being abstracted by the clerk, the endorsement of *Petridi & Co.* was duly forged, and they were presented for payment. A representation on the matter was made to Messrs. *Vagliano's* clerk when only a few bills had been presented, but he raised no objection, and for a time the frauds went on successfully. At length Messrs. *Vagliano* discovered that two acceptances of theirs had been forged, and then the whole of the transactions came out. The bank claimed to retain the £71,000 out of Messrs. *Vagliano's* account, and the latter brought an action to negative any such right on their part. Two points were mainly contested. If the bills of

exchange were payable to the order of Petridi & Co., the bank had no business to pay except upon their endorsement. On the other hand, a recent statute provides that when a bill of exchange is made payable to a fictitious payee, it is to be treated as payable to bearer. If, then, Petridi & Co. could be treated for the purposes of the bills as fictitious, the bank would be safe. The second question was whether Messrs. Vagliano had by their own conduct so contributed to the loss as to disentitle them to throw it upon the bank. Mr. Justice Charles, before whom the case first came, held that Petridi & Co. were not fictitious within the meaning of the statute; consequently the bills were payable only to order, and the bank was liable for paying on a forged endorsement. Moreover, there had been no negligence on the part of Messrs. Vagliano sufficient to defeat their right to recover. The case was next heard before the full Court of Appeal, where the Lords Justices supported the judgment of Mr. Justice Charles, the Master of the Rolls dissenting. A large majority of the House of Lords has now decided in favour of the bank. It held that, inasmuch as Petridi & Co. were introduced as a mere fiction, and were not intended to have any rights under the bills of exchange, they might well be regarded for this purpose as fictitious. Consequently the bills were by the statute payable to bearer, and the bank was not liable. It was held, too, that the conduct of Messrs. Vagliano in forwarding letters of advice of the bills, and in not discovering the forgeries when the bills themselves were returned with the pass-books, had misled the bankers, and so had absolved them from liability.—In the case of the **Edinburgh Ballarat Gold Mine Co. v. Sydney** (Queen's Bench Division, July 18th, '91) a cheque for £1000 had been drawn by the defendant, a solicitor, in favour of "Mr. Cornish." The cheque was never endorsed by "Mr. Cornish," but the plaintiff company endorsed it in his name, alleging that the cheque was payable to bearer, since Cornish was a fictitious person, and that they as holders in due course for value were entitled to the amount. It was alleged that the cheque was obtained from the defendant by the promoter of the company, who was anxious that the company should go to allotment, and that the application for shares was not intended as *bona fide*. Mr. Justice Charles held that the plaintiffs were entitled to recover.—A broker deposited with a banker, as security for money advanced, share certificates and bonds which belonged to his client, and which he had no authority to pledge. It was held that the bankers were liable in damages to the owner of the securities. (*Symmons v. London Joint Stock Bank*, Court of Appeal, Dec. 16th, '90.) On the other hand, in the case of *Baker v. The Nottingham Banking Company* (Queen's Bench Division, Jan. 28th, '91), in which the facts were of a somewhat similar nature, it was held that the plaintiff was not entitled to recover, as there was nothing to lead the bank to draw an inference that the bonds were not the property of the person depositing them, whereas in *Symmons v. The London Joint Stock Bank* the facts enabled the bank to draw such inference.

Bankruptcy Act, '83. See previous eds.

Bankruptcy Act, 1890. contains thirty-one sections, some of them having very numerous subsections. The first section makes additions to acts of bankruptcy, and also

enables an assignee of a judgment debt, such as a mortgagee or trustee in bankruptcy, to file a petition. The second section secures that the notes of a bankrupt's public examination shall be read over either to or by him, and facilitates or permits the postponement of the public examination of disabled bankrupts. Sect. 3, consisting of nineteen subsections, creates a new practice and procedure in compositions, which it expedites by reducing the number of meetings of creditors; and it also gives the court additional powers to approve, or otherwise, of such proposals. And if bankruptcy offences are proved against the debtor the minimum composition to be approved as binding on the whole of the creditors is one of 7s. 6d. in the pound. By sect. 4 no person is in future to be appointed a trustee who has been previously removed for misconduct or neglect of duty; and by the following section the area of selection of the committee of inspection is enlarged by making eligible any creditor who is entitled to prove, though no member can act until he has proved his debt. Sect. 7 enlarges the powers for the arrest of absconding debtors. Sect. 8 regulates for the future the discharge of bankrupts, and provides that if a bankrupt is proved to have committed certain specified frauds and offences (but in such case only) the discharge must either be suspended for at least two years, or until a dividend of 10s. in the pound has been paid, or the bankrupt must be placed under an obligation to discharge the balance, or some part of the balance (in the discretion of the court) of his debts. In this respect the statute moderates the existing law, under which it has been held that any such obligation must be for the whole unpaid balance of the debts; and provision is made for the abatement of such an order if after two years the bankrupt satisfies the court of his inability to comply with its terms. Exemption from the obligation to pay 10s. in the pound is also made if the bankrupt satisfies the court that the fact that his assets are not of a value equal to 10s. in the pound has arisen from circumstances for which he cannot justly be held responsible. The bankruptcy offences referred to in this section are fraud or fraudulent breach of trust, omission to keep usual and proper books of account, bankruptcy caused or contributed to by rash and hazardous speculations or unjustifiable extravagance in living or gambling, or culpable neglect of business affairs, frivolous and vexatious litigation, knowingly trading after insolvency, &c. Sect. 9 mitigates the law as to civil disqualification on bankruptcy by limiting the period to five years after discharge, and includes in disqualifications that of being elected a county councillor. Sect. 10 prevents a discharge operating to release a bankrupt from the pecuniary consequences of seduction, affiliation orders, or damages against a co-respondent in a matrimonial cause, except so far as the court may think fit under the circumstances of each case. Sects. 11 and 12 regulate the duties of sheriffs in relation to goods taken in execution if bankruptcy supervenes, and protect the interests of the general body of creditors, on the principle that "equality is equity." Sect. 13 enlarges the trustees' time for disclaimer, and contains provisions in favour of the operations of building societies. Sects. 16, 17 and 18 require the trustee and official receiver to furnish upon demand by a creditor lists of the creditors

and statements of the estate accounts, and to summon meetings of the creditors. Sect. 19 enlarges the power of removal of trustees for incapacity or non-performance of duty or want of impartiality. Sect. 20 amends the procedure in relation to judgment-debtor bankrupts, and Sect. 21 in relation to deceased insolvents' estates. Sect. 22 reforms the proxy system in the direction of giving further rights and privileges to creditors as against the official receiver. Sect. 23 introduces into the law an important principle intended to protect creditors' estates and bankrupts against the claims of extortionate money-lenders, by providing that proofs on estates for interest bonuses and the like shall be limited to 5 per cent. until the general body of creditors have been paid in full. By sect. 24 affidavits in bankruptcy may be sworn before justices of the peace, and by sect. 25 elaborate returns are to be made to the Board of Trade, and are to be open to the public, of all deeds registered under Sir Albert Rolit's Deeds of Arrangement Act, '87. Sect. 26 at last remedies a grave defect in the Bankruptcy Act '83, under which bankrupts against whom a petition is presented may be prosecuted for such serious misdemeanours as fraudulent breaches of trust, appropriation of trust funds and the like, while bankrupts adjudicated on their own petition, though equally guilty, escape scot-free—a state of law which has led to the gravest miscarriages of justice, which are now put an end to. Equally sect. 27 removes a blot on bankruptcy administration by repeating the provisions of the Larceny Act, which prevents the proof by independent testimony and the punishment of certain serious misdemeanours, such as frauds by trustees, agents, etc., if the bankrupt has first referred to them on his public examination. Still by a proviso such statements of a bankrupt cannot be themselves used as evidence against him—which is all the protection which ought to be accorded to a criminal. The law should in such cases be a shield for defence, but it is too often a sword for attack. Lastly, by sect. 28 the landlord's right of distain for rent is reduced from twelve months to six, but this proviso only operates in case of bankruptcy.

Bankruptcy, Law as to, in '91. *In re Croom* (Chancery Division, Jan. 22nd, '91) raised a question whether, in the case of a scheme of arrangement under the Bankruptcy Act, '83, property acquired by the debtor subsequent to the approval of the scheme by the court passes to the trustee under the scheme, or whether the approval of the court is equivalent to an order of discharge, so that after-acquired property belongs to the debtor. It was held by Mr. Justice Kekewich that such property belongs absolutely to the debtor.—In the case of *Smith v. Gronow* (Queen's Bench Division, June 17th, '91) a question was raised as to the power of a lessor to re-enter upon his property in case the lessee becomes bankrupt. In the present instance the lease had, with the consent of the lessor, been assigned to a third party, and it was held that under these circumstances the landlord could not take advantage of the bankruptcy of the lessee to re-enter as against the innocent assignee. A point was also raised in the case as to the extent to which the landlord's action was affected by the subsequent annulment of the lessee's bankruptcy, but Mr. Justice Wright declined to determine the question, though he expressed an opinion that the

subsequent annulment of the bankruptcy could not defeat the lessor's right in an ordinary case.—A bankrupt is sometimes ordered to set aside a stated portion of his salary or income on behalf of his creditors. It appears, however, that the salary or income must be fixed and certain, and in the case of a working collier, whose weekly wages averaged from 25s. to 30s. a week, the county court judge declined to make an order, on the ground that there was no certainty that the man would earn the amount. This view was subsequently supported by the Court of Appeal. (*In re Jones*, Bankruptcy Court, June 22nd, '91.)—In the case of *Mr. G. M. Byrne, M.P.* for West Wicklow, an application was made to the Court of Bankruptcy (Aug. 17th, '91) for a statutory certificate that the bankruptcy had been caused by misfortune, and without any misconduct on Mr. Byrne's part. The latter was described as an estate and mortgage broker, of Parliament Street, Westminster, and an order of discharge had been granted. He now asked for a certificate in order to prevent his disqualification as a member of Parliament. Mr. Registrar Linklater, holding that the failure was clearly attributable to misfortune, granted a certificate as prayed, under sect. 32 of the Bankruptcy Act.—In a case in which a registrar had given a bankrupt his discharge, the Board of Trade took the case to the Court of Appeal, who decided that the bankrupt had engaged in rash and hazardous speculation, and suspended his discharge for twelve months from that date. (Court of Appeal, Dec. 12th, '90.)

Banks and Banking. The origin of banking in England in anything like the modern sense of the term dates from the foundation of the Bank of England, in the reign of William III. Charles II. had ruined the credit of the Exchequer by seizing the gold lodged with the Government for safe keeping, and as a consequence William III. found it impossible to borrow money for carrying on his wars. It was then that the scheme for the formation of the Bank of England was brought forward and carried. The Bank made advances to the Government, and in return became sole keeper of the Government balances, and the only joint-stock bank permitted to issue notes in or near London. The formation of other joint stock banks in England dates from 1826, when the disastrous panic of the preceding year, attributed to the bad management of the country private banks, enabled the ministry to compel the Bank of England to give up some of the privileges of its charter. It was ultimately agreed that joint-stock banks should be formed beyond a radius of sixty-five miles from the Metropolis. **Country joint-stock banks**, however, did not spring up very rapidly at first, and it was not until the prosperous years '33-6 that any considerable increase in their number took place. Upwards of forty banks were established in '36. The creation of joint-stock banks in London arose from a discovery made in '22 that the Bank Charter Act did not prohibit joint-stock banks being formed in London to carry on business on the lines adopted by London private banks. The Bank's charter gave the Bank of England the exclusive privilege of issuing notes payable on demand, but it did not give it the exclusive privilege of receiving deposits. In the old days, when the charter was framed, the term banking referred chiefly

to the issue of notes, deposit banking being hardly known. The result of this discovery was the introduction of a clause into the **Bank Act of '33** permitting joint-stock banks to be formed in London, providing they did not issue notes. The **London and Westminster** and **London Joint-Stock** banks were formed in '36, the **Union** and **London and County** in '39, followed at intervals by others. For several years after this period many legal questions respecting the acceptance of bills, the power of suing for debts, etc., arose from time to time, and constantly embarrassed the operations of the joint-stock banks. All these disabilities, however, were finally swept away by the **Joint-Stock Banking Act of '44**. It was not, however, till '58 that an Act was passed permitting the creation of joint-stock banks with limited liability. The failures of the **City of Glasgow** and **West of England** banks, in '78, brought about another important alteration of the law respecting the liability of banks. The ruin caused by those two catastrophes drew the attention of the public to the hardships of the system of unlimited liability, and in '79 an Act was passed to establish "reserve liability." The essential element of "reserve liability" is that a portion of the bank's uncalled capital shall be set aside to be called up only in case of failure, and for the purpose of liquidation. Banking practices in England and Scotland differ in many respects, but the cardinal distinction between the two systems lies in the power granted to Scotch banks of issuing notes not convertible except at the head office. It is entirely owing to this privilege that the Scotch banks are able to open so many branches. There is no necessity to keep gold reserves at the branches; a parcel of bank notes is all that is wanted. The Act of '45 regulating Scotch bank issues prohibits any new bank that may be opened in Scotland from issuing notes, and it is easy to see that this proviso renders banking in Scotland a monopoly. The Irish banks are also permitted to issue notes like the Scotch banks, but in their case all notes are payable "at the place or places where they have been issued or are issued." Thus the banks in Ireland, unlike the Scotch banks, must keep some gold at every branch. In England no banks located in London are permitted to issue notes, and even when an English country bank wishes to enter London it is compelled to give up its bank-note issue, should it have any. No new bank starting business in England is allowed to issue notes. At present the total note circulation of the country private and joint-stock banks is under 2½ millions sterling, whilst the note circulation of the **Bank of England** is about 25 millions. The Scotch and Irish banks have a note circulation each of 5½ millions. The total number of joint-stock banks established in the United Kingdom is 185, many of which have numerous and very important branches. Their total paid-up capital is about £70,000,000. The deposits held by all the banks in the United Kingdom, both private and joint stock, are estimated at about 600 millions, the increase during the last ten years being about 90 millions sterling. The first half of '91 was not favourable for banking. Business, generally speaking, was dull throughout the country, while stagnation reigned on the **Stock Exchange**. The value of money was low, the average bank rate being only £3 10s. 8d. against £4 10s. 4d. in the corresponding period of '90, and the outside

market rate of discount for three months paper £2 14s. 8d. against £3 13s. 11d. The **Baring** crisis in the autumn of '90 forced all the banks to adopt a very cautious policy in employing their funds, as the future was full of uncertainty and danger. This, and the strong expression of feeling that it was necessary to keep larger reserves, made the managers of the **Joint Stock Banks** doubly careful in their dealings. With reference to the action of the **Bank of England** in regard to the **Baring crisis**, the Governor's allusion in his speech at the half-yearly general Court, held on March 12th, '91, will be of interest. It conveys a clear idea of the exact position of affairs, which led to the intervention of the Bank. It is also necessary to record with satisfaction the appreciation with which Mr. Lidderdale's timely action was received. He was elected a member of the Privy Council, and was presented with the honorary freedom of the City of London. (See also LIDDERDALE.) Mr. Lidderdale said: "You must all have learnt from the Press that in the second week of November it became known to the Bank that the great house of Baring were in difficulties. For an announcement that the firm were embarrassed by their operations in South America the Governors would, to some extent, have been prepared, but not for the actual facts. The situation was at once recognised to be very grave, and to demand prompt and decided action on the part of the directors. We had a reserve ample for ordinary requirements, but not for the demand certain to come upon the Bank the moment Messrs. Baring's difficulties became known. The old and well-proved remedy of raising the rate would not have met the urgency of the case, as the condition of financial affairs in several countries of Europe, as well as in the United States, made it certain that gold to the required extent could not be attracted here except slowly, and then only by rates so high as to involve much suffering to our own trading and mercantile community. It was therefore decided to adopt exceptional measures, even at a considerable sacrifice to the Bank. In the course of a couple of days we secured, by a sale of Exchequer bonds to the State Bank of Russia, the sum of £1,500,000 in gold, and obtained from Paris as a loan, by the prompt and liberal action of the Bank of France, a further sum of £3,000,000 as an addition to our resources. Four days of that week were occupied in the preparation and examination of a statement of Messrs. Baring's position, and on Nov. 14th I was enabled to assure the heads of Her Majesty's Government that there was good reason to believe, without committing myself to definite figures, that the assets would yield a substantial surplus over the liabilities if sufficient time were allowed for liquidation. Without this belief in their full eventual solvency, nothing could have been done to save the firm. When I tell you that the liabilities of Messrs. Baring Brothers were over £21,000,000, you will realise that the burden of carrying over their difficulties was not to be lightly undertaken even by the Bank of England, and that the risk of doing so was more than the Bank were called upon to bear alone. It was necessary therefore to invoke the aid and support of the financial community in forming a guarantee fund to justify the Bank in providing the money required. I am glad to acknowledge the promptitude of the response made. It was

nearly five o'clock on the afternoon of Friday when the guarantee list was opened and headed with £1,000,000 by the Bank of England. In half an hour the amount had reached £3,250,000; by eleven next morning (Saturday) it was £6,500,000, and at twelve I was able to announce that the liabilities of the firm would be duly met. This, however, did not prevent large further additions to the guarantee fund, which eventually reached £17,250,000, rendering it certain that, even if the liquidation proved disappointing, the loss to any individual guarantor could hardly be serious. You will, no doubt, wish to know how the liquidation has proceeded, and I will therefore give an outline of the account. On Nov. 1st the liabilities stood at about £21,000,000; the assets apparently at about £24,800,000. Since then numerous entries have been made on both sides of the account, additional drafts having come forward and remittances been received; but on March 1st the liabilities to the public had been reduced to £3,522,000. The debt to the Bank, however, had reached £6,650,000, making a total of £10,172,000 still due. The assets in bills and cash were on March 1st £849,000, and the debts due to the firm £3,364,000, making a total of £4,213,000. To cover the difference of nearly £6,000,000, there were securities in hand to a considerably larger extent. Of these the partners' lands, houses, and private property represent over £1,000,000, and the securities of which the value is readily ascertainable about £1,250,000. The balance consists of South American securities, and these are much more difficult to estimate. Wherever there are quotations we have taken the very lowest; in other cases we have put on low prices, and I can only say again, without committing myself to figures, that, although the market for South American securities has seriously declined since Nov. 1st, there is still, to all appearances, a substantial surplus over the liabilities—a surplus, in my judgment, quite sufficient to protect the guarantors. In illustration of our estimate I may take a single large item—that of an unissued Uruguay Six per Cent. Loan of £2,000,000. This we have taken at 50, the quotation for similar bonds now on the market being 55 to 57. The interest on this unissued loan has been regularly paid, and, judging by the desire

shown by that Government to maintain their credit, will, we hope, continue to be paid. I think you may have a reasonable hope that the efforts made by the Bank to protect the country from the consequences of that failure will involve no loss either to the Bank or to those who assisted the Bank in carrying the matter out." These adverse influences caused a falling off in the net profits of the London banks in almost every instance. The decreases ranged from £700 up to £37,000. In two instances only was there a reduction in the distribution, the exceptions being the London and Westminster and the Union Bank, which were not able to repeat the payment of the bonus given in the first half of '90. The country banks did better than those in the Metropolis, owing to their profits being more dependent upon industrial activity than to Stock Exchange business. This is evidenced by the Bankers' Clearing House returns, which show a decline of nearly 26 per cent. in the clearings on the Stock Exchange pay-days, whilst the general total shows a falling off of a little over 10 per cent. In consequence of the London banks adhering to the rates of dividend paid on account of the first half of '90, the apportionments to reserve and to reduction of cost of premises have had to bear the whole of the decrease in the net profits. The only amounts placed to reserve out of profits earned were £5000 by the Consolidated Bank, and £5000 by Martin's Bank. Out of premiums received on new shares, the London and Provincial added £50,000 to reserve, and increased their potential reserve by writing down to '90 the whole of their holding of consols, at a cost of £42,382, beside adding £10,295 to the Officers' Pension Fund. The London and South Western Bank in the same way added to the reserve fund £30,000, produced by premiums, and wrote down to '90 their holdings in consols. The dividends of the country institutions have not been in one instance less than those distributed in '90, while in five cases there was a distinct improvement. The joint-stock banks of the Metropolis agreed amongst themselves to issue monthly balance sheets based upon their statutory accounts. The first monthly statement was for July, and the position then and at the end of September is seen in the following table:—

Name of Bank.	Liabilities on deposits and current accounts.	Cash in hand and at Bank of England.	Proportion of cash to deposits.	
			Sept.	July.
Alliance	£ 4,700,758	£ 697,712	14·8	12·9
Capital and Counties	11,056,000	1,314,190	11·8	10·4
City	6,370,771	926,746	14·5	10·0
Consolidated	3,230,446	306,042	9·4	12·0
Imperial	3,865,436	532,465	13·7	11·4
Lloyd's	20,538,603	2,711,738	13·2	15·5
London and County	35,349,696	4,126,864	11·6	12·3
London and South-Western	5,199,881	757,581	14·5	9·9
London and Westminster	24,633,667	3,821,066	15·5	14·7
London Joint Stock	11,405,400	1,173,419	10·3	20·2
Martin's	808,742	286,651	15·7	13·9
National Provincial	41,146,971	4,600,820	11·1	12·3
Prescott, Dimsdale	3,765,429	581,157	15·4	12·3
Union of London	13,487,527	2,175,678	16·1	17·7
Williams, Deacon	9,305,227	999,711	10·7	8·3

The publicity of the joint-stock banks has gained for them the great bulk of the business of the country, for large institutions are becoming more popular with the community. Consequently many of the smaller banks have either been taken over by the joint-stock banks, or have coalesced into territorial groups for mutual protection. The changes which have taken place during the year are as follows: The Union of London took over the business of Chasemore, Robinson & Sons, of Croydon. The Leeds Old Bank is now joined to the York and East Riding Bank. The National Bank of Wales acquired the business of the Carnarvonshire District Bank of Fugh, Jones & Co. The Consolidated Bank of Cornwall (Bolitho, Williams, Foster, Coode, Grylls & Co.) amalgamated with Bain, Field, Hitchens & Co., of Redruth and Helston. The Wilts and Dorset Banking Co. purchased the business of Hancock & Co., Wiveliscombe, and increased the nominal capital by £500,000. Lloyd's Bank absorbed the Brecon Old Bank and Beoching's, of Tunbridge Wells; Fraed & Co., of Fleet Street, London; Oobb & Co., of Margate; and Hart, Fellows & Co., of Nottingham. Capital and Counties acquired the business of Watts, Whidbourne & Co., of Teignmouth, and Garfit, Claydon & Co., of Boston, Lincolnshire, and increased their capital by £787,500. The Cornish Bank purchased the Commercial Bank of Cornwall, and increased its capital by £250,000. The Manchester and Liverpool District Banking Co. acquired the business of Brokclhurst & Co., of Macclesfield. The Stamford, Spalding and Boston Bank absorbed Eaton, Cayley & Co., of Stamford. The Central Bank of London amalgamated with the Birmingham and Midland Banking Co. Prescott, Dimsdale & Co. absorbed the business of George Moger & Sons, Bath City Bank, Deane & Co., Manchester, and the Thornbury Bank of Harwood & Co. Fuller, Banbury, Nix & Co., of Lombard Street, amalgamated with Parr's Banking Co., Warrington. The Channel Island Bank took over the Old Bank of Jersey (Messrs. Godfray, Major & Godfray). Laoy, Hartland & Co., which was formed in 1809, has amalgamated with the London and Midland Bank (Ld.). Martin's Bank was converted into a joint-stock company, with a capital of £1,000,000. It is worth noting that Lloyd's now represents twenty-four former separate banks. See MONEY MARKET AND STOCK EXCHANGE MOVEMENTS.

Baptists. The Baptists hold that the only Scriptural mode of baptism is by immersion, and that the proper subjects are "believers"—persons of ripe age to exercise belief. Any other baptism they consider to be contrary to the original institution, contrary to the example of Christ, and also opposed to the spiritual design of the ordinance. Historians, themselves not Baptists, have shown that through many centuries these views have been held amongst the Waldenses, the Albigenses, the Vaudois, the Lollards and Wycliffites. Formerly, on the Continent and in England, they were opprobriously called **Anabaptists**. In 1537 Henry VIII. issued a proclamation against their heresy, as persons who rebaptised themselves. They began their separate existence as Particular Baptists in 1633, at a meeting-house in Wapping. As early as 1611, many Baptists, because of persecution, fled to America, and the feeble remnant in London published a *Confession of Faith* (1611) to vindicate their orthodoxy. In 1620 they memorialised the king for liberty of wor-

ship. *Confessions of Faith* they published again in 1644 and 1646. In 1689 a *General Assembly of Baptists* in London published a *Confession* in thirty-two articles, and a *Baptist Catechism*, after the model of the Assembly's Catechism. The latest returns ('90) give, in the United Kingdom, 2802 churches, 3781 chapels, with 1,223,526 sittings, 1874 pastors, 4000 local preachers, 300,163 church members, 447,892 Sunday scholars, 45,132 teachers. These figures include only those churches which have sent returns to the Baptist Union. A rough estimate of the number of members, teachers and scholars in non-reporting churches is about 30,000 members and 35,000 scholars additional. The colleges for training the rising ministry are: Bristol, founded 1770; Regent's Park, 1810; Rawdon, Bradford, 1804; Nottingham, 1797; Haverfordwest, 1839; Pontypool, 1836 (formerly Abergavenny, 1807); Llangollen, 1862; Manchester (Brighton Grove), 1866; the Metropolitan Pastor's College, 1856; Scotland, the Theological Hall, 1869. The Baptist Foreign Mission was originated in 1792 (see MISSIONARY SOCIETIES). Baptist churches are congregational in government, holding to the order of pastors (bishops) and deacons. The interests of different counties are cared for by 48 local associations; and the wider affairs of the denomination are attended to by the **Baptist Union of Great Britain and Ireland**, formed in 1831—which Union, while it has no legislative authority, is adapted to secure united action throughout the whole country. Of late years Home missions have become affiliated with the Union, and the Annuity, Augmentation, and Education Funds have been established. On Jan. 1st, '90, the Irish Mission passed from the control of the Council of the Union to that of a committee of the Irish Baptist Association, who entirely govern and direct the affairs of the Mission. These societies represent the distribution of upwards of £12,000 per annum by the Council of the Union, under one executive. Many of the General Baptists early merged into Socinianism, so that in 1770 the "**New Connexion**" (Evangelical) became the true exponent of General Baptist views in the country. Almost from the time of the Reformation until recently Baptists have been divided in two sections—the "**Particular**" (or Calvinistic) and the "**General**" (or Arminian) Baptists; but by a resolution of the Assembly of the Union (which included both General and Particular Baptists) passed on Oct. 10th, '89, the two sections are now merged in one; and the distinctive terms are abolished, the word "**Baptist**" alone being used. Outside the Baptist denomination there are the **Sooth Baptists**, with a plural eldership. In England there are some 300 **Hyper-Calvinistic** churches. It is computed that in the world at large there are 42,650 Baptist churches, 27,883 pastors and missionaries, and 3,786,603 church members. The selection of a vice-president for the Baptist Union of England and Wales rests with the Council, which consists of one hundred members. The name is submitted for confirmation to the whole assembly of the Union, and the Vice-President for one year becomes in the ordinary course President during the next year. President of the Baptist Union for the year '91-'92, Col. J. T. Griffin (q.v.). Vice-President, Rev. R. H. Roberts (q.v.). Secretary, Rev. S. H. Booth, D.D. Offices of the Baptist Union, 29, Fournival Street, London, E.C. Consult *The Baptist Handbook*.

Barbadoes. A British West Indian island; geographically but not politically one of the Windward group. Barbadoes is of coral formation, and rises in a succession of limestone and coral terraces to a height of 1104 ft.; while it is almost encircled by coral reefs, which render the approach to it dangerous to mariners. The climate is healthy; but violent hurricanes occur and cause much damage. For latest statistics see **BRITISH EMPIRE** (table).

Barbuda. A British West Indian island; a dependency of Antigua, and under the federal government of the **Leeward Islands**. Belongs to the Codrington family, and enjoys proprietary government locally.

Baring Crisis. See **BANKS AND BANKING**.

Baring, Sir Evelyn, C.B., K.C.S.I., G.C.M.G., son of late Henry Baring, 1st cousin of present Lord Northbrook, b. 1840. Captain R.A. '68, major '75; private secretary to Lord Northbrook (Governor General of India) '72-6; English Commissioner of the Public Debt '76-9. Married (76) Ethel, daughter of Sir Rowland (Stanley) Errington. **Controller General of Egyptian Finance** '79-80; **Financial Member of Council India** '80-83. Since Oct. '83 **H.M.'s Consul General and Minister in Egypt**. Sir Evelyn possesses a more complete knowledge of Egypt than any living English official.

Barnaby, Sir Nathaniel, K.C.B., was b. at Chatham, 1829, and served his apprenticeship as a shipwright at Sheerness. He obtained in '48 an Admiralty Scholarship in the School of Naval Architecture at Portsmouth, and secured an appointment in the designing room of the Admiralty in '55. During the thirty years that he was connected with this department, he rendered important services in the design and construction of our fighting ships. The substitution of steel for iron in shipbuilding was mainly due to his exertions. Sir N.B., who was made a K.C.B. on his retirement as **Director of Naval Construction** in '85, is the author of the article on the Navy in the *Encyclopædia Britannica*. He has also identified himself with various philanthropic and religious movements.

Barnett, Rev. Samuel A. Vicar of St. Jude's, Whitechapel, was b. in 1844. Ed. at Wadham Coll., Oxford, graduating a Second in Mods. and a Second in History. Ordained deacon in '67, and priest in the following year, he was curate of St. Mary's, Braynston Sq., '67-79. Becoming **Vicar of St. Jude's, Whitechapel** ('79), he at once devoted his energies to the brightening of the lives of those around him. **Toynbee Hall** (*q.v.*), of which he is Warden, has become, under the enthusiastic energy of Mr. and Mrs. B., a centre of widespread influence. In particular, the picture-exhibitions organised at Toynbee Hall have attained great success. Mr. B. returned in September '91 from a tour round the world.

Baroda. See **DIPLOMATIC**.

Baronetries conferred Dec. '80 to Nov. '81:—**Robinson, the Rt. Hon. Sir Hercules George, G.C.M.G.; Rawlinson, Major-Gen. Sir Henry, G.C.B.; Brooks, Thomas, Esq., of Rawtenstall; Quain, Richard, Esq., M.D., F.R.S.; Stephen, Sir James FitzJames, K.C.S.I.; Kennard, Coleridge Arthur Fitzroy, grandson of the late Mr. Coleridge J. Kennard, formerly M.P. for Salisbury; O'Brien, R. Hon. Peter, Chief Justice of the High Court of Justice in Ireland; Savory, Mr. Alderman, while Lord**

Mayor, and in remembrance of the reception accorded to the German Emperor in the City.

Barrie, J. M., whose writings under the pseudonym of "Gavin Gilmly" have raised him to a literary eminence in the last three years, was b. at Kirriemuir, Forfarshire, in 1860. He was ed. at Dumfries Academy, and also attended the art classes at Edin. Univ., where he graduated M.A. in '82. After holding a journalistic position in Nottingham he came to London. The introduction to the public of Mr. B.'s peculiar genius for depicting Scotch village life was accomplished through the columns of the *British Weekly*. He soon became known to readers of the *St. James's Gazette*, while, latterly, he has contributed to the *Speaker*, the *National Observer*, and the *Anti-Jacobin*. His first volume was entitled "Better Dead," and appeared in '87. This was written in a satirical vein, and is a contrast to "**Auld Lights Idylls**" and "When a Man's Single"—both of which were published in '88. The immediate interest aroused in Mr. B.'s writing was accentuated by "**A Window in Thrums**" ('89). This book excited the warm appreciation of Mrs. Oliphant, and is considered the author's greatest success. A collection of sketches under the title of "An Edinburgh Eleven" also appeared about this time. In '90 Mr. B. issued "**My Lady Nicotine**," and during '91 his first lengthy story, entitled "**The Little Minister**," appeared in *Good Words*, and was subsequently published in book form.

Barry, The Rt. Rev. Alfred, D.D., D.C.L., was b. 1826. Ed. at King's Coll., Lond., and Trinity Coll., Camb.; B.A. '48, Fourth Wrangler, and seventh in the first class of the Classical Tripos. Ordained '50, and in '51 appointed Sub-Warden of Trinity Coll., Glenalmond. In '54 he accepted the post of head master of the Leeds Grammar School, which he held till '62, when he was appointed principal of Cheltenham College. He was for some years a member of the School Board for London. In '68 Dr. Barry was elected Principal of King's Coll., Lond., in '80 Chaplain in Ordinary to the Queen, in '81 Canon of Westminster, and in '83 **Bishop of Sydney and Primate of Australia**. On his visit to London in '88 to attend the Pan-Anglican Synod, he was offered and accepted the appointment of **Assistant Bishop** to the Bishop of Rochester, which, however, he shortly resigned. Among his best-known works are the "**Introduction to the Old Testament**," "**Notes on the Gospels**," "**Cheltenham College Lectures**," and a "**Life of Sir C. Barry, R.A.**," his father. On the presentation of the Queen, Dr. B. received (Jan. '91) the canonry of Windsor, rendered vacant by the decease of Canon Capel-Cure. App. Hampton Lecturer for '92.

Barthélemy-Saint-Hilaire, Jules, French philosopher and statesman, was b. Aug. 10th, 1805. Appointed teacher of French literature ('14) in the Polytechnic School, and four years later became Professor of Greek and Latin Philosophy in the College of France; but, refusing to take the oath which was required after the *coup d'état* of '51, he resigned this position. In '40 he was associated with M. Cousin, Minister of Public Instruction, and for a time represented the *département* of Seine-et-Oise in the Assembly, for which he was returned to the Chamber of Deputies in '69. As a member of the committee which examined M. de Lesseps' Suez Canal scheme he rendered useful service. After the armistice, consequent on the *siege* of Paris, at which he was present,

M. St-Hilaire joined the Left side of the Chamber, and was one of the members who assisted the Government in the pacific negotiations with Prussia. Elected to the Senate (75), and two years later received the Legion of Honour. In M. Ferry's cabinet of '80 he held the office of Minister of Foreign Affairs. He recently completed, after labour lasting fifty-nine years, a translation of Aristotle. The work consists of thirty-five volumes.

Baseball. This game was comparatively unknown in England until the spring of '89, when the American baseball teams, which had been giving exhibitions of their favourite pastime in Australia, Ceylon, Arabia, Italy and France, brought their long tour to a close by a visit to the mother country. As a result a number of clubs were formed, more especially in the north of England.—Description of the game. The ground in the game of baseball is marked out in diamond shape, with bases 90 feet apart at each corner, the pitcher being in the centre. The "home" plate, a square of vulcanite, is let into the ground between the creases or batting spaces, and fifty feet away from this, in the centre of the diamond, the pitcher or bowler's "box" is laid out. On the umpire taking up his customary position behind the striker, play is called, and to score it is necessary for the latter to make the whole circuit of the bases, either a base at a time or with a continuous effort. Any ball caught puts the striker out, and he also has to retire if touched by the ball in the hands of a fielder while away from a base. The pitcher, although at liberty to throw the ball anywhere he pleases, must so deliver it as to cross the home plate not higher than the striker's shoulder, or lower than his knee. Three such fair balls, or deliveries, if not hit, put the batsman out, and five wides, or unfair deliveries, entitle him to go to the first base. When three of a side are out the innings terminates, and the opposing side goes in. On Sept. 3rd, '91, a Canadian football team touring in this country played a baseball match with a team of the Middlesbrough Club (the holders of the North of England Championship Cup). Five innings were decided, and the Canadians won an interesting contest by one run.

Basutoland. A native province of British South Africa. It lies inclosed between Natal, the Orange Free State, the Transkeian Territories, and Cape Colony. Basutoland was annexed from Cape Colony in 1883, and has since been administered by a Resident Commissioner, under the direct authority of the Crown. See BRITISH EMPIRE.

Bath and Wells, Rt. Rev. Lord Arthur Charles Hervey, D.D., 69th Bishop of (founded 905), fourth son of the 1st Marquis of Bristol, was b. 1808. Ed. at Eton and Trin. Coll., Cambridge; M.A. ('30), when he was sixth in 1st class in Classics. Ordained deacon ('32), priest ('33); became rector of Ickworth ('33) and was also rector of Horningsheath. Archdeacon of Sudbury ('62) until elevated to the episcopate '69. In '88 Lord H. received a handsome testimonial from the clergy in his diocese, in connection with his 80th birthday. He celebrated his golden wedding July 30th, '89.

Bath, The Most Honourable Order of the. Originally established by King Henry IV., at his coronation, 1399, this order fell into neglect in the seventeenth century, but was revived in 1795, under George I. It was re-

modelled by the Prince Regent in 1815, to commemorate the auspicious termination of the long and arduous contest in which the Empire had been engaged, and was further enlarged in 1845, and now has three classes, each with Military and Civil (nominal) subdivisions:—

G.C.B. . Knight Grand Cross Bath.
K.C.B. . Knight Commander Bath.
C.B. . Companion Bath.

Members of the first two classes, being knights, are entitled to the prefix "Sir." The G.C.B.s are not to exceed 50 for military service, exclusive of the sovereign and princes of the blood, and such distinguished foreigners upon whom may be conferred the honorary dignity, and 25 for the civil service; of the second class there may not be more than 123 for military and 80 for the civil service, excluding in the former case those admitted as honorary members, and except in certain special circumstances when there is power to increase the numbers. Of Companions there may be 940, of whom 690 may be for military and 250 for civil service. An officer must have received a medal or some similar honour, or have been specially mentioned in despatches for distinguished service in action, before he can be nominated; and he must be of the rank of rear-admiral or major-general, and must have been appointed to the second class, before he can receive the Grand Cross of the order. The badge is a crimson ribbon, with motto "*Tria juncta in uno*" (Three joined in one). The Dean of the Order is the Dean of Westminster. Admiral the Hon. George Grey is Bath King of Arms; Sir Albert W. Woods is Registrar and Secretary, and Charles George Barrington, C.B., is Gentleman Usher of the Scarlet Rod. See KNIGHTHOODS conferred in '91.

Batoum. The chief mercantile outlet of the Russian province of the Caucasus; acquired from the Turks in 1878, and used as a free port until '86, when Russia repudiated the *porto franco* protocol of the Treaty of Berlin. The Russians have almost entirely rebuilt the town, which now contains 10,000 inhabitants, is defended by a series of batteries, and it being provided with a new harbour at a cost of half a million sterling. The Czar visited it Oct. 7th, '88, and laid the foundations of a new Orthodox Cathedral. Is not only the outport of the petroleum industry of the Caspian, with which it is connected by a railway 560 miles long, but also of the new Transcaspiian Railway (q.v.), extending from opposite Baku to Samarcand, nearly nine hundred miles, and tapping the trade of Central Asia. A regular service of thirty tank steamers now runs from Batoum to the ports of Europe, and the port is provided with storage accommodation for 20,000,000 gallons of oil, which is equal to twenty-five tank cargoes of 3000 tons apiece. Export, '87, nearly 300,000 tons of petroleum products; besides wine, maize, and manganese ore. Is a second-class naval station, ranking next to Sebastopol, and possesses a direct military road to Kars.

Battenberg, Henry Maurice, Prince of, son of Prince Alexander of Battenberg (Hesse) and the Countess Von Lauek, daughter of a former Polish Minister of War, who was raised to the rank of Princess on her morganatic marriage with the ruler of Hesse, was b. Oct. 3, 1858. Married (July 23, '85) Princess Beatrice Mary Victoria Feodora, the ninth and youngest

child of Queen Victoria. In Aug. '91, the Prince was present at the Eisteddfod.

Bavaria. See GERMANY; and for Ministry see DIPLOMATIC.

Bechuanaland. The country of the Bechuana (pron. Bethswana). A region of S. Africa, extending from Cape Colony to the Zambesi, between the Transvaal and Kalahari. It now consists of three sections—**British Bechuanaland** (q.v.), Northern Bechuanaland Protectorate, and the undefined portion beyond. The first has been formally annexed, and is ruled by an Administrator acting under the Governor of Cape Colony. A body of mounted police maintains order here and in the Protectorate. The first has Bechuanaland extends from the Griqualand and Transvaal borders to the Molopo river and Ramathlabama Spruit. The limits of the Northern Bechuanaland Protectorate are:—West of the boundary of the South African Republic as defined by Convention of Feb. 1884, to the 20th meridian of E. longitude, thus including part of Kalahari; north of R. Molopo as far as the 22nd parallel of S. latitude. Portions of these lands are thickly wooded and well watered, intersected here and there with open plains in the south, while in the north immense plains are dotted with numerous "vleys" of fresh water, and large salt "pans" or lakes. Gold, coal, and lead have been found in Bechuanaland; and as this vast country has not yet been scientifically prospected for minerals, it is reasonable to suppose that it is possibly not inferior in this respect to its neighbours, Matabeleland, the Transvaal, and Griqualand, countries rich in the precious metals, diamonds, and coal. In '83-4 bands of Boer filibusters had invaded what is now British Bechuanaland, had deposited certain chiefs and set up others, and were forming two so-called "republics," **Stellaland** and **Goshen**. At length their lawless proceedings obliged the British Government to interfere. Sir Charles Warren, with a force of 4000 troops, was sent into the country. He suppressed the fighting and raiding that had been going on, restored order, arranged and delimited the Protectorate, which was declared in March '85, the annexation of British Bechuanaland being effected in September of the same year. It may be added that in '86 Boer raiders trekked in numbers into the country beyond the Protectorate and Matabeleland (q.v.). Bechuanaland possesses a wide extent of fairly fertile land, a splendid climate (suitable for Europeans), a sufficient rainfall, a peaceful native population, and means of access by railway; and time, patience, and steady rule are all that are needed to create in Bechuanaland a future outlet for the more respectable element of the surplus population of this country. See CAPE COLONY.

Bedford, Rt. Rev. E. C. Billing, Bishop Suffragan of, was b. 1836. Graduated at Worcester Coll., Oxon., '57; held a curacy at St. Peter's, Colchester, '58-60, and at Compton Bishop, '61; vicar of Holy Trinity, Louth, '62-73; and of Holy Trinity, Islington, '73-8, in which year he accepted the rectory of **Spitalfields**, which he held until his appointment as Bishop Suffragan of Bedford, in succession to Dr. Walsham How. Dr. B. has always shown deep practical interest in the poor, devoting his attention chiefly to the elevation of the degraded classes and the rescue of fallen women. In '86 he was appointed **Prebendary** of Holborn

in the See of London, and Commissioner under the Pluralities Act for the Archdeaconry of London.

Bedford Grammar School, founded 1566; reorganised 1873. Annual income, £3500. Eight leaving exhibitions of £70 and £60 for four years. Two fall vacant annually. The new buildings were opened Oct. 19th, '91. **Pupils,** 800. The school is divided into four sections: (1) Classical, (2) Civil and military, (3) Junior School, (4) Preparatory School. **Alumni** include Sir Henry Hawkins, Lord Farnborough, and Col. Burnaby. **Head Master,** J. S. Phillpotts, M.A.

Bedfordshire, County Council for. See COUNTY COUNCILS.

Beecher Stowe, Harriet Elizabeth, the daughter of Lyman Beecher, was b. 1812, at Litchfield, Connecticut. Married in '36 the Rev. Calvin E. Stowe, D.D. She is a sister of the late Rev. Henry Ward Beecher. In '50 she wrote for the *National Era*, an anti-slavery paper, a serial entitled "**Uncle Tom's Cabin**"; published in book form ('52), it met with great success in the United States, 325,000 copies being sold in three years and a half. In Great Britain its sale was enormous. The work has been translated into twenty different languages, and it has been dramatised in various forms. Afterwards published "**A Peep into Uncle Tom's Cabin for Children**" ('53), "**A Key to Uncle Tom's Cabin**" ('53), "**The Christian Slave**," a drama founded on "**Uncle Tom's Cabin**" ('55). Visited Europe ('53), and soon afterwards produced "**Sunny Memories of Foreign Lands**," "**Dred**," "**The Minister's Wooing**," "**The Pearl of Orr's Island**," "**The Chimney Corner**," "**Pink and White Tyranny**," "**Paganic People: their Loves and Lives**."

Beerbohm-Tree, Herbert, the actor, is the son of a grain merchant named Beerbohm, and was b. in London in 1853. Shortly after entering his father's office in '70 he became a member of the Irrationalists Amateur Dramatic Club, and gradually drifted into the profession. In '78 he played "**Grimaldi**" at the Globe for a charity with such success that he had no difficulty in obtaining provincial engagements, which enabled him to gain experience. His first hit was as the timid curate in "**The Private Secretary**," at the Prince of Wales's; and immediately after he played the grim spy "**Macari**" in "**Called Back**." Praise obtained for many assumptions altogether opposite in style prompted management on his own account. Taking the Comedy Theatre ('87) he produced "**The Red Lamp**," and in the autumn of the same year took the Haymarket Theatre, where "**Captain Swift**," "**A Man's Shadow**," "**The Village Priest**," and "**The Dancing Girl**," have been notable successes. His Falstaff, in "**The Merry Wives of Windsor**," was a veritable *tour de force*. His wife, an admirable Greek scholar formerly connected with Queen's College, is a very refined actress.

Beetaloo (South Australia) Dam. This dam, which was practically completed at the end of '90, is described as one of the largest in the world, and certainly the largest in the southern hemisphere. The laying of the concrete occupied two and a half years, the height is 110 feet, length 580 feet, width at top 14 feet, and 60,000 cubic yards of cement concrete were required. When full the lake will be 105 feet deep at the dam, about one and a quarter miles

long, and on an average eight chains wide; there is a bywash with massive training walls; the capacity of the reservoir is 800 million gallons. Up to the early part of '91 no less than 255 miles of mains of local manufacture had been laid, and of the total of £496,000 expended the dam cost £117,000. Mr. A. B. Moncrieff, M. Inst. C. E., is the engineer.

Behring Sea Question. The dispute between Great Britain, Canada, and the United States, with respect to sealing in the Behring Sea, originated as far back as '86. On Aug. 2nd of that year, three schooners belonging to Victoria, British Columbia, were seized by the United States revenue cutters whilst sealing in Behring Sea. Their masters and mates were tried at Sitka for illegal sealing, and were fined and imprisoned; the vessels were detained and not released until '88, and there were several extremely unpleasant incidents in the treatment of the crews. In '87 five more schooners from Victoria were seized by the United States cutter *Rush*. The masters of four of the vessels were placed on trial, and were held to be guilty of illegal sealing, and the ships confiscated. The master of the fifth, the *W. P. Sayward*, entered a demurrer, and his vessel was released after bonds to a considerable value had been given. In '88 the only incident was the seizure by a Russian steamer of one schooner, which was at the time close to Russian territory, and whose boats were admittedly sealing within the three-mile limit. In '89 four Victorian schooners were captured by the *Rush*, and the skins on board, together with the arms and sealing gear, were confiscated; a fifth was warned to leave the Behring Sea, and did so. In '90 no seizures were reported. The captures described above were defended by the United States first, and chiefly, on the ground that the Behring Sea was *mare clausum*. Canada, on the other hand, contended that this claim was wholly unfounded; that with one exception all the vessels seized were at the time of capture thirty, forty, or even seventy miles from the nearest shore, and that their seizure was a gross violation of international law. Moreover, in the case of the *W. P. Sayward*, it was stated that the vessel when taken was not sealing, and had not a single seal on board. On these grounds a vigorous protest was entered against the high-handed, and, as alleged, illegal action of a Power nominally on friendly relations with Great Britain. But for some while little notice appeared to be paid in diplomatic quarters to this protest; at least, no effective action was taken until March '90, when the Hon. C. H. Tupper, the Canadian Minister of Marine, went to Washington to confer with the British Ambassador with a view of placing jointly with him Canada's case before the United States Government. Meanwhile the latter, whose claims to sole jurisdiction over the Behring Sea had been questioned even by some United States authorities and jurists, had fortified its case by the additional contention that the rapid extermination of the seals absolutely necessitated the regulation of the industry. This point was met at Washington ('90) by Canada's offer to refer the whole question of the need for a close time in sealing to a body of experts, and to refrain during the negotiations from sealing within a considerable margin beyond the jurisdictional waters round the Pribiloff Islands. This offer, however, was refused, and the negotiations

were abandoned, as was disclosed in the dispatches relating to the dispute which were submitted to Parliament on Aug. 11th, '90. From these documents it appeared that Mr. Blaine's contention was that since the fisheries had been exclusively controlled by the Russian Government, without interference, and without question from their original discovery till the cession of Alaska ('67), and since from that date till '86 they had been in the undisturbed possession of the United States, therefore the exclusive rights of the United States had been established. Lord Salisbury replied that the British Government had always claimed freedom of navigation and fishing in the waters of Behring Sea outside the three-mile limit, and that the non-using of a lawful occupation was not the same as the total abandonment of it. Further, in a dispatch dated June 14th, '90, Lord Salisbury declared that the British Government would hold the United States Government responsible for the consequences that might ensue from acts which were contrary to the established principles of international law. The Canadian view of the United States claims has been ably set forth in a memorandum prepared by the Hon. C. H. Tupper, which showed that the officials of the United States Treasury itself had declared that the United States had no power to go outside the three-mile limit. In the days of Russian rule in Alaska, Russia put forward a similar contention to that now made by the United States, and it was successfully resisted by the Washington authorities. Again, when Congress was asked to pass a vote for the purchase of Alaska, Mr. Sumner plainly stated that there was no closed sea in Alaska. As to the destruction of seals, it was argued, on Canada's behalf, that if any diminution in the number of the animals had occurred it was due to indiscriminate slaughter on the breeding grounds, and not to excessive hunting in the open sea, and that with the former the United States had full power to deal as a matter of internal legislation. In this connection it is important to notice the distinction between the two methods of sealing pursued respectively by the North American Commercial Company, who in '90 secured for a period of twenty years the right to take seals on the Pribiloff Islands, and the British Columbian seal hunters. The former have the right to kill not more than a hundred thousand bachelor seals per annum, and the special value of the concession arises from the fact that the little group of islands in the Behring Sea, where their occupations are carried on, are the chief breeding grounds of the animals north of the equator. For the seal requires for breeding purposes physical conditions not often found in combination. The coast must be low and shelving, free from sand and puddles; the climate must be cold, and the atmosphere moist and fog-laden. Only on the Pribiloff Islands in the North Atlantic, and in one or two spots in the North Pacific, are all these conditions fulfilled. Hence the jealousy with which the company's rights are guarded and maintained. The method of capture is to drive the "bachelor" seals—seals which are under six years of age—inland from the actual breeding grounds in batches, and then slaughter them by clubbing them. The British Columbian sealers, on the other hand, hunt in the open sea. When the breeding season is over, the vast congregation of seals scatter themselves over a wide area in

search of food, and as they thus roam over the sea the Victorian sealers capture them singly. The actual hunting is done in small open boats, and is necessarily always an arduous and sometimes a dangerous work. It is this method of sealing, quite distinct, it will be seen, from that pursued on the Pribiloff Islands, which the United States Government wishes to suppress on the grounds just specified. The firm attitude which had at length been assumed by the Imperial Government produced, however, some effect early in '91, when negotiations for the reference of the whole dispute to arbitration were resumed. The outcome was the introduction in the House of Commons at the end of May of the **Seal Fishery (Behring Sea) Bill**, with the object of enabling the Government to stop seal-hunting on the part of British subjects in the Behring Sea for a period to be specified in an Order of Council. The Bill was rapidly pushed forward, eliciting but brief discussion and no opposition. On June 8th, in the House of Lords, **Lord Salisbury**, in moving the second reading of the measure, explained that it was promoted to permit the Government to come to an agreement with the United States to suspend sealing pending the investigations of a special commission, which was to be nominated by both countries, to examine and report upon all bearings of the question. According to the President of the United States the cause which had mainly prompted that Government's action, was the desire to prevent the extermination of an animal which sustained a valuable industry, and avert from that industry, so far as the Behring Sea was concerned, the fate which had overtaken it elsewhere. The close time it was proposed to enforce was until May '92, before which date the arbitrators to be afterwards appointed would, it was hoped, present a final award to their respective Governments. Canada had, however, pointed out that these arrangements would work some injury to private interests, whose claims the Premier admitted it would be necessary to meet. The notice of the proposed prohibition for the current season had come too late in the year, and seal hunters had made preparations which could not then be stopped. It was an open question whether the compensation which would thus have to be allowed should be paid by the Canadian or by the Imperial Governments. But in the first instance, and to save time, the Imperial Government has assumed that liability. The Standing Orders of the House having been suspended, the Bill was at once passed through its remaining stages, and the Order in Council authorised by it, enforcing a close time till May '92 for all seal hunters in Behring Sea, was issued at the end of June. The two commissioners chosen to act on behalf of Great Britain were **Sir George Baden-Powell, M.P.**, and **Professor Dawson**, of the Geological Survey of Canada, with **Mr. Ashley Froude** as Secretary. The commissioners appointed by the United States Government were **Professor T. O. Menhenhall** and **Professor C. H. Merriam**, of the Department of Agriculture at Washington. **Sir George Baden-Powell** sailed for Canada on June 27th, and left Victoria with **Professor Dawson** in July to visit the sealing grounds. During their absence the seal hunters pressed forward their claims for the compensation, to which **Lord Salisbury** had admitted that they were entitled. In August they forwarded a memorial setting forth that they had sustained

"grievous injuries, embarrassment, and loss," and urging that the only equitable method of ascertaining the compensation due to them would be to allow them in respect of each vessel a sum equal to the value of an average take in the Behring Seas according to the number of boats carried by each vessel for the last three years, and calculated on the current price of seal skins. The total number of vessels which cleared at the Victoria Customs House in '91 for sealing cruises in the North Pacific Ocean and Behring Sea is stated to be forty-nine, representing a capital of some £80,000, and employing 1,082 men. On Oct. 8th the British commissioners returned to Victoria after a three months' tour of the sealing grounds. On reaching Ottawa, on Oct. 22nd, **Sir George Baden-Powell** stated that they had had five hundred interviews with persons interested or engaged in the industry; that their report would be submitted to the Privy Council, and by it to the Canadian Government; and that a settlement of the matter should be easy. "If all the commissioners looked only to the absolute interests of the seal industry, an arrangement could be come to in five minutes." No announcement has, however, yet (Nov. 4th) been made respecting the appointment of arbitrators as foreshadowed by **Lord Salisbury's** speech, and for whose labours the commissioners' inquiries were to prepare the way.

Beira-Baixa (Portugal) Railway. This new line, which opens up some of the most fertile and industrial districts of Portugal, was inaugurated by the King and Queen on Sept. 5th, '91. It passes through a mountainous country, involving the construction of sixty-four bridges and viaducts and ten tunnels. The total length of the bridges is 3,538 metres, and of the tunnels 1,768 metres, together amounting to nearly 24 per cent. of the whole line.

Belfast Railway Improvement. It was stated in Sept. '91 that as it was impossible to pass through Belfast by train, a scheme was on foot (with **Sir F. Bramwell** as consulting engineer) to supply the necessary facilities. It is proposed that a central station should be built in King Street, close to Smithfield. The Northern Company's connection is to be tunnelled by York Street and Royal Avenue, and the line from the present County Down terminus will reach the proposed centre by Waring Street and Berry Street. It is proposed to tunnel the Great Northern from a point outside the existing station in Great Victoria Street. The scheme, which includes a grand hotel, is estimated to cost £750,000.

Belfast Victoria Channel. On July 8th, '91, this new straight channel was formally opened by **Mr. James Musgrave**, chairman of the Harbour Trust. The work is portion of a scheme, for the improvement of the port at an estimated expenditure of one million sterling, under an Act obtained in '83. The new cutting is through "slob" banks, extends seawards about four miles, and is about 300 feet wide from toe to toe of the slopes, which incline at the rate of about 1 in 7; the depth of water secured is 17 feet at low tide and 25 feet at ordinary high tide. From Dec. '85 to its completion the work was continued night and day with the most powerful machinery available, two large twin screw hopper dredgers, each of 800 tons capacity, being utilised, the electric light being brought into requisition after dark. There are

four lighthouses in the channel. Mr. Salmond, M. Inst. C. E., the engineer-in-chief to the Commissioners, directed the operations.

Belgian Political Parties. The chief parties are two—viz., the **Clericals** and the **Liberals**—and there are, in addition, the minor groups of **Protestants** and **Socialists**. Neither of the two last named, however, wield an independent parliamentary influence, and both in the ordinary affairs of political life are anti-Catholic, and consequently vote with the Liberals. The **Catholics**, or **Clericals** as they are usually called, have now been in power for rather more than seven years, the present ministry, under M. Beernaert, having, in October '84, succeeded the Liberal administration of M. Frère-Orban, which had held office since June '78. At the present time the Catholics are in a considerable majority, commanding 97 votes in the Chamber, against the 41 of the Opposition. The last election to the Chamber was in June '88, previous to which the strength of parties was—Catholics 98, Liberals 40. The ministerial party, consequently lost a seat at those elections, although at those held in June '86 it increased its numbers from 86 to 98, the electoral practice being for one-half the Chamber to retire every two years. The **Senate**, which is composed of exactly one-half the number of members of the Chamber of Representatives, viz., 69, contains 50 Catholics and 19 Liberals. The election of one-half of the Chamber in June '90 left the situation unchanged, as the Clericals were again victorious in the *arrondissement* of Ghent. The resignation, on account of ill-health, of M. Melot, Minister of the Interior, was announced in Feb. '91. The Premier is M. Beernaert.

Belgium. A kingdom under Leopold II. of Saxe-Coburg. By constitution of 1831 Belgium is declared to be a constitutional and hereditary monarchy—executive power in King; legislative power jointly vested in King, Senate, and Chamber of Deputies. Deputies must be Belgians of twenty-five years of age, elected for four years (half the Chamber retiring every two years, except in case of dissolution, when all go out) by citizens of twenty-one years of age who have passed an elementary examination, belong to the professional classes, or who pay £1 13s. 6d. annually in direct taxes. One deputy allotted to each 40,000 of population; present number of Chamber is 138. Both senators and deputies are paid by State. Number in Senate half that of the Chamber; senators are elected by same electorate for eight years (half retiring every four years except on dissolution), to be forty years of age and pay taxes to annual amount of £84. **Area**, 11,173 sq. m.; pop. 6,147,041. (For army and navy see FOREIGN ARMIES and FOREIGN NAVIES.) There is no state religion. **Revenue** for '90, 347,164,154 fr.; expenditure, 346,137,852 fr. **Imports** during '90, 1,534,400,000 fr.; exports, 1,243,700,000 fr.; debt, 1,785,185,007 fr.—At the end of Nov. '90 the firm of Postendorff suspended payment, with liabilities of 8,000,000 fr., and assets 12,000,000 fr., chiefly in Buenos Ayres property, which had much depreciated. The police (Dec. 2nd) tore down placards at Euschede bearing the words: "Woe to the land whose king is a child! Long live the Republic!" Similar placards were torn down in other towns (3rd). The Belgian **Colliers' Congress** at La Louvière (17th) determined on a general strike unless the Chamber resolved on the revision of the Constitution and

the adoption of universal suffrage. A letter from the "English Companions" undertook to prevent the export of English coal to Belgium during the strike. A cage containing eighteen miners fell to the bottom of a shaft at Hornu, killing all the occupants. Dr. Paepé, the Socialist, was buried (25th); there was an enormous crowd, but no disturbance. The Belgian National Congress met, under the Presidency of M. Paul Janson, at Brussels (27th), and passed a resolution in favour of universal suffrage and proportional representation. The navigation of the Scheldt became so dangerous, owing to the frost (31st), that the Board of Pilotage refused to grant pilots. Commander Cameron gave a lecture (Jan. 9th, '91) before the Brussels Geographical Society, favouring the pacific colonisation of Africa by chartered companies. The two classes of the Reserve were called out (17th), with most satisfactory results, nearly all the men being in barracks and ready for service in forty-eight hours. Prince Baldwin, the heir to the throne, died (21rd). He was the eldest son of the Count of Flanders, and twenty-two years old. The funeral took place (29th) with great pomp, the body being deposited in the Church at Laken, the funeral service having been performed at the Cathedral of St. Gudule. To a deputation of working-men delegates of the Council of Industry and Labour (Feb. 8th), the King said he was not dictator, and must leave the nation to settle the question of universal suffrage. The Waterloo monument in the Evre cemetery was finished. Early in March the venerable Archbishop of Mechlin issued a letter to the Roman Catholic clergy, giving them permission to accompany funerals to the cemeteries (which are communal), and to consecrate each grave separately. Mr. Mercier, the Quebec Premier, and Mr. Sheehy, Minister of Finance, arrived in Brussels (April 4th), and were received by the King. The Foreign Secretary officially opened the International Customs Tariffs Office. Five hundred delegates, representing 275 workmen's associations, met at Brussels (5th), when a revision of the Constitution was demanded. It was resolved to give the general council power to avert the general strike till after the Budget discussion, so that it might be seen if the Government intended to vote for revision. A Permanent Commission to study monetary questions was established at the Ministry of Finance. The first meeting of the Conference summoned by the Brussels Anti-Slavery Society took place in the Palace of the Belgian Academies (20th), the chair being taken by M. Melot, Advocate-General of the Belgian Court of Cassation. The **May-day** demonstrations passed off peaceably. A strike of 30,000 men in the Charleroi coal district took place in the early part of the month. The strike continued to spread (17th), the number of the strikers being 100,000. The dock labourers at Ghent struck (May 10th). The strikes terminated (20th), the Chamber having adopted the proposal for the revision of the Constitution. The Belgian State debt amounted to 1,785,185,007 fr. at the end of '90, having been increased by 33,500,000 fr. during the year. The new telegraph tariff between England and Belgium, of 17 times a word, came into operation (July 1st); the fixed tax for each telegram was reduced from 80 to 50 centimes. An International Socialist Labour Congress, representing all the countries in Europe except

Russia and Portugal, was opened at Brussels (Aug. 16th). There were 353 delegates, many being ladies. The following was unanimously adopted (19th): "Whereas it is necessary to give to the international labour movement a common impulse, especially in the direction of protective labour legislation; therefore be it resolved by this Congress: (1) To organise in every country a permanent commission of inquiry concerning the conditions of labour in its relation to working-class legislation. (2) To collect, collate, and exchange all necessary information with a view to the development and unification of all the said legislation. (3) This Congress recommends the wage-workers of the whole world to unite their efforts against the domination of capital, and wherever they enjoy political rights, to exercise them with the object of gaining their emancipation from wage-domination." The Congress closed (22nd). The Roman Catholic Congress was opened at Mechlin (Sept. 8th), under the presidency of M. Decoster Echemin. The Roman Catholic Congress closed (14th). The Minister of Public Works announced that till March 28th, '92, he would receive tenders for the construction of a port at Bruges, connected by a deep sea canal with Heyst. At Ghent a serious accident happened (27th) at a fête, when a platform gave way; many persons were injured, and the manager and one of his men killed. General Boulanger shot himself on the tomb of his late mistress, Madame de Bonnemain (30th), in the Cemetery d'Ixelles, Brussels. The general was buried beside Madame de Bonnemain (Oct. 3rd). The sixth session of the British Continental and General Association, of which the Public Morality Society of Belgium was a branch, was opened (5th) at the Palais des Academies, Brussels, under the presidency of M. de Laveleye. The Antwerp Correctional Tribunal sentenced Sheridan Ford to pay a fine of 500 fr. and 3000 fr. damages or in default six months' imprisonment for pirating Mr. Whistler's book "The Gentle Art of Making Enemies." The Government (Nov.) promised Ostend enough ground gratuitously for the construction of a new dock, and to grant a subsidy of 3,000,000 fr. towards a new quay.

Belgium, King of. See LEOPOLD II.

Belize (Bay-leez). Capital of British Honduras (q.v.) and a port. Formerly the name of the whole colony. Pop. 5767 in 1881.

Beluchistan. A British protectorate south of Afghanistan, extending to the Persian Gulf. Population, some 250,000 tribesmen. Quetta, administrative centre. Railway to Candahar completed. The chiefs of Beluchistan are mere nonentities, and receive small pensions from the Indian Government. In '91 Major Muir, political agent in South B., was attacked by natives while holding a court at Khenj. He lost two fingers. The assassins escaped.

Bengal. See INDIA; and for Ministry, etc., see DIPLOMACY.

Benguela. A province of Portuguese West Africa. See ANGOLA.

Bennett, Sir James Risdon, M.D., F.R.S., was b. at Romsey, 1809. M.D. Edin. '33. Pres. of the Royal College of Physicians ('76-80). Consulting physician to Victoria Park Hospital for diseases of the chest, and hon. phys. and Governor of St. Thomas's Hosp. He was a commissioner to the Paris Exhibition '74, and Chairman of the Executive Committee of the International Medical Congress '81, in which year he

was knighted. His "Essay on Acute Hydrocephalus" obtained the Foighergill gold medal. He is also the author of "Lectures on Cancerous and Intra-Thoracic Growths," and is one of the most eminent living authorities on chest diseases.

Berbera. A town and port on the north Somali coast. Caravans from the African interior arrive here, and the trade with Aden is considerable. Has an excellent and capacious harbour.

Berbice. A county of British Guiana (q.v.). **Beresford, Lord Charles William Delapoor,** was b. 1846. Entered the Royal Navy ('59). In '63, while a midshipman on board the *Defence*, he twice saved life from drowning, and received the bronze medal of the Royal Humane Society, and the gold medal of the Liverpool Shipwreck and Humane Society. To these distinctions was added the clasp of the Royal Humane Society (24th Feb. '71). Accompanied the Prince of Wales to India ('75-6) as naval aide-de-camp. At the bombardment of Alexandria in '82, commanded the *Condor*, and distinguished himself during the action by his bravery and naval skill. The *Condor* was largely instrumental in silencing the Marabout fort, and earned the honour of a special signal from the Admiral, "Well done, *Condor*." For these services Lord Charles was promoted to the rank of captain. Served in the Sudan campaign under Lord Wolseley for the relief of General Gordon, and was in command of the Naval Brigade in the expedition across the desert. Elected Conservative Member for Waterford '74-80, and for East Marylebone '85 to July '89. Appointed a Lord of the Admiralty Aug. '86; resigned Jan. 18th, '88. Resigned (July '89) his position as M.P., in order to qualify for Admiral. It was stated (Sept. '91) that his lordship would be Conservative candidate for N. Kensington at the General Election.

Berkeley Peerage Case. The House of Lords delivered judgment in reference to this remarkable peerage claim on July 31st, '91. In the year 1811 the Committee for Privileges sat to consider this particular case, and then decided that Randal Mowbray Thomas Berkeley had made out his claim to the peerage by his descent from the fourth Earl of Berkeley; while William Fitzhardinge Berkeley, afterwards Lord Fitzhardinge, who claimed the peerage as eldest male heir of the fifth Earl of Berkeley, had failed to establish his legitimacy. Further evidence was now brought forward on behalf of Lord Fitzhardinge, but he again failed to establish his claim. The suggestion put forward on his behalf was that the fifth Earl of Berkeley desired to obtain the possession of Mary Cole, a woman of great personal beauty; and that finding it impossible to do so except upon the terms of marriage, he resolved that the marriage should be so celebrated that it could be afterwards repudiated if desired. It was admitted that for years Mary Cole called herself Miss Tudor, and lived with Lord Berkeley as his mistress; that the children born between 1785 and 1796 were acknowledged by their parents to be illegitimate; that when they were afterwards married they were described as single people; and that when the first child after the marriage was born he took by courtesy the title belonging to the eldest son of the Earl. On the other hand, it was contended that an earlier marriage took place,

but was concealed because Mary Cole had a sister who was a kept woman, and Lord Berkeley did not like to have it known that he had married the sister of such a person. Lord Bramwell, in giving his judgment, held with Lord Eldon, who presided over the former Committee for Privileges, that it was absurd to suggest that a man would rather his wife should be regarded as a kept woman than that it should be known that he had married the sister of one. He came to the conclusion, as also did the Lord Chancellor, that Mary Cole was a victim of Lord Berkeley; and that though they subsequently married, they never did so with an intention of setting up an earlier marriage, and that the earlier children were illegitimate. Their lordships reviewed the new evidence which had been adduced, and held that even if it proved all that was intended it did not justify them in disturbing the decision arrived at in 1811. In the course of his judgment the Lord Chancellor read the evidence of the Rév. John Chapeau, which threw considerable light upon the case. The evidence consisted of a conversation in which Lady Berkeley related part of her early history.

Berkshire, County Council for. See COUNTY COUNCILS.

Bermuda Islands. Called after Bermudez, a Spaniard, who discovered them in 1575. Also named *Somers Islands*, after Admiral Somers, whose ship was wrecked here in 1609. The "Bermoothes" of Shakespeare. Situated in the North Atlantic, 600 miles east of Cape Hatteras. For latest statistics see *BRITISH EMPIRE*, etc. (table). There is regular steam communication between Bermuda and New York. The Imperial Government decided (Dec. '90) that foreigners should not be allowed to become naturalised or possess land in Bermuda on account of the smallness of the colony.

Bernard-Beere, Mrs., a daughter of Mr. Wilby Whitehead, an artist, and the widow of Captain Dering, son of Sir Ed. Dering, Bart., was trained for the stage by Mr. Hermann Vezin. She made her *début* at the Opera Comique. In '86 she secured great popularity in the provinces by her powerful rendering of *Fédora*. Mrs. Bernard-Beere played in "Still Waters Run Deep" at the Criterion last spring. She has been very successful in her impersonations in "As in a Looking Glass," as Julia in "The Rivals," Bathsheba Everdene in "Far from the Madding Crowd," Mrs. Devenish in "Lords and Commons," Princess Zicka in "Diplomacy," and "Ariane" in Mrs. Campbell-Fraed's play.

Bernhardt, Mme. Rosine Sarah, was b. in 1844, at Paris; the most distinguished French actress of her day. She is of Jewish descent. She entered the Paris Conservatoire at the age of fourteen, where she studied tragedy and comedy. Joining the staff of the Théâtre Français, she made her *début* in Racine's "Iphigénie," and in Scribe's "Valérie," but was not very successful, and retired for a time from the stage. Her first grand success was as *Marie de Neuberg*, in Victor Hugo's play of "Ruy Blas." Becoming very popular by her representations in "Junie," in "Andromaque," and in "La Sphinx," she was replaced on the staff of the Théâtre Française. She visited London, in company with other members of the Comédie Française, and performed at the Gaiety Theatre in '79, '86, '88; and again in '89, when she appeared at the Lyceum in "La Tosca."

On 15th April last she appeared in "Lena" at the Paris Variétés, and in Sept. at the Porte St. Martin Theatre in the revival of "La Tosca." Has recently had the Order of the French Academy conferred on her. She is also the authoress of a one-act play entitled "L'Aveu," produced in '88. Made her appearance as "Joan of Arc," in London, '90, and during the summer of '91 played in Australia.

Berry, Sir Graham K.C.M.G., Agent-General in London for Victoria, was b. Aug. 28th, 1822, at Twickenham. Emigrated to Victoria in '52, and entered Parliament eight years later. In '71 he became *Treasurer and Commissioner for Customs*, and was enabled "to crown the edifice of protection" by the imposition of 20 per cent. *ad valorem* duties. Took the *Premiership* and became Chief Sec. in Aug. '75. The introduction of a land tax brought about speedy defeat, and on the refusal of a dissolution his party blocked business in the House. At the general election in '77 he was returned with an overwhelming majority. A land tax was carried through both Houses, but the Upper House refused to pass an appropriation bill, which included a provision for payment of members. A dead-lock ensued, which lasted from May '77 to April '78, when a compromise settled the dispute. In the winter of '78 he went to England, with the view of getting the constitution of the Upper House altered. This was finally done in '80. Mr. B. was appointed *Agent-General* in '86, and was created K.C.M.G. a year later.

Besant, Mrs. Annie (née Wood), was b. Oct. 1st, 1847, in Ireland, and passed her early days at Harrow. She soon manifested an earnest interest in social and political topics. In '74 she became connected with the National Secular Society. Owing to the publication of "Fruits of Philosophy," Mrs. B. was prosecuted, in connection with the late Mr. Bradlaugh (Nov. '77). Mrs. Besant has since stated her disagreement to the sentiments expressed in this book. In '80 she announced her adhesion to Socialism. For many years she was member of the School Board for London. After working and speaking on the Freethinking platform, Mrs. B. announced that henceforth she would follow the tenets of Theosophy. Visited India in November.

Besant, Walter, was b. at Portsmouth 1838. Educated at King's College, Lond., and Christ's College, Camb. Accepted the appointment of Senior Professor in the Royal College of Mauritius, but resigned in consequence of ill health. He made his *début* as an author in '68 with "Studies in Early French Poetry," which was followed two years later by the "French Humorists." In conjunction with the late Mr. James Rice he commenced a successful career as a romance writer; the most popular production of their joint authorship was "Ready Money Mortiboy," which they also dramatised and put on the stage at the Court Theatre. Of the novels which Mr. Besant has published in his own name, the most popular are, "All Sorts and Conditions of Men," "All in a Garden Fair," and "Children of Gibson." The establishment of the *People's Palace*, in the East End of London, was inspired by Mr. Besant's writings. His recent books are, "The World went very well Then" and "Katherine Regina" ('87); "Fifty Years Ago," "Herr Paulus," "Eulogy of Richard Jefferies," and "The Inner House" ('88); "For Faith and Freedom," "The Bell of

St. Paul's, "To Call Her Mine"; ('80), "The Holy Rose," "The Demonic," and "Armored of Lyon-esse" ('90). He has for many years been secretary to the Palestine Exploration Fund, and in '71 produced, jointly with the late Professor Palmer, a history of Jerusalem. Mr. B. has also interested himself in questions affecting the rights of authors, and was appointed first chairman of the executive committee of the Incorporated Society of Authors. During '91 he issued "St. Katherine's by the Tower."

Bessarabia. A Russian province bordering on the Danube, ceded by Turkey to Russia in 1812. Area 28,386 sq. m., pop. 1,369,075.

Betting and Loans (Infants) Bill. See Session, sect. 60.

Betting, Law as to, in '91. A novel point was raised in the case of the Queen v. Hulton (Queen's Bench Division, April 30th, '91). A sporting newspaper issued a handicap book or racing record, giving the races that were coming on, and attaching a weekly coupon in which six races were named, and offering prizes to those who predicted the majority of the winners. It was alleged that this was illegal, either under the Betting Acts or the Lottery Acts, but the magistrate declined to convict. A case was now stated for the Queen's Bench. The court held that the case came within neither of the Acts mentioned, that it was a mere question of guessing names of winning horses, and that if the practice was mischievous it was for the Legislature to prohibit it.

Bible Society, The British and Foreign. was established in 1804, its object being the circulation of the Scriptures. Up to '91 nearly 128,000,000 Bibles and portions of the Bible, in 290 languages and dialects, had been issued under its auspices. The expenditure of the Society in '90-'91 was over £231,000. Work abroad is carried on not only through the missionary societies, but by some twenty-eight agents in foreign countries, under whom a large staff of colporteurs is engaged in distributing the Scriptures. **Bible House**, 146, Queen Victoria Street, E.C. Secretaries, Rev. J. Sharp, M.A., Rev. W. M. Paul.

Billiards. (For early history of the game see ed. '86.) Slate tables were first played upon in this country in 1827. Our foremost players have now reached a point of excellence altogether unknown a few years back. John Roberts, Jun., is the best all-round player, and has retained the championship ever since '85; but at the spot-barred game W. J. Peall is without a rival, and on Nov. 3rd, '90, he scored a wonderful break of 3304, the highest ever made. Records in the varying branches of the game are too numerous to specify; those credited to Roberts, W. Cook, W. J. Peall, W. Mitchell, T. Taylor, and J. Bennett being the most notable. The Pyramid shield remains in the possession of W. Cook, this excellent player having won it the stipulated number of times. Early in the season there was much discussion as to the regulations governing professional championships, some advocating the introduction of the spot stroke without limit, and others upholding the retention of the old table. On Jan. 16th a meeting of the Billiard Association was held at the offices, 140, Fleet Street, and Messrs. W. J. Peall, W. Innes, W. D. Courtney, A. P. Gaskell, H. Coles, Stevens, W. E. Fuller, H. B. Smith, G. Wright, A. H. Orme, and J. North were appointed as a committee to consider these matters. It was also resolved that

billiard table makers who are members of the Association be invited to assist the sub-committee by forwarding models of pockets, etc., they think most desirable to be used on what is intended to be called the Association table. The committee presented their report at a meeting held on April 28th, which included the following recommendations: (1) That there be a standard billiard table measuring not less than 2 ft. 3½ in., and not more than 2 ft. 10 in. in height, and 12 ft. long by 6 ft. 1½ in. wide on the bed of the slate. That all matches shall be played upon this table, and that no breaks made upon other than the standard billiard table shall be accepted as records by the Association. (2) That the ball used be not less than 2½ in., and not more than 2¾ in. in diameter. (3) That the billiard championship be played for in games of 5000 points up, and be completed in two days, afternoon and evening, and that a new cloth be fitted to the table each day, both cloths being cut from the same piece. (4) That the spot-barred championship be played for as above, but that it shall be 4000 points up, and without the new cloth on the second day. (5) Having found that the measurement of 3½ in. for the opening of pockets adopted by the Association has hitherto been made at the top of the cushion, your sub-committee recommends that, bearing in mind the fact that cushions are cut away underneath, it is advisable to take the above measurement at the point of contact between ball and cushion. This we find to be material in the shape of the pockets, as in reality the space hitherto left for a ball's passage into the pocket is appreciably greater than 3½ in. The only model submitted was of a pocket, which it was explained had been designed to be 3½ in. in width, measuring from that portion of the rubber with which the ball actually comes in contact, and not, as in so many tables, at the top of a cushion cut away underneath. Success did not appear to have been attained in the preparation of this model, and by several the pocket was voted an easy one. In these circumstances a resolution was passed referring the report back to the sub-committee, with a request that further models might be produced. Later on other models were furnished, but so far nothing of a practical character has been determined upon. A number of exhibition matches were played on championship tables during the months of January and February, but these did not meet with much success, though at times Roberts showed brilliant form and scored at exceptionally rapid pace. Several matches were also played in the same months, in which the "spot" and "push" strokes were barred, so that ample opportunity was afforded of contrasting the various phases of this most popular of indoor pastimes; but "all in" games which could be concluded at one sitting undoubtedly proved the most attractive. Amongst the principal professional matches decided during the year were the following: A spot-barred match of 8000 up for £200, between W. J. Peall and J. North, was brought to a close on Jan. 10th, the latter winning by 2465 points. A week later H. Coles also defeated Peall in a match for £50, the conditions being the best of a series of 750 up, spot-barred. Coles receiving 100 points start in each game. On Jan. 31st an all-in match of 10,000 up, for £200, between J. North and C. Dawson, terminated in favour of the former, who conceded his opponent 2000 points, and

won by 1461. On Feb. and Peall and W. Mitchell commenced an all-in match of 15,000 up, level, for £200; this ended in a draw, much in favour of the latter, who, however, failed to reach his points within the specified time. On the same afternoon J. Roberts and J. North started a spot-barred match of 24,000 up, and, after a fortnight's play, the champion, conceding his rival 12,000 points, won by 245. The stakes amounted, it is said, to £500 a side. Roberts next beat Dowland, in a match of 12,000 up, by 227 points, notwithstanding that the loser received 6000 start. On March 14th Peall and Roberts commenced a spot-barred match of 24,000 points, the former receiving half the game for a stake of £1000, and without doubt this proved the most attractive contest of the season, the Egyptian Hall, Piccadilly, being crowded every afternoon and evening during the two weeks over which play extended. Peall improved upon the advantage conceded him from the start, and only on one occasion was Roberts in front on the handicap. In the result the champion was beaten by 2500 points, but his reputation as the most skilful billiard player of the day was in no way tarnished. He scored seventy-eight three-figure breaks, the chief of these being 551, 418, 413, 384, 379, 336, 333, 332, 329, 297, 283, 280, and 249. Peall was credited with thirty-two three-figure contributions, the highest of which were 285, 248, 197, 179, 178, 174, 154, 153, and 152. On April 18th, Peall, conceding C. Dawson 5000 points in an all-in match of 15,000 up, defeated him by 1924. On April 21st, in the course of a spot-barred game of 600 up, between H. McNeil and T. Taylor, the latter accomplished a really remarkable and unprecedented performance. When his score stood at 217 against 100, he got the balls jammed in the left top pocket, and, making 32 cannons, ran out a winner by 404 points. Requested to continue, Taylor did so, and increased his break to 1467, thus breaking Roberts' record of 690 by 777. A spot-barred match of 10,000 for £1000, between Peall and J. Dowland, in which the latter received a start of 2600, was brought to a close on May 6th, the former winning by 1341 points; and the champion spot player also won the all-in tournament for the Wright Challenge Cup, on May 20th, the runner-up being W. Mitchell. On Oct. 17th, C. Dawson and W. Mitchell concluded a spot-barred match of 8000 up, the former (in receipt of 1500) winning by 5083 points; and on the same evening North defeated Peall in a spot-barred match of 1400 up by 194 points. On Oct. 31st a spot-barred contest of 10,000 up between J. North and D. Richards terminated in favour of the latter, who received 1000 start, by 666 points; and the same day Dawson brought his spot-barred match of 8000 up with H. Coles to a close, the latter being defeated by 1768 points. The amateur championship, instituted by Messrs. Orme, of Manchester, in '88, was competed for in the new saloon at 16, Soho Square, on Jan. 14th and 15th, A. P. Gaskell and S. H. Fry having challenged W. D. Courtney, the holder. In the preliminary heat Gaskell beat Fry by 208 points, and in the match Courtney defeated Gaskell by 529 points, the full totals being 1500 as against 971. The annual competition for the Cambridge Challenge Cue was commenced on Feb. 19th, and in the first game A. Jones (Jesus) beat H. Sutherland (Caius) by 78 points; in the second C. F. Badeley (Jesus) beat C. A. MacCarthy (Pembroke) by 155;

Jones next beat H. Hirsch (Christ's) by 39; and in the final further defeated Badeley by 27 points. In the Oxford Challenge Cue contests B. S. Chope (St. John's) beat R. Langworthy (Brasenose) by 16 points after a very interesting struggle; F. K. Cobbett (University) beat O. R. B. Johnstone (Keeble) by 45 points; and in the final Chope beat Cobbett by 16 points, the full totals being 500 as against 484. On April 13th another competition for the amateur championship was commenced at Messrs. Orme's Rooms, when J. R. Pennycuik beat "Ormonde" by 181 points; A. R. Wisdom (Southsea) beat F. A. Lindner (Birmingham) by 59; A. P. Gaskell beat Pennycuik by 597, and subsequently defeated Wisdom by 761 points. He then opposed Courtney for the title, and this contest furnished some of the best play ever witnessed at an amateur contest. At the close of the first evening the totals were Courtney 725, and Gaskell 642; but, on resuming, the latter played brilliantly, scoring one break of 277 (a record for the game), and ran out a winner by 312. Having previously won the cup five times, it now became his absolute property. The Oxford and Cambridge matches were played at Beechey's Rooms, Alfred Street, Oxford, on May 1st and 2nd, when Colin Smith (Trinity Hall) and A. Jones (Jesus), of Cambridge, beat G. A. Higginbotham (Pembroke) and B. S. Chope (St. John's), of Oxford, in the four-handed game by 78; but in the single-handed game Higginbotham, the Light Blue, beat Colin Smith, of Oxford, by 75 points. The majority of the matches mentioned were decided at the Egyptian Hall, Piccadilly, Westminster Aquarium, and Thurston's Rooms, Catherine Street, Strand.

Bill, Parliamentary. A Parliamentary bill is either (1) public or (2) private.—(1) If a public bill is to be introduced in the House of Commons, the first step is to move, after giving notice, that leave be given to bring in a bill. If leave be given, the Speaker asks, "Who will prepare and bring in the said bill?" and the member who had moved for leave mentions names. Subsequently the mover, on being called on by the Speaker, walks up from the bar and presents the bill, which is then read a first time and ordered to be printed. On a future day it is read a second time (and this is the occasion for discussing its principle); after which it is committed and its details debated by a committee of the whole house, or by a committee selected from the house, or by one of the two **Grand Committees**. It is then reported with the amendments of committee, if any; it is next considered as amended, and is then read a third time. It is next taken to the Lords, where it goes through the same stages, and if amended comes back to the Commons. If the houses cannot agree upon the amendments, the bill drops; but if they are accepted, then the bill goes back to the Lords with an announcement to that effect. If a public bill be commenced in the House of Lords, the stages are very similar, only that a peer can present a bill without first asking leave. The stages of a bill are introduction and first reading, second reading, committee, consideration as amended (if amendments have been made in committee), and third reading; and it is not the practice, except in case of urgency, to advance a bill more than one stage at a sitting.—(2) **Private.** An important branch of the business annually trans-

acted by Parliament. The total number of bills deposited for the session of '91 which related to railways, canals, tramways, subways, and the supply of gas, electric lighting and water, amounted to 148, as against 173 of the session of '90; 158 of the session of '89, 168 in '88 and 143 in '87; in '86 the figure was 150, the number for '85 was 203, and for '84 it was 227. The total amount of money proposed to be raised in the session of '91 was £58,132,590, as compared with £40,106,611 in '90, and with £25,613,445 in '89, £29,317,842 in '88 and £30,575,080 in the previous year, £23,434,718 in '86, £54,527,189 in '85, £67,280,606 in '84, and £94,142,729 in '83. The Parliamentary work involved in this mass of business is performed partly by a paid staff of officials, and partly by peers and members, whose services are unremunerated. The procedure on a private bill differs from that on a public bill in some important particulars, among which are that the initial proceedings are taken at fixed dates, which do not depend upon the sittings of the Houses, and usually fall in the Parliamentary recess; that a private bill can only be introduced into the House of Commons on petition first presented, which shall have been deposited in the Private Bill Office; and that an inquiry by a small committee, which may hear counsel and witnesses, is substituted for a discussion in committee of the whole House. Another point of difference is that, while at a dissolution or a prorogation all public bills which have not received the Royal Assent fall to the ground, it is customary to provide when a dissolution takes place in the spring that the private bills in progress shall be taken up by the new Parliament at the stage where they had been left by the old Houses. This course was taken by special resolution in '80; and Parliament went further in '86, when some of the bills in progress were not only renewed after the general election, but were kept alive during the short session of August and September, and through the prorogation and the recess until the commencement of the session of '87. Private bills are generally placed by promoters in the hands of gentlemen who make this branch of business their particular study, and who are known as Parliamentary agents. During recent years the system of provisional orders has been largely availed of by promoters. In the Queen's speech, delivered at the opening of the session '87, a bill was promised for improving and cheapening the process of private-bill legislation, but, owing to pressure of other business, it was never introduced. A joint committee investigated the question during the session of '88, and reported in favour of the establishment of a Commission intrusted with the functions of private bill committees, the ultimate decision being reserved to Parliament. Such a Commission must, they added, necessarily be an experiment, but it presented the best hope of an adequate solution of the difficulties of the situation. In their scheme of Local Government for Scotland ('89) the Government made certain proposals on this subject, which were subsequently dropped, but were revived in '90, only to be again abandoned. Another bill on the subject was brought forward in '91 (see Session, sect. 98). For a more detailed account of private bill procedure see ed. '87.

Bills of Exchange, Law as to, in '91. A point of importance as to bills of exchange was determined in the case of *Alecock v. Smith* (Chan-

cery Division, Aug. 8th, '91). An English bill was seized in Norway in respect of debt, and in accordance with Norwegian law was sold at public auction. By Norwegian law such a sale confers a perfect title upon the purchaser, independently of any claims of the prior holder, and notwithstanding that the bill may be overdue. The English law, on the other hand, gives the purchaser of an overdue bill only such title as the vendor had, or any difference as to the extent of negotiability between a current and an overdue bill. It was held that Norwegian law must apply, and that the bankers who had purchased the bill from the purchaser at the sale by auction were entitled to be paid the proceeds of the bill.

Bills of Sale. The statute law relating to bills of sale in England is contained in the Acts of 1878, '82 and '90. A bill of sale upon goods or chattels corresponds to a mortgage of real estate; and the above Acts are chiefly directed to prevent the fraudulent granting of bills of sale. Every bill of sale given by way of security for the payment of money is void unless made in accordance with the form in the schedule of the Act of '82. It must be duly attested by one or more credible witnesses not being a party or parties thereto. It must be registered within seven days after making, and the registration must be renewed once every five years. When first registered, a copy of the bill, together with an affidavit of the time of such bill being given, of its due attestation, and of the residence and occupation of the person giving the same, and of every attesting witness, must be presented to the registrar and filed by him. If the bill of sale be given subject to any defeasance, condition, or declaration of trust, such defeasance, condition, or declaration must appear, if not in the body of the bill, at least on the same paper, and must be set forth in the copy filed. A transfer or assignment of a registered bill of sale need not be registered. Bills of sale comprising, in whole or in part, the same chattels, take priority in order of registration. Delays, omissions, or mistakes in the registration of bills of sale may be rectified by the order of any judge of the High Court. A bill of sale executed within seven days after the execution of an unregistered bill of sale will be held void, in so far as it affects the same chattels, unless it is proved not to have been executed for the purpose of evading the law. Any bill of sale not complying with the conditions of attestation and registration, is void as against the giver's trustee in bankruptcy, etc. A bill of sale given in consideration of a sum less than £30 is void. A bill of sale is void except as against the grantor with respect to any personal chattels acquired by him after its execution. But this provision does not apply to growing crops or fixtures or machinery subsequently acquired in substitution for fixtures or machinery specified in the bill. Chattels assigned under a bill of sale are not liable to be seized by the grantee unless (1) the grantor make default in paying the money thereby secured, or in fulfilling any condition necessary to the security; (2) the grantor become a bankrupt, or allow the goods comprised in the bill to be distrained for rent, rates or taxes; (3) the grantor fraudulently remove, or suffer to be removed, from his premises the goods comprised in the bill; (4) the grantor refuse, without reasonable excuse, to produce to the grantee his last receipts for

rent, rates, and taxes; (5) execution has been levied on the grantor's goods under any judgment. The Bills of Sale '90 exempts letters hypothecating or declaring trusts of imported goods during the interval between the discharge of the goods from the ship in which they are imported and their deposit in a warehouse or re-shipment for export, or delivery to a purchaser, from the Bills of Sale Act 1882.

Bills of Sale, Law as to, in '91. On appeal to the Court of Appeal in the case of *Bird v. Davey* (HAZELL'S ANNUAL, '91, p. 52), the decision of the Queen's Bench Divisional Court was reversed. The bill of sale had two attestation clauses, the first of which bore underneath it the name of "G. B., Solicitor, R.," while the second had only the signature of the witness "G. B.," without his address and occupation. The handwriting was obviously similar. The Court of Appeal held that the bill of sale was good, because, from what appeared on the face of it, there was an irresistible inference that the attesting witness in the two attestations was the same person, and that his address and description, being given in the first attestation clause, was sufficiently stated.—In the case of *Beckett v. the Tower Assets Company*, the Court of Appeal (March 21st, '91) once more gave a decision against the methods by which money-lenders seek to obtain a hold on the furniture of borrowers without complying with the formalities of the law. The plaintiff had applied to the defendants for a loan, and it was agreed that there should be a sale of his furniture to the company, followed by an agreement on the part of the plaintiff to take it back on the hire purchase system. Moreover, to give the proceeding an air of reality, the sale was not to be made by Mr. Beckett himself, but his landlord, to whom rent was due, put in a friendly distress, and then there was an ostensible purchase by the company from him. The plaintiff subsequently failed to pay the instalments in respect of the hire purchase arrangement, and the company entered his house and carried off the furniture. The plaintiff brought an action for trespass, and the jury fixed the damages at £265, subject to the question whether the company had acted illegally. Mr. Justice Cave held that the sale was sufficiently distinct from the hiring agreement to give the property in the furniture to the company, and that it was therefore in their power to resell it to the plaintiff in the manner described. The Court of Appeal, however, reversed this decision. They held that the distress was a sham, and that the document by which the seizure was effected was nothing but a bill of sale, and invalid owing to want of registration. The damages assessed by the jury were consequently ordered to be paid.—A bill of sale which includes a provision as to power to sell on the premises by private treaty or public auction, is not void, the Act allowing of any provision "necessary for the maintenance of the security" (*Bourne v. Wall*, Q. B. Div., April 13th, '91).—The question whether a covenant in a bill of sale to the effect that the instalments are to be taken as instalments of interest—not of principal nor of principal and interest—leaving the principal to be repaid at the end of the period is valid as being in accordance with the Bills of Sale Act, was raised in the case of *Edwards v. Marston* (Court of Appeal, Dec. 5th, '90). The Court decided that such a bill of sale was valid.

Bimetallism is the term currently used to denote a **Double Monetary Standard of Value**. (For detailed discussion of the question see ed. '87.) A Royal Commission on currency appointed in '86 issued its report Nov. '88 (see ed. '89). It left matters very much as they stood previously on the question. A Deputation of the Bimetallic League waited on the Premier and Mr. Goschen at the Foreign Office, May 30th, '89, to urge the Government to consider the desirability of consulting the chief commercial nations as to their readiness to join in a conference for the re-establishment of an international bimetallic system. An **International Monetary Congress** was held at Paris in September '89. In the summer of '90 the **United States Congress** passed an Act, which came into force on August 13th, empowering the Treasury to increase its purchases of silver. According to the old Bland Act the Treasury had to buy each month a minimum of \$2,000,000 and a maximum of \$4,000,000 of silver. The new Act authorises the Treasury to buy a fixed amount of 4,500,000 ounces of silver per month, payments being made in silver certificates. The highest price which the Treasury is allowed to give is 59d. per oz., that being the American bimetallic par. Silver certificates are legal tender for all debts. The result of this new legislation has been a **sharp rise in silver**; in a few months the price bounded up from 44d. to 55d. per oz. The United States have been hitherto steady exporters of the metal, but the prospect now is that the whole of the production of the American mines will be bought up for home purposes. It remains to be seen what effect the sudden sharp advance in price will have in stimulating the production of the metal. Fresh mines are bound to be opened up, and the older undertakings will be worked with greater vigour. In the long run, therefore, the prospect is that the market will be flooded, unless other means are resorted to for increasing consumption. It is possible, should silver touch 59d. per oz., that the United States may boldly adopt bimetallism in conjunction with the European nations that are members of the Latin Monetary Union. That, of course, is the ultimate aim of the silver men in the United States.

Biology. The record for '91 is one of slow and steady progress. There has been no sensational discovery, *dénouement* or *débacle*. The ground of contest between the opposing factions of biological evolutionists is shifting. The fact of evolution (as opposed to special creation) is universally admitted. The question, What are the factors (the mechanism, or scaffolding) of evolution? constitutes the gage of battle. The classic theory of Darwin emphasised these four factors: (1) rapid multiplication, (2) heredity, (3) variation, (4) struggle for existence. The operation of these four collectively is called **natural selection**. In heredity Darwin included inheritance of acquired (as opposed to congenital) characters. The two largest camps of contemporary biologists are divided by the latter issue—Are acquired characters inheritable? The **neo-Darwinians** (Wallace, Weismann, Ray Lankester, etc.) maintain that natural selection without the inheritance of acquired characters is sufficient to account for evolution. They deny that characters acquired by use or disuse (e.g., the strong arm of a blacksmith) are inheritable. On the other hand, the **neo-Lamarckians** (chiefly American biologists) say that acquired

characters are inheritable, and that their operation is the most important factor in evolution. Outside these partisan camps other schools are springing up. Romanes and Gulick contend that natural selection (with or without the inheritance of acquired characters) is itself insufficient to account for the origin of new species (organic evolution), as free inter-crossing (in-and-in breeding) would swamp all variations and produce a uniform type, if natural selection were the only factor. Romanes has drawn up a list of causes which tend to isolate organisms, and by hindering free inter-crossing, prevent heredity from cancelling variability. The chief kinds of isolation are (1) natural selection; (2) sexual selection (also admitted by Darwin and Wallace); (3) physiological selection (the production of mutual sterility between individuals, whether of the same species or not); (4) geographical isolation (as by mountains, deserts, seas, etc.); (5) migration. There is another school (which has been called the **New Biology**) consisting of various shades of thinkers (Patrick Geddes, Mivart, Eimer, Lloyd Morgan, Arthur Thomson, etc.), which takes a still broader view of organic evolution. The tendency of their teaching is to diminish the **externally causative** idea from evolution and to analyse the steps of the continuous, natural process of growth, which is summarised under the term evolution. In its furthest development this school would state the problem for future analysis (and final synthesis) and detailed investigation and exposition, somewhat as follows: 1. Primary factors of evolution (factors of variation), (a) instability of protoplasm; (b) use and disuse; (c) environment; (d) fertilisation, etc., etc. 2. Secondary factors (which play upon the more fundamental primaries), (a) natural selection (struggle for existence, etc.); (b) isolation; (c) co-operation; (d) self-sacrifice (love as opposed to hunger, especially noticeable in the development of the mammalian type), etc., etc. A main contention of the new Biologists is that the partisan disputes of Neo-Darwinians and Neo-Lamarckians cloud the issues and cause needless confusion by making natural selection to cover the area of the primary factors. Darwin's position, it is pointed out, was stronger than that of his successors, because he succinctly stated that the primary factors were to him a *terra incognita*, and that his endeavour was to work out the secondary factors. In this the new Biologists (or some of them) maintain that Darwin was entirely successful as far as he went. He made true progress in tracing the evolutionary effects of competition and struggle for self, amongst organisms, but he failed to follow the thread towards the higher factors of co-operation and self-sacrifice. He over-estimated the products of the primal organic passion of hunger, and under-estimated those of the other primal passion—love. The two most important biologic books of the year review and summarise current speculations outlined above. These are Lloyd Morgan's "Animal Life and Intelligence" and "Wood's Holl Biological Lectures" (Boston, U.S.A.). Amongst minor works have been Pascoe's "The Darwinian Theory of the Origin of Species" (London: Gurney and Jackson), and David Syme's "On the Modification of Organisms" (London: Kegan Paul, Trench and Co.). Both the latter are strongly anti-Darwinian. No discoveries or advances of moment have been made either in field

or laboratory biology during the year. The president of the Biological section of the British Association (Professor Francis Darwin), at Cardiff, in August, instead of giving a summary of recent progress, devoted his address to the discussion of a very specialised branch of a single department—"Growth curvatures in Plants."

Birkbeck Institution. This, was founded by the late Dr. Birkbeck in 1823, as a mechanics, literary and scientific institute. The foundation stone of the present building, Bream's Buildings, E.C., was laid by the Duke of Albany in '83, and the building subsequently opened formally by the Prince of Wales.

Birmingham and Mersey Ship Canal. According to a lengthy article in the *Times* of Sept. 15th, '90, this scheme showed signs of revival, the preference being given to it over three other projects—the connection of the city with the port of Hull, utilising the Trent; the ship canal to London, making use of a portion of the Thames; and the waterway to Bristol. The choice, it seems, is made because of the heavy traffic available all along the line of route through the Midlands and the Potteries, and the fact that 43 per cent. of it already finds its way to the Mersey for export. Of course the scheme includes the opportunity offered by the Manchester Ship Canal; the cost is estimated at £3,000,000, and an appreciable profit is calculated on an average freightage of 48. per ton. The Birmingham Chamber of Commerce (Sept. 24th) adopted a resolution in favour of the scheme. It was stated that a company had been registered with a capital of £30,000; and it was hoped that half that amount would be sufficient for the Parliamentary proceedings. Although the project was much discussed during '91, no definite commencement of the work was announced.

Birmingham, King Edward's School, comprises three grammar schools for boys, four grammar schools for girls, a high school for boys and a high school for girls. Founded 1552, reorganised 1878; income, £25,000. Numerous scholarships and exhibitions both for boys and girls. The boys number over 1200. Head master, Rev. A. R. Vardy, M.A. Sec., Mr. G. Ashford. Motto, *Domine, Saluum fac Regem*. Some alumni—the Archbishop of Canterbury (Dr. Benson), the late Bishop of Durham (Dr. Lightfoot), the Bishop of Durham (Dr. Westcott), Sir J. Johnstone, K.S.I., Mr. Burne Jones, etc.

Birmingham Water Supply. The scheme recommended by Mr. Mansergh and the local engineer, Mr. Gray, proposes to utilise the watershed of the river Elam, high above Aberystwith, and the watershed of the river Claveren. These give a gathering ground of about 100 square miles; the annual rainfall is over 60 in. per annum, and the water is described as absolutely pure and remarkably soft. The estimated cost was four millions sterling, and the distance from Birmingham about 80 miles, while the daily supply would be 60 million gallons at least. As to the financial side of the scheme, the water committee hoped that no charge would be made in the rates, but in '92 it would be necessary to increase the water rents, which are now about £136,702, by £24,000. This increase could be allowed to accumulate for the payment of interest on capital, but it would, no doubt, be possible to postpone the first repayments of capital till '93, when an annual charge of £24,532 would begin under

this head. The whole sum of four millions would not be expended till 1902. Gravitation was expected to save £20,000 a year on the present outlay for pumping. On April 21st the Town Council approved the scheme, and a committee was authorised to act in the matter. Later details showed that the Corporation were under an obligation to supply not only Birmingham, but a large district outside, the total population numbering 658,878, and the pipes by which the present water supply is conveyed measure 576 miles in length. For the new scheme about 8½ miles of tunnels, 35½ miles of cut and cover, and 34½ miles of iron pipes will be required. A full description of the scheme was published in the *Times* of Sept. 17th. On Oct. 13th, at a meeting of the Birmingham City Council, the report of the water committee was submitted. Sir T. Martineau said the estimate for a delivery of 26 million gallons daily, including the maintenance of the existing works for ten years, was £3,621,000. To meet the probable increase of population three additional instalments would be required, bringing the total to nearly 6 millions sterling. The estimated increase of charges would amount to £28,000 a year, but this was £5,000 a year less than the annual remissions of water rate since '76. The second instalment would not be required before 1908, and two years later the scheme would be remunerative, and a further reduction of water rate would then commence. The report was adopted. In the meantime it had been announced that the Parliamentary Bill had been drafted, and that Sir F. Bramwell and Mr. Hawshaw had been over the ground from the watershed to the Birmingham end.

Births (Dec. 1st, '90—Nov. '91). The following records of births during the last twelve months lay pass some general interest:—

Acland, w. of A. H. D., M.P., d. (April 17)
 Alexander, Lady Diana, s. (Sept. 6)
 Alsopp, w. of Hon. Percy, M.P., d. (April 25)
 Arran, Countess of, d. (Aug. 11)
 Balfour, Lady Frances, d. (March 7)
 Baring, Lady Grace, s. (Feb. 23)
 Bertie, Lady Caroline, s. (Jan. 10)
 Bonsor, w. of H. Cosmo, M.P., d. (Jan. 9)
 Boscawen, Lady Margaret, d. (May 29)
 Brabourne, Lady, s. (July 5)
 Bright, w. of John A., M.P., s. (Sept. 11)
 Buckinghamshire, w. of the Earl of, d. (April 11)
 Butler, Lady Theobald, d. (Feb. 10)
 Castlerosse, Viscountess, s. (May 29)
 Javendish, Lady Harriet, d. (Dec. 22, '90)
 Cecil, Lady Florence, s. (May 21)
 Charley, Lady, w. of the Common Serjeant of London, d. (Dec. 25, '90)
 Cleveland, w. of Ex-President, d. (Oct. 4)
 Jobham, Viscountess, d. (Jan. 21)
 Joke, Viscountess, d. (Feb. 10)
 Jombe, Lady Jane Seymour, d. (April 1)
 Lamborne, Viscountess, d. (Aug. 10)
 Ross, w. of Hon. W. H., M.P., d. (June 1)
 De Blaquiere, Lady, d. (Feb. 17)
 De Freyne, Lady, d. (May 1)
 De Lisle, w. of E. de Lisle, M.P., s. (Sept. 27)
 Dyer, w. of Sir T. Swinnerton, Bart., s. (May 27)
 Ebrington, Viscountess, s. (Jan. 24)
 Evans, Lady Henrietta, d. (July 17)
 Falkland, Viscountess, s. (Dec. 24, '90)
 Fife, Her Royal Highness the Duchess of, d. (May 17)
 Fitzgerald, Lady Henry, s. (Nov. 8)
 Robhouse, w. of Henry, M.P., d. (Feb. 19)
 Holland, Lady Mary, d. (March 1)

Jerome, w. of Jerome K., d. (Dec. 12, '90)
 Jessel, Lady, s. (May 28)
 Knox, Lady Sybil, d. (March 14)
 Lees, w. of Elliott, M.P., s. (Sept. 7)
 Louth, Lady, d. (April 16)
 Macartney, Lady, s. (Dec. 6, '90)
 Mackenzie, Lady, of Glenmuick, s. (Aug. 22)
 Melanania, w. of the Bishop of, d. (April 17)
 Melgund, Viscountess, s. (Feb. 12)
 Newcastle, w. of Lord Bishop of, s. (June 30)
 Noble, w. of Wilson, M.P., d. (June 12)
 Parker, Hon. Mrs. Frank, s. (March 3)
 Ranfurly, Countess of, d. (May 3)
 Roche, w. of the Hon. Alexis, d. (Oct. 24)
 St. David's, w. of the Bishop of, d. (Aug. 21)
 Samuelson, w. of George B., M.P., s. (Dec. 15, '90)
 Smith, Lady Blanche, s. (Dec. 9, '90)
 Thornycroft, w. of Hamo, R.A., d. (Sept. 2)
 Thurston, w. of Sir John, K.G.M.C., Governor of Fiji, s. (Sept. 18)
 Weymouth, Viscountess, d. (March 27)
 Vane, Lady Catherine, s. (June 8)
 Williams-Wynn, Lady Watkin, s. and heir (Jan. 25)

Bishop of London's Fund, The. Instituted ('63) for a term of ten years, as a means of helping to provide for the spiritual wants of London and its suburbs. Since the foundation of the fund, £846,169 8s. has been subscribed. It was determined, at the commencement of '74, that the fund should be continued as a permanent diocesan institution. The following are its objects: (1) Missionary clergy and additional curates to work under the bishop's control, and to be confined in their work to particular parishes; (2) Scripture readers, mission women, and other lay workers; (3) The housing of the clergy; (4) Mission and school buildings; (5) In special cases assistance towards endowment; (6) Church building; and (7) Generally such other objects as it may be found desirable to promote from time to time. Last year £6656 was given to maintain eleven mission clergymen, twenty-one parochial curates, and eighty-seven lay agents, and £18,571 towards the building of churches, mission-rooms, etc. **Offices,** 46a, Pall Mall, S.W. **President,** the Lord Bishop of London; **Hon. Secs.,** Messrs. E. Thornton and John E. Nelson. **Clerical Sec.,** Rev. H. Kirk, M.A.

Bishops' Signatures. Except in the following cases, a bishop's signature takes the form of the initials of his Christian name, or names, preceding the name of his see. Thus the Bishop of Ripon signs "W. B. Ripon"—his full name being William Boyd Carpenter, but the surname "Carpenter" gives place to "Ripon." The exceptions to this rule are in the cases of the two Archbishops and the Bishops of Bath and Wells, Carlisle, Chichester, Durham, Exeter, London, Oxford, Rochester, Salisbury, Truro, and Winchester. The **Archbishop of Canterbury** signs "E. W. Cantuar.,"—the initials representing "Edward White," and "Cantuar." being a contraction of the Latin word for Canterbury. The **Archbishop of York** signs "W. D. Ebor.,"—the initials representing "William Dalrymple," and "Ebor.," being a contraction of the Latin word for York. The **Bishop of Bath and Wells** signs "A. C. Bath. & Well.,"—the initials representing "Arthur Charles," and "Bath. & Well.," being a contraction of the Latin words for Bath and Wells. The **Bishop of Carlisle** has recently resumed the official signature, and signs "H. Carloli." The **Bishop of Chichester** signs "R. Cicestr."

The Bishop of Durham signs "B. F. Dunelm." The Bishop of Exeter signs "E. H. Exon." The Bishop of London signs "F. Londin." The Bishop of Oxford signs "W. Oxon." The Bishop of Rochester signs "R. T. Roffen." The Bishop of Salisbury signs "J. Sarum." The Bishop of Truro signs "J. Truron." The Bishop of Winchester signs "A. W. Winton." The following is a list of territorial prelates of the Church of England, with the date of their appointment to the see, and with the annual income:—

See.	Bishop.	Appointed.	Income.	Bishop Suffragan.	Title.
Canterbury ...	Benson (Abp.)	1883	£15,000	Dr. G.R. Eden	Bishop of Dover.
York ...	Maclagan (Abp.)	1891	10,000	Dr. Crosthwaite	Bishop of Beverley.
London ...	Temple ...	1885	10,000	(Dr. Earle ...	Bishop of Marlborough.
Durham ...	Westcott ...	1890	8,000	(Dr. Billing ...	Bishop of Bedford.
Winchester ...	Thorold ...	1891	6,500	Dr. Sandford	Coadjutor Bishop.
Bangor ...	Lloyd ...	1890	4,200	Dr. Sumner...	Bishop of Guildford.
Bath and Wells	Hervey ...	1869	5,000		
Bristol ...	Ellicott ...	1863	Attached to Glouc.		
Carlisle ...	Goodwin ...	1869	4,500	Dr. Ware ...	Bishop of Barrow-in-Furness.
Chester ...	Jayne ...	1888	4,200		
Chichester ...	Durnford ...	1870	4,200		
Ely ...	Compton ...	1886	5,500		
Exeter ...	Bickersteth...	1885	4,200		
Gloucester ...	Ellicott ...	1863	5,000		
Hereford ...	Atlay ...	1868	4,200		
Lichfield ...	Legge ...	1891	4,200	Sir L. Stamer	Bishop of Shrewsbury
Lincoln ...	King ...	1885	4,500	Dr. Trollope	Bishop of Nottingham.
Liverpool ...	Ryle ...	1880	3,500		
Llandaff ...	Lewis ...	1883	4,200		
Manchester ...	Moorhouse ...	1886	4,200	Dr. C. Roberts	Coadjutor Bishop.
Newcastle ...	Wilberforce...	1882	3,500		
Norwich ...	Pelham ...	1857	4,500		
Oxford ...	Stubbs ...	1888	5,000	Dr. Randall	Bishop of Reading.
Peterborough...	Creighton ...	1891	4,500	Dr. Mitchinson	Assistant Bishop.
Ripon ...	Carpenter ...	1884	4,200	Dr. Pulleine	Bishop of Richmond.
Rochester...	Davidson ...	1891	3,100	Dr. Yeatman	Bishop of Southwark.
St. Alban's ...	Festing ...	1890	4,500		
St. Asaph ...	Edwards ...	1889	4,200		
St. David's ...	Jones ...	1874	4,500	Dr. J. Lloyd	Coadjutor Bishop.
Salisbury ...	Wordsworth ...	1885	5,000		
Sodor and Man	Bardsley ...	1887	2,000		
Southwell ...	Ridding ...	1884	3,000	Dr. Ware ...	Coadjutor Bishop.
Truro ...	Gott ...	1891	3,000		
Wakefield...	How ...	1888	3,000		
Worcester ...	Perowne ...	1891	5,000	Dr. Bowlby...	Bishop of Coventry.

Bishops, Terms relating to. Bishopping, a term sometimes applied to Confirmation dating from the very earliest times, but now practically obsolete. **Bishop's Charge**, the instructions of a bishop to the clergy and laity at his Visitation (*v. infra*). **Bishop's Court** is held in the cathedral of each diocese, and dispenses the canon law. It is more generally called the **Consistory Court**. The **Bishop's Chancellor** is the judge. In large dioceses Consistory Courts are held by the Bishop's commissaries. **Bishop's Pastoral**, a letter addressed by a bishop to the clergy and laity of his diocese on some special occasion. **Bishop's Ring**, worn by all bishops, signifies his spiritual marriage to his see. **Bishop's Visitation**, the summons to meet their bishop issued to his clergy and laity. (The canonical age for the consecration of a bishop is thirty years.)

Bisley Meeting. The first annual meeting of the National Rifle Association, which was held for the first time at Wimbledon in 1860, took place at Bisley in '90. The meeting was opened with due ceremony on July 12th, by the formal firing of a rifle by H.R.H. the Princess of Wales. At the meeting in July 91, in the

second stage of the Queen's Prize, the **Silver Medal** resulted in a tie between Sergt. Milner, 3rd Lanark, with scores of 200, the third score, 197, being made by Lieut. Davidson, Canada, the fourth, 195, by Sergt. Fenwick, 4th V.B. Royal Highlanders, and the fifth, 194, by Corp. Pape, 1st V.B. Border Regt. The tie between Milner and Muirhead being subsequently shot off, ended in favour of Milner. The **United Hospitals Challenge Cup** was won, for the eighth successive year, by St. Thomas', five of the team belonging to the Artists, and the other, who took second place, to the Queen's Westminster. The **Belgian Cup** for volley-firing ended in a victory for the 3rd Lanark, who won last year, and in '84 and '80. They took the cup and £20 with a score of 198. The 4th Lanark were second (£15) with 175, the 1st Berks third (£10) with 172, and the 5th Lanark fourth (£10) with 169. The **China Cup**, presented in '64 by Volunteers in China for competition between county teams of 10, each man firing 10 shots at 600 yards, went to Lanarkshire (cup and £30) with 395 points, the second place being taken by Cheshire (£20) with 381, and the third by

Hampshire (£15) with 377. The **Mackinnon Prize**, presented by Col. Mackinnon, Secretary of the Association, was won by England with a score of 109. This competition is open to teams of 10, each team firing five volleys at a figure-target at 400 yards, the time allowed being five minutes. England took £10, and Canada, second with 102 points, £5. In the final stage of the **Queen's Prize** the contest was a keen one, **Pte. Dear**, Queen's Edinburgh R.V., winning the **Gold Medal**, Gold Badge, and £250, with a score of 269, **Sergt.-Bugler Hill**, 19th Middlesex, being second (£60) with a score of 268, **Sergt. Gibbons**, 3rd Middlesex, third (£40) with a score of 266, **Lieut. Davidson**, Canada, fourth (£30) with 264, and **Pte. W. Rosburgh**, London Scottish, fifth (£20) with 262. Among winners of £15 there were three scores of 262, one of 261, four of 260, one of 259, and one of 258. The 30 winners of £12 made scores ranging from 257 to 249; the winners of £10, 249 to 246; winners of £8, 246 to 239; and winners of £5, 239 to 222. In the **Albert**, first stage (A.B., 800 and 900 yards, 10 shots), **Capt. Foulkes**, 3rd V.B. Cheshire, won the prize of £20 with 89 points, and **Staff-Sergt. Worth**, 1st Gloucestershire Engineers, £10, with 79 points. The first prize in the **Mullens Competition** (£100) fell to the 1st V.B. North Lancashire, with 53 hits; second prize (£40) to the Artists Rifle Volunteer Corps, 49 hits; third prize (£24) to London Scottish, 42 hits; the 2nd V.B. Liverpool taking £18, and the 5th V.B. Scottish Rifles £12, and 1st Lanark and 2nd Jersey Light Infantry (ties) dividing £6 between them. The **Duke of Cambridge M.B.L. Competition**, 15 shots at 1000 yards, was won by **Capt. Gibbs**, and Gloucester (£20), with 62 points; and the **Albert A.R.**, second stage (15 shots at 1000 yards), by **Lieut. Oxley**, 2nd Sussex. The mother country carried off the **Kolapore Cup** (200, 500, and 600 yards) with a score of 679; Canada being second, 672. The **Chancellor's Plate** (200, 500, and 600 yards) went to Cambridge University with 617, against Oxford's 625. The Volunteers carried off the **United Service Cup** with 705; the Army (same second, 653; Marines also, 653; Navy fourth, 626; Yeomanry fifth, 620; and Militia sixth, 613. Charterhouse was victorious in the **Public Schools Match** with 405; Bradford being second, 394; Clifton third, 393; Wellington fourth, 387; Winchester fifth, 386; Marlborough sixth, 382; Bedford seventh, 381; Haileybury eighth, 378; Rugby ninth, 377; and Eton tenth, 371. In the Individual Competition for the Spencer Cup, **Sergt. Banks-Whitgift** took the cup with 33 points. Charterhouse took the **Cadet Corps Match** (challenge trophy and bronze medals) with 107, Winchester being second with 103, and Clifton third with 93. In the match for the **Eloho Shield**—one of the most exciting of the meetings—England was victorious with 1670; Ireland being second, 1633; and Scotland third, 1617. England has won the shield now 14 times, Ireland 10, and Scotland 5.

Bismarck Archipelago. A group situated N. of the eastern part of New Guinea, including islands formerly called New Britain, New Ireland, and New Hanover. They are a German possession. See **COLONIES OF EUROPEAN POWERS**.

Bismarck-Schönhausen, Prince Otto Eduard Leopold; created Count Sept. 16th, 1865, and Prince (Fürst) von Bismarck March '71, was b. of an old noble family of the 'Mark' (Brandenburg) at Schönhausen, April

1st, '15. He led a somewhat tempestuous youth, in the course of which he studied and fought duels at the universities of Göttingen and Greifswald, spent some time in the army, and subsequently settled down as a country gentleman, managing the family estates and discharging the office of inspector of dykes. Brought up in the political faith of the **Junkers**, or Prussian Tory squirearchy, he became (46) a member of the Provincial Diet of Saxony, and of the Prussian Diet, in which he first attracted attention by his fiery speeches in defence of the old monarchical party. During the revolutionary period of '48 the services he rendered in the public debates to the Conservative cause so impressed the Prussian Ministry that he suddenly found a diplomatic career opened to him. The representation of Prussia in the Diet of the old German Bund at Frankfurt falling vacant, the Premier introduced Herr von Bismarck to the King, who, not without misgiving, appointed him to that important post. Here he remained for several years, discharging the arduous duties of his office with an ability which won for him the admiration of the Prussian court. The remarkable series of private despatches which he addressed to the Prussian Premier, and which have recently been given to the world, are models of diplomatic skill and statecraft. Austria was then all-powerful in the German Bund; and, supported by nearly all the other German states, had systematically prevented Prussia from exercising that influence in the councils of the Confederation to which, from her position as by far the greatest of the purely German states, she was justly entitled. From the time of Bismarck's appearance, however, the voice of Prussia began to have increasing weight. The successful audacity with which he checked Austrian intrigue at Frankfurt was the source of constant irritation at Vienna, and naturally tended to produce some estrangement between the Austrian and Prussian courts. Herr von Bismarck was sent as ambassador to St. Petersburg ('59-62). In May '62 he was promoted to the then most difficult and important post in the diplomatic service—that of Prussian ambassador at Paris, where Napoleon III. was then in the plenitude of his power. Five months later he was summoned to Berlin, and made First Minister of the Prussian Crown. The first ten years after Herr von Bismarck assumed power are amongst the most remarkable in modern European history. Within that brief period he had humbled the Austrian empire, destroyed the French empire, and created the new German empire. He remodelled the map of Europe, dismembering Denmark and France. He enlarged the frontiers of Prussia by the annexation of various provinces, including the dominions of three dethroned German princes; and succeeded in placing Germany, which had previously been the weakest and least respected of the great powers, at the head of all the states of Europe. His first task as Minister President was, however, one from which a statesman of less resolution and of less firm belief in the rights of the Crown, might well have recoiled. The Chamber of Deputies had refused to pass the military budget, as it demanded increased grants, which were required to carry out the reorganisation of the army in accordance with the ideas of the King. The House uniformly refused these supplies, and for several sessions

heated debates and violent scenes, in which the Minister President and the Liberal leaders were the principal antagonists, were of constant occurrence. In spite of the rejection of the budget by the Chamber the Government spent the money, and the House threatened Von Bismarck with impeachment for violating the Constitution. In the midst of this quarrel a Congress of all the *Princes of Germany* was invited to meet at Frankfurt to reorganise the German Bund; but the King of Prussia, by advice of his minister, refused to appear; and the project, although discussed and approved by five-sixths of the German sovereigns, came to nothing. The German Bund having, at Herr von Bismarck's instigation, resolved to invade the Elbe duchies in support of the claims of the Duke of Augustenburg, Austria, Prussia and Saxony, were intrusted with the execution of the task; and a war broke out in '64 with Denmark, resulting in the loss to her of the duchies of Schleswig-Holstein and Lauenburg. Instead of giving them up to the Duke, Von Bismarck, now created Count, determined, if possible, to annex them to Prussia. The Austrian and Saxon troops were recalled, and the quarrel eventually led (in '66) to a war between Prussia and Austria, who was joined by Bavaria, Hanover, Hesse Cassel, Hesse Darmstadt, and Nassau. The arms of Prussia were victorious: Austria suffered a crushing defeat at Sadowa (Königgrätz), in Bohemia. Hanover and the South German states were likewise vanquished; and the war, which was over in seven weeks, led to the treaty of Nikolsburg, by which Austria was permanently excluded from the German Bund, and Hanover, Nassau, Hesse-Cassel, and Frankfurt, as well as Schleswig-Holstein and Lauenburg, were annexed to Prussia; and the North German Confederation, with Prussia at its head, was established in place of the old Bund, while with the South German states an offensive and defensive alliance was concluded, giving the King of Prussia supreme command of all their troops in time of war. Of the *North German Bund* Count von Bismarck was created Chancellor, and President of the Federal Council. In addition to these successes, in consideration of which the Prussian House of Deputies passed a bill of indemnity, forgiving his former breaches of the Constitution, Count von Bismarck obtained great popularity for creating a representative branch of the new Federal Government, on the basis of manhood suffrage. The Diet, which first assembled in '67, consisted of delegates representing a nation of 29,000,000 Germans. Napoleon III., jealous of the growing power of Prussia, attempted to obtain some compensation for France by the annexation of the Grand Duchy of Luxemburg, which Holland had consented to cede to him. But in this scheme the French Emperor was thwarted, chiefly by the energetic attitude of Count von Bismarck; and in the end the Duchy was declared neutral territory, and the fortifications of the capital were demolished. In '68 Count von Bismarck withdrew for some months from active public life, but he was in power again before the end of the year. Already for some time the biography of Count von Bismarck had practically been the history of his country, and, great as were the events through which he had conducted Germany, he was destined to lead her shortly through greater events still: notably by the defeat of the French

in 1870, the dispute growing out of the offer of the crown of Spain to Prince Leopold of Hohenzollern. The King of Prussia, as the head of the family, had consented to his acceptance of the honour, afterwards revoked. After a campaign consisting of an unbroken series of victories, largely due to the strategic genius of Count von Moltke, King William was able, through his Chancellor, to dictate terms of peace to his helpless assailant. Of the events in Prince Bismarck's life subsequent to the Franco-German war, it may be mentioned that he presided at the Congress of Berlin ('78), the Berlin Conference ('80), and the Congo or Colonial Conference ('84). In his domestic legislation Prince Bismarck has been far less fortunate than in his diplomatic negotiations. In his economical policy, after beginning as a Free Trader he has become a Protectionist. He first largely reduced the customs tariff, and ten years later imposed heavier duties than ever. While he thus alienated the Liberals, his *May Laws*, interfering to an unwise extent with the religious liberty of the Catholic priesthood, led to a long and bitter struggle with the Roman Church, and made all its adherents his bitter enemies. Equally unfortunate was his policy with regard to the *Social Democrats*, his Draconic measures against whom have produced the profoundest discontent among the working classes of the large cities. The measures he has sanctioned against the Polish settlers in the eastern provinces of Prussia, formerly belonging to Poland, savour of harshness. In the course of his career Prince Bismarck has given utterance to expressions which have since become familiar in every civilised tongue. In the heat of the controversy with the Catholics he once said, "We shall never go to Canossa"; but, like the Emperor Henry IV. to Pope Hildebrand (Gregory VII., the Great), he has since found it expedient to send an ambassador to the Vatican (Feb. '86), and to repeal the harshest portion of the *May Laws*. He had previously (Dec. 31st, '85) received the decoration of the Order of Christ from the Pope. Prince Bismarck is often called the man of "iron and blood," because in one of the first speeches he delivered as Minister President (in '62) he said that "it was not by speeches and majority votes that the great questions of the time would be settled, but by iron and blood." The Danish, the Austro-German and the Franco-German wars form a significant commentary on this expression. Other phrases attributed to him are that "Might goes before Right," the definition of a journalist as "a man who has failed in his profession in life," and many others. Prince Bismarck's name was, three years ago, very prominently before the public mind in connection with the *Triple Alliance* between Germany, Austria, and Italy, which is understood to be directed against a possible alliance between Russia and France against the German Powers. Subsequently Europe was profoundly moved by the official statement in a Berlin paper that during an interview between Prince Bismarck and the Tzar, on the latter's return from Copenhagen to St. Petersburg, the German Chancellor informed His Majesty that he had been the dupe of some Orleans clique, who had forged a diplomatic correspondence and forwarded it to the Tzar, the object of which was to show that Prince Bismarck was intriguing against Russia in Bul-

garia. Since the death of the Emperor William I. in March, '88, Prince Bismarck has repeatedly sought to conciliate Russia. During the brief reign of the Emperor Frederick he successfully opposed the contemplated matrimonial alliances between the Princess Victoria, daughter of the Emperor, and Prince Alexander of Battenberg, late Prince of Bulgaria, on the ground that it would be objectionable to the Tzar. It was doubtless on the advice of Prince Bismarck that the present Emperor, immediately after his succession, arranged an interview with the Tzar at Peterhof. A few weeks later (viz., in August) an interview took place between the Chancellor and Signor Crispi, the Italian Premier. This interview following immediately upon the dispute between Italy and France over the Massowah question, gave rise to much speculation, it being generally believed that the object of it was to strengthen the Triple Alliance, and especially to emphasize the understanding between Germany and Italy, in view of a possible rupture of either of those Powers with France. The general aim of Prince Bismarck's overtures to Russia, and his policy with regard both to the Triple Alliance and to Great Britain, was evidently to effect the isolation of France. The publication of the late Emperor Frederick's Diary, in September '88, put a new light upon some of the Imperial transactions in which Prince Bismarck has been engaged. Much sensation was created both in Germany and elsewhere by the revelation of the diary respecting the authorship of the idea of German Unity. The late Emperor claimed to have proposed this policy, and to have experienced great difficulty in persuading Prince Bismarck of its practicability. Since Queen Victoria's visit to Potsdam, in '88, when she had an interview with Prince Bismarck, German policy towards England has been of a very conciliatory character, and the Chancellor's organ, the *Norddeutsche Zeitung*, has recently strongly urged the desirability of a good understanding between the two countries, especially with regard to East African affairs. The Queen, in August '89, presented Prince Bismarck with a full-length portrait of herself. The degree of D.D. was conferred on him by the University of Giessen (Dec. '88). Two attempts have been made on the Chancellor's life: the first by a lunatic named Blind, on May 7th, '66, at Berlin; the second on July 13th, '74, by Kullmann, at Kissingen. A Bismarck museum, containing all sorts of objects relative to the Chancellor's career, has been founded at Berlin. The reported resignation of Prince B. of his office as Prussian Prime Minister as well as Chancellor was announced (Feb. '90), but did not actually occur till March 17th, when divergences of opinion between him and the Emperor led to his retirement. His departure from Berlin on the 20th was made the occasion of a great popular demonstration. At his country seat he has since resided, and many of his utterances have hardly displayed the same command over his feelings as might have been expected. In particular, interviews with various journalists led to contradictions from the Prince of statements which they claimed to have heard from him. During '91 rumours as to still more strained relations between the Emperor and Prince B. caused discussion. He was elected to the Reichstag (May) for the district of Geestemünde. He has been watching public affairs with keen interest,

while residing on his estate, but has recently been more reticent in expressing his opinions. Of the extensive literature on Prince Bismarck the chief original sources in German are Poschinger's edition of Prince Bismarck's Frankfort Letters and Despatches; his Correspondence, by Köppen; his Political Life and Labours, and his Speeches, by Hahn; his Biography, by Hezekiel, and the works of M. Busch entitled "Bismarck and his People." There is an excellent English work, "Prince Bismarck," by Mr. Charles Lowe.

Bissao and Casamanza. Portuguese stations on west coast of Africa, between Gambia and Sierra Leone. Bissao was the great stronghold of the Portuguese slave trade. See COLONIES OF EUROPEAN POWERS.

"Black and White." A new illustrated weekly record and review, which made its first appearance on Feb. 6th, '91. Mr. C. N. Williamson, who was the chief mover in the enterprise, was for some years on the staff of the *Graphic*. Office, 33, Boulevard Street, E.C.

Black, William, novelist, b. at Glasgow 1841. Commenced his career as a journalist, and was successively connected with the London *Morning Star* (acting as special correspondent during the war between Prussia and Austria in '66), and the *Daily News* (of which he was assistant editor). He is the author of "A Daughter of Eth," "A Princess of Thule," "Madcap Violet," "Adventures of a House Boat" ('88), "In Far Lochaber," "The Fenance of John Logan" ('89), and "The New Prince Fortunatus." His recent novels are "Stand Fast, Craig Royston" and "Donald Ross of Heimra."

Blackie, John Stuart, son of a banker at Aberdeen, was b. at Glasgow, 1809, and was ed. at Göttingen, Berlin, and Rome; appointed Professor of Humanity at Marischal College, Aberdeen ('42), and Professor of Greek in the University of Edinburgh ('51). He was one of the most energetic advocates of the reforms in the Scottish Universities in '60. Author of a number of poems and prose works, of which the most popular, perhaps, is "Self-Culture." An unconventional style, with ready wit, characterise the Professor both as a lecturer and a writer. He retired from his professional duties in '82. His recent works are a "Life of Burns" ('88) and "Scottish Song" ('89).

Blackmore, Richard Doddridge, author of "Lorna Doone," was b. in 1825. Ed. at Tiverton, and Exeter Coll., Oxford. Electing to follow the legal profession, he was called to the bar at the Middle Temple ('52), and commenced his career as a conveyancer. After publishing "Clara Vaughan" in '64, and "Oradock Nowel" two years later, Mr. B. at once leapt into fame, in '69, by "Lorna Doone: a Romance of Exmoor," a book whose popularity is still very great. Other books from his pen include "Alice Lorraine" ('75) and "Mary Anerley" ('80). Mr. B. has translated the *Georgics* of Virgil, and has also written poems, of which, perhaps, "The Fate of Franklin" is best known. Recent writings of Mr. B. are "Kit and Kitty" and "Springhaven," both sustaining his reputation for poetic description and careful delineation of character.

Blackpool Tower. It was reported in June '91 that Messrs. Maxwell and Tuke, of Manchester, had drawn up the plans for this tower. The site is between the north and south piers. The tower will be about 500ft. in height, on

the Eiffel model, the ground floor being used as a circus, the first floor as a menagerie and aquarium, and the second floor as a concert room and floral hall. The size at the base is 100 ft. square, tapering to 30 ft. square at the foot of the cupola, the first gallery, 70 ft. from the ground, being 80 ft. square, and the second gallery, 300 ft. high, 30 ft. square. The lifts, capable of accommodating 20,000 visitors a day, will run to the second gallery, and thence broad staircases will lead to six upper galleries, the lantern and cupola. The materials chosen for construction are wrought iron and steel, with cement and red brick on the lower floors, and the tower will be lighted by electricity. At the meeting of the company on Sept. 16th it was stated that the whole of the capital of £150,000 had been allotted. The foundation stone was laid on Sept. 25th. The site of the proposed buildings extends to about 6,000 yards, and the main structure, which is designed to resist four times the pressure of the heaviest gale ever recorded at Blackpool, will occupy one-fifth of the site.

Black Rod, Gentleman Usher of the. An officer of the House of Lords appointed by the Crown, who assists at the introduction of peers, has charge of the arrangements for the maintenance of order below the bar, near the Throne, and in the strangers' gallery, and who summons the Commons whenever their attendance is required in the House of Peers. When he, or his deputy, the Yeoman Usher, performs the last-mentioned duty, he knocks thrice at the door of the House of Commons with his rod of office; and on being announced and admitted, "commands" the immediate attendance of the honourable House, if Her Majesty is personally present in the House of Peers, but only "desires" their immediate attendance if they are to wait upon the Lords Commissioners. Present holder of the office, **Admiral Hon. Sir J. R. Drummond, G.C.B.**

Black Sea and Sea of Azov Ship Canal. It was reported in the spring of '91 that a company had been formed to connect these seas by a waterway, which will be 75 miles long, 73 ft. wide, 23½ ft. deep, and entrance depths of 16 ft. The period of construction is six years.

Blackwall Tunnel. As far back as 1882, amongst the plans before the Metropolitan Board of Works towards a settlement of the vexed question of providing communication across the Thames below London Bridge, was a tunnel between Blackwall and the vicinity of Greenwich and Woolwich. The Bill for the present tunnel scheme was read a third time in the House of Lords and passed on June 21st, and received the royal assent on June 28th, '88. (For subsequent details see last ed.) The report of the Bridges Committee of the London County Council on this matter was published early in Feb. '91. In this they expressed their agreement with the advice given by Sir B. Baker and Mr. Binnie, the Council's engineer, both of whom deprecated the expenditure of any of the £10,000 voted for experimental works, which were shown to be unnecessary as to the strata, the nature of which had been disclosed by borings already made, while the sum would not pay for the construction of a shaft to be afterwards utilised for a roadway tunnel. Sir B. Baker had visited the Sarnia (*q.v.*) and Hudson River (*q.v.*) tunnels, and recommended the shield system there adopted. He suggested a tunnel; for vehicular traffic only, of 23 ft. or

24 ft. internal diameter, and Mr. Binnie suggested that, to provide passenger footways, the roadway might be reduced to 16 ft. On Feb. 17th the report came before the Council, and an amendment referring it back to the Committee was proposed, but rejected by 67 to 28. The consideration of the matter was then adjourned, but came up again on Feb. 24th, when the report, which also instructed the engineer to prepare drawings and to consult with Sir B. Baker and Mr. J. H. Greathead, M. Inst. C.E., was adopted. A joint report of the Bridges and Parliamentary Committees, recommending that no steps be taken as to modifying the existing powers, or applying for a further Bill (in relation to charges on adjoining property) was adopted on March 17th. At the meeting of the London County Council on Oct. 13th, tenders for the tunnel works were opened and referred to the Committee. The amounts were £1,112,760, Messrs H. Kennedy & Sons; £1,018,812, Mr. John Jackson; £974,580, Mr. W. Webster; and £871,000, Messrs. S. Pearson & Son. At the meeting of the Council on Nov. 3rd it was decided to accept the tender of Messrs. S. Pearson & Son. This firm, it was stated, were engaged in completing the Hudson River Tunnel (*q.v.*) by compressed air with a pneumatic shield, under the direction of Sir B. Baker, and the same method would be followed at Blackwall.

Blaine, James Gillespie, American statesman, was b. at West Brownsville, Penn., 1830. Ed. at Washington Coll., where he graduated with distinction. He was for a short time Professor of Mathematics in the Kentucky Military School, but subsequently became editor of the *Portland Daily Advertiser*. In '62 he was elected to Congress, and was Speaker of the House of Representatives ('63-'74). In '76, '80 and '84 he was an unsuccessful Republican candidate for the Presidency. Mr. B. is the author of "Twenty Years in Congress." He is a confirmed Protectionist. He accepted ('88) the office of Secretary of State in his Cabinet. During '91 his name was constantly brought before the public, and contradictory rumours as to his health were circulated.

Blake, Sir Henry Arthur, K.C.M.G., Governor of Jamaica, entered the Royal Irish Constabulary in 1859, and acted as resident magistrate from '76-'82, when he assumed executive charge over the E. Div. of Ireland as a special resident magistrate. Became Governor of the Bahamas two years later, and in '87 was appointed Governor of Newfoundland. His election for the governorship of Queensland in '88 excited so much opposition that Sir H. was appointed to Jamaica instead.

Blandyte. A compound formed by a combination of various hydro-carbons, earth oxides, etc.; but the principal ingredients are Trinidad asphalt and "waste"—that is, a residuum in the manufacture of indiarubber, and known in the trade under various names. It is, in fact, old rubber, which has more or less perished from use or exposure. The process of making blandyte revives and restores the lost qualities of the old rubber, and gives it a new life and renewed usefulness. To the asphalt and waste is added some of the vegetable oils, after undergoing a chemical treatment, with the object of eliminating all moisture possible, and replacing this by hydrogen, with compounds of sulphur, by the agency of solvents and carefully regulated heat. Blandyte

increases the durability of goods, and resists all oils, both mineral and vegetable, as well as acids and alkalis. It is a non-conductor of heat and cold, and is not affected by climatic changes. It is about the same weight as leather, but more lasting, more cleanly, quite as tough, more solid, impervious to water, can be sawn, stitched, or nailed, and resists the heat which destroys leather. It forms an excellent ebonite, such as is used for cells and for electric batteries. As an insulator it can be steam vulcanised upon the wire, and thus dispenses not only with the great cost of rubber and gutta-percha, but diminishes the labour, time, and cost of covering with various woven jackets and other tarred encasements. All descriptions of goods hitherto made from rubber can be manufactured with *blandyte* at a very much reduced cost, while being much more lasting. The compound is named, *blandyte* after its inventor, Dr. Blandy, M.D.

Blantyre. A mission-station in Eastern Africa, founded in 1876 under the auspices of Established Church of Scotland. Situated on highlands between Lake Shirwa and Shiré River. Is becoming the centre of much independent British settlement and trade. See NYASSA, ZAMBESI, etc.

Bloemfontein. Cap. Orange Free State (*g.v.*). "**Blue Books**" are the official reports, papers and documents printed for Government, and laid before the Houses of Parliament. They are uniformly stitched up in dark blue paper wrappers. Germany, white; France, yellow; Italy, green; Spain, red; Portugal, white. See PARLIAMENTARY PAPERS.

Blumenthal, Field-Marshal Leonard von, who, as a strategist is probably unrivalled in military matters, was b. 1810 at Schwedt-on-the-Oder. He studied at the Military Academies of Culm and Berlin. Was successively appointed Second Lieutenant in the Guard (Fusilier Guards) '27; Adjutant to Landwehr ('37); Premier Lieutenant of the General Staff (Topographical Division) '46; and Captain of the General Staff '49. He was made Chief of the Staff of the Army in Schleswig-Holstein in recompense for his services in that war ('49); Major in the Grand General Staff ('53); Chief of the General Staff of the Mobile Army Corps against Denmark ('63); Major-General ('64); Chief of the General Staff of the second army, which invaded Bohemia ('66); Chief of the General Staff ('70), a post he has since held. Was appointed Field Marshal in '88.

Blyth, Sir Arthur, C.B., K.C.M.G., Agent-General for South Australia, was b. at Birmingham, March 21st, 1823. Arrived in Adelaide '39, and engaged in commercial pursuits until '61. Entered the council '55, and took a prominent part in the legislation which enlarged the suffrage and settled the constitution of South Australia. Commissioner for Public Works, '58-60; Treasurer, '61-3; Premier from Aug. '64 to March '65. Appointed Agent-General ('77) in London for the colony.

Board of Trade Returns. See TRADE in '91.

Boat Race, Oxford and Cambridge. See AQUATICS.

Bohemia. The population of this province consists of 4,000,000 Czechs and 2,000,000 Germans. It possesses a Provincial Diet, which is competent to legislate in all matters not specially ruled by the Reichsrath. Recently there has been much unsettlement politically in Bohemia, owing to the demands of the

Young Czech party. See AUSTRIA-HUNGARY, AUSTRIAN POLITICAL PARTIES, and HUNGARIAN POLITICAL PARTIES.

Bokhara. A feudatory Central Asian State attached to the Russian province of Turkestan. Conquered in '68, it has been rapidly losing all independence since, and the completion of the Transcaspian railway to Samarcand practically incorporates it with the Tsar's dominions. Is the most populous khanate of Turkestan, possessing 2,000,000 inhabitants, while Bokhara (70,000) is the principal trade centre of the region. The railway station of B. is situated ten miles from the city, and here the Russians have built a "**New Bokhara**," allowing the older city, for political reasons, to fall into decay. The Russian Political Resident, M. Charikoff, removed to this point in '89, and a Russian garrison is established there. The Ameer is allowed to maintain an army of 30,000 troops for administrative purposes, and these are being drilled by Russian instructors. Russian imports into B. in '87 were 16,675,000 roubles, and B.'s exports into Russia 15,040,000 roubles (over three millions sterling together), showing a surplus in Russia's favour of 1,635,000 roubles. The yearly import of green tea, chiefly from India, alone amounts to 288,000 lb., valued at 6,720,000 roubles (£672,000). Most of the Caspian steamboat companies have agencies in B., and the trade is rapidly passing into Russian hands.

Bolivia. Bounded on the north by Peru and Brazil; on the east by Brazil and Paraguay; on the south by the Argentine Republic and Chili; on the west by Chili and the Pacific Ocean. Capital La Paz, pop. 26,000. It is ruled over by a President with a Congress of two Chambers, elected by universal suffrage, as were the three preceding Presidents. Area is 2,150,000 square kilometres; pop. 2,199,891. Estimated revenue '88-9, \$5,887,121; expenditure, \$5,948,777. Average value of imports, \$10,000,000; exports, \$18,000,000. Foreign debt '88, \$6,397,032. Only one loan was made in London, and has been settled with the shareholders. The standing army is fixed at 1500 men, commanded by four Generals and 365 officers. This is a very rich country, with great variety of climate. It abounds in mines of all kinds of metals, especially copper and silver; its production of the latter-named metal takes the third place in the whole world—namely, after the United States and Mexico. It produces potatoes, barley, grapes, coffee, cacao, etc.; and it exports wool and minerals. But industry is wanting in the country, which offers a wide field to European labourers. For Cabinet, etc., see DIPLOMATIC.

Bombay. See INDIA; and for Ministry, etc., see DIPLOMATIC.

Bombay Graving Dock. (See BOMBAY DOCK WORKS in last ed.) The following description, taken from the Bombay paper, was published by the *Times* of Jan. 21st, '91: Length of floor, 500 ft.; extreme length, 530 ft.; width at coping, 90 ft.; at floor, 62 ft.; depth at head, 33 ft.; at stern, 34 ft.; available depth for docking at high-water ordinary spring tides, 27 ft. 3 in., width of entrance, 65 ft. 6 in. The cill of the entrance, as well as the dock, are at an extra low level, to accommodate war vessels of the second class. No less than 140,000 cubic ft. of dressed stone and 30,000 yards of rubble masonry were used, and the stone for the caisson grooves is Cornish granite taken from England. The excavation involved

95,000 cubic yards; the dock will hold some 7 million gallons, and can be emptied in about three hours. The actual cost was within the estimate of 1,144,850 Rs. The dock (known as the Merewether Dock) was formally opened by Lord Harris in March.

Bombay Water Works. The last stone of the Tansa Dam was laid on April 4th, '91, by Mr. H. A. Acworth, who, in describing this great undertaking, stated that the 11 million cubic feet of masonry which had been used were sufficient to make a wall 100 miles long, 10 ft. high, and 2 ft. thick. It may be added that the estimated cost of the whole scheme was 1½ millions sterling; the artificial lake formed by the dam in the valley has a superficial area of 8 or 9 square miles; the dam is 117 ft. high, 100 ft. thick at base, and 15 ft. at top, the foundations in places going 45 ft. beneath the level of the soil. The gathering ground for the water is on the slope of the Western Ghats, some 60 miles off. From the lake the water is conveyed by means of a duct, 8 ft. high, to within 15 miles of Bombay, and thence by a 4 ft. iron main into the city.

Bonheur, Rosa, d. of a talented French artist, was b. at Bordeaux 1822. Her artistic studies were directed by her father, and her first two pictures, "*Chèvres et Moutons*," and "*Les Deux Lapins*," which were exhibited in '41, attracted much attention. Mdlle. B. was one of the first ladies to receive the *Légion d'Honneur*. In '55 "*The Haymaking Season in Auvergne*" was hung at the Universal Exposition in Paris, and in the same year she sent the "*Horse Fair*" to the French Exhibition in London, where it was the centre of attraction for the season. Received first-class medal of St. Louis, '48. In '49 a fine work, "*Labourages Nivernais*," by her, attracted much attention, the French Government purchasing it for 3000 fr. In '80 the *Leopold Cross* was bestowed on Mdlle. B. by the King of the Belgians, and at the *Siege of Paris* the Crown Prince of Prussia directed that her residence should be left unmolested. As a painter of horses, Rosa Bonheur has had few rivals. A fine specimen of her work is hung in the *National Gallery*.

Booth, Rev. William, better known as General Booth, the founder of the Salvation Army, was b. at Nottingham, 1829. Entered the Methodist New Connexion Ministry '50. He resigned, however, in '61, preferring to work as an evangelist amongst those who never attended a place of worship at all. In '65 he established in the East End of London the *Christian Mission*, out of which grew the great organisation known as the *Salvation Army*, which has not only invaded almost every town of England and Wales, but has sent missionary contingents into various foreign countries. His eldest son is the chief of the staff, and his eldest daughter has greatly aided the progress of the movement in *Switzerland and France*. Other members of his family have also co-operated with him in his missionary enterprise. The issue of a book entitled "*Darkest England, and the Way Out*," towards the end of '90, occasioned much discussion. In it General B. propounded various schemes for solving the social problems connected with what he termed the "submerged tenth." An appeal for at least £100,000 to start the scheme met with a liberal response, despite many criticisms passed upon the author and his methods, and by the end of January the General announced that

about £108,000 had been promised. He afterwards started on a continental tour, and the starting of a food *depôt* formed the inauguration of the scheme. During '91 the General has addressed large meetings on the Continent and in Scotland and the provinces. He set sail for *South Africa* at the end of July, and held successful meetings at Cape Town. He then sailed for Australia.

Borneo. A large island of the Malay archipelago, divided into various States. Estimated total area 290,000 sq. m., estimated pop. 1,846,000.—Holland claims as a possession 203,714 sq. m. of territory on the south, east, and west of the island. In reality this immense tract is parcelled out into various native states. Those on the coast are more or less under Dutch influence. Of the interior little is even known. The principal Dutch settlements are at *Sambas, Pontiana, Banjarmasin, and Koti*. On the north-west coast is the State of *Sarawak*; area 40,000 sq. m., pop. 280,000. It is under British influence, though not a British dependency, being ruled by an English rajah (H.H. Charles J. Brooke). North-east of Sarawak is the independent State of *Brunei*, or *Borneo Proper*, a territory of less extent. Beyond it lies *British North Borneo*, area 30,000 sq. m., which is not an official dependency, but is the property of an English trading company, to whom a royal charter has been granted. In '88 a virtual *Protectorate* was proclaimed over *British N. Borneo*. Between this and the Dutch territories on the east is the native state of *Bulu*. (Political and other details will be found under *SARAWAK, BRITISH NORTH BORNEO, etc.*) Borneo is rich in valuable timber, woods, fruits, spices, drugs and gums, and has a varied fauna. *Minerals*, coal, iron, gold, diamonds, antimony, quicksilver, etc. Soil exceedingly fertile, and well adapted for the cultivation of all tropical products. Principal exports, sago, bees-wax, edible birds'-nests, camphor, hides, rattans, tortoise-shell, cinabar, tripang, antimony, coal, gold, diamonds, pepper, indigo, arrow-root, caoutchouc, gutta-percha, spices, drugs and dyes, etc. The people belong to various races—Malays, Dyaks, Kyans, Negritos, Bugis, and Chinese. Tattooed races, Kanowits, Pakatans and others, inhabit the interior. At a council held at Brunei (Sept. '91) the Sultan firmly refused to accept a money compensation for the seizure of Limbang by Rajah Brooke.

Bosnia and Herzegovina. Two Turkish provinces situate south of the Danube, with Servia on the east and Dalmatia on the west. They were placed under Austrian rule by virtue of the Treaty of Berlin. Their united area (including the Sandjuk of Novibazar) is 23,571 sq. m., and the population 1,504,091, of whom two-fifths are Mohammedans, two-fifths Russo-Greek, and one-fifth Roman Catholic; but the races and religions are so mixed in the various districts that it would be almost impossible to create from the medley a single harmonious state of any size. Austria occupied the provinces with very little difficulty, and with the exception of a slight seething in 1882, rapidly quelled, the 14,000 troops garrisoning the country have had no serious difficulties to contend with.

Bosphorus. A channel, nineteen miles long, connecting the Sea of Marmora with the Black Sea, and separating Europe from Asia. About seventeen miles long, and from half a mile

to a mile and a quarter wide. It has no equal in the world for the depth of its bed, and the numerous bays with which its steep cliffs are furrowed afford everywhere such a safe anchorage that the whole channel may be regarded as a continuation of the roadstead of Constantinople.

Bosphorus Bridge. During the first quarter of '90 an old project of bridging the Bosphorus between Roumeli and Anatoli-Hissar was revived. (See last ed.) A Constantinople telegram of Aug. 20th, '91, reported that a special committee of Public Works was discussing the project of a bridge between Scutari and Stamboul, suggested by a group of French engineers. The plan contemplates a structure 203 metres long for passenger, tram, and railway traffic, which will connect the Anatolian line with the Trans-European system.

Bötticher, Karl Heinrich von, the German Minister for the Interior, was b. in Stettin, Jan. 1833. Entering politics, he quickly attracted the attention of Prince Bismarck, and was regarded as the direct representative of the Chancellor in the Reichstag. On the accession of the Emperor William, special compliments were accorded by him to Herr von B., and at the opening of the Reichstag (Oct. '89) the Emperor's speech was read from the throne by him. The Grand Cross of the Saxon Order of Merit was conferred on him by the King of Saxony (April '89). The German Emperor showed his appreciation of Herr von B. by conferring on him (March '90) the Order of the Black Eagle. A political attack on him in '91 only resulted in the greater admiration of Herr von B. by the Emperor.

Boughton, George Henry, A.R.A., b. 1833, spent his early years in studying alternately at New York, London, and Paris. In '61 he opened a studio in London, and has since chiefly resided in that metropolis. His works, which have been numerous exhibited at the Royal Academy and the National Academy of New York, include "Winter Twilight," "The Lake of the Dismal Swamp," "Passing into the Shade," "Coming into Church," "Morning Prayer," "The Sealed Letter," "The Idyll of the Birds," and "The Return of the Mayflower." At the exhibition of '86 his "Councilors of Peter the Headstrong" attracted much notice. His picture, "Love in Winter," was much admired in the Royal Academy '91.

Bourse, The Paris. See STOCK EXCHANGE.

Bowen, The Rt. Hon. Sir Charles S. C., one of the Lord Justices of Appeal, was b. in 1835, and was ed. at Rugby and Balliol Coll., Oxford. He was called to the bar at Lincoln's Inn in '61. He was senior member of the Truck Commission in '70, and junior counsel to the Treasury in '72, but never took silk. Appointed (79) a Judge of the Queen's Bench Division, and ('82) a Lord Justice of Appeal. Lord Justice Bowen is the author of an historical essay entitled "Delphi," and of a pamphlet on the Alabama question. Has also published a translation of the *Elegues and First Book of the Æneid* of Virgil. He is one of the very few judges who have passed direct from the Junior Counsel's Bar to the Bench. Spoke on the subject of "Novels" during Jan. '91.

Boy Messengers. See MESSENGER SERVICE. **Brackenbury, Lieut.-General Henry, C.B.**, R.A., was b. at Bolingbroke, Lincs. in 1837. Entered the Royal Artillery in '56, and served through the Indian Mutiny. Subsequently he

joined the staff of the Royal Military Academy at Woolwich. During the Franco-Prussian war he gained many distinctions for his services in connection with the British National Society for aid to the sick and wounded. Military secretary to Sir Garnet Wolseley in the Ashantee war and also in Zululand. Private secretary to Lord Lytton, as Viceroy of India. For two months in '82 he acted as Assistant Under-Secretary for Ireland. Promoted Major-General '85, and three years later Lieut.-General. Appointed Director of Military Intelligence in '86. Was a member of the Royal Commission, which met in '88, to consider the administration of the Army and Navy.

Braddon, Mary Elizabeth, daughter of Mr. H. Braddon, was b. in London in 1837. Is a prolific writer, for besides many sound contributions to general literature, she is the author of nearly forty novels, the best known of which are "Aurora Floyd," "Lady Audley's Secret," "Eleanora's Victory," and "Henry Dunbar," whilst her more recent works are "Flower and Weed," "Ishmael," "Wyllard's Weird," "The Mohawks," "Like and Unlike," "The Fatal Thrice," "The Time will Come," "One Life, One Love." Miss Braddon formerly edited *Belgravia* magazine, to which many of her stories were contributed. Her drama, "Griselda," was produced at the Princess's Theatre, '73. Her husband is Mr. John Maxwell. During '91 her novel, "Gerald," was published.

Bradford, Colonel Sir Edward Ridley Colbourne, K.C.B., K.C.S.I., Aide-de-Camp to the Queen, Commissioner of the Metropolitan Police, was b. 1838. Joined the Madras Army in '53, when he was appointed cornet in the 5th Madras Light Cavalry. Transferred to the Madras Staff Corps on its formation, and served with the 1st Central India Horse from '58 to '60. Subsequently appointed to the Indian Political Service. He served in the Persian War ('56-7) and in the Indian Mutiny '58 (twice mentioned in despatches), and has received the medals for those campaigns. He was appointed Secretary to the Political and Secret Department of the India Office in '87, and held that position till June '90, when he was made Commissioner of the Metropolitan Police on the resignation of Mr. Monro.

Bradlaugh, the late Mr., M.P. See SESSION, sect. 10.

Brahms, Johannes, the composer, was b. at Hamburg 1833. In '61 he went to Vienna, where he has since resided, and devoted himself to composition. His great "German Requiem" ('68) established his reputation. Brahms is the composer of many symphonies, "Rinaldo," "The Song of Destiny," songs, cantatas, etc. His unrivalled settings of "Hungarian Dances," and his own "Liebeslieder" dances with choral accompaniment, are the most graceful classical compositions of the kind since Chopin. His *Sonata in D minor*, Op. 108, for piano and violin, was produced for the first time in London, May '89. His quintett in G was performed at the Popular Concerts for the first time in Feb. '91.

Bramwell, Sir Frederick, D.C.L., F.R.S., was b. 1818, and served his time as a mechanical engineer with John Hague. He is a brother of Lord Bramwell, and son of the late George Bramwell, banker. He was elected Associate of the Institute of Civil Engineers in '56, a member of the Council of that body in '67, and its President in '84. He has also been

President of the Institute of Mechanical Engineers in '74. **Hon. Sec.** to the Royal Institution since '85. Chairman of the Executive Council of the Inventions Exhibition '84, and is Chairman of the Executive Council of the City and Guilds of London Institute for the Promotion of Technical Education. Sir Frederick was knighted in '87, and was, '88, elected **President of the British Association for the Advancement of Science**. Received hon. D.C.L. of Durham in '89.

Bramwell, George William Wilshe, P.C., 1st Baron (creat. 1882), is the son of Mr. George Bramwell, banker, and was b. in London 1808. Called to the bar at Lincoln's Inn ('38); appointed a Q.C. (July '51); a Baron of the Exchequer (Jan. '56); a judge of the High Court of Justice, Exchequer Division ('75); a Lord Justice of Appeal ('76); retired from the bench '81. Lord Bramwell is a frequent contributor to the debates in the House of Lords, where his common-sense remarks always secure him the ready ear of the peers. Under the familiar signature "B" Lord Bramwell has frequently written to the *Times* on questions of the hour.

Brazil. A republic in Central S. America, occupying the west coast from 5° N. lat. to 29° S. lat., and comprising the vast valley of the Amazon and its affluents, as well as the watershed of other great rivers. Until '90 it was an empire under Emperor Pedro II., of the house of Braganza. By the constitution of 1824 the executive power in imperial affairs was confided to the Emperor, and the legislative to a Senate and Chamber of Deputies. Senators were chosen for life by the Emperor, each from one of three candidates nominated by the people; the deputies were elected directly for four years. The Chamber had the initiative in taxation, and in the choice of the sovereign if necessary. Provincial affairs were dealt with in the provincial assemblies. The revolution which broke out during the closing months of '89 plunged the country into a state of turmoil, and for a while grave fears were entertained in Europe concerning the internal condition of the empire, it being suggested that the new Government might repudiate, or be unable to fulfil, the financial engagements of the country. It was declared by the Provisional Ministry that a government of peace, liberty, equality and fraternity would be formed, and that all national engagements would be recognised and kept. On June 23rd, '90, a draft of the projected **Constitution** was promulgated by Ministerial decree. In its main features it provided for a president and vice-president, elected indirectly through an electoral college for six years; two legislative chambers—viz., a Senate, elected by the State Legislatures for nine years, and a Chamber of Deputies, elected by popular vote for three years; a supreme federal tribunal of fifteen judges, appointed for life, and a federal judicial system; a federal district for the national capital, like the district of Columbia, but with privileges of representation in the two Chambers and in the presidential election like any State; the transformation of the old provinces into self-governing States; universal suffrage to all except illiterates, mendicants, soldiers (rank and file), and members of religious orders, companies, congregations, or communities who owed obedience to the same to the prejudice of their personal liberty; guarantees

for life, property and political rights; responsibility of the President and his Cabinet before the law; religious freedom and separation of Church and State; obligatory civil marriage, etc. The President of the Federation was declared alone responsible to the nation, and the Ministers were replaced by Secretaries of State answerable to the President alone. The powers of the two Chambers were to be purely legislative and moderating, so that an adverse vote in either House would not necessarily entail a change of Ministry. This scheme was to be submitted to the **Constituent Assembly** in November, for which the elections took place in September, the supporters of the Government obtaining a large majority at the polls. As the result of these elections it was declared that the adoption of Republican institutions had been confirmed by the people, and that the Republic had thus been placed upon a firm basis. The principal acts of the Provisional Government during the year were of a financial character. Prevailing religion Roman Catholic, but all others are tolerated. Education not in a very forward state, 84 per cent. of population being illiterate. Area 3,218,082 sq. miles; pop. 14,000,000. The revenue for ('90-1), £16,961,568 expenditure 17,012,218; total foreign debt ('81), £30,048,500; internal funded debt, £60,395,040; internal floating debt, £15,571,701; estimated exports, 16,040,000 m.; estimated imports, 84,000,000 m. (milrei = 278d.). Capital **Rio Janeiro**, pop. 357,332. (For previous history see earlier eds.) Serious differences of opinion occurred in the Ministry (Dec. '90). By the 3rd, the differences were got over. There was a general strike of carmen at Rio (3rd). A decree was published (11th) for the fusion of the Banco Nacional and the Banco Estados Unidos as the Banco da Republica with a capital of 200,000,000 milreis. The text of a secret decree, to encourage immigration by way of giving rewards, was published (25th) at Vienna.—In '81 a new Cabinet was formed (Jan. 22nd), under the presidency of Senhor Uchoa, who will be Minister without portfolio. The Ministry was composed as follows: Senhor Cavalcante, Minister of the Interior; Senhor Justo Chermont, Minister of Foreign Affairs; Senhor Alencar Araripa, Minister of Finance; General Frota, Minister of War; Admiral Foster Vidal, Minister of Marine; Senhor Assiz Brazil, Minister of Justice. A visitor reported, (Feb. 11th) that 140,000 peasants had been landed in answer to the offer of the Government. They were not, however, allowed to found colonies, but were spread about in groups of fifty, without tools or food, in the plantations and forests, where they died by hundreds. The final draft of the new Constitution was passed by the Senate (23rd), and promulgated (24th). Marshal Fonseca was (25th) elected President of the Republic by the Congress for four years, General Peixoto being elected Vice-President. At the opening of the Legislative Session (June 15th) the President said there had been an increase in the revenue, and he hoped there would be no need for the imposition of fresh taxes. The Government ordered from France a new training ship (Sept.). President Fonseca was seriously ill (Oct.). Marshal Fonseca dissolved Congress (Nov.) and became Dictator, and martial law was proclaimed. It was reported that the number of children of school age was 277,881, the number on the rolls being only 19,135, and the attendance 12,757.

Breach of Promise Actions in '91. One of the most extraordinary actions for breach of promise ever brought in an English court was that of *Evelyn v. Hurlbert*, which was decided by a Queen's Bench jury on April 20th, '91. The plaintiff was Gertrude Ellis, a young lady who had adopted for the dramatic profession the name of Gladys Evelyn, and the defendant was a former proprietor of a New York newspaper, who subsequently became resident in London, and was a well-known writer upon subjects of public interest. The claim was for £10,000. The case for the plaintiff was that she met the defendant in an omnibus in April '87, and that he addressed her, giving the name of Wilfrid Murray. An acquaintance followed, and it was alleged that a few days afterwards the defendant promised the plaintiff marriage, and that under the promise there was undue intimacy. She received a large number of letters from the defendant in the name of Wilfrid Murray; but she subsequently learned that his real name was Hurlbert, and that he was a married man. He then, to make amends, promised to settle £150 a year upon her, and to pay her £800 down. The arrangement, however, was not carried out, and she brought this action. The plaintiff swore that Mr. Hurlbert was none other than Wilfrid Murray. On the other hand, the case for the defendant was that he had had but a slight knowledge of the plaintiff, that he had never promised her marriage, or had improper relations with her, and that the letters produced in court were written by a person named Wilfrid Murray, whose handwriting no doubt bore a singular likeness to that of the defendant, and who had formerly been in his employment as private secretary. The contention was that it was Murray who had been carrying on the intrigue with the plaintiff, but the defendant was unable to produce him, or to give any clue as to his whereabouts, it being suggested that Murray was a person who lived in fear of certain members of the Irish revolutionary party, and that for this reason there was some amount of mystery attached to his proceedings. In the result, after an elaborate hearing of the case, the jury found a verdict for the defendant. They did not pronounce any opinion as to the letters which were produced in the case, but they found that there was no promise of marriage. Judgment was accordingly given for the defendant. On June 17th an application was made to the Court of Appeal for a new trial, principally on the ground that the plaintiff was taken by surprise, and that the verdict was against the weight of evidence. A new trial was refused, the Master of the Rolls stating in his judgment that, though the jury were unable to agree as to the author of the letters—as to which a cloud remained both over the defendant and the plaintiff—they had virtually stated that even supposing the defendant wrote the letters, yet there was no promise of marriage, and no corroboration of it. There was nothing to show that the verdict was so unreasonable as to warrant interference with it on the ground that it was against the weight of evidence. The learned judge added: "We give no opinion as to who is right or wrong, or who is the infamous party in the case. The guilty person here has, it is plain, been guilty of wicked perjury; but as to that I give no opinion; but according to the rules of law there is no ground for disturbing this verdict. The parties have tried the

case before a jury, who have found their verdict, and we must abide by it, and have no right to disturb it."—In the case of *Knowles v. Duncan*, in which a jury had awarded £10,000 damages for breach of promise of marriage, the Court of Appeal (Jan. 30th, '91) reduced the amount to £6,500, the plaintiff accepting that sum in preference to a new trial. The bankruptcy of the defendant was subsequently annulled.—An extraordinary action, heard in the Chancery Division, was that of *In re Park*, in which a Miss Margaret Josephine Smith alleged that the late Mr. Park had executed a deed by which he agreed to pay her £30,000 if she married his son, or £20,000 if there was no marriage. Miss Smith sued the executors to recover the latter amount, but Mr. Justice Romer held that the claim was wholly fraudulent, and one that had been supported by fictitious documents and false swearing. He dismissed the action with costs, and directed the documents to be impounded (June 5th, '91).—The last stage in the action of *Wiedemann v. Walpole* was reached in the Court of Appeal (July 29th, '91). The action was for breach of promise of marriage and for libel. It had been heard on three occasions, the first being in '88, before the late Mr. Baron Huddleston, when, in consequence of the plaintiff's refusal to answer questions in cross-examination, judgment was given for the defendant. A new trial was subsequently ordered, and took place before Mr. Justice Mathew, when the jury disagreed and were discharged. The third trial was before Mr. Baron Pollock, and the learned judge having left the question of breach of promise to the jury, they found a verdict for the plaintiff for £300. The defendant then went to the Court of Appeal, expressing his willingness that the verdict upon certain issues and the damages should stand, but arguing that there was no evidence with respect to the alleged breach of promise, and that the issue ought not to have been left to the jury. The defendant had received a number of letters from the plaintiff which he had not answered, and Mr. Baron Pollock had left it to the jury to say whether the fact of the defendant not replying to the letters was corroborative evidence of the promise. The defendant pleaded that though in mercantile transactions a person who did not repudiate a statement in a letter relating to a business transaction was *prima facie* bound by it, yet this rule could not be held to stand good in the present instance. The Court of Appeal held that the fact that the defendant had not answered the letters in question was no corroborative evidence of the alleged promise of marriage. The judge, therefore, ought to have held that there was no evidence of corroboration to be submitted to the jury. On the issue as to breach of promise, judgment would be entered for the defendant, and as that was the substantial ground of appeal costs were allowed.

Brewing Industry of the United Kingdom. According to last returns respecting brewing, the number of licensed brewers for sale on the 30th September, '90, was 12,000. One of these brewed 400,000 and under 450,000 barrels of malt liquor, two 450,000 and under 500,000, two 550,000 and under 600,000, and two 1,000,000 and over. The amount of licensee duty paid and beer duty charged to the last-named two brewers was £888,208 3s. 9d. From later returns issued by the Commissioners of Inland Revenue the

number of barrels of malt liquors charged with duty for the year ended 31st March, '91, was as follows: viz.—

	Brewed by Brewers for Sale.	Brewed by other Brewers.	Total.
England . .	27,539,261	65,260	27,604,521
Scotland . .	1,797,452	57	1,797,509
Ireland . .	2,555,240	33	2,555,273
Grand Total	31,861,953	65,350	31,927,303

The gross receipts from beer duty during this period were £9,781,397. The sum of 3d. duty on each barrel of beer was by statute law surrendered to the local taxation account, from the 1st April, '90, this amounting to £391,256, leaving for Imperial purposes £9,390,141. The quantity of ingredients used by licensed brewers-for-sale for the year ending Sept. 30th, '90, was, malt and corn, 55,359,064 bushels, and the quantity of sugar (including the equivalent of syrups) was 1,976,177 cwt. 17 lb. The quantity of beer exported from the United Kingdom from the 1st Oct. '89 to 1st Oct. '90, latest returns, was 509,059 barrels, of the declared value of £1,898,281. The number of persons licensed for domestic brewing continues to decrease each year. The number for '89-90 was 25,281, as against 23,424 for '90-91. It is a common practice for brewers in England to advance large sums of money to publicans on mortgage of the lease and goodwill of the premises of the former. Such publicans covenant to purchase all their malt liquors from these brewers when the latter produce these beverages, and the public-houses subject to this arrangement are called "tied houses." The ordinary prices charged for malt liquors to these houses are greater than those charged to others called "free" public-houses. Although brewers covenant with the tenants of their tied houses to supply them with good marketable liquors, it frequently happens that worse beverages are sent to them than should be, much to the annoyance of customers and the injustice of the occupiers of "tied" houses, who are often almost slaves of the brewers, and who cannot practically complain to the latter respecting such inferior beverages from a fear of being compelled to leave their premises. Several breweries almost entirely limit their supply of malt liquors to these houses; and it is stated on good authority that but for their "tied" trade two-thirds at least of the common brewers-for-sale would have to discontinue their business. It is evident, therefore, that these brewers are the most interested persons in the compensation question in connection with the non-renewal of licences of public-houses. On the 20th March last, it was decided by the House of Lords in the case of *Sharp v. Wakefield* in affirming the decision of the Court of Appeal, that on the hearing of an application for the renewal of a licence for the sale of intoxicating liquors under the Licensing Acts of '88, '73, and '74, the licensing justices have a discretion to refuse the renewal on the ground of the remoteness of the house for which the licence was applied, from police supervision, and the character or necessities of the neighbourhood. Although brewers and others peculiarly interested in public-houses

regard this law as a grievance, it does not appear likely to prove so according to the reports of refusals to renew licences at Brewster Sessions.

Bridge, John Frederick, Mus. Doc., organist of Westminster Abbey, was b. at Oldbury 1844. Educated at the Cathedral School, Rochester. He subsequently became a pupil of the late Sir John Goss. In '69 he was appointed organist of the Manchester Cathedral, and in '71 Professor of Harmony at Owens College. He has been connected with Westminster Abbey since '75, and was appointed in '90 Professor of Music at Gresham College. His "Hymn to the Creator" was produced at the Worcester Festival of '84; "Rock of Ages" at the Birmingham Festival '85; and "Callirhoe" at Birmingham Festival '88. At the Worcester Festival in '90 Prof. B.'s new oratorio "The Repentance of Nineveh" was successfully produced.

Brine Pumping (Compensation for Subsidence) Act, 1891. See Session, sect. 51.

Brighton Tower. In Oct. '91 it was stated that a company had been registered for the erection of an Eiffel Tower and Winter Palace at Brighton, with a capital of £210,000.

Brisbane. Capital of *Queensland* (q.v.), on river Brisbane, about 25 miles from its mouth, in Moreton Bay; pop. 99,000.

Bristol and London Canal Communication.

The statement was made in Dec. '89 that a number of persons interested in the traffic between Bristol and London had bought the Wiltshire and Berkshire Canal, "with the intention of entering into active competition with the G. W. Railway Co." This canal leaves the Kennet and Avon Canal at Summington, near Devizes, and joins the Thames at Abingdon. It is connected by a short branch from Swindon, through Cricklade, with the Thames and Severn Canal, into which new capital, it was added, was to be introduced. In Aug. '91 it was stated that the directors of the Wilts and Berks Canal had entered into a contract for dredging and restoring the canal to its original depth and section. The capital of the company, it was added, is £30,000; the traffic amounts to about 33,000 tons a year, and produces a revenue of about £300, which is increased to £1700 from other sources. The net revenue for the year '88 was under £400. Haulage is done by horses only.

British and Foreign Spirits Committee. See Session, sect. 125.

British and Foreign Anti-Slavery Society. Founded 1839, its first president being Thomas Clarkson. The objects of the Society, which carries on the work of previous Anti-Slavery Societies, the need for which had ended in the emancipation of slaves in British colonies, are: "The universal extinction of slavery and the slave trade; and the protection of the rights and interests of the enfranchised population in the British possessions, and of all persons captured as slaves." Patron, the Prince of Wales; Journal, *The Anti-Slavery Reporter*; Sec., Chas. H. Allen; Office, 55, New Broad Street, E.C.

British Association. Founded at York in 1831, at the suggestion of Sir D. Brewster, for the purpose of stimulating scientific inquiry and for promoting the intercourse of scientific men. The Association meets annually for a session of one week, each year in a different town, but never in London. The only occasion

on which a meeting has been held out of the United Kingdom was in '84, when the Association visited Montreal. It was formerly the practice to elect occasionally as the president a man of high social position, but since '67 this custom has been dropped, and the chair is now invariably occupied by a man of scientific eminence. The Association issues an **annual volume**, containing not only the addresses and abstracts of papers communicated to the several sections, but also reports on the state of science, prepared by committees specially appointed, and often assisted by grants of money for conducting researches. The **Association** is now divided into eight sections, distinguished by letters as follow: A, **Mathematics and Physics**; B, **Chemistry**; C, **Geology**; D, **Biology**; E, **Geography**; F, **Economic Science and Statistics**; G, **Mechanics**; H, **Anthropology**. Each section is governed by a president, vice-presidents, secretaries and committee. (For list of the successive presidents of the whole Association see ed. '87.) The last meeting was held at Cardiff in Aug. '91, under the presidency of Dr. Huggins (*q.v.*), whose **introductory address** dealt with some of the more important problems of Spectroscopic Astronomy, and the application of photography to the production of stellar maps, etc. The **evening discourses** were by Prof. L. C. Miall, on "Some Difficulties in the Life of Aquatic Insects," and by Prof. A. W. Rucker, on "Electrical Stress." The section for **Mathematics and Physics** was presided over by Prof. Oliver Lodge, whose address was on recent advances in Physics. He also proposed that a national laboratory should be founded. In the section of **Chemistry** Prof. Roberts-Austen treated of Metallurgy historically, and discussed its recent development. In **Geology** Prof. Rupert Jones treated of the Origin, the Output, and the Geology generally of the South Wales Coal Measures. In **Biology** Mr. Francis Darwin treated of Growth-Curvatures in Plants. In **Geography** Mr. Ravenstein spoke of Cartography. In the section for **Economic Science** Prof. Cunningham dwelt on "Nationalism and Cosmopolitanism in Economics"; while in **Mechanics** Mr. Foster Brown's address dealt with the "Mechanical Details of Mining." In **Anthropology** Prof. Max Müller spoke of the "Importance of the Study of Language in Anthropological Researches." The next meeting will be at Edinburgh, under the presidency of Sir Archibald Geikie (*q.v.*), commencing on Aug. 3rd, '92. **Offices**, Burlington House, W.

British Bechuanaland. A portion of Bechuanaland (*q.v.*) south of the Molopo river. It has been annexed, and is distinct from the Northern Bechuanaland Protectorate. The extension of a railway from Kimberley into it has been proposed. For Governor, etc., see DIPLOMATIC.

British Columbia. A province of the Dominion of Canada which lies between the Rocky Mountains and the North Pacific Ocean, and from the United States boundary to 60° N. lat. Mineral resources vast, especially coal and gold. (See CANADA and BRITISH EMPIRE.) For Ministry see DIPLOMATIC.

British Guiana. A British colony in north of S. America. Coast extends from Orinoco to Corentyn river, 300 miles, and inland 400 miles.

Divided into three counties—Essequibo, Demerara, and Berbice (pron. Berbeess). Capital, Georgetown (Demerara), pop. 49,000, a picturesque, well-built city and port, provided with various excellent modern institutions; second town and port, New Amsterdam (Berbice) pop. 9000. Rich alluvial low-lying plains extend forty to seventy miles from the coast, and are the seat of cultivation and settlement. Beyond rise mountains, covered with forest, and scarcely explored. Sundry fine rivers, the Essequibo, Demerara, Berbice, Corentyn, Cuyuni, Kupununi, Massaruni, Siparuni, etc., navigable for boats, but broken by cataracts. Flora and fauna very rich. Staple article cultivated is sugar-cane. Cotton, coffee, indigo, ginger, have at times been grown; cocoanut, cacao, tobacco, occupy attention. Iron and gold exist. Gold mining is now attracting considerable attention. Resources great, but enterprise deficient, except as regards the sugar industry. Government representative; constitution unique. Executive in hands of Governor; legislation conducted by Court of Policy of ten members, five nominated by elected College of Seven Kiezers. To pass finance six elected representatives added, forming Combined Court. Civil law is modified Roman-Dutch; criminal law is English. Clergy of Churches of England and Scotland have charge of eighteen parishes. Garrison of small detachment of troops (West Indian), two companies volunteers, and a nominal militia. Exports consist of sugar, rum, molasses, gold, timber, shingles, charcoal, and cocoa-nut. (For latest statistics see BRITISH EMPIRE, table.)

British Empire, Colonies, Dependencies, and Protectorates. We furnish a table of the British empire throughout the world, showing the geographical distribution of the various parts of it, their respective capitals, area, population, public revenues and expenditure, imports and exports, the dates at which they were acquired, and their political status and government. The dependencies are classified thus:—(a) Colonies possessing a full constitution, with responsible government; (b) colonies in which the legislature is partly elective and partly controlled by the governor, styled representative government; (c) Crown colonies, which are ruled directly by the Imperial government, through their respective governors and local officials; (d) dependencies subordinate to the government of others, provinces and parts of colonies, administered by functionaries appointed by the governments on which they are dependent; (e) protectorates, internally independent, but more or less subject to British control, by treaty and otherwise; (f) places nominally belonging to Great Britain, but either unoccupied or not under authority. Territories occupied by troops, but not declared to be actually British possessions (*e.g.*, Egypt, Suakim), have not been included in this table. Details of various dependencies will be found under their respective headings elsewhere. The figures given in the Table are the latest received in England. The population is, generally speaking, that of the census of '81, except in the responsibly governed colonies and some others, where it is the estimate up to June '90. Financial figures are generally those for '90-'91, the year ending in June in most cases. (See following pages.)

British East African Association. A company recently constituted by Royal Charter to exploit certain territories on the Suahili coast of Africa. By the treaty concluded in '86 between Great Britain, Germany and Zanzibar, the former's "sphere of interest" was declared to extend from the Tana river north and east to Somaliland. **Mombasa** is now virtually a British port, and the centre of this territory. Late in '87 the Seyyid of Zanzibar ceded to the Association all his rights over the coast from Port Wanga to the German port of **Witu**. In '89 a new charter, conferring further powers on the Company was granted. See **ZANZIBAR**.

British Honduras. A colony in Central America, bounded by Yucatan on N., Guatemala W. and S., and Caribbean Sea E. **Exports**, mahogany, logwood, dyewoods, and caoutchouc, Sugar-cane, coffee, cacao, coconuts, tobacco, and fruits cultivated; cochineal, indigo, iustic, sarsaparilla, tortoiseshell. For statistics see **BRITISH EMPIRE**, etc. (table).

British Museum. The establishment of the Museum dates from the acquisition in 1753 of the **Sloane collections**, which were bequeathed by Sir Hans Sloane to the nation on condition of a payment of £20,000. The Museum and Library were established in **Montague House**, Bloomsbury, and opened Jan. 15th, 1759. Admission was at first very restricted, and the present arrangement, by which it is opened on every week-day, and only particular rooms are closed on certain days, dates from the month of February in the year '79. Since the beginning of Feb. '90 the eastern and western galleries, lighted by electric light, have opened alternately on week-day evenings from eight to ten o'clock. By '45 the four sides of the present building were erected, and Montague House removed. Subsequently it was found necessary to make additions, and in '57 the present reading room, with the galleries for books, was erected. The collection went on growing rapidly, and in '80 it was decided to transfer the archaeological and natural history collections to South Kensington, which transfer was completed by '83. To give further space the White wing was built in '83, with the funds left by Mr. William White, and this was devoted to the separate accommodation of newspapers and Parliamentary papers, prints and drawings, and two exhibition galleries. The departments still remaining in Bloomsbury include, in addition to the department of printed books and maps and that of manuscripts, those of prints and drawings, Egyptian and Assyrian antiquities, Greek and Roman antiquities, British and mediæval antiquities, and ethnography, and coins and medals. The Library contains not only the finest and most extensive collection of English literature in the world, but also the best library in each European language existing out of the country in which that language is spoken, as well as extensive collections of Hebrew and Oriental books. The department of **MSB.** is worthy of the collection of books, and in particular contains the most valuable materials for our national history; it contains no less than 55,000 volumes, including over 9000 in Oriental languages, as well as Greek, Coptic, and Latin papyri, charters and seals. The department of printed books contains over 1,600,000 volumes, and considerable annual additions are made. The annual accessions, about 45,000 volumes, from all sources, under

the Copyright Acts alone are about 10,000 volumes. In consequence of the inconvenient extent to which the manuscript catalogue of the printed books had attained (altogether nearly 3000 large folios), it is now being put into print as rapidly as the funds will permit. It is hoped that the new printed catalogue will be complete in about 600 volumes by the year 1900. A reader's ticket is granted to persons over twenty-one years of age on producing a recommendation from a householder, who must be a person of recognised position, and who must certify that the applicant will make proper use of the reading room. The authorities will not accept the recommendations of hotel and lodging-house keepers in favour of their lodgers. The total number of visitors to the Museum in '90 (exclusive of readers) was 520,172, of whom 453,776 attended during the day, and 66,496 in the evening. The total showed an increase of 15,635 over that of the previous year. As the Museum was opened in the evening for the first time in Feb. '90, the day visitors showed a decrease of 50,761, as compared with the number in '89.

British North Borneo. A territory in the north of the island of Borneo (*q.v.*). Mineral resources said to be immense. The country was originally ceded in 1877-8 to a private company of Englishmen by the sultans of Brunei and Sulu. Efforts were then made to obtain a royal charter, and, in spite of much opposition from the Governments of Spain and the Netherlands, this was granted by her Majesty in '81. In Oct. '88 an announcement was made of the establishment of a **virtual protectorate** over British North Borneo, Brunei, and Sarawak. By this arrangement British influence is now supreme over the whole of the N.W. and N. coast of Borneo. The total area of this united protectorate is about 70,000 square miles. Administration is in the hands of a Governor, who is assisted by a Council, and by Residents appointed to preside over provinces and districts; the machinery being similar to that in Crown colonies. For latest statistics see **BRITISH EMPIRE** (etc.), table.

British West Africa. See **WEST AFRICA**.

Broad Church. See **CHURCH OF ENGLAND**.

Brock, T. R.A. was b. 1847, and commenced his artistic career as a modeller at the Porcelain Works in Worcester, his native place. In London he became a student at the Royal Academy, where, in '69, he was awarded the gold medal and scholarship for historical composition. Under the tuition of Mr. J. H. Foley, R.A., he progressed speedily as a sculptor. His "**Heracles Strangling Antæus**" brought him much notoriety, while an equestrian group, entitled "**A Moment of Peril**," was purchased for the nation. He has produced many lifelike statues, and was elected **R.A.** in '83, and **R.A.** in Jan. '91.

Brooke, Rev. Stopford A., M.A., was b. 1832. Educated at Trin. Coll., Dublin, where he graduated ('56), winning the Downe Prize and Vice-Chancellor's medal for English verse. Minister of Bedford Chapel, Bloomsbury ('76), where he now officiates. He was formerly Chaplain to the Queen and Chaplain to the Empress Frederick of Germany. In '80 Mr. Brooke seceded from the Church of England in consequence of his not holding the orthodox views on miracles. Is the author of several works, among which are "Life and Letters of the late F. W. Robertson," "Primer of English

Literature," an able review of which is to be found in Mr. Matthew Arnold's "Miscellaneous Essays," "The Early Life of Jesus," several volumes of sermons, and a volume of poems issued '88. He is at present engaged on a *History of English Poetry*.

Brooks, Right Rev. Phillips, D.D., Bishop of Massachusetts, U.S., was educated at Harvard University, where he graduated with distinction. He is a member of its *Senatus Academicus*. He is a Broad Churchman. At the request of the late Dean Stanley he preached in Westminster Abbey. Dean Stanley also preached in Dr. Brooks's Church in Boston. Archdeacon Farrar has also preached for him. Dr. Brooks is an active philanthropist as well as a popular preacher. The extraordinary speed of Dr. B.'s utterance has often been the subject of remark. He is considered to be the most rapid preacher living. After holding the rectorship of Trinity Church, Boston, for many years, he was appointed *Bishop of Massachusetts* in May '81.

Brotherhoods, Anglican. In Canterbury Convocation, July 1889, the *Ven. F. W. Farrar, D.D.*, Archdeacon of Westminster, brought forward a proposal to found certain *brotherhoods of clergy* in the Church of England. The inception of the movement may be traced to a speech by the same eminent dignitary delivered at Burlington House in '87, in which he demanded some sort of brotherhood to cope with the needs of poor parishes. Subsequently *Bishop Thorold* appealed to Convocation on the subject, and a joint committee from both Houses was appointed, with the *Bishop of London* as chairman. Eight bishops, and a number of deacons and archdeacons, were upon the committee, which drafted a unanimous report recommending the proposal. Three resolutions were appended, one of which was proposed by Dr. Farrar in Convocation and passed with enthusiasm *memine contradicente*. The remaining two resolutions—one relating to the imposition of vows, and the other to the maintenance of episcopal authority—came up for discussion at the spring session of Convocation, '90. The vows approved in the report are of temporary duration, and dispensable by the bishop, enforcing poverty, celibacy and obedience. It was deemed a vital characteristic of the scheme that no appeal of any kind is to be made for funds or for public support. Small and unauthorised brotherhoods of clergy are not unknown in the Church of England—e.g., the "Cowley Fathers," Oxford, established about twenty years ago. Other communities, lay as well as clerical, have made an ephemeral appearance, but have not succeeded in effectually grafting their methods or principles upon the Church of England. The most recent of these is the *St. Paul's Brotherhood*, under the leadership of *Mr. A. M. Robbins*, which has its headquarters in Lisson Grove.

Broughton, Rhoda, who has achieved notice as a clever novelist, is a native of North Wales. Her first work, "Cometh up as a Flower," which was published about twenty years ago, at once made her name. Other works which have attracted attention include "Goodbye, Sweetheart," "Nancy," "Joan," "Second Thoughts," "Belinda," "Not Wisely but too Well," "Red as a Rose is She," "Doctor Cupid" ('87), and "Alas!" published in '90.

Brown Animal Sanatory Institution, usually called the Brown Institution, was

established under the will of Mr. Thomas Brown, who died in 1852, bequeathing £20,000 to the University of London for "upholding an institution for investigating, studying, and without charge, beyond immediate expenses, endeavouring to cure maladies, distempers, and injuries, any quadrupeds or birds useful to man may be found subject to." Directions were given for the annual delivery of five free lectures, and it was stipulated that kindness to the animals should be a general principle of the institution. In case of a lapse of trust, the University of Dublin to receive the benefits. The validity of this bequest was unsuccessfully contested in the law courts. In '71 the institution was formally established, and a suitable building erected in the Wandsworth Road, Vauxhall. The fund now consists of about £26,800. The number of out-patients treated during '90 was 4,264; of in-patients, 361. *Professor-Superintendent, C. S. Sherrington, M.B.; Veterinary Assistant, E. E. Batt, M.R.C.V.S.*

Brown, Ford Madox, artist, was b. 1821. Educated on the Continent. Exhibited ('48) his "Wickliff Reading his Translation of the Scriptures," at the Free Exhibition, near Hyde Park; his "King Lear" ('49). At the Royal Academy ('51) he produced his third large picture, representing "Chaucer at the Court of Edward III.," and ('82) "Christ washing Peter's Feet." Opened an exhibition in Piccadilly ('61), his picture "Work" being considered his chief work at that time. His subsequent productions include "The Coat of Many Colours," "Cordelia's Portion," "Elijah and the Widow's Son," "Romeo and Juliet," "The Entombment," "Don Juan," and "Jacopo Foscari," as well as a painting representing Cromwell dictating the famous protest to the Duke of Savoy. Mr. Madox-Brown has for some time been engaged in illustrating the history of Manchester in the Town Hall of that city.

Browne, Rt. Rev. Dr. Edward Harold, Ex-Bishop of Winchester, was b. 1811. Ed. at Eton, and Emmanuel Coll., Cambridge, graduating as Wrangler ('32), took the Crosse Theological Scholarship, the Tyrwhitt Hebrew Scholarship, and the Norrisian prize. D.D. ('64), Hon. D.C.L. of Oxford ('77), Hon. D.D. ('85). Ordained deacon ('36), priest ('37), by the Bishop of Ely, he was consecrated *Lord Bishop of Ely* ('64), and translated to the diocese of Winchester ('73). Formerly was Fellow and Tutor of his College ('37-40), Vice-Principal and Professor of Hebrew in St. David's College, Lampeter ('43-49), Norrisian Professor of Divinity at Cambridge ('54-64), Canon of Exeter ('57-64). As an author his lordship is best known by his learned "Exposition of the XXXIX. Articles," of which no less than thirteen editions have been issued. His resignation took place at the end of '90.

Browning Society, The. Instituted ('881) for the study of the works of the poet. Among its vice-presidents are Sir F. Leighton and Mr. Henry Irving. Of Browning's plays, "Colombe's Birthday," "The Blot on the Scutcheon," and "Straford," have been performed. The society issues to its members the best papers read at its meetings, with abstracts of the discussions thereon. It has also issued free to its members, the various books published as handbooks to Browning's works. The meetings of the Society are held at University College, Gower Street. Hon. Sec., E. E. Davies, 2, Wallace Road, Canonbury, London, N. There are

many recognised Browning societies in the various provincial towns of England.

Bruges Ship Canal. A Brussels telegram of Sept. '91 stated that tenders were invited by the Ministry of Public Works for the construction of a deep sea canal from Heyst to Bruges, and a port at the latter place.

Brunel. Otherwise known as "Borneo Proper," is a state in the north of Borneo (*q.v.*). Area about 25,000 sq. m. Capital **Brunel**. It is ruled by a sultan, who, however, is not vested with despotic authority, certain officers of his court having powers similar to a constitutional ministry. A virtual protectorate was proclaimed over Brunel by England in '88.

Brussels Ship Canal Scheme. Two English syndicates, stated a Brussels telegram of April 7th, '90, solicited a concession for enlarging the canal and port of Brussels to make the city accessible to vessels of 2000 tons. The cost was estimated at about 24,000,000 fl. In May it was reported that the Government had decided to give a credit of 4,000,000 fr. towards the construction of the ship canal. No further details had been made public to the time of going to press.

Bryce, James, M.P., eminent as an author as well as a politician, was b. 1838; ed. at Glasgow Univ. and Trin. Coll., Oxon., obtaining several University honours, in addition to the Craven and Vinerian Scholarships. Called to the bar of Lincoln's Inn '67, and was elected three years later **Regius Professor of Civil Law** at Oxford Univ. Entered the House of Commons as Liberal M.P. for Tower Hamlets '80, which he continued to represent till '85, when he became member for the S division of Aberdeen. **Under-Sec. for Foreign Affairs** for five months in '86. Mr. B. has always taken a deep interest in the condition of the Armenians. His works, which have gained for him a great reputation, include "The Holy Roman Empire," "Transcaucasia and Ararat," and his latest, "The American Commonwealth" ('89). The last-named book, which is most comprehensive, attained much popularity both in England and in the United States.

Buchanan, Robert, poet, essayist, and playwright, was b. 1841. Ed. at Glasgow University. Some of Mr. Buchanan's poems, stories, and plays, notably the "Shadow of the Sword," "A Nine Days' Queen," and "Sophia," have secured for him considerable popularity. His play of "Sophia," founded on Fielding's "Tom Jones," had a run of several hundred nights at the Vaudeville. At the same theatre Mr. B.'s play "Joseph's Sweetheart" was produced early in '88, and reproduced in September. "That Doctor Cupid" was also produced at the Vaudeville Jan. '89, and had a long and successful run. Mr. B. published in Oct. '88 an epic poem entitled "The City of Dream." His drama, "A Man's Shadow," proved a very attractive play ('90). "The Moment After," by Mr. B., appeared in October. He produced a burlesque entitled "The Gifted Lady" in June '91. His literary labours included "The Coming Terror" and "The Outcast."

Buckhounds, Master of the. Has control of the royal hunts, and charge of the royal inclosure at Ascot. The office is in the department of Master of the Horse. See **MINISTRY**.

Buckle, George Earle, son of the Rev. George Buckle, canon of Wells Cathedral, was b. near Bath 1854. He is editor of *The Times*, to which post he was appointed in '84, having

previously been connected with the editorial staff of that journal. Mr. B. was educated at Honiton Grammar School, Winchester, and New Coll., Oxford, of which he was a scholar. He won the **Newdigate Prize for English Verse** in '75, took a First Class in **Literæ Humaniores** '76, and a First Class in Modern History in the following year. He was subsequently elected to a **Fellowship of All Souls' Coll.**, and was called to the bar at Lincoln's Inn in '80.

Budget. See **FINANCE, NATIONAL, and SESSION, sect. 64.**

Buen Ayre, or Bonaire. An island on the coast of Venezuela, belonging to Holland. See **COLONIES of EUROPEAN POWERS.**

Buckinghamshire, County Council for. See **COUNTY COUNCILS.**

Building Societies. These societies may be divided into two sections—the Proprietary and the Mutual Societies; the latter dividing the whole of the profits amongst the members *pro rata*. Some are permanent, and others terminable. A favourite development of the latter is the **Star-Bowkett**—named after the founders of the system a society which allots its capital among the members, according to the number of shares they nominally hold, by ballot. The subscriptions, generally a small sum per share, are paid weekly or monthly; and on securing an "appropriation" the member repays this sum very much as he would pay his rent, over a term of ten or twelve and a half years, at the end of which the house or land becomes his own. He also maintains his small subscription, and at the winding-up of the society he is entitled to a share of the profits. A further development of the ballot system is the arrangement by which the member may sell his appropriation and his subscription book, thus realising an immediate premium. According to the last annual official return, issued '91, there were in the **United Kingdom** 422 societies, of which 2333 were in England and Wales, 43 in Scotland and 45 in Ireland. The total liabilities in societies making returns amounted to £52,482,577. The liability on shares of this total was £35,206,709; to depositors and other creditors, £15,065,249; and for balance of unappropriated profit, £2,120,529.

Bulgaria. By Treaty of Berlin, 1878, Bulgaria was constituted an autonomous and tributary principality under the suzerainty of the Porte, the executive power being vested in the prince, assisted by council of ministers, and the legislative power in a single chamber, the National Assembly, elected for three years by manhood suffrage in the proportion of one member to every 10,000 of population. In '83 a second chamber was formed, and it was enacted that every law must be examined and voted by both chambers and sanctioned by the prince. In '85 Eastern Roumelia was united to B. (For history '78 to '86 see ed. '88.) By the treaty the amount of tribute and the share of the Turkish debt to be assumed by Bulgaria was to be fixed by agreement between the Powers, '89. Area (including Eastern Roumelia, now also known as Southern Bulgaria) 38,390 sq. m., pop. 3,154,375. Capital, **Sofia**, pop. 30,438. Budget for '90: **Estimated revenue**, £2,901,961; **expenditure**, £3,243,727. **Imports** ('89), £2,914,770; **exports**, £3,223,243. **Total debt**, £5,998,533. The chief imports are textile manufactures, iron, coals; chief exports, corn, wool, tallow, and other agricultural and pastoral produce.

The bulk of the trade is with Turkey, Great Britain and Austria. Railways connect Sofia with Constantinople and Belgrade, and Rustchuk with Varna. Of the population over two-thirds are of the Greek Church, and less than one-third Mohammedans, Jews, Gipsies, Armenians, etc. The widow of Major Panitza was voted a pension of 1200fr. from the Army Fund (Dec. '90). The President of the Chamber assaulted M. Kassahoff, editor of the *Narodna Prava*, in consequence of an attack by the paper on the former's private life. The Session was closed by Prince Ferdinand (27th). The War vote for '91 was put at 20,617,435 fr. Reshid Bey, the Ottoman agent at Sofia, was received by the Prince (Feb.). M. Stambouloff decided to expel all Russian refugees from Bulgaria. M. Nelidoff, the representative of the Czar, paid a visit to Monsignor Joseph, Exarch at Constantinople (22nd). M. Belcheff, Minister of Finance, was shot (March 27th) when leaving a confectioner's shop, and died immediately. The assassins were not arrested, but the act was supposed to be part of a conspiracy, under the leadership of a Russian, Major Bendereff. A pension of 5000fr. was granted to the Minister's widow. A subscription was opened (May) throughout the country for the establishment of Bulgarian primary and secondary schools in Macedonia. The subscription reached 220,000fr. by the 28th. The fourth anniversary of the accession of Prince Ferdinand was celebrated as a public holiday (Aug. 18th). By order of M. Stambouloff the house of Bishop Methodius, the representative of the Exarch, was (30th) visited and thoroughly searched, a large number of letters and documents being seized. M. Tontcheff resigned the position of Minister of Justice (Oct.). The fortifications of the Ports of Varna and Bourgas were considerably strengthened. The government determined (2nd) to hold two agricultural and industrial exhibitions, one at Philippopolis in '92, and one at Rustchuk in '93. The second session of the present Sobranje was opened (27th) in state by Prince Ferdinand. A snowstorm commenced (28th) and continued for several days, causing great inconvenience, stopping the railway traffic in several places.

Bulgarian Political Parties and the Sobranje. The party divisions in the Bulgarian Sobranje or National Assembly may be generally described as **Ministerialists** and **Opposition**. The present Sobranje was elected in Oct. '90. The elections, like those of '87, gave an overwhelming majority to the Government, which has now 260 supporters out of a House of 295. The chief members of the **Governmental party**, which is also the **anti-Russian party**, are M. Stambouloff, Premier and Minister of the Interior; M. Grekoff, Minister of Foreign Affairs; M. Natchevitch (who succeeded M. Belcheff when the latter was murdered in April '81), Minister of Finance; and Col. Savoff, Minister of War. The chief **Opposition leaders** are MM. Karaveloff and Radoslawoff. Discussions in the Cabinet were reported (Aug.). M. Tivkoff was supporting the Premier. The resignation of M. Tontcheff, which had been impending for some time, took place on Oct. 1st. He was succeeded as Minister of Justice by M. Grekoff, who retains his position as Minister of Foreign Affairs.

Buller, Lieut.-General Sir Redvers Henry, V.C., K.C.B., K.C.M.G., Adjutant-General of the Army, was b. 1839. Ensign, '58. Served

in the campaigns in China ('60), Ashanti ('73-4), South Africa ('78-9), Egypt ('82-4), and Soudan ('84-5). Has received four medals with seven clasps, and six other decorations. All his regimental service has been in the **60th King's Royal Rifles**. He has held twelve staff appointments, and was Quartermaster-General of the Army for three years from Oct. '87, when he succeeded General Lord Wolseley as **Adjutant-General of the Army**, and received the temporary rank of Lieut.-General.

Bülw, Hans Guido von, was b. at Dresden, 1830. Was originally designed for the law, but adopted music as his profession. While he was a student at the University of Berlin, he contributed to *Die Abendpost*, a democratic journal, in which he defended the musical doctrines of Liszt and Wagner. He became a pupil of Liszt in '51, and from '55 to '64 he held the post of Master of Piano-forte at the Conservatoire of Professors Sterne and Marx at Berlin. He became **Director of the Conservatoire at Munich**, where he organised performances of Wagner's principal works. In '78 he was appointed **Königlicher Hofkapellmeister at Hanover**. He has given performances with distinction in most of the European capitals, and in June, '88, gave a series of **Beethoven recitals at St. James's Hall, London**. He is characterised by the intellectual grasp of his subject as well as by remarkable technical skill. He has composed, among other works, music to Shakespeare's "Julius Cæsar," and to "Nirwana," "Des Sängers Fluch," "Vier Charakterstücke für Orchester," and "Il Carnevale di Milano."

Bulwer, Sir Henry Ernest Gascoigne, G.C.M.G., Lord High Commissioner of Cyprus, was b. 1836, and ed. at Trin. Coll., Camb. App. official resident at the Ionian Isles '60; six years later Receiver-General and Treasurer of Trinidad. Next year he became **Administrator of Dominica**. Acted as Governor of Labuan and Consul-General at Borneo from '71 to '75, when he went to Natal as Lieut.-Governor, becoming **Governor** in '82. Created G.C.M.G. in the following year, and received his present appointment in Cyprus in '85.

Bundesrath. See GERMANY and GERMAN POLITICAL PARTIES.

Burgess, J. B., R.A., was b. in 1830, and is the son of H. W. Burgess, who was landscape painter to William IV. Artistic talent has been hereditary, for Mr. B.'s great-grandfather taught Gainsborough. The first medal awarded by the Royal Academy for drawing from the life model was gained by Mr. B., who was elected **R.A.** in '77. He became **R.A.** eleven years later.

Burial Laws Amendment Act, '80. This is an Act to enable the burial of Nonconformists and others in Church of England burial-grounds without the service of the Church of England, and in some cases with other services. It was long opposed by churchmen on the ground that its advocates had no real grievances, but regarded it as a stepping-stone towards Disestablishment. It provides that any one responsible for the burial of a deceased person may give forty-eight hours' notice in writing, and in the form prescribed in the first schedule to the Act, to the incumbent of any place or his substitute, that it is intended to bury the deceased in the churchyard of such place without the rites of the Church of England, and that the incumbent or his substitute shall then be free to permit such burial

Educated at Harrow and Trin. Coll.; Bell Univ. Scholar ('52), Battie Univ. Scholar and Browne Medallist ('53), Porson Prize, Camden Medal, Members' Prize ('54), B.A. (Senior Classic), and was Fellow of his college ('55). Head master of Harrow ('59), of which school his father, the Rev. George Butler, D.D., had also been head master. Hon. Chaplain to the Queen ('75-7), Dean of Gloucester ('86), but only a few weeks after his installation resigned his Deanery to accept the **Mastership of Trinity**. Married in August, '88, **Miss Ramsay**, of Girtton Coll., who distinguished herself by taking the first place in the Cambridge Classical Tripos '87.

Butt, Rt. Hon. Sir Charles Parker, was b. 1830; called to the bar in '54, and created a Q.C. '68. After unsuccessfully contesting Tamworth, he sat as M.P. for Southampton, in the Liberal interest ('80-83), when he was appointed a Judge of the Probate, Divorce, and Admiralty Division, a vacancy being caused by the resignation of Sir Robert Phillimore. In succession to Lord Hannen, he was appointed, in Jan. '91, **President** of this Division of the High Court of Justice, and was sworn a member of the Privy Council in February.

Bye-Elections. See COMMONS (CONSTITUENCIES).

Cabinet, The Present British. See MINISTRY.

Cabinets, Colonial and Foreign. See DIPLOMATIC.

Cabs. These vehicles have been so named from *cabriolets de place*, brought into England from Paris at the beginning of the present century. In 1823 one-horse vehicles were introduced into the London streets for hire. Owing to the opposition of vested interests, only 12 were at first allowed for the purpose. They were constructed to hold two persons inside, in addition to the driver, who was partitioned off from them. They were painted yellow, and stood for hire in a yard in Portland Street, W. The number of such cabs had increased to 65 in 1831, and to 1,500 in 1841. They gradually displaced the hackney coaches, which were first used in England about 1605, and which were mainly the left-off carriages of the nobility licensed for use by the public. There were about 3,206 cabs running in the Metropolis in 1855, more than 6,900 in 1862, about 8,000 in 1877, and more than 11,000 in 1890. The *cabriolet de place* was greatly improved upon. Boulnois patented a cab drawn by one horse, and which carried two passengers facing each other, the driver having a seat at the top. This cab had a door behind, similar to an omnibus. A larger cab of the brougham type but smaller, and places for two passengers, shortly afterwards came into use. The present Clarence four-wheeler has been made from this design. A patent safety two-wheeled cab was invented by **Mr. Hansom** in '34, and was called after his name. This has been highly appreciated, and is justly said to have marked a new era in rapid street vehicles. Numerous improvements have been effected in it, particularly as regards windows and door-opening apparatus. Among the more important improvements made in the construction of these cabs on the whole are those by Messrs. Forder Bros. & Co., 321, Long Acre. The **Forder Hansoms** are now generally recognised as the leading cabs for appearance and comfort in the Metropolis, and the better kind are provided with india-rubber tyres. About three years ago Forder Bros. & Co. invented and patented a door-opening apparatus for cabs, by which the driver could open and close the doors from his seat, much to the convenience and comfort of his passengers. During '90 Metropolitan cab proprietors' licences were issued in

respect of 11,297 hackney carriages, of which 7,376 were two-wheelers or "Hansoms," and 3,921 were four-wheelers. The number of the former new vehicles brought into use in that year was 687, and 214 four-wheelers. From the monthly night inspections made during that year, 238 "Hansoms" and 118 "four-wheelers" were reported as unfit, and the proprietors were forbidden to further use them until seen again, and found fit by the police authorities. There were 596 cab standings existing (exclusive of those in the city and on private ground, railway stations, etc.) at the end of the year, accommodating 6,764 of these vehicles. There were in '90 15,136 cab drivers in the Metropolis. The proportion of these men to cabs for the year was 13.57 drivers to every 10 cabs. As regards their conduct during the year, 1,421 were convicted of drunkenness; 397 of furious, wanton, or careless driving; 101 for cruelty; 46 for abusive, obscene, or insulting language; and 71 for assault. During the same period, 40 cab drivers' licences were revoked, and 12 suspended. The number of drivers' licenses held in '90, by men over 60 and under 70, was 971; by cabmen over 70 and under 80, 149; by those over 80, 3.

Fares by Distance—

If hired and discharged within the four-mile radius for any distance not exceeding two miles	s. d.
For every additional mile or part of a mile	1 0
If hired outside the four-mile circle, wherever discharged, for the first and each succeeding mile or part of a mile	0 6
If hired within but discharged outside the four-mile circle, the whole distance not exceeding one mile, 1s.; exceeding one mile, then for each mile ended within the circle 6d., and for each mile or part of a mile ended outside	1 0

Fares by Time—

Inside the four-mile circle, four-wheeled cabs for one hour or less, 2s.; two-wheeled cabs	2 1
For every additional quarter of an hour or part of a quarter, four-wheeled cab, 6d.; if a two-wheeled cab	0 1
If hired outside the circle, wherever discharged, for one hour or less	2 1
1 above one hour, then for every quarter of an hour or less	2 1

If hired within but discharged outside the four-mile circle s. d. 2 6
Extra Payments—(whether hired by distance or time)—
 Luggage.—For each package carried outside the cab o 2
Extra Persons—
 For each above two (two children under ten years of age count as one person) o 6
 For a child under two years old, when carried, together with two or more persons o 3
Waiting—
 By distance, for every 15 minutes completed (if hired within the four-mile circle), four wheels, 6d.; two wheels o 8
 If hired without circle, two or four wheels o 8
 Fares are according to distance or time, at the option of the hurer, mentioned at the beginning of the hiring. If not otherwise expressed, the fare to be paid according to distance, but the driver can refuse to be hired by time between 8 p.m. and 6 a.m. If hired by distance, the driver is not compelled to drive more than six miles, nor more than one hour if hired by time. If hired by time, the driver may be requested to drive at any rate not exceeding four miles an hour; if required to drive more than four miles within the hour he may demand, in addition to the fare regulated by time, for every mile or any part exceeding four miles, the fare regulated by distance. An agreement to pay more than the legal fare is not binding. If the driver agree beforehand to take any sum less than the proper fare, the penalty for demanding more than the sum agreed upon is 40s. The driver of every cab is to have with him, and to produce when required, the **Authorised Book of Distances**, and every such driver shall, when hired, deliver to the hurer a printed ticket showing fares, etc. Drivers may demand a reasonable sum as deposit from persons hiring and requiring him to wait at any place beyond the fare to which the driver is entitled for driving thither. The penalty is 40s. if the driver, after receiving such deposit, refuses to wait or go away before the expiration of the time for which the deposit shall be a sufficient compensation, or if the driver shall refuse to account for the deposit. If any dispute should arise between the hurer and driver, the former may require the driver to drive to the nearest Metropolitan police court or justice room, where the complaint may be determined by the sitting magistrate without summons, and, if not sitting, then to the nearest police station, where the complaint shall be entered and heard by the magistrate at his next sitting. All property left in a hackney carriage shall be deposited by the driver at the nearest police station within twenty-four hours, if not sooner claimed by the owner, such property to be returned to the person who shall prove to the satisfaction of the Commissioner of Police that such belonged to him, on payment of all expenses incurred, and of such sum to the driver as the Secretary of State has prescribed. All inquiries relating to cabs should be addressed to the Public Carriage Office, New Scotland Yard; but inquiries respecting property left in a cab should be made at the Lost Property Office, at the same address. Cabmen's shelters, commenced in '75, are much appreciated by cab drivers, as they can procure therein refreshments and shelter when on the stands. They

have been of great service in promoting habits of sobriety and thrift.

Cabul. The capital of Afghanistan (*q.v.*).

Calicos Islands. Southern islands of the Bahama group. With Turk's Island are under government of Jamaica.

Caine, Thomas Henry Hall, eminent novelist and dramatist, was born of Manx parentage in 1853, and commenced his career as an architect in Liverpool. From contributing to both the *Builder* and the *Building News* he became connected with journalism, and joined the staff of the *Liverpool Mercury*. Resided with Dante Rossetti in London till the poet's death in '82. Published "Sonnets of Three Centuries" ('82), and also "Recollections of Rossetti," while in '83 "Cobwebs of Criticism" appeared. During the last five years his skill as a novelist has been exemplified in "The Shadow of a Crime," "A Son of Hagar" ('87), "The Deemster," which was dramatised under the title of "Ben-my-Chree" ('87), "The Bondman" ('90), and "The Scapegoat," which appeared in '91. Lectured on the Little Manx Nation" in Jan. '91, at the Royal Institution, and published a book on the same subject.

Calrd, Very Rev. John, D.D., was b. at Greenock 1820; Principal of Glasgow University; one of the most scholarly and eloquent preachers of Great Britain; was ed. at Glasgow University, where he graduated after a distinguished career; ordained '45; appointed to the charge of Lady Yester's Established Church, Edinburgh, in '47, where he attained considerable popularity as a preacher. Subsequently he became minister of Errol, Perthshire; chaplain in ordinary to H.M. ('55); minister of Park Chapel, Glasgow ('57); Professor of Divinity, Glasgow Univ. ('62), of which university he was appointed Principal and Vice-Chancellor ('73). His principal works are: "Sermons" ('58), "Philosophy of Religion" ('80), "Spinoza" ('88). Principal C., as leader of the Broad Church party in Scotland, has exercised great influence on the philosophical thought of that country.

Calderon, Philip H., R.A., was b. 1833 at Poitiers. Began to exhibit in the Royal Academy ('58) after studying at Paris; an A.R.A. ('64), R.A. ('67). In '78 Mr. Calderon was one of the English artists selected to exhibit an extra number of works at the Paris Exhibition, at the close of which he received a "rappel" of first-class medal, and was created a Knight of the Legion of Honour. He is well known as a painter of domestic and other subjects. His "Ruth and Naomi," in the Academy, '86, was highly spoken of. Appointed ('87) Keeper of the Royal Academy in place of Mr. Pickersgill. Mr. C.'s picture in the Academy ('91), entitled "St. Elizabeth's Great Act of Renunciation," gave rise to a discussion as to the correctness of the artist's conception of the nudity of the saint. It was purchased under the terms of the Chantry bequest.

Cambodia. A province of Indo-China and a French protectorate. See COLONIES OF FOREIGN POWERS.

Cambridge, H.R.H. George William Frederick Charles, 2nd Duke of K.G., P.C., K.P., G.C.M.G., G.C.H., G.C.B., G.C.S.I. (creat. 1801), grandson to George III. and first cousin to the Queen, was b. at Hanover March 26th, 1819. He became a colonel in the British army in '37, and succeeded his father Adolphus Frederick, 1st Duke of Cam-

bridge, in '50. Four years later ('54) he was raised to the rank of major-general, on his appointment to command the two brigades of Highlanders and Guards united to form the first division of the army sent against the Tzar General of Russia in the Crimean war of '54-6. In '56 he was promoted to the rank of General; in '61 appointed Colonel-in-chief of the Royal Artillery and Royal Engineers; and in '62 raised to the rank of Field Marshal, and subsequently appointed Commander-in-chief of the British army, and appointment perpetuated by letters patent '87. He is Ranger of Hyde Park and Richmond Park. Visited Egypt in the spring of '91.

Cambridge University. About the middle of the thirteenth century students began to collect in hostels. The endowed colleges gradually absorbed the hostels, the last of which was annexed to Trinity in 1540. The legislative bodies are the Senate, which consists of graduates, and the Council, a smaller body elected therefrom. Like Oxford, the University underwent important changes in 1882, as did also many of the colleges in both universities. The following is the list of colleges: (*Founded 1257*), *Peterhouse*—Head, J. Porter, D.D.—*Undergraduates*, 70; (1326), *Clare Hall*, E. Atkinson, D.D., 178; (1347), *Pembroke*, C. E. Searle, D.D., 115; (1348), *Gonville and Caius*, N. M. Ferrers, D.D., 180; (1350), *Trinity Hall*, H. Latham, M.A., 241; (1352), *Corpus Christi*, E. H. Perowne, D.D., 95; (1441), *King's*, A. A. Leigh, M.A., 81; (1448), *Queens*, G. Phillips, D.D., 87; (1473), *St. Catherine's*, C. K. Robinson, D.D., 46; (1496), *Jesus*, H. A. Morgan, D.D., 179; (1505), *Christ's*, John Peile, Litt.D., 145; (1511), *St. John's*, C. Taylor, D.D., 277; (1519), *Magdalene*, Hon. and Rev. L. Neville, M.A., 60; (1546), *Trinity*, H. M. Butler, D.D., 241; (1584), *Emmanuel*, S. G. Phear, D.D., 166; (1595), *Sidney Sussex*, Charles Smith, M.A., 54; (1800), *Downing*, Alex. Hill, M.A., D.D., 72. *Hostels* (1873), *Oxendish*, J. H. Flather, M.A., 34; (1882), *Selwyn*, Hon. A. T. Lytton, M.A., 122; (1884), *Ayerst*, W. Ayerst, M.A., 32; *Non-Collegiate*, 156; Total, 3090. The examinations necessary for degree of Bachelor are the Previous ("Little-Go"); General, and Special examinations. Candidates for Honours have to pass an additional examination in Mathematics, French or German with their Previous. The subject of the compulsory study of Greek was warmly debated during '91, and the motion which was opposed to Greek was defeated in the Senate. The voting was—*placet*, 185; *non placet*, 525 (Oct. 20th). The *Triposes*, which for Honour candidates take the place of the General and Special, are Classical, Mathematical, History, Law, Theology, Moral Science, Natural Science, Indian Languages, Semitic Languages, and Mediæval and Modern Languages. Women are admitted to the examinations, and reside mostly in *Newnham College* and *Girton College*. (See article, HIGHER EDUCATION OF WOMEN.) Vigorous efforts have been made to secure the advantages of degrees for women by resident and non-resident members of the University, but hitherto without success. Students of not less than two years' standing at an affiliated college, on being admitted members of the University, may be deemed to have already kept three of the terms required for any degree; it is the same with adult students under a committee working in concert with the University in places where there is no affiliated

college. **Affiliated colleges** are:—University College, Nottingham; St. David's, Lampeter; Firth, Sheffield; and the University of New Zealand. **Affiliated centres**:—Hull, Derby, Scarborough, Newcastle-upon-Tyne, and Sunderland. **Degrees**.—D.D. (*hood scarlet cloth lined with dove-coloured silk*); B.D. (*h. plain black silk*); M.A. (*h. black silk lined with white silk*); B.A. (*h. black stuff lined with white fur*); M.D. (*h. scarlet cloth lined with pink silk*); M.B. (*h. black silk lined with white silk*); M.Ch. (*h. same as M.A.*); LL.D. (*h. scarlet cloth lined with pink silk*); LL.B. (*h. black stuff lined with fur*); LL.M. (*h. black silk lined with white silk*); Mus.D. (*h. cream brocaded silk lined with cherry satin*); Mus.B. (*h. black stuff lined with fur and cherry satin*). **Chancellor**, His Grace the Duke of Devonshire, K.G. **Vice-Chancellor**, Rev. J. Peile, Litt.D. (Christ's.). **High Steward**, Lord Walsingham. **Parliamentary representatives**, Prof. Sir G. G. Stokes (q.v.) and Prof. R. C. Jebb, LL.D. (q.v.) **Proctors** '90-91: Rev. A. W. Streane, M.A., and A. Caldecott, M.A. **Registrar**, Mr. John Willis Clark, M.A. **Consult Camb. Univ. Calendar**.

Cameron, Commander Verney Lovett, C.B., D.C.L., a distinguished naval officer and African traveller, was b. 1844. Entered the Royal Navy ('57); lieutenant ('65); commander ('76); retired ('83). Took part in the Abyssinian campaign; served on the East Coast of Africa; accompanied Sir Bartle Frere's special mission to Zauzibar; went to the relief of Livingstone; and has made important explorations in Central Africa, laid down the watersheds between the Nile, the Congo, and the Zambesi, etc., and was the first European who had ever succeeded in crossing tropical Africa from east to west. Has also visited Syria and Mesopotamia. Commander Cameron is a gold medallist of the Royal Geographical Societies of London, Paris, and Lisbon, and has received a gold medal from King Victor Emmanuel. Created C.B. ('76), is Hon. D.C.L. of Oxford, and possesses several foreign decorations. Is the author of "Across Africa", a work on Steam Tactics; "The History of Arthur Pencreath," etc.

Cameroons. A territory on the Bight of Biafra, West Africa, annexed by Germany in 1884. See COLONIES OF FOREIGN POWERS.

Canada, Dominion of, consists of upper portion of North American continent, and is 3,519,000 sq. miles in extent. In 1867 provinces of Ontario, Quebec, Nova Scotia, and New Brunswick united under one federal government; in '70 Manitoba and territories were added, the latter by purchase from Hudson Bay Company; British Columbia joined in '71 and Prince Edward Island in '73. Newfoundland remains independent. **Federal capital**, Ottawa, Ontario, pop. 42,000; chief cities, Montreal, 225,000; Toronto, 180,000; Quebec, 65,000; Halifax, 45,000; St. John, 35,000; Winnipeg, 25,000. Estimated population in '90, 5,075,855. The Indians number 124,500. Canada is the largest of all the British possessions, embracing nearly one-half the whole empire, and is 500,000 sq. miles larger than the United States without Alaska.—**Natural features.** River St. Lawrence, with lakes Ontario, Erie, Huron, and Superior, is chief waterway of Eastern Canada. The St. Lawrence is frozen four months and a half each year, when Halifax and St. John are the winter seaports. The Rocky Mountains divide British Columbia from the

rest of Canada. All the provinces are well watered by rivers. The climate varies, being in the east cold but clear in winter, warm in summer; while the climate of British Columbia resembles England. The winter is dry, healthy, and invigorating.—**Resources.** The mineral deposits are practically inexhaustible, particularly coal, iron, copper, and gold. The fisheries on both the Atlantic and Pacific coasts are extremely valuable. The timber supply is also rich. Agriculture is successfully carried on in all parts, but in Manitoba and the territories wheat-growing capabilities, as well as general farming, are immeasurable.—**Government.** The federal parliament is modelled after that of the United Kingdom, with a Senate of eighty members nominated for life, and a House of Commons of two hundred and fifteen members elected quinquennially on a low suffrage. The number of members sent by the provinces is in proportion to population, and a readjustment takes place every ten years after each census. The senators and members are paid. The Governor-General, representing the Queen, receives \$50,000 yearly. Each province has its legislature and responsible ministry. The limits of federal and provincial jurisdiction are regulated by the British North America Act, which passed the Imperial Parliament in '67 and is the constitution of the Dominion. There is no state church, but the Roman Catholic Church in the province of Quebec has secured to it the privileges enjoyed by it previous to British rule, of collecting tithes, etc. The estimated strength of the various religious bodies is: Roman Catholics, 1,799,245; Methodists, 758,608; Presbyterians, 697,460; Church of England, 590,537; Baptists, 291,130. The chief universities are Toronto, McGill at Montreal, Laval at Quebec, Queen's at Kingston, Victoria at Cobourg, and Dalhousie at Halifax. There are numerous institutes and schools of superior grade, and the standard of legal and medical education is high. The military establishment consists of (1) an Imperial military and naval garrison at Halifax, and a naval station at Esquimaux, on the Pacific, altogether comprising about 2000 troops; (2) permanent corps with schools of instruction for cavalry, artillery, and infantry, with a total strength of 1015 officers and men; (3) a native volunteer force of 37,677.—**Income,** '90-'91, £7,975,985; **expenditure,** £7,198,806. The federal taxes (raised by customs and excise) amounted to £6,317,414, the average per head of the population being £1 ss. 4d.; **gross debt,** £57,222,459; **net debt,** £47,506,643. **Public works cost** £36,343,596.—**History.** Canada was ceded, after the conquest by Wolfe, to Great Britain in 1763 by France. In 1837 responsible government was granted, after rebellions in Upper and Lower Canada. Since the union of the various provinces in '67 the principal events have been the two rebellions in the North-West, led by the half-breed Louis Riel, who was hanged in '85; the construction of the Canadian Pacific Railway; and the adoption, in '78, of a highly protective tariff.—In Dec. '90 the Ontario Government raised the price of Government land which was sold as mining locations. Two cases of leprosy were reported (Dec. '90) from Cape Breton Island. A Bill was introduced into the Quebec Legislature to compel every elector to exercise his franchise and so reduce the cost of elections. The express from Halifax to Montreal was crossing a bridge near Quebec (18th); the structure collapsed, and

the train fell into the river. Five persons were killed and thirty injured. The German sailing vessel *Abela* raided St. Paul's Islands, belonging to the United States, and captured four hundred seals. The captain did not report his arrival in Canadian waters, and the collector at Victoria fined him the full penalty, \$920. The Minister of Justice sent a memorandum to Lord Knutsford in favour of the strong feeling for legislation against the admission of American pirated editions of English copyrighted works. Considerable excitement was caused by the closing by the United States Government of all ports except St. Albans, Vermont, against Canadian cattle, on the plea of preventing the importation of pleuro-pneumonia. There were 1847 failures for \$18,000,000 in '90, against 1777 for \$14,000,000 in '89. The Quebec Legislature passed a Bill (31st) raising from £200 to £300 the deposit to be made by a person seeking to have an election declared void. In '91 the question of seal fishing in the Behring's Sea (*q.v.*) arrived in January at the stage that Lord Salisbury informed Lord Stanley of Preston that he had resolved to resist the claims of the United States (and). The free offer of 100,000 tons of nickel made to the British Government by the owners of some Ontario mines was accepted. A Government inquiry into the management of the export cattle trade was opened at Montreal (5th). Hundreds of telegrams reached Sir John Macdonald (11th) on the 76th anniversary of his birthday. A disastrous fire occurred in Montreal (12th), doing £20,000 damage. It was announced (23rd) that Mr. Blaine had made overtures for commercial relations. The Cabinet decided (31st) to establish a dairy school in each province during the year, and to appropriate a sum of money to make trial shipments of the butter produced to English and other markets. The annual meeting of the Canadian branch of the Imperial Federation League was opened at Toronto (30th), under the presidency of Sir S. L. Tulley. The proclamation of the dissolution of Parliament was issued (Feb. 4th). The Central Farmers' Institute, Toronto, by 81 to 17, passed a resolution in favour of absolute free trade between Canada, Great Britain, and the United States. A serious boiler explosion occurred in Quebec (12th); many people were killed. A terrible explosion occurred at the Springhill mines, Halifax; 123 men were killed. An agreement was completed (March 28th) which gave the Canadian Pacific Railway an entrance to New York over the New York Central lines. The Roman Catholic archbishops and bishops of the Quebec province issued a pastoral (April) protesting against the abolition of the Roman Catholic schools by the Manitoba School Law. The new Parliament was opened by the Governor-General (April 30th). The passengers from Japan by the Canadian Pacific Railway Company's steamer *Empress of India* made the trip across country from Vancouver to Montreal in ninety hours (May). The Minister of Agriculture, in his latest report, for '90, gave the importation of cattle into the Dominion in that year as 1386 head; of sheep, 30,551; swine, 1324; and horses, 1694. Of cattle and sheep, 122,122 and 43,780 head respectively were exported. During '90 26,060 tons of phosphate were exported. The copyrights issued—this being one function of the Agricultural Department—numbered 688; and the patents, 2428. More than half of the latter were taken out by

residents in the States. The number of immigrants who stated their intention to settle in Canada was 75,067, this being 16,533 fewer than in '89. On this item the department spent £25,460. In the House of Commons (12th), Mr. Tarte accused Sir H. Langevin, Minister of Public Works, and Mr. T. M'Greevy with gross and corrupt frauds in regard to the manipulation of the public contracts. The matter was referred to the Committee on Privileges. The annual statement of the Bank of Montreal produced an unfavourable impression, showing that the profits were only \$844,999, as against \$1,377,311 for the previous year. The estimates for the year ending June 30th, '92, were presented (18th); the amount to be voted was \$23,690,000; the amount authorised by statute was \$19,500,000. Sir John Macdonald died at Ottawa (June 6th), after a long illness. The body lay in state in the Senate Chambers (9th) and was seen by 18,000 persons. The remains were interred with masonic honours in the Catanaque Cemetery, Kingston (11th). Terrible forest fires occurred in the wooded district of the island of St. John (June), and enormous damage was done. Many persons were rendered homeless, and the Chapman Railway was destroyed. Navigation on the St. Lawrence was suspended (9th) on account of the forest fires on both sides of the river. Sir John Thompson having declined the Premiership, Mr. Abbott accepted the post (13th). The amount of personal property left by Sir J. Macdonald amounted to \$85,000. The Government gave notice (July) to the Canadian Pacific Railway that the mail from Vancouver to China and Japan would be every three weeks instead of monthly, as provided by the original contract. The Convent of St. Victor, used as an asylum for deaf mutes, was burnt (8th). The three hundred inmates escaped mainly through the coolness of one of the Sisters of Mercy, Sister Margaret, who made a rope of sheets and lowered 140 of the inmates from a window. A serious landslide occurred (7th) on the banks of the Skeena river, Vancouver, which killed over forty people, and destroyed nine houses. Great excitement was caused by the discovery that the Quebec civic treasury was empty, neither the police nor firemen having been paid for a long time. Five of the public officials at Ottawa were suspended for illegally obtaining extra pay (14th). The exports in '90-'91 amounted to \$95,500,000, and the imports to \$107,500,000; the Customs revenue was \$22,000,000. Two immense forts at York Redoubt, Nihale's Island, were in course of construction (Sept.), and they when complete will make Halifax harbour practically impregnable. The Hon. Alexander Lacoste, Speaker of the Commons Senate, was appointed Chief Justice of the Quebec Court of Queen's Bench. The report of the Committee on Privileges was presented (15th). The majority report declared the charges against Thomas M'Greevy to be substantially proved. It found that Mr. M'Greevy conspired with contractors to defraud the Government, and that his statement in Parliament that he was not the owner of the steamer *Admiral* was false. With respect to the allegations against Sir Hector Langevin, the report found that serious irregularities had been proved in connection with the letting of contracts, and that they were due to the careless management of the Department of Public Works. Some of the officials of the department were censured, but Sir Hector Langevin

was acquitted of criminal knowledge, intentional dishonesty, or favouritism. The minority report, which was signed by Messrs. Mills and Davies, Liberals, reviewed the evidence and declared each of the charges against Sir Hector Langevin and Mr. M'Greevy to be proved, with the exception of the allegation that Owen E. Murphy had corruptly paid Sir Hector Langevin \$10,000, on which point the evidence was conflicting. It declared further that the Quebec Harbour contract was sold by Mr. M'Greevy with the connivance of the Public Works Department, and that Sir Hector Langevin was guilty of a breach of public trust in allowing a double payment in respect of certain work. Regarding the British Columbia Graving Dock, the report said that Connolly, the contractor, offered to pay Mr. M'Greevy \$50,000 provided that the dock were lengthened 100 feet; and that subsequently Sir Hector Langevin made a report to the Privy Council in favour of the extension, and asking the Imperial Government to share the cost. The report of Sir Hector Langevin was adopted by the Privy Council, but the Imperial Government refused to contribute to the cost of the extension, and it was therefore abandoned. In conclusion, the minority stated their conviction that the contractors secured a controlling influence over Sir Hector Langevin and the Department of Public Works through Mr. M'Greevy by the payment of large sums towards election funds and towards the maintenance of Sir Hector Langevin's newspaper. A great strike occurred at Ottawa (14th), when 3000 lumber hands left work, demanding increased pay and shorter hours. Mr. R. N. O'Brien was tried at Montreal (27th) for circulating a libel against Prince George of Wales. The jury returned a verdict of guilty Oct. 2nd, and on the application of prisoner's counsel sentence was suspended, the accused being freed on his recognisances. On the motion of Mr. J. Thompson, the House of Commons unanimously carried the formal expulsion of Mr. Thomas M'Greevy (29th). The returns of the Fishing Department (4th) showed that the number of seals caught by the Canadian fishing fleet was 30,000, 12,000 of which were caught in Behring Sea. The Cabinet gave authority to the Minister of Justice (5th) to institute prosecutions against those contractors whose frauds were brought to light in the investigations into the charges against Sir H. Langevin and Mr. M'Greevy. The experiment of growing two-rowed barley was a great success. The Royal Commission to investigate the workings of the Civil Service was appointed (14th). It consisted of Mr. George Hague, manager of the Merchants' Bank; Mr. Justice Budge, of the Exchequer Court; Mr. E. Barbeau, manager of the Credit Foncier; Mr. J. M. Courtney, Deputy Minister of Finance; and his brother, Mr. Leonard Courtney. A recent Blue Book gives the following statistics as to the railways: In '90 there were 13,250 miles of railway under traffic in the Dominion, against 12,638 in '89. The paid-up capital invested in these lines was £157,289,562, against £152,115,289 the year before. The gross earnings rose to £9,368,765 from £8,420,923, and the net earnings to £2,786,095 from £2,222,116. The freight carried was 20,787,469 tons, against 17,928,626 in '89, and the number of passengers rose to 12,821,262 from 12,151,051. The train mileage was 41,849,329, against 38,819,380 the year before.

Two hundred and seventeen lives were lost by railway accidents during the twelvemonth (an increase of seven), 117 persons having been killed by being on the track and 35 (of whom 26 were *employés*) by falling from cars or engines. Seven *employés* were killed and 359 injured while engaged in coupling cars. The mileage under traffic in '80 was 6,891; in '90, 13,256. Tons of freight carried in '80, 9,938,585; in '90, 20,787,459. Passengers in '80, 6,462,948; in '90, 12,821,262. Earnings in '80, \$4,712,289; in '90, \$9,368,765. It was stated (Sept.) that the following tracts of country in the Dominion were still unexplored: The country between Alaska, the Porcupine River, and the Arctic Ocean, 9500 square miles; between the Lewis and Yukon rivers and Alaska, 32,000 square miles; between the above rivers, the Stickeen, and the coast ranges, 27,000 square miles; the territory between the Pelly and Mackenzie rivers, 100,000 square miles; between the Great Bear Lake and the Arctic Ocean, 50,000 square miles; between the Great Bear and Great Slave lakes and the Mackenzie River, 35,000 square miles; a tract of 81,000 square miles, bounded by the rivers Stickeen and Liard on the north and the Skena and Peace on the south; 75,000 square miles between the Peace, Athabasca and Loon rivers; 35,000 square miles to the south of Athabasca Lake; an area of 7500 square miles between Bathurst Inlet and the Coppermine River; and a territory of 31,000 square miles between Black River and the Arctic Ocean. There is also a vast region made up as follows: An area of 178,000 square miles between the lakes already mentioned and the western shore of Hudson Bay; an extent of 22,000 square miles between Hudson Bay and the rivers Severn and Attawapiskat; an area of 15,000 square miles between lakes Trout and Seul and Albany River; and about 35,000 square miles south and east of James Bay. Finally, almost the whole of the interior of Labrador, estimated at 289,000 square miles, is unexplored country. Mr. Senecal, late Superintendent of the Government Printing Bureau, had a suit brought against him by the Attorney-General for \$15,000, which is the sum he is said to have compelled paper, type, and printing-press makers to pay him as commission on goods bought from them. Professor Russell's party, which had just returned from the Alaskan wilds, arrived at Portland (Oct. 21st). The party ascended Mount St. Elias to the height of 14,500 ft., and found that it was 5000 ft. higher. See also DIPLOMATIC and BEHRING SEA QUESTION.

Canadian Pacific Railway (see previous editions). On Dec. 12th, '90, a supplementary dividend of 1 per cent. was declared for the current half year, payable with the guaranteed dividend of 1½, thus making the whole dividend for '90 5 per cent. It was officially estimated that, after paying the dividends and fixed charges for the year, there was a surplus of \$925,000 to be carried to reserve, that fund thus reaching \$2,800,000. According to a New York telegram of March 29th, '91, an important agreement was arrived at on March 28th, to give the Canadian Pacific an entrance to New York over the New York Central lines. Mr. Van Horne, president of the Canadian Pacific; Mr. Chauncey Depew, president of the New York Central; and Dr. H. Walter Webb, one of the vice-presidents, ratified the arrangement. A Minneapolis cablegram of April 18th stated that

the western extension of the Soo was to be completed at once, with the view of making it the main line between Boston, Montreal and the Pacific coast. On May 2nd a remarkable railway journey across the Continent by means of this line was completed. The passengers of the ss. *Empress of India*, on a trip round the world, ran from Vancouver to Montreal, 2,900 miles, in 3 days 17 hours, the average speed over the entire distance being 34 miles an hour, the maximum speed being from 70 to 75 miles an hour. The journey from Yokohama to Montreal occupied exactly two weeks. It was announced that a similar train would run, to carry the mails between Great Britain and China and Japan, of course beating every other route. The annual meeting of the company was held at Montreal May 13th, when it was shown that the surplus for the year, after payment of two supplementary dividends, was \$753,082, bringing up the total surplus to \$2,656,432; the increase in profits was \$171,864. The directors recommended a continuance of the policy of supplementing the guaranteed dividend by 2 per cent. from the earnings, making a total of 5 per cent. per annum, allowing the remainder to accumulate as a reserve fund, although they believe the line during the current year able to pay the whole of the 5 per cent. May 1st, '91, was the day fixed in the original contract to finish the main line, but by that date it had been five years in operation; there were 5,500 miles in full and profitable work, with tributaries of 1600 miles, important connections in various directions, and the arrival of the company's first Pacific steamer on record had taken place. A dividend at the rate of 5 per cent. per annum was declared for the first half of '91; of this, 1 per cent. was from surplus earnings, and 1½ from the annuity. It was reported from Ottawa, July 6th, that the Imperial authorities had served notice to make the China and Japan mail service tri-weekly instead of monthly. In Oct. it was announced that the War Office had asked the company to submit proposals for the conduct of British troops over the line from the Atlantic to the Pacific with a view to test the new route at once. About the same time it was reported from Ottawa that Superintendent Abbott, after an inspection with President Van Horne of the bridges of the Pacific division, stated that the wooden structures would be replaced by others of steel, iron and stone. The cost was estimated at \$2,000,000, to be met by the improved running time from Vancouver to Montreal. The result of an arbitration on a claim for \$10,000,000 brought by the company against the Government for defects in the Rocky Mountains section made by the latter, was announced on Oct. 17th. The award was \$579,000 with \$9000 costs.

Canary Islands. Off N.W. African coast. Belong to Spain, and ruled as an integral province of the kingdom. See COLONIES OF FOREIGN POWERS.

Candahar. It has become an established principle of Indian defence that if the Russians advance to attack India a stand shall be made at Candahar, or rather along the line of the Helmund river, 70 or 80 miles to the west of it. To prepare for this, the Indian railway system has been completed to the Quetta side of the Kwaja Amran range, and a tunnel, two miles long, is being pushed through it to the Candahar side. Here there are no more engineering obstacles, and the 80 miles of rails (already

stored at Quetta) can be laid down at leisure. Candahar contains 60,000 people, and does an increasing trade with India. Is 300 miles from Cabul, 369 from Herat, and 145 from Quetta.

Candia. See CRETE.

Canonical Hours. A term usually applied to the hours within which marriages may be legally solemnised. In '88 the hours were extended from 12 to 3 p.m. Special supplementary canons were enacted by Convocation and promulgated, after having received the Royal Assent, declaring and authorising the change.

Canon Law. It is of the essence of canon law that it may never be abrogated, and in some cases custom acquires the sanction of canon law. Learned canonists, therefore, appeal for authority in matters ecclesiastical to a whole literature of canonical lore, from the so-called Apostolical Canons to those of last year's Convocation. The most ancient repositories of ecclesiastical law are the three volumes of "Decrees" (now known as the "Decrees of Gratian," who edited them), by Ivo, Bishop of Chartres, comprising, besides decrees of councils, provincial constitutions, synodals, glossaries, sentences of Popes, summaries, and rescripts. Besides these, the *jus canonium* included many foreign canons and decretals, together with particular laws and constitutions made in England for the government of the Church—all which are, in a sense, now in force. But even from the Conquest to the Reformation no canons or constitutions made in any synods here were suffered to be executed, if they had not the Royal Assent. These canons were all collected and explained by *Lyndwood*, Dean of the Arches, in the reign of Henry VI., and by him divided into sixteen historical sections, ranging from the canons of Stephen Langton, at the Council of Oxford, 6 Henry III., to the *Reformatio Legum*. The authority to make canons, and to promulgate them with the Royal Assent, is vested in the clergy by the statute 25 Henry VIII., commonly called the "Act of Submission." The canons of 1603-4 alone bear the sanction of statute law in England, and are of equal authority with the Book of Common Prayer. These canons were, for the most part, collected out of ordinances dispersed in several injunctions published in former reigns. An Act of Parliament may nullify any canon, unless it enjoins some moral duty; but a canon not confirmed by an Act of Parliament cannot alter any other law. **Unestablished branches of the Anglican Church (q.v.),** being autonomous Churches, make their own canons irrespective of statute law, but these are binding only within their own spiritual jurisdictions, and bear only the same relation to the canon law of the Church as is borne by, say, the "Decrees of Gratian."

Canons, Various Kinds of. **Canon Capitular (v. infra, Canon Residentiary).** Canon Honorary, appointed in some cathedrals. He keeps no residence, and receives no emolument. **Canons Minor** are the junior clergy connected with cathedrals, being chiefly charged with the duty of saying or intoning the daily prayers. **Canon Penitentiary**, a canon of a cathedral invested by the bishop with the duties of penitentiary to the diocese. **Canon Regular**, a regular conventual canon. **Canons Residentiary** (also termed **Canons Capitular**), the senior canons who keep residence and receive emolument from their stalls. **Canons Secular** were not conventual, but kept the hours.

Canterbury, Right Hon. and Most Rev. Edward White Benson, P.C., D.D., 93rd Archbishop of (founded 596); was b. 1829, and was ed. at King Edward's School, Birmingham, and at Trin. Coll., Cam. (B.A., 1st cl. Classics, senior Chancellor's classical medalist and senior optime '52; Fellow of Trin. Coll. '53. Ordained deacon '53, priest '57. Formerly one of the masters of Rugby School; and head master of Wellington Coll. '58-72. A prebendary in Lincoln Cathedral '69, and chancellor and canon residentiary '72. Hon. chaplain to the Queen '73-5, and chaplain '75-7. Examining chaplain to Bishop of Lincoln '73-7. Consecrated 1st Bishop of Truro '77. Translated to Canterbury '83. Is Primate of All England and Metropolitan. Patron of 187 livings. Presided at the trial of the Bishop of Lincoln, which commenced at Lambeth Palace Feb. 12th, '88. Gave judgment on this case in Nov. '90. Delivered a remarkable speech at the Church Congress in Oct. '91.

Cape Breton Island. A portion of Nova Scotia (q.v.). See BRITISH EMPIRE.

Cape Colony. The Cape of Good Hope is a promontory on the extreme south of Africa, and has given its name to the Cape Colony, whose boundaries now are: West, the Atlantic Ocean; north, the Orange River and Bechuanaland; east, the Orange Free State, Basutoland, and Natal; south, the Indian Ocean. The area of the whole colony is 213,636 sq. miles, with pop. 1,525,739. Capital **Cape Town**, pop. 60,000; other chief towns, Port Elizabeth, pop. 18,000, the chief commercial port; Grahamstown, pop. 10,000, the capital of the eastern province; Kimberley, pop. 25,000, the seat of the diamond trade; Queenstown, King Williamstown, and Paumanza, or East London. Simon's Bay is an Imperial naval station 22 miles south of Cape Town. Divided into two great districts, Eastern and Western, which are subdivided into a number of provinces, fiscal districts and magisterial divisions. **Grigqualand West**, the **Transkeian Territories**, and **Walfisch Bay**, have some separate provincial status.—The **Nieuveveldt Mountains** divide the colony, running east and west. To north and west the country consists of open plains, more or less sterile. To the south and east are fertile plateaux, the **Karroos**, and regions of great fertility. In these parts is much splendid forest. Both flora and fauna are extremely rich and varied. Minerals worked in the colony comprise copper, coal, gold (on the **Kynsna**), lead, manganese, alum, salt, nitre, crocidolite, and diamonds. Rivers, including the Orange, the largest, are not navigable. The climate of the Cape is noted for its beneficial effect upon consumptive, asthmatic and rheumatic patients. The eastern districts are dry, the winter season fine, rains falling in summer; while in the western districts the reverse is the case. The scenery among the mountain ranges, Lower Albany, British Kaffraria, and in the Transkei, is exceedingly grand. The principal exports are wool, Angora hair, ostrich feathers, sheep and goat skins, diamonds, wines, spirits, hides and skins, copper ore, and aloes. Executive in hands of a Governor and responsible Ministry of five principal ministers. Parliament consists of a Legislative Council of twenty-two members, and a House of Assembly of seventy-six members. Members of the Legislative Council are elected for seven years, and of the Assembly for five years. The electors are the

same in each case, and are qualified as occupiers of property worth £50, or receiving £50 salary, or £25 with board and lodging. The laws are founded on a modification of the Roman-Dutch Law. Both English and Dutch languages are used in Parliament and the Courts. There is a University at Cape Town (Royal Charter, 1877), and there are a large number of state-aided elementary schools, besides private and religious institutions. The principal denominations are Dutch Reformed, Episcopalian, Presbyterian, and Roman Catholic, which, until recently, received some State aid. For defence there is a force of Cape Mounted Rifles, 769; Volunteers, 4000; and every able-bodied man between 18 and 50 is liable to be called out for military service. Whites number about a third of the entire population, and the greater number of them are of Dutch descent. The Transkeian Territories are ruled by resident magistrates under the Governor of the Cape Colony. Walvisch Bay, an isolated port on the coast of Damaraland, is administered by a Resident. For latest financial statistics see BRITISH EMPIRE, etc. (table). The most valuable exports are wool, £1,580,609, and diamonds, over £4,000,000. The colony possesses 1693 miles of railway open, and extensions are being laid. Kimberley now has railway communication with Port Elizabeth and Cape Town. The lines are Government property. There are 8981 miles of telegraph wires in operation. About 84,000,000 acres are in occupation, 600,000 being under cultivation. Vineyards occupy 20,000 acres, producing 4,500,000 gallons of wine and 1,000,000 gallons of brandy. Ostriches number some 25,000; sheep 11,000,000; cattle 1,112,000; goats 3,000,000. Wheat crop about 1,700,000 bushels, other grain 3,000,000 bushels, tobacco 3,000,000 lb., aloes 340,000 lb., dried fruit 2,500,000 lb. Cotton and rice are grown in certain regions. Government lands are granted, leased, or may be rented on easy terms. Natives, Hottentots and Kafirs, number over two-thirds of the population. Where they are not in a position of equal citizenship with whites their affairs are controlled by a Minister for Native Affairs.—The Cape was first settled in 1652 by the Dutch, and in 1814 became an English colony. The Hottentot and other slaves of the Dutch settlers or "Boers" were liberated in '33 by the general Emancipation Act of the Imperial Parliament. This, and other things, caused much dissatisfaction among the Dutch, and large bodies from time to time *trekked* (i.e. migrated) northward, and formed what have since become the Orange Free State, the Transvaal, and Natal. In 1820 England sent out the first body of British settlers. There have been five great Kafir wars on the eastern frontier—in 1811, '18, '35, '46-53, and '57-63—devastating and laying waste whole regions of land; but the last of these was concluded in '63. Since then, in 79-80, the Basuto rebellion occurred, which spread also to the Transkei. The civilising influence of schools, industrial institutions, frequent intercourse between the races, the construction of railways and other public works, are producing admirable changes for the better among the tribes. The colony has been gradually enlarged by annexations, the latest of which are Griqualand West, annexed '80; the various Transkeian Territories, '75-87; and Walvisch Bay, '84.—In Dec. '90 the north-

ern extension of the Kimberley Railway to Vryburg was officially opened (3rd) by the Commissioner of Crown Lands, and the Simonstown Railway by the Premier. The Natal Legislative Council passed (6th) a Bill authorising a loan of £2,000,000 for railway and harbour construction and public works. The railway connecting the Orange Free State with the Cape system was opened (17th). The Transvaal Volksraad, after conference with the Cape Ministry, agreed to the construction of the Bethulie and Vaal River Railway extensions, and the Grain District Line. Sir Henry Loch and Mr. Cecil Rhodes left Cape Town for England on board the *Drummond Castle* (14th). There was a severe storm, doing immense damage and submerging several mines at Johannesburg (18th). Lieut.-General W. G. Cameron, commander of the troops, was sworn in as Administrative High Commissioner.—In '91 a further discovery of gold, at Mt. Shankuru, was reported (Jan. 30th). A new rich diamond mine was discovered in Griqualand West. In ferrying across the Vaal river (Feb.) 25 farmers were drowned in sight of their wives and children. The extension of the Natal Railway to Laing's Neck was opened (April 7th) by the Governor, Sir Charles Mitchell; President Kruger and General Joubert were present, and were entertained at a banquet (9th), after making a tour of the colony. A new Bank Act was gazetted (17th), providing that Government securities should be lodged against note issues. The High Commissioner has declared the British annexation of the strips of territory west of Bechuanaland known as the Bastard's Country (May). Parliament was opened (27th), the Governor announcing the appointment of a Minister of Agriculture. The estimates for '91-2 were presented (June 9th). The credit balance left in '90 was £489,000, but after audit this was raised to £510,000. From this had to be made certain deductions, and the balance they actually had to deal with was £428,000. The greater portion of the revenue was derived from Customs and railways. Out of the Customs they had to pay £87,000 to the Orange Free State. The revenue for '91-2 was estimated at £4,285,000, and the expenditure at £4,216,000. A party of 100 Boers tried (July) to cross the Limpopo into Mashonaland, but were prevented by the police, and were also warned against pursuing that course by a proclamation by the President of the Transvaal. A dynamic outrage at the Kimberley offices of the De Beers Company did much damage (20th). The Cape Parliament finally passed (22nd) the Bank Bill, the chief feature of which was the establishment of a guaranteed note currency against Government stock. Sir Henry Loch, on arrival at Mutata in the course of his tour, was received with unbounded expressions of loyalty by the natives, who had assembled to the number of 12,000 to welcome him. Mr. Cecil Rhodes left Beira for Fort Salisbury, Mashonaland. The preliminary report of the director of the census showed that the population had increased 50 per cent. since the last census. The grand total for '91 was 1,525,739, as compared with 1,028,966 at the date of the last census, which for the old colony was 75, but for Griqualand West '77, and for the native territories '79. In '75 the colony as it then stood had a population of 720,984, comprising 263,783 Europeans and white people, 287,630 aboriginal natives, and 196,571 other coloured people and foreigners, including Chinese.

Indians, etc. In '81 the figures for the old colony were: White population, 337,000; aboriginal natives, 340,405; other coloured people, 277,879—total, 955,284. The percentage of increase of the whites was 42·32, whereas that of the original natives was only 18·35. In Griqualand West the population in '77 was 45,277, made up of 12,374 Europeans or whites, and 32,903 aborigines and other coloured people; but in '91 the number of inhabitants was 83,115, of whom 29,469 were whites, and 53,646 were coloured—that is, in '77, only 27·33 per cent. of the population was white, while in '91 the proportion was 35·46 per cent. As regarded the proportion of the sexes, there was a marked increase in the number of females. In '65, to every 100 males of the total population, there were 94·08 females. In '75 there were 95·06; but in '91 the proportion was 99·03 females to every 100 males. The average density of the population increased from 2·52 persons to the square mile in '65 to 6·890 in '91. The Hon. Cecil Rhodes reached Fort Salisbury in the early part of the month. Sir Henry Loch arrived at Cape Town (Oct. 25th). See GRIQUALAND WEST, KIMBERLEY, PORT ELIZABETH, WALFISCH BAY, TRANSKEIAN TERRITORIES, BRITISH EMPIRE, etc.; and for MINISTRY, etc., see DIPLOMATIC.

Cape Verde Islands. Lie 350 miles from Cape Verde, the westernmost point of Africa. Belong to Portugal. Coaling station, St. Vincent. Imports about £230,000; exports about £50,000. Principal productions, cotton, sugar, indigo, raised and manufactured; tamarinds, cocoa-nuts, fruits, salt, red coral, also exported. People, Portuguese and Negro. See also COLONIES OF FOREIGN POWERS.

Capri di Caprera de Montecuccoli, George, General von, the German Imperial Chancellor, was b. in Berlin, Feb. 24th, 1831, and is of Italian origin. When he had attained the age of eighteen he entered a general regiment and rapidly won distinction. In the campaigns of '64 and '66 he was actively engaged, and in '70 received the appointment of **Chief of the Staff** to the 10th Army Corps. Three years later he commanded the 30th Division at Metz. In '84 he showed the versatility of his talents by succeeding Herr von Stosch as **head of the Admiralty**, which he partially re-organised. After the accession of the present German Emperor he transferred his services to his old corps, and in the conduct of the autumn manoeuvres convinced the Emperor of his fitness for a still higher position. On Mar. 19th, '90, the formal appointment of General C. was notified as **successor** to Prince Bismarck, who ten days later quitted Berlin.

Cardiff Dock Strikes. See LABOUR.
Carlisle, Right Rev. Harvey Goodwin, D.D., 68th Bishop of (founded 1132), was b. 1818. Ed. at Caius Coll., Cambridge; B.A. '40; Wrangler and Smith's prizeman, and subsequently Fellow of Caius. Ordained deacon '42, priest '44; became incumbent of St. Edward's, Cambridge, '48; **Dean of Ely** '58; consecrated Bishop of Carlisle '69. He is the author of Goodwin's "Course of Mathematics" and other works. He published "The Foundations of the Creed" '89. He was one of the chief promoters of the scheme for establishing a "Church House" (q.v.) to commemorate H.M.'s Jubilee. His lordship resumed in '91 the old ecclesiastical signature of "Carloli."

Carlos I., King of Portugal, is the son of King Louis I., and was b. Sept. 28th, 1863, and bore the title of Duke of Braganza prior to ascending the throne. Married in May '86 Marie Amalie, daughter of the Comte de Paris. Succeeded to the crown in Oct. '89. During '91 he has not been prominently before the public.

Carlyle Society was founded in 1879 "by a group of students and admirers of Carlyle's work, and discontinued in honour of his memory." Members are admitted by paying a yearly subscription, and they meet once in every month (at present), at Anderton's Hotel, when papers suggested by Carlyle's work are read and discussed; some of them are also published. Number of members, 73. The society has erected a memorial tablet on Carlyle's house. It has a library and a branch at Montreal. **Pres.**, Dr. Eugene Oswald; **Sec. and Treas.**, Henry W. Macrosty, 25, Hull Street, Knightsbridge, S.W.

Carnot, Marie François Sadi, President of the French Republic, was b. at Limoges August 1837. He is a grandson of Carnot "the organiser of victory" under the French convention, and is a civil engineer by profession. When only twenty years of age he entered as a student the Ecole Polytechnique, and passed with distinction to a school for special instruction in the building of roads and bridges. During the siege of Paris (Jan. '71) he was appointed **Prefect of the Seine Inférieure** and as **Commissary General** gave valuable assistance in organising the defences of that Department. A month later he took his seat in the National Assembly as **deputy** for Côte d'Or, ranging himself in line with the Republican Left, with which he consistently voted. On the 16th of May, '77, he opposed the vote of confidence in M. de Broglie. Since first elected he has sat continuously in the Chamber of Deputies, at first for the Côte d'Or, and later for Beaune. In '86 he took office in the **Brisson Cabinet** as **Finance Minister**, the duties of which he also filled when M. de Freycinet formed his Government in Jan. '87. On the resignation of M. Grevy (Dec. 2nd, '87), M. Carnot was elected **President of the Republic**. The Czar of Russia conferred on M. Carnot the Order of St. Andrew in March '91.

Caroline Islands. This archipelago, or group of islands, in all numbering five hundred, lies to the east of the Philippines, in the Pacific Ocean, between lat. 30° and 12° N., long. 130° and 170° E. See COLONIES OF FOREIGN POWERS.

Cart (Paisley) River Improvement. It was announced early in '91 that these works had been completed, and that vessels of 500 tons are now able to get up to Paisley, which is about three miles above the junction of the Cart with the Clyde. Messrs. Bell and Miller in '82 were instructed by the Cart Trustees to prepare a report, and in '86 an Act was obtained to carry out their recommendations. A harbour has been constructed a short distance below Paisley, the quays being connected with the Glasgow and South Western and the Caledonian Railway systems, and the channel straightened and deepened. The estimated amount of dredging was 1,069,971 cubic yards, and about 20,000 cubic yards of rock had to be removed. The bottom is 18 ft. below high spring tides, and 15 ft. at neaps, the width has

been increased from 80 ft. to 180 ft., the bottom being 85 ft. The cost has been about £130,000.

Castelar y Rissoll, Emilio, Spanish statesman and orator, was b. in 1832; one of the most eloquent living public men of Europe. In the revolutionary movement of '68 Castelar joined the Republicans. Serrano quelled the rebellion, and Señor Castelar narrowly escaped with his life, taking refuge in Geneva. At the elections of '68 Señor Castelar found himself in a hopeless minority in the Constituent Cortes. He opposed a return of the monarchical government. On the abdication of King Amadeo he became Minister for Foreign Affairs, and in '73 he was chosen President of the Cortes, and subsequently **President of the Executive Power**. At this time war was raging in the Biscayan provinces of Spain, and Castelar prorogued the Cortes, and constituted himself a sort of dictator. The Cortes, when it reassembled, declined to pass a vote of confidence in him, and he withdrew. At the accession of Alfonso XII. Castelar left Spain for a time; but in '76 he obtained a seat in the Cortes as deputy for Madrid, though he has not held office since. Señor Castelar is a writer on historical, literary, and political subjects, and is at present said to be compiling works on "The Centenary of Christopher Columbus" and "Spanish Orators."

Cathedrals, English. The cathedral is the mother church of the diocese, in which the bishop's seat is fixed. In many cases English cathedrals were originally monastic or collegiate churches, over which a bishop was set; in others, the bishop having been set over a district, chose his own church. English cathedrals were of two classes—(1) Where the clergy were monks; (2) where the clergy were secular canons. Gradually the dean grew to exercise greater power in his cathedral than the bishop, and many quarrels ensued in consequence. After the suppression of the monasteries by Henry VIII., the monastic cathedrals (Canterbury, Carlisle, Durham, Ely, Norwich, Rochester, Winchester, and Worcester), were remodelled, and the bishoprics founded by Henry (Bristol, Chester, Gloucester, Oxford, Peterboro', and Westminster) were provided with cathedrals. The last lost its bishop, but kept its dean and its position as a cathedral. The cathedrals of Liverpool, Manchester, Newcastle, Ripon, and St. Albans are of recent translation, and like other new bishoprics, notably Southwell and Wakefield (the latter constituted in '88), take as their cathedrals ancient parish or collegiate churches. The restoration of Peterborough Cathedral is now nearly completed.

Cattle Dishorning. See DISHORNING CATTLE.

Cave, Sir Lewis William, b. 1832. Called to the bar '59, Q.C. '75. After a successful professional career, he was appointed a judge of the High Court '81. He was joint editor of the reports of the Court for the consideration of Crown cases reserved '61-5, and of Stone's "Practice of Petty Sessions." He also edited the editions of Addison on "Contracts," and the same author's "Law of Torts."

Cayenne. A French colony in Guiana, South America. Exports to France about £750,000 annually. See COLONIES OF FOREIGN POWERS.

Caymans, The, a group of three islands in the British West Indies, 150 miles north-west of Jamaica, of which they are politically a dependency. The islands (Grand Cayman, Little Cayman, and Cayman Brae) are well wooded and produce much turtle. Area 225 sq. m., pop. 2500, mostly on Grand Cayman.

Celebes. A large island of the Asiatic archipelago. Area 72,000 sq. m.; pop. about 2,000,000. Part of the island is an "Outpost" of Dutch India, containing the towns of Menado, Port Rotterdam, and Vlaardingen or Macassar. The remainder broken up into native states. The native princes recognise the authority of the Dutch, who expelled the Portuguese from Celebes in 1660.

Census of '91. On April 6th last, when the last enumeration was taken, the total population of the United Kingdom consisted of 37,740,283 persons, being an increase of 2,855,435 upon the enumerated population in '81. The decennial rate of increase was 8.2 per cent., and lower than in either of the two next preceding decennia, in which it had been 8.8 and 10.8 per cent. respectively. The decrease in the rate of growth was shared by all the divisions in the kingdom. The smallest diminution was in Wales, where the increase was only a little lower than it had been in the previous decennium, falling from 11.8 to 11.6 per cent., while the greatest decrease was in Ireland, where the population was less by 0.1 per cent. As regards the population of **England and Wales** on April 5th, '91, the number of persons then returned was 29,001,018, being an increase of 3,026,579, equal to 11.65 per cent. on the number returned at the previous census of '81. Of the 29,001,018 enumerated, 14,050,620 were males, and 14,950,398 females. This excess of 899,778 females would be greatly reduced if the army, navy and merchant service abroad were not excluded from the enumeration. The rate of increase in the population of England and Wales during the last decennium was not only less than in the previous one, but lower than in any previous decennial period since the first enumeration in this country in 1801. The factors which determine the growth of the population are, firstly, the balance between births and deaths, and secondly, the balance between emigration and immigration. The former is in this country always a cause of increase, because the births invariably outnumber deaths, while the latter factor is always a cause of decrease because emigrants are more numerous than immigrants. The number of persons of English or Welsh origin who left the United Kingdom for places outside Europe between '71 and '81 was, so far as could be ascertained by the Board of Trade, 996,038, while the number in the next decennial period rose to 1,571,856. The loss to the population by the excess of emigration during the last decennium amounted to 604,182, of whom 410,648 were males, and 193,534 females. With respect to the islands in the British seas, the population of the **Isle of Man**, which was found to have declined 0.9 per cent. in the preceding decennium, is now 55,598, being an increase of 3.8 per cent. In **Jersey** there was a decline of 7.4 per cent. between '71 and '81, while at the last enumeration the population was returned at 54,518, being an increase in the decennium of 4 per cent. In **Guernsey** the population, which in '81 had

increased by 6·4 per cent., is now further increased by 8·3 per cent., and its inhabitants are 35,339. The increase of population in England and Wales was not equally spread over these parts of the United Kingdom. In 271 of the 632 registration districts the returns show a decrease in the number of inhabitants, and in 202 out of these 271 districts there had been a decline of population between '71 and '81. The counties in which the rates of increase were highest are those which are affected by London, namely, Essex, Surrey, and in a smaller degree Middlesex and Kent, or counties in which coal-mining is the leading industry, as Glamorgan-shire, Monmouthshire, Durham, and Northumberland. Then come the manufacturing counties, while lastly follow the rural counties. Tottenham, Leyton and Willesden, in the immediate neighbourhood of London, have doubled, or more than doubled, their population during the last decennium. Liverpool among the large cities and towns has, however, decreased 6·3 per cent. The real growth of a town can frequently be properly estimated only if the official boundaries are not recognised, and its ring of suburbs be included in its area. Thus, if the greatly restricted area of Liverpool were extended to include the suburbs, its percentage of increase would be about 5·9, because the population of such suburbs has increased during the last decennium by about 60 per cent. The population of London, meaning the London of the Registrar-General, which, with the exception of the parish of Penge, coincides with the administrative county of London, was at the last enumeration 4,211,056, being an increase of 395,512 or 10·4 per cent. upon the population of '81. The Metropolitan population increased at a rather lower ratio than the population of England and Wales as a whole, and this is the first time that this has occurred. It was notified in the last Census Report that in the middle of London there was a group of districts wherein the inhabitants were decreasing on account of the substitution of business premises for dwelling houses, and that round this central area, and constituting the remainder of the registration or Inner London, was a circle of districts, all of which had undergone more or less rapid increase in population, this addition generally being greater the further the district was from the centre, and the rate of increase showing, in most instances, a tendency to become smaller and smaller, and that outside this Registration, London was a wide belt of suburban districts called the Outer Ring, in which the population was increasing with extraordinary rapidity. It is stated that all these phenomena are repeated in the last enumeration, as all the middle districts which indicated decreases of population in '61-'71, and in '71-'81 showed, with one exception, further decrease in '81-'91. This exception was Whitechapel, which, after diminishing 3 per cent. in '61-'71, and 6·8 per cent. in '71-'81, showed an increase of 4·3 per cent. in the next decennium, which is probably owing to an additional influx of foreigners. At the last enumeration in '91 the population of this Outer Ring was 1,422,276, making the population of so-called Greater London 5,633,332. The following table shows the enumerated population in '81 and '91 of all cities and towns in England having a population of more than 150,000 in the latter year, with the increase per cent. during the last decennium, viz. :-

	Aggregate Population.		Mean Per-centage of Increase of Pop., '81-'91.
	1881.	1891.	
London (Inner)	3,815,544	4,211,056	10·4
Liverpool . . .	552,508	517,951	6·2
Manchester . . .	462,303	505,343	9·2
Birmingham . .	400,119	429,171	7·1
Leeds . . .	309,119	367,506	18·0
Sheffield . . .	284,508	324,243	14·0
Bristol . . .	206,874	221,665	7·1
Bradford . . .	194,495	216,361	11·2
Nottingham . . .	186,575	211,984	13·6
West Ham . . .	128,953	204,902	58·9
Kingston-upon-Hull . . .	165,690	199,991	20·7
Salford . . .	176,235	198,136	12·4
Newcastle-on-Tyne . . .	145,359	186,345	28·2
Portsmouth . . .	127,989	159,255	24·4

For additional information see "Preliminary Report and Tables of the Census Returns, '91."

Central African Railway. In the *Engineer* of July 17th, 24th and 31st, '91, Mr. W. Wiseman, M. Inst. C. E., contributed a striking series of articles on a proposed railway through British Central Africa, from Lagos on the West to Berberah on the east. The length was estimated at 3000 miles, and the cost at 15½ millions, or 18 millions if the English gauge be adopted. As to its possibilities, Mr. Wiseman referred to his knowledge of railway construction in India and Burmah, and to the fact that the Canadian Pacific (*q.v.*) is 2900 miles long, and was made in five years at a cost of 26 millions; and to the Siberian Railway (*q.v.*), which he estimates at 4800 miles long, with an expenditure of 50 millions. The line would cross the Nile at Fashoda, and here he says a junction might be made with an extension of the Egyptian system, thus providing an alternative mail route to Bombay, saving two days.

Central America comprises Costa Rica, Guatemala, Honduras, Nicaragua, and San Salvador (*q.v.*).

Central American Railway. The Corpus Christi and South American Railroad Company was organised in the fall of '90 to construct a line from Corpus Christi in Texas to Panama, a distance of about 2350 miles. In the spring of '91 it was reported that the surveys had been made, concessions granted, and a fairly easy route obtained, except for 150 miles in Mexico, where a rise from the coast to the central plateau takes place. The main line will be from Corpus Christi to Brownsville, Texas, 150 miles; Tuxpan 300 miles further, with a branch 175 miles long from Tuxpan to the city of Mexico; from Tuxpan 50 miles to Tehuantepec; then 50 miles to strike Guatemala, which it will cross by a stretch of 65 miles to Nicaragua; 350 miles across the state to Costa Rica; and then another stretch of 400 miles to the southern terminus. The present railway distances from New York to the city of Mexico are 3649 miles by the El Paso route 3210 miles by the Eagle Pass route, and 284 miles by the Laredo route; the distance by the new line will be 2619 miles of standard gauge.

Central Asia. An almost obsolete general political designation for the Kirghiz, Bokharan, Khivan, and Turcoman regions which Russia conquered and annexed between '88 and '89. Previously it had been known as **Independent Tartary**. Russia has divided it into two large provinces: **Turkestan** and **Transcaspiæ**, and a small one called the **Government of the Steppe**, embracing the Semiretchinsk district, on the Chinese frontier. The former comprises the Kirghiz deserts, the old Khanate of Khokand, the country conquered from Bokhara, and, in addition, it controls the vassal states of Bokhara and Khiva. **Administrative centre**, Tashkent. The latter consists of the Turkoman region between the Caspian and Oxus; **administrative centre**, Askabad. Turkestan was conquered from the Orenburg base, and until the completion of the Transcaspiæ railway (*q.v.*) in '88 maintained communications with Russia solely by means of the Orenburg-Aral caravan route, 1700 miles from the Orenburg railway terminus to Samarcand. **Transcaspiæ** (Russian *Zakaspie*) or the "country beyond the Caspian," was conquered from the Caspian Sea base, and the whole of it is now traversed by the Transcaspiæ railway, which connects Samarcand with that sea, thereby superseding the Orenburg route altogether (see **BOKHARA**).

Central London Railway. This Bill came before a committee of the House of Commons on March 3rd, '91, when it was stated that the proposed line (differing from the one proposed in '90) was six miles long, and was intended to run from Shepherd's Bush to Cornhill through a tunnel to be excavated on the shield system. The total capital of the company was fixed at £2,700,000 in shares and £900,000 borrowing powers; the period taken for construction five years, and the motive power electricity, Mr. Greathead being the engineer of the scheme. In the consideration of the clauses of the Bill in committee the chairman, on March 11th, announced that they had decided to insist upon the provision that the charge for workmen's trains should not exceed a penny for the whole journey. The Committee of the House of Lords declared the preamble of the Bill proved on June 24th, and passed the Bill on July 23rd.

Central Provinces (India). For Ministry, etc., see **DIPLOMATIC**.

Cesarewitch Stakes. See **TURF**.

Ceylon. An island almost joined to the southern extremity of India by a chain of reefs and sandbanks called Adam's Bridge. It is a British Crown colony. Area 25,365 sq. m., pop. 2,850,000. Divided into seven administrative provinces. Capital Colombo, pop. about 120,000. Chief production for export has been coffee till recently; now more attention is paid to tea, cinchona, coconut and other palms. Grain and rice are cultivated, with cacao, cinnamon, caoutchouc, etc. Manufactures limited to native requirements, including ironware, cordage, etc. (For latest financial statistics see **BRITISH EMPIRE**, etc., table.) Railways 182 miles. Crown lands are sold at an upset price of Rs. 10 per acre, but often realise much more. Bulk of population Singalese, then Tamils, Moormen (Arabs), Eurasians, and Malays. Europeans about 5000. A degraded race, the Veddahs, occupies the interior, but is not numerous.

Malagos Archipelago. A large scattered group of coral islands in the Indian Ocean, off a southward extension of the Maldives, 1,200 miles from Mauritius, and 800 from

Ceylon. A dependency of the former, which supplies a Resident Magistrate and police force. Chief of the group are the **Oil Islands**, of which **Diego Garcia** is the largest and most important. It possesses a spacious harbour, now used as a watering station for Australian and Red Sea steamers.

Chairman of the Committee of Ways and Means. A member of the House of Commons who performs important functions in connection with both the public and private business of parliament. He is elected when the House goes into Committee of Ways and Means, or Supply, for the first time in a new parliament, and he holds office until the dissolution of that parliament. Although he is nominated by the Government, he is not a member of the Government, any more than the Speaker, but an officer of the House. The salary of the office is £2500 a year. The Chairman of Ways and Means usually presides when the House is in committee, whether on financial business or on a bill, but he may request one of several temporary or deputy chairmen nominated by the Speaker at the commencement of each session to act for him (see **PARLIAMENTARY PROCEDURE**). His place is not in the chair of the Speaker, but at the table where the Clerk, who retires with the Speaker, has sat. When the House is informed of the unavoidable absence of the Speaker, the Chairman of Ways and Means performs his duties, and exercises his authority in relation to all proceedings of the House as Deputy Speaker until the next meeting of the House, and so on from day to day on the like information being given to the House. He may also take the chair as Deputy-Speaker, when requested to do so by the Speaker, without any formal communication to the House. The recent holders of the office include the late Mr. Raikes, '74-80; Sir Lyon Playfair, '80-83; Sir A. Otway, '83-5. **The Rt. Hon. Leonard Courtney** is the present Chairman, having been first elected in '85. The Chairman of Committees in the House of Lords is appointed at the commencement of every session. The late Lord Redesdale was first appointed to the office in '51, and was reappointed in every subsequent session until his death in '86. The late **Duke of Buckingham and Chandos** was chosen to succeed him, and was reappointed in '87, '88 and '89. On the death of the Duke, the Earl of Morley was elected in '89.

Chamberlain, Lord. See **LORD CHAMBERLAIN**.

Chamberlain, Lord Great. See **LORD GREAT CHAMBERLAIN**.

Chamber of Shipping. See **SHIPPING, CHAMBER OF**.

Chamberlain, The Rt. Hon. Joseph, P.C., M.P. for W. Birmingham, was b. in London, July 1836. Educated at University College; and in '54 his father joined the firm of Nettlefold, the well-known screw makers of Birmingham. He also, in course of time, joined the firm, and for many years devoted himself almost exclusively to business, his spare time being given up to the study of politics. His first introduction to public life was in '70, as one of the leaders of the defeated secular candidates for the **School Board of Birmingham**. But in '73 Mr. Chamberlain was elected chairman of the Board. During this period he was also a member of the Town Council, and was elected Mayor ('73). His tenure of office was remarkable for the

expeditious despatch of the corporate business. On the death of his father he retired from the firm, in order to devote all his energies to public life. To him also was due the transfer of the gas and water works to the borough authorities. He opened a sanitary exhibition in the town, and was the author of the improvement scheme which has entirely transformed the face of central Birmingham. He was re-elected Mayor in '74, and again in '75. In '74 he opposed Mr. Roebuck in Sheffield, but was defeated by a large majority. About this period his name was brought prominently before the public by several articles; he wrote for the *Fortnightly Review*, promulgating very advanced political and educational views. He was chairman of the Education League, and a member of the famous Liberal Association nicknamed later on "The Caucus," though not so closely identified with its origin and growth as is popularly supposed. In '76, on the retirement of Mr. Geo. Dixon from parliament, Mr. Chamberlain was elected for Birmingham without opposition, and has represented the town ever since. From '76 his career is to be traced in parliament and on the public platform. In '77 he laid before the House an exposition of the Gothenburg licensing system, which he had personally seen in operation in Sweden. His advocacy of the scheme, however, produced no impression upon members, and Mr. Chamberlain never revived the subject. At this period he sat below the gangway, among the Home Rulers, with whose aspirations he was supposed to have some sympathy. When the Liberals returned to power with a large majority, it was felt that ministerial distinction should reward the man whose influence had not a little aided the victory. Mr. Gladstone offered Mr. Chamberlain the *Presidentship of the Board of Trade*, with Cabinet rank. Mr. Chamberlain worked hard at this department of work. He passed a Patents Bill, and a Bankruptcy Bill, but an attempt to grapple with the question of merchant shipping was met by a formidable and successful opposition. On his exit from office ('85) he increased his reputation as a political leader considerably more than during the three previous years, his freedom from office giving him greater latitude; and he attacked Conservatives and Whigs with almost equal bitterness. Mr. Chamberlain was elected for Birmingham at the general election of '85, along with six Liberal colleagues. He held the office of *President of the Local Government Board* until his divergence of views on the Irish policy of Mr. Gladstone caused his resignation (March 27th, '86). He has since ranked as a member of the party of Liberal-Unionists. Mr. Chamberlain was the originator of the *Round Table Conference*. He was subsequently appointed *British Commissioner* to the Conference at Washington for the settlement of the dispute between the United States and Canada on the Fisheries Question, and agreed to the terms of the treaty, which has been rejected by the American Senate. Previous to his departure for America he visited Ulster, and delivered a series of speeches on the Home Rule problem. Revisited United States on the occasion of his marriage with Miss Endicott (Nov. 15th, '88). In Nov. '89 Mr. C. proceeded on a tour to Egypt, where he studied the British position and inspected the works of the Irrigation Department. Revisited America (Aug. '90) in company with his wife, and in course of his travels

pursued his inquiries into American politics. Spoke on the subject of Friendly Societies, at Birmingham, on Jan. 5th, '91. A speech by Mr. C. referring to the "One man, one vote" question attracted attention in March. In the following month he addressed a large gathering at Portsmouth. He intervened in the debates, more than once with effect. Mr. C. delivered an important speech (Oct. 13th) at High Mead, near Carmarthen, dealing with the Liberal-Unionist position and the question of Disestablishment.

Chancellor of Ireland, Lord. is head of the Irish judicial establishment, principal legal adviser of the Lord Lieutenant, and exercises in Ireland many of the powers which in England are vested in the Lord High Chancellor. The office may be held by a Roman Catholic. See MINISTRY.

Chancellor, Lord High, who is appointed by mere delivery of the Great Seal to him by the sovereign, is principal legal adviser of the Crown, is by prescription Speaker of the House of Lords, and may act in that capacity even though he be not a peer; he is by virtue of his office a privy councillor, and as the first existing great officer of state he takes precedence of all but royal dukes and the Archbishop of Canterbury. He presides, if present, when the House of Lords is sitting as an appellate court. He is president of the Chancery Division of the High Court and of the Court of Appeal, and is one of the Judicial Committee of the Privy Council. In the absence of the sovereign he reads the Queen's Speech at the opening and prorogation of parliament, and he is always one of the Commission for giving the royal assent to bills. He is visitor of all hospitals of royal foundation, the general guardian of all infants, idiots, and lunatics, and has the general supervision of all charitable trusts. His patronage is very extensive. He nominates the puisne judges and county court judges; and, except for Lancashire, he appoints the county magistrates, generally accepting the nominations of the lords-lieutenant and the borough justices. He is the patron of twelve canonries and over six hundred livings. On retiring from office he receives a pension of £5000 a year, but in such case he commonly assists the Lord Chancellor and the Lords of Appeal in Ordinary in the transaction of the judicial business of the House of Lords. Any one who has filled the office of Lord Chancellor may also, at the request of the Lord Chancellor, sit in the Court of Appeal, but he shall not be required to sit and act in the Court unless upon request he consents so to do.

Channel Bridge. This extraordinary proposal received another revival at the autumn meeting of the Iron and Steel Institute at Paris towards the end of Sept. '89, when an elaborate paper was forthcoming from Messrs. Schneider & Co., Creusot Works, and M. H. Hersent. The route proposed was from Folkestone to a point south of Cape Grisnez, the cost is given as £34,400,000, the metal to be provided for the construction of the bridge would represent an aggregate weight of 1,000,000 tons, and the time for construction be ten years. The matter appeared to excite much interest among those present. (For further details see last ed.) The *Times* of Oct. 18th, '90, published a Paris telegram giving a history of the work done, stating that Sir F. Watkin had assisted, and that a route farther

to the north had been found which would save four kilometres of length. The same journal, in a communication dated Dec. 26th, gave an account of the survey of the Straits of Dover undertaken by permission of the French Minister of Marine by M. Renaud, hydrographic engineer, assisted by M. Duchanoy, mining engineer, and an analysis of their report was issued on the above date. Soundings and borings were taken from July 1st to Sept. 1st, with the result that M. Renaud suggested a different course to that already indicated. He proposes a straight line bridge from a point 350 metres north-east of the light to the west of the South Foreland, to a point 300 metres north-east of the entrance of the tunnel near Cape Grisnez. The length is 3,445 metres, a reduction of 5150 metres on the original scheme, and the greatest depth met with is from 50 to 51 metres. Instead of 4 millions of cubic metres of masonry, 3½ millions will be required, and there will be an immense saving in the quantity of metal work; only 92 piles will be required instead of 112. Other advantages are claimed, including a reduction of height and better shelter from wind and sea.

Channel Islands. The, lie in the southern part of the English Channel, 10 to 30 miles from the French coast. Anciently an appanage of the Duchy of Normandy, they have belonged to England since the Conquest. Total area about 76 sq. m.; pop. 89,857.—Divided into two separate governments, called **Bailiwicks**, that of **Jersey**, and that of **Guernsey**.—Granitic rock is the foundation of the islands. They are extremely fertile and picturesque. Agriculture is largely carried on, fruit and vegetables being raised for export. **Industries** are farming, market gardening, and fishing. Much cider is made. Dairry farming is a great feature, and the breed of cattle is celebrated. The fisheries are important, embracing lobster, oysters, and cod. Minor manufactures are carried on, and intermediary trade between Britain, France, and other countries is considerable, exports and imports reaching £1,500,000 in British produce alone. The climate is moist and mild.—Each **Bailiwick** enjoys a kind of autonomy. The Crown appoints a Lieutenant-Governor and a Bailiff to each, and each has its representative legislature called the **States**. The English Church is the established religion, and the islands are included in the see of Winchester. Relics of Norman custom survive in the administration. Taxation is exceedingly light.—**The People** are an intermixture of French and English. Both languages are spoken, but the former is official.—**Jersey** has no appendages. Its area is 28,717 acres, or about 45 sq. m., with pop. 54,518. It is divided into 12 parishes. The capital is **St. Helier** (30,000), situated on St. Aubyn's Bay, on the south. It is hilly, and the most fertile of the group. Some shipbuilding is carried on, and syenite is quarried and exported. Iron and manganese exist.—**Guernsey**, 30 miles north of Jersey, has attached to it the small isles of **Alderney**, **Bark**, or **Sorcq**, **Herm**, **Jethou**, **Brecon**, etc. Together the area of all is 19,605 acres, about 31 sq. m.; pop. 35,339. They are divided into 10 parishes. The capital is **St. Pierre**, on the east, with a good harbour. **Guernsey** is level on the north, hilly to the south. It is somewhat less fertile than Jersey. **Alderney** is elevated on the south-west. It has no good harbour, and is separated from Cape La Hogue by the dangerous Race of Alderney.

Its area is only some 1900 acres, and its village is called **St. Anne**. For Lieut.-Governors, etc., see **DIPLOMATIC**.

Channel Swim. See **SWIMMING**.

Channel Tubular Railway. (In last ed. see **CHANNEL VIADUCT AND TUNNEL SCHEME**.) Shortly stated, this is a suggestion to cross the Channel by means of a tube of metal with viaduct approaches. The *Times* of Feb. 26th, '91, stated that the attitude of the Government towards the scheme would probably be the same as that adopted to the Channel Tunnel (q.v.), but Sir E. J. Reed, M.P., published a letter on Feb. 28th, in which he pointed out that the tubular railway was an essentially different project. It would always be within reach of the ships of the Navy, and therefore the military objection felt to the tunnel would in this case have no existence. Sir E. J. Reed, it should be stated, introduced a Bill into Parliament, his French colleague in the scheme being M. Gustave Eiffel. The Secretary for War intimated the intention of the Government to oppose the scheme. On June 18th it was stated that the Bill would not be further pressed during the Session, Sir E. Reed considering that more time was required to clear up certain doubts which a joint committee of the Board of Trade and the Admiralty had suggested. On the same day the order for the second reading of the Bill was read in the House of Commons and discharged. Sir E. J. Reed read a paper on the proposed railway at the August meeting of the British Association at Cardiff, and said the approximate cost would be between 12 and 15 millions sterling. Mr. J. Abernethy questioned this estimate, and expressed himself in favour of Sir John Fowler's plan for the construction of huge ferries to carry the trains across bodily, as did Mr. P. F. Nursey. Mr. J. H. Greathead and Sir B. Baker also adversely criticised the tubular scheme, chiefly on the ground of cost.

Channel Tunnel (see last and previous eds.). Sir E. Watkin moved the second reading of the Bill in the House of Commons on June 5th, '90, and was supported by Mr. Gladstone, the result being: for the second reading 153, against 234: majority 81. At the previous division in '88 the voting was 165 to 307: majority 142. The Bill was again lodged for the Session of '91, but not pressed. The search for workable coal is proceeding in the neighbourhood of Shakespeare Cliff, the results obtained being deemed sufficiently satisfactory to authorise improved methods. On Aug. 21st, '91, an important step was taken by the commencement of an experimental shaft about one hundred yards to the west of the boring. It was stated at the time that a Board of Trade inquiry was to be held on the question of the foreshore, beneath which it is proposed to search for coal. Before the British Association in the same month Professor Boyd Dawkins read a paper on the enterprise.

Chant, Mrs. Ormiston, the well-known temperance advocate and public speaker, was b. 1848, near Chepstow. As a successful teacher, a nurse in the London Hospital, and manager of a lunatic asylum, Mrs. Chant's work has partaken of a widely diversified nature, while her popularity as a speaker is shown by the fact that during the space of eighteen days she once addressed thirty-one meetings and travelled 2600 miles. She is a member of the executive of both the **Women's Suffrage Society**

and the National Vigilance Association. She has lectured with great success recently in America, and is the authoress of "Verona, and other Poems." Mrs. C. is married to a London surgeon.

Charitable Societies. The following is a list of the principal charitable and philanthropic institutions having offices in London, and being wholly or in part dependent upon voluntary contributions. The figures indicate the last reported annual receipts. Institutions from which returns for '91 have not been received are indicated by a *. The list does not include charities connected with the City of London (see CITY GUILDS). **Hospitals and Dispensaries** will be found in an article under that heading.—**Actors' Benevolent Fund** (£2470), C. I. Colton, 8, Adam Street, Adelphi; **Additional Home Bishops' Endowment Fund**, Canon Ingram, St. Margaret's Rectory, 20, Finsbury Sq.; **Aged Pilgrims' Friend Society and Asylums** (£7150), J. E. Hazellton, 83, Finsbury Pavement; **Aged Poor Society** (£666) and **Almshouses** (£1703), J. B. Corney, 42, Gerrard St., Soho, W.C.; **Alexandra Orphanage**, J. Finch, 73, Cheapside; **Annuitants' Homes**, Miss Sheppard's (£830), Mrs. Cadman Jones, 27, Ossington St., Bayswater; **Architects' Benevolent Society** (£596), W. H. White, 9, Conduit St., Hanover Sq.; **Army Scripture Readers' and Soldiers' Friend Society** (£10,732), W. A. Blake, 4, Trafalgar Sq., Charing Cross; **Arnold Fund for Widows and Orphans of Clergymen of the Established Church of England and Ireland** (£2000), 57, Coleman St.; **Artists' Benevolent Fund** (£2003), L. Young, 23, Garrick St., W.C.; **Artists' General Benevolent Institution** (£3124), D. H. Gordon, 10, St. James St., S.W.; **Association for Placing Orphans in Private Families** (£81), W. Senior, 98, Cheyne Walk, S.W.; **Association for Promoting the General Welfare of the Blind** (£2812), Col. H. Lewis, 28, Berners St., W.; **Asylum for Fatherless Children** (£50029), J. R. Edwards, 35, Finsbury Circus, E.C.; **Asylum for Idiots** (£32,752), J. Downing, 36, King William St., London Bridge; **Asylum for the Support and Education of Deaf and Dumb Children** (£10,000), W. H. Warwick, 93, Cannon St., E.C.; **Baptist Tract and Book Society** (£1143), Mr. J. C. Woolcott, 224, Fournival St., Holborn, E.C.; **Dr. Barnardo's Homes for Destitute and Orphan Children** (£110,478), J. Odling, 18 to 26, Stepney Causeway, E.; **Benevolent Society of Blues for the Relief of Persons Educated in Christ's Hospital, their Widows and Orphans** (£1332), G. Wilkins, 85, Tufnell Park Rd., Holloway; **Benevolent Society of St. Patrick, for Educating, Clothing, Partly Feeding, and Apprenticing Poor Children born of Irish Parents in or near London** (£3108), F. R. Stokes, 61, Stamford St., S.E.; **Benevolent or Strangers' Friend Society** (£1107), B. H. Gerrans, 52, Finsbury Pavement; **Biggs's Charity to Printers** (£4446), J. S. Hodson, 20, High Holborn; **Blind (Royal) Pension Soc. of the U. K.** (£6931), W. E. Terry, 235, Southwark Bridge Rd.; **Booksellers' Provident Institution** (£1561), G. Larner, 28, Paternoster Row; **Boys' Home Industrial School** (£7640), H. James, Regent's Park Rd., N.W.; **British and Foreign Sailors' Society** (£19,229), Rev. E. W. Matthews, Mercers' St., Shadwell; **British Home for Incurables** (£10,824), R. G. Salmond, 73, Cheapside; **British Medical Benevolent Fund** (£3415), Dr. S. Phillips, 62, Upper Berkeley St., W.; **British Orphan Asylum** (£9,900), C. T. Hoskins, 62, Bishopsgate St. Within; **Brixton Orphanage for Three Hundred**

Fatherless Girls (£2,465), Mrs. Montague, Barington Rd., Brixton; **Brown Institution for the Treatment and Study of the Diseases of Domestic Animals** (£1037), T. Le Marchant Douse, Lond. Univ.; **Builders' Benevolent Institution** (£2955), Maj. Brutton, 35 Southampton Row; **Butchers' Charitable Institution** (£4869), H. J. V. Philpott, Butchers' Hall, Bartholomew Close; **Cabdrivers' Benevolent Association** (£2366), G. S. Murphy, 15, Soho Sq.; **Cabmen's Shelter Fund** (£1175), W. H. Macnamara, 185, Victoria St., S.W.; **Cass's School**, 26, Jewry St., Aldgate; **Central African Mission** (£21,063), Rev. D. Travers, 14, Delahay St., Westminster; **Cheese-mongers' Benevolent Institution** (£1300), E. Kent, 16, Borough High St., S.E.; **Children's Aid Society** (£3270), A. J. S. Maddison, 32, Charing Cross, S.W.; **Children's Country Holiday Fund** (£9500), Cyril Jackson, 10, Buckingham St., Strand, W.C.; **China Inland Mission** (£28,361), B. Broomhall, 4, Pyrland Rd., Mildmay, N.; **Christian Colportage Association for England** (£20,973), H. D. Brown, 37, Farringdon St., E.C.; **Christian Community** (£2751), J. Atkinson, 28, Enfield Rd., Kingsland, N.; **Christian Evidence Society** (£1033), Rev. T. T. Waterman and Rev. C. L. Engstom, 13, Buckingham St., Strand; **Christian Vernacular Education Society for India** (£11,496), J. Johnston, 7, Adam St., Strand; **Christ's Hospital** (£57,000), R. L. Franks, Newgate St.; **Church Army** (£15,100), Rev. W. Carlie, 128 & 130, Edgware Rd.; **Church Association** (£5611), H. Miller, 14, Buckingham St., Strand; **Church Defence Institution** (£7542), Rev. H. G. Dickson, St. Stephen's Palace Chambers, 9, Bridge St., Westminster; **Church Extension Foreign Missions** (£1534), Mrs. Haig, Orphanage of Mercy, Randolph Gardens, Kilburn, N.W.; **Church Extension Ragged Schools** (£1771), Miss F. Ashdown, 27, Kilburn Park Rd.; **Church Extension Winter Relief Fund** (£1559), Miss F. Ashdown, 27, Kilburn Park Rd.; **Church Missionary Society for Africa and the East** (£247,737), Rev. C. Fenn, M.A., 16, Salisbury Sq., Fleet St.; **Church of England Central Society for Providing Homes for Waifs and Strays** (£41,633), E. de M. Rudolf, Church House, Dean's Yard, Westminster; **Church of England Parochial Mission Society** (£4512), Rev. H. Muir, 7, Adam St., Adelphi; **Church of England Scripture Readers' Association** (£12,982), Clerical Sec., Rev. Marcus Rainsford, Lay Sec., T. M. Tilby, 56, Haymarket; **Church of England Sunday School Institute** (£2900), J. Palmer, 13, Sergeants' Inn, Fleet St.; **Church of England Temperance Society** (£11,739), F. Eardley-Wilmot, R.N., 9, Bridge St., Westminster; **Church of England Temperance Benefit Societies** (£2000), A. G. Old, Church House, Westminster, S.W.; **Church of England Zenana Missionary Society** (£31,709), J. Stuart, Col. G. R. S. Black, Gen. Robinson and Col. Howis, 9, Salisbury Sq., Fleet St.; **Church of Ireland Sustentation Fund** (£1136), R. Nugent, 32, Charing Cross; **Church Pastoral Aid Society** (£54,814), Rev. J. I. Cohen, Falcon Court, 32, Fleet St.; **Church Penitentiary Association** (£1815), Rev. G. C. Campbell and C. H. Baker, 14, York Buildings, Adelphi; **Church Schoolmasters' and Mistresses' Benevolent Institution** (£8193), G. W. Perry, 4, Little Dean's Yard, Westminster, S.W.; **City of London Trust Society** (£4698), J. Whittington, 35, Finsbury Sq.; **Clergy Orphan School** (£10,472), Rev. H. W. Dennis, 62, Lincoln's Inn Fields; **Colonial and Continental Church Society** (£9,201), Rev.

Canon Hurst, 9, Serjeant's Inn, Fleet St.; Colonial Missionary Society (£2400), Rev. W. S. H. Fielden, Memorial Hall, Farringdon St.; Commercial Travellers' Benevolent Institution (£14,926), J. Kaines, 47, Finsbury Circus; Commercial Travellers' Schools (£11,689), H. A. Evans, 37, Milk St., Cheapside; Congregational Church Aid and Home Missionary Society (£24,259), Rev. W. F. Clarkson, Memorial Hall, Farringdon St., E.C.; Corporation of the Sons of the Clergy (£26,000), W. Bowman, Corporation House, Bloomsbury Place; Country Towns Mission (£2575), G. H. Mawer, 18, New Bridge St., Ludgate Circus, E.C.; Orators' Augmentation Fund (£8725), Rev. J. R. Humble, 2, Dean's Yard, Westminster; East London Church Fund (£18,300), Rev. R. W. Harris, 26, St. Mary Axe; East London Industrial School (£3893), E. C. Sinkler, 55, Clarendon Rd., Lewisham, Kent; East London Nursing Society (£2565), A. W. Lacey, 49, Philpot St., Commercial Rd.; East London Provident Association (£1175), W. H. York, 495, Commercial Rd., E.; Female Mission to the Fallen (£3348), A. J. S. Maddison, 32, Charing Cross, S.W.; Female Orphan Asylum (£2172), G. Booth, 32, Essex St., Strand; Field Lane Refugees and Ragged Schools (£6228), Peregrine Platt, Vine St., Clerkenwell Rd.; Foreign Missions of the Presbyterian Church of England (£19,029), J. Consult, for further and fuller information, Low's "Handbook to the Charities of London," and The Classified Directory to the Metropolitan Charities.

Charitable Trusts Recovery Act, '91. See Session, sect. 82.

Charity Commissioners for England and Wales, The. The Charity Commission was created by the **Charitable Trusts Act 1853** (16 & 17 Vict. c. 137). Four commissioners were appointed, three of them being paid; and two at least of these three (one of the two being the Chief Commissioner) must be barristers-at-law of not less than twelve years' standing at appointment. No paid commissioner can sit in the House of Commons during tenure of office. The Board are empowered, "from time to time, as they may see fit, to examine and inquire into all or any charities in England and Wales, and the nature and objects, administration, management, and results thereof, and the value, condition, management, and application of the estates, funds, property, and income belonging thereto." Certain large exceptions, however, are specified: the Universities of Oxford, Cambridge, London, Durham, and all colleges or halls of any of them; all cathedral or collegiate churches, all buildings registered as places of worship, with the Registrar-General of Births, etc., and *bona fide* used as places of meeting for religious worship; Queen Anne's Bounty, the British Museum, friendly or benefit societies, savings banks, institutions or societies for religious or other charitable purposes, funds or property of missionary or similar societies, and generally all undertakings (independent or dependent) wholly maintained or carried on by voluntary contributions. But this exemption "shall not extend to any cathedral, collegiate, chapter, or other schools";

the colleges of Eton and Winchester, however, were exempted by the amending Act of '55. The secretary to the Commission for the time being is a corporation sole, by the name of "The Official Trustee of Charity Lands," for taking and holding charity lands; and the Lord Chancellor may appoint any persons to be jointly with the secretary "The Official Trustees of Charitable Funds," who must lay their accounts before Parliament yearly. The original jurisdiction of the Commissioners has been greatly extended. In '74 the Endowed Schools Act transferred to them all the powers and duties of the Endowed Schools Commissioners. In '82 the Prison Charities Act empowered them to make schemes respecting prison charities. In '83 the Municipal Corporations Act empowered them to hold, manage, and enjoy the property of certain dissolved corporations until they should make schemes for its administration. In '83, also, the City of London Parochial Charities Act empowered them to inquire into the nature, tenure, and value of all the property and endowments belonging to the charities mentioned in the "Digest of Parochial Charities of the City of London," referred to in the thirteenth report of the Charity Commissioners for England and Wales, and every one of them, and every other charity the property or income of which is applicable or applied to, or for the benefit of, any parish or part of a parish within the City of London, or of any inhabitant or inhabitants thereof, and the purposes and trusts for or upon which the same have heretofore been or are now held or enjoyed, and to which the income thereof has been or is now applied, and to classify the said property in two schedules—"Ecclesiastical Charity Property" and "General Charity Property"; and to frame schemes for the future application and management of the charity property and endowments, under prescribed directions. An account of their proceedings under the above-mentioned Acts will be found in their annual report (Eyre and Spottiswoode). The last report states that the Commissioners issued 438 orders during the last year. Total sum of stocks and investments held by the trustees of charitable funds at the end of '90 was £15,161,457. The present Chief Commissioner is Henry Longley, Esq., C.B.; the second, C. H. Alderson, Esq.; the third, Edward Stanley Hope, Esq.; the fourth (unpaid), the Hon. Sir Henry Stafford Northcote, Bart., C.B., M.P. Sec., Daniel R. Fearon, Gwydyr House, Whitehall, S.W.

Charity Organisation Society, The. was established with the object of improving the condition of the poor—(1) by promoting co-operation among existing charities and between charities and the poor law; (2) by securing due investigation and fitting action in all cases; and (3) by repressing mendicancy. The Bishop of London is president of the Society, which consists of a federation of district committees, one or more existing in each of the poor-law divisions of the Metropolis, and of a central council at which every committee is represented. The primary objects of the local committees are to afford to all charitable institutions and individuals an easy means of exchanging information and of working together, to prevent overlapping in relief, and to secure the investigation of cases with a view to referring them to the proper quarter for assistance.

In suitable cases assistance is given in the form of loans; it supplies information in regard to charitable institutions and questions connected with the administration of relief. **Special committees** appointed by it report on such subjects as "Charity and Food," "Exceptional Distress," "Medical Reform," "The Condition of the Feeble-minded and Epileptic," "Feeding of School Children," "Homeless Cases," etc. It also investigates cases of begging-letter writing. **Organ of the Society, *Charity Organisation Review***, and other papers are issued. **Sec., C. S. Loch.** **Central Office, 15, Buckingham Street, Adelphi, W.C.**

Charles I. (Charles Eitel Frederick Zepherin Louis), **King of Roumania**, was b. 1839. When '66 Prince Alex. John had been expelled from the sovereignty of Roumania, King Charles ascended the throne. He had formerly served as an officer in a regiment of Prussian dragoons. In '81 the Roumanian representatives unanimously proclaimed him King of Roumania; he had previously borne the title of Prince. His Majesty wears the Russian cross of St. George, which he received from the Emperor Alexander II. He celebrated the twenty-fifth anniversary of his accession to the throne in May, '91, and was the recipient of many congratulations. In '69 he married the **Princess Pauline Athlie Louise of Wied**, a lady of literary capacity, who writes under the *nom de plume* of "**Carmen Sylva**." Her Majesty paid a visit to England (Aug. '90), staying at Llandudno, visiting the Eisteddfod at Bangor, and going also to Ireland. She also visited H.M. the Queen at Balmoral. During Sept. '91 the illness of Her Majesty excited sympathy.

Charles, Sir Arthur, K.P. Judge of the Queen's Bench division, was b. 1839. Ed. at Univ. Coll., London, graduating with mathematical honours '58. Called to the bar of the Inner Temple '62; went the Western Circuit, of which he was leader. Took silk in '77, and became Bencher of Inner Temple three years later. **Recorder of Bath** for nine years ('78-87). Was an unsuccessful **Parliamentary** candidate in the Conservative interest for London Univ. at the General Election of '80. His lordship is possessed of literary inclinations, and was at one time Examiner in Common Law for his *alma mater*. **Elevated to the bench ('87)** and received knighthood.

Charlotte Town. Capital of Prince Edward Island (*q.v.*), pop. 11,500.

Charterhouse School, Godalming. Founded 1611, and until 1872 situated near Smithfield, London, on ground that belonged to the Carthusian Monastery. One of the nine great public schools of the Public Schools Commission. Sixty scholarships tenable in the school. There are ten vacancies annually. Twenty-one exhibitions to the Universities, each of the annual value of £80, tenable for four years. **Chairman, Archbishop of Canterbury.** Pupils, 500. **Head Master, Rev. W. Haig Brown, LL.D.** **Motto, *Deo dante dedi.*** **Alumni (some),** Thackeray, Grote, Blackstone, Wesley, Addison, John Leech, Havelock, Thirlwall, Lord Liverpool, Ellenborough, Steele, Milner Gibson; G. Manners-Sutton, Archbishop of Canterbury; T. Manners-Sutton, Lord Chancellor of Ireland; Sir George Bowen, G.C.M.G.; Sir Richard Webster, Q.C., M.P., Attorney-General; Prof. Jebb, M.P., Professor of Greek at Cambridge; Prof. Nettleship, Professor of

Latin at Oxford; F. T. Palgrave, Professor of Poetry at Oxford.

Cheap Trains (London) Bill. See Session, sect. 53.

Cheltenham College, Gloucester. Founded 1841. It is a proprietary college of six hundred and fifty shares, each share entitling the holder to nominate one pupil. There are three departments—the classical, the military and civil, and the junior. Numerous scholarships are attached to the College. The pupils number about 550. **Principal, the Rev. H. A. James, B.D.** During June '91 the Jubilee of the College was celebrated, and a dinner, at which many old scholars met, took place. Among the alumni of Cheltenham College are the Rt. Hon. Sir Henry James, Q.C., M.P.; the Rt. Hon. John Morley, M.P.; the Rt. Hon. and Most Rev. Lord Plunket, D.D., Archbishop of Dublin; Very Rev. F. Pigou, D.D., Dean of Bristol; Colonel Sir Charles Wilson, K.C.B., K.C.M.G.; Colonel Sir Charles Wairren, G.C.M.G., K.C.B.; Briton Riviere, Esq., Royal Academician; Rev. W. W. Merry, D.D., Rector of Lincoln College, Oxford; Rev. R. J. Wilson, M.A., Warden of Keble College, Oxford; C. I. Elton, Q.C., M.P.; R. T. Reid, Q.C., M.P.; W. E. H. Lecky, R. E. Francillon.

Cheltenham Lawn Tennis Lawsuit. See LAWN TENNIS.

Chemistry, '91. At the British Association Prof. Dunstan read the report of the committee on the formation of haloid salts, the results being, so far, preliminary. Mr. T. Turner reported upon his experiments as to the cause of the red patches frequently seen on the surface of brass sheets on rolling. Manufacturers in particular will welcome his explanations. A new alloy of gold and aluminium has been obtained by Professor Roberts-Austen, chemist to the Mint. It has a deeper and more brilliant colour than any other known alloy; contains 78.4 per cent of gold, and 21.6 of aluminium, and corresponds to the formula Al_2Au . Specimens of the unique chemical compound, nickel-carbon-oxide, have been exhibited by Mr. Ludwig Mond, F.R.S., as also articles of solid nickel deposited from nickel-carbon-oxide, and goods plated with nickel obtained by exposure to this compound. The properties of this substance, says Mr. Mond, make it possible to volatilise nickel at a low temperature, and to extract it industrially in a perfectly pure state from all other substances with which it is found. M. Berthelot has also obtained a new compound analogous to this nickel compound. Another interesting substance, iron-carbon-oxide, has also been obtained by Messrs. Mond and Langer, differing considerably from the above, as to which we are promised a fuller account. Mr. Crookes has been engaged on most important experiments on the electrical evaporation of metals and alloys. It is possible in the case of Prof. Roberts-Austen's alloy to separate a large portion of the gold from the aluminium by electrical evaporation. Among valuable published papers is one, by Mr. Veley on the conditions of chemical change between nitric acid and certain metals. Professor Armstrong's and G. H. Robertson's papers on the chemistry of the *Plante* cell; and yet another contribution by Dr. Schunck on the chemistry of chlorophyll must be noted. Before the Chemical Society, Mr. T. Cuthbert Day read a paper "On the Influence of Temperature on Germinating Barley" which will prove useful to the maltster. To mark the occurrence of the JUBILEE of the Chemical Society in '91, a

"CHEMISTS' BENEVOLENT FUND was founded, and a considerable sum has already been subscribed. (For abstracts of chemical papers published in the various journals during the year consult *Journal of the Chemical Society*.)

Chesney, Lieut.-Gen. Sir George T., K.C.B., was cd. at Woolwich, and in '48 joined the Bengal Engineers. He became lieutenant in '54, and served during the siege of Delhi. His promotion was as follows: captain ('58), major ('72), lieut.-col. ('74), colonel ('84), and general ('85). Two years afterwards he became a member of the Council of the Governor-General of India. His literary work includes "*The Battle of Dorking*," which created a sensation in '71, "*The Private Secretary*," "*Indian Polity*," and "*The Dilemma*."

Chess. (For history of the game see edition '90, which also contains results of international and championship matches up to date.) Chess, with living pieces, is as old as the game itself, but from various causes exhibitions of this kind are necessarily rare. The last witnessed in London was at Hengler's Circus, and the pieces were soldiers drafted from the Guards. On Jan. 14th, '91, two games were played at the *Royal Concert Hall, St. Leonards*. The White forces were represented as follows: The King, Capt. Gaskell; The Queen, Miss Forbes; the Rooks, Mr. Lambert and Miss Mildred Hayley; the Bishops, Mrs. Ebdon and Miss Papillon; Baron von Roemer and Mr. C. Thursby were the Knights; and the Pawns, the Misses Ada Murray, Winifred Dyke, Maud Scholfield, and Gladys Ebdon, Masters Robin Follett, Willie Hayley, Edward Brookfield and Thomas. The Red (Black) forces were represented by: The King, Lord Brassey; The Queen, Lady Brassey; the Rooks, the Hon. Muriel and the Hon. Marie Brassey; the Bishops, Lady Beatrice Capell and Miss Hilda Brassey; the Knights, the Hon. T. A. Brassey and Mr. Harvey Combe; the Pawns, the Misses Gwendoline, Violet, Beatrice, and Iris Brassey, and Masters Ramsey Murray, Walter Scholfield, Robert Raper, and Edgar Brassey. The picturesque costumes were of the Tudor period, the White forces attired in a combination of white satin and silver, and the Red (Black) pieces in red satin slashed and puffed with gold. The two games were conducted by the Hon. Reginald Capell and Mr. W. Shadforth Roger. The first, a lively *Kieseritzky Gambit*, was won by White, and the second, a *Philidor's Defence*, was won by Black. On Jan. 24th, a match between the British Chess Club and the chess players of the National Liberal Club took place at the National Liberal Club. Seventeen players a side were engaged, and in the result the British Chess Club scored eleven games, the National Liberal Club four, and two games were drawn. On the same evening the counties of Surrey and Kent played their annual match at the Salutation, Newgate Street. There were twenty players a side, and the result was a victory for Surrey by nine games to four, and seven draws. The contest between I. Gunsberg, of London, and W. Steinitz, of New York, which was commenced on Dec. 9th, '90, terminated on Jan. 22nd, in a win for the latter by six games to four, the remaining nine games played ending in draws. These celebrated players kept fairly equal at the start, and during the first nine games neither was more than one game ahead. Steinitz secured the tenth game, and was then leading by two; the 11th was drawn; Gunsberg won the

12th, but lost the next; the two following games were drawn; Gunsberg won the 16th; the 17th was drawn; Steinitz was credited with the 18th, and as the 19th was drawn, it was useless playing the last, as Gunsberg could not win. Steinitz opened in ten of the games and confined his initial operations to 1 P-Q 4, and 1 Kt to K B 3, which to a great extent may be described as the same thing, for after a few moves on either side similar positions are arrived at. Gunsberg played the Evans-Gambit four times, the Guico-Kano on three occasions, his two remaining openings being P-Q 4 and the Ruy Lopez. On Feb. 3rd, the match between North London and the London Banks, twenty players a side, terminated in favour of the former with a score of eleven games to six, and three draws. At the annual general meeting of the British Chess Club, held on Feb. 14th, it was resolved to raise the subscription from three to four guineas. The following week the Universities played their annual match with the City of London, and whilst Oxford was beaten by six games to two, Cambridge was successful by five games to four. On March 7th was decided the return match between the British Chess Club and the National Liberal Club, twenty players a side, and again the former proved victorious, the totals on this occasion being 12 games to 8. On the same evening a match for £25 between Mr. Tinsley and Mr. Müller (the best of seven games, draws not counting, twenty moves an hour), was brought to a close at Simpson's. The first four games were played at Simpson's, and resulted in favour of Tinsley, who also secured the next three, and thus won by seven to nil. The Universities' week opened on March 17th, and in their combined attack on the City of London they were beaten by eleven games to nine. On the following day Oxford defeated the North London Club (nine a side), but Cambridge lost to the Belsize Club (seven a side). The nineteenth annual match between the rival Universities was played on Thursday, the verdict being in favour of the Light Blues by five games to four. On Saturday the Cambridge representatives were beaten by those of the British Chess Club by 4½ games to 2½. On April 1st, Oxford 'Varsity beat Cambridge 'Varsity by four games to two. During the week Mr. J. H. Blackburne concluded both matches which he was engaged to play in Havana. The first against Señor Galmayo he won by five games to three, and two draws, and the second against Señor Vasquez by five games to one. The Correspondence Match, arranged with a view to test the merits of the Evans-Gambit and Two Knights' defence, between Mr. Steinitz and Mr. Tchigorin, which had been in progress for a considerable time, terminated towards the close of the month in the retirement of the former, who was hopelessly beaten. The theory of the Two Knights' defence is Mr. Steinitz's own. On May 13th the City of London Club beat the British Chess Club by the odd game on the actual score, in addition to which they counted three games by forfeit; but on the following day they could do no more than make a draw against St. George's, the totals being seven games each. The fourth annual match between the Grande Cercle et Cercle des Echecs de Paris and the British Chess Club took place at the Paris Cercle on May 20th, and ended in a draw with three games each. On May 30th, Hampshire beat Sussex at Portsmouth by seven games to five. The third annual meeting of

secretaries of Lancashire chess clubs was held on June 13th at the Manchester Chess Club. Over thirty clubs were represented, and it was resolved to organise the various clubs into a county association. The proposal met with very warm approval. A tournament at Simpson's, which had been watched with considerable interest, was virtually brought to a close on July 14th, the leading winners being R. Loman, first; Van Vliet, second; H. Bird, third; and J. Mortimer, fourth. The meeting at Oxford of the Counties Chess Association was concluded on Aug. 8th, honours being divided between the Rev. A. B. Skipworth and the well-known Southampton player, Mr. J. H. Blake. Messrs. Lambert, Owen and Trenchard show the next best score with 4½ each. The deaths of several prominent players and problem composers were announced in the course of the year, amongst the departed being Mr. Walter Grimshaw, Mr. T. G. Campbell, Captain G. H. Mackenzie (found dead in his room at an hotel in New York), Mr. J. H. Bauer, Mr. J. H. Mills, and Lord Paulsen. Consult "Staunton's Chess Players' Handbook," one of Bohn's Scientific Library Series.

Chester. Rt. Rev. Francis John Jayne, D.D., Lord Bishop of. The see, anciently part of Lichfield, was made a separate diocese by Henry VIII. in 1541, and has an income of £4,500. His lordship, the 33rd Bishop, was b. 1844, and educated at Wadham College, Oxon. Was a Double First in the Final Schools in '68, when he was elected Fellow of Jesus College. Ordained '70; curate of St. Clement, Oxford. Subsequently Tutor of Keble College, and in '79 appointed Principal of St. David's College, Lampeter. In '86 he was presented to the Vicarage of Leeds, which he held until his elevation to the episcopal bench, '88.

Cheyne. Rev. Thomas Kelly, D.D., was b. in London 1847. Ed. at Merchant Taylors' School and Worcester Coll., Oxford. Elected ('60) Fellow of Balliol Coll., and in '81 was appointed rector of Tendring, Essex. In '85 he became Oriel Professor of the Interpretation of Holy Scripture at Oxford, and a Canon of Rochester. Professor C. is one of the most eminent authorities on Biblical exegesis. Canon C.'s *Bampton Lecture*, '89, on the Psalter excited much controversy in consequence of his seeking to show that the later Psalms, Books IV. and V., were of a Post-Exilian origin. He was a member of the New Testament Revision Company, and is the author of several works on the Prophets, and of "The Book of Psalms, New Version."

Chicago World's Fair. This Fair is to be situated on the south-western shore of Lake Michigan, about six miles from the centre of the city of Chicago, and railway and tram lines are already laid down for the conveyance of goods and passengers. There are to be 13 departments: A, Agriculture; B, Viticulture, Horticulture, Floriculture; C, Live Stock; D, Fisheries; E, Mines and Mining; F, Machinery; G, Transportation Exhibits; H, Manufactures; J, Electricity; K, Fine Arts; L, Liberal Arts; M, Ethnology, Archaeology; N, Forestry. These will be divided into 172 groups, with 917 classes. At the end of September £1,119,088 of stock had been subscribed, of which £600,918 had been paid into the treasury. The city of Chicago also issued £1,000,000 of municipal bonds. In addition, the management expect to realise £500,000 from concessions and the sale of

privileges, £400,000 from salvage, and about £1,400,000 from admissions, making a sum of £4,119,088 available for the purposes of the fair. The following sums were also provided by foreign nations for their special departments: Great Britain, £25,000; France, £48,000 asked, but not yet voted; Germany, £4000 preliminary and £50,000 asked; Japan, £100,000; Mexico, £150,000; Peru, £5,000; Costa Rica, £10,000; Colombia, £16,000; Guatemala, £24,000; Jamaica, £2,000; Chili, £20,000; Egypt, £100 preliminary and £6000 asked; Brazil, £65,000. The following are the various buildings and their dimensions: Administration, 260 ft. by 260 ft.; Machinery Hall, 850 ft. by 500 ft.; Machinery Annex, 550 ft. by 420 ft.; Agricultural Hall, 800 ft. by 500 ft.; Transportation, 660 ft. by 250 ft.; Transportation Annex, 9 acres; Horticultural Hall, 1000 ft. by 240 ft.; Electrical Building, 700 ft. by 145 ft.; Fisheries Building, 363 ft. by 163 ft.; Mines and Mining, 700 ft. by 350 ft.; Manufactures Building, 1688 ft. by 788 ft.; Women's Building, 400 ft. by 200 ft.; United States Building, 420 ft. by 350 ft.; Fine Art Gallery, 500 ft. by 320 ft.; Illinois Building, 160 ft. by 450 ft.; Casino, 300 ft. by 175 ft.; Forestry Building, 500 ft. by 200 ft.; Dairy, 200 ft. by 95 ft.; Saw Mill, 300 ft. by 125 ft. A number of steam engines of various types will furnish 16,000-horse power, operating the dynamos for light and power, and driving the shafting. It is only in the Machinery Hall and Annex that steam power will be used. All the power elsewhere will be electrical, transmitted by wires from this power-house. The 16,000-horse power required here contrasts with the 6000 at the Paris Exposition and the 14,560-horse power Coihoss engine driving the machinery at the Philadelphia Exhibition of '76. The Fair is to be formally dedicated on Oct. 10th, '92, the 400th anniversary of Columbus' discovery of America. Elaborate ceremonies will mark the event, the President of the United States being expected to attend, and a feature will be the procession, in which 10,000 troops will participate. The Fair is to be opened to the public on May 1st, '93, and closed on Oct. 30th following. The general reception of exhibits will begin on Nov. 1st, '92; but no article will be admitted, according to the announced programme, after April 10th, '93. Goods for exhibition will be admitted duty free, but customs dues will be levied on any of such goods sold in the United States. Information respecting the World's Fair may be obtained from Mr. J. Pierpont Morgan, Chairman of the World's Fair Executive Committee, care of Mayor Grant, City Hall, New York. The Council of the Society of Arts, which was appointed the Royal Commission for the Fair, issued a prospectus which stated that they "are now prepared to receive applications from artists, manufacturers, and others desirous of taking part in the exhibition, to afford them all necessary information, and to offer them all available facilities which they may desire for this purpose. Such applications must be made upon forms to be obtained from the secretary of the Commission, Sir H. Truman Wood, at their offices, Society of Arts, John Street, Adelphi, London, W.C. They must be sent in, properly filled up, not later than Feb. 29th, '92, and addressed to the secretary, as above."

Chicago (World's Fair) Tower. The monument in form of a globe, described in our last ed., gave way in favour of a steel tower de

signed by Mr. David A. Proctor, the architects being Messrs. Holabird and Roche, and the engineer Mr. C. T. Purdy, all of Chicago, the contract being let to the George A. Fuller Co. The tower is on the Eiffel principle, but hexagonal in plan, and having a larger base; it will be 1155 ft. in height, and cost three million dollars. The steel, of which 7500 tons will be required, will be furnished by Messrs. Carnegie, Phipps & Co., and the Hall Elevator Co. will supply the lifts.

Chichester, Rt. Rev. Rd. Durnford, D.D., Lord Bishop of. The see was founded in 1070, out of the old Saxon see of Selsey, founded in 681. The present income is £4200. His lordship, the 71st bishop, was born at Sandford, Berks, in 1802. He was ed. at Eton and at Magdalen Coll., Oxford, where he graduated first class in classics '26, and gained a fellowship '30, in which year he was ordained deacon, and the year following priest. His lordship was formerly rector of Middleton, Lancashire, '35-70; Hon. Canon of Manchester '54-6; Archdeacon of Manchester '67-70; Canon of Manchester, '68-70; and Bp. of Chichester '70.

Chignecto Ship Railway. In the ed for '90 some account of this enterprise was given under the heading Nova Scotia. This extraordinary line is being made, from the designs of Sir John Fowler, Sir Benjamin Baker and Mr. McKetchum, by Mr. J. G. Meigs, and runs from Fundy to the Gulf of St. Lawrence, some 17 miles. It is quite straight, laid with 110-lb. steel rails (2 pairs), 4 ft. 8½ in. gauge, and 16 ft. apart. The sleepers are "close spaced," and the heaviest gradient is 1 in 509. At each end of the line vessels up to 2000 tons will be raised 40 feet on 16-wheeled trucks resting upon hydraulic lifts. It was reported about the middle of April '89 that the Canadian Government had granted a subsidy of £35,000 a year for twenty years. According to the Government requirements, the weight of the vessel and cargo transported is not to exceed 2000 tons dead weight, or vessels of 1000 tons gross register laden (see last ed.). On Aug. 14th, '91, it was reported that the Canadian Parliament had extended the time for the completion by one year (to July 1st, '93). In the debate it was stated that the quantity of clay and rock excavated was 1,745,957 cubic yards, leaving 278,913 yet to be excavated. The steel rails were all delivered, and nearly all the hydraulic machinery, 14 miles of single track laid, and nine-tenths of heavy iron sleepers delivered; the ship cradles were ready, the locomotives were being built, and there remained but one mile of grading to do. The company were obliged to excavate for the basins 24 ft. deeper than the estimate in order to reach the solid rock foundation; then there was a scarcity of labour. The total expenditure had been £600,000, leaving £500,000 yet to be laid out. According to a Halifax telegram of Aug. 21st, the British and Canadian Governments were considering a proposition to advance funds to complete the line, it being suggested that the former should contribute two-thirds and the latter one-third, on the ground that similar enterprises "calculated to revolutionise commerce" awaited the result of the experiment. Replying to an attack in the *Montreal Herald*, Mr. Kendrick, secretary of the company, writing on Aug. 26th, stated that the contractors were under engagement to accept mortgage debentures to complete the works, and that the engineer on the spot believed that

the traffic receipts would be able to pay fixed charges and good dividends without calling upon the Government subsidy of \$170,602 a year. A Halifax telegram, dated Sept. 11th, stated that Captain Rainier, H.M.S. *Tourmaline*, was preparing a special report for the Admiralty. An Ottawa telegram of Nov. and reported the arrival of the chief engineer, who stated that if the Government would remove the restriction which made the payment of a Government subsidy a condition he could float the necessary bonds in England.

Children, Custody of. See CUSTODY OF CHILDREN, LAW ON.

Children, Custody of, Act, '91. See SESSION, sect. 63.

Children's Country Holidays Fund. This and similar funds (e.g., the Children's Fresh Air Mission) have recently arisen in London to organise holidays, never less than two weeks, for poor sickly city children by boarding them with country cottagers, who are paid 5s. a week per child; and much good has resulted from the movement, several thousands of children being annually benefited. **Patroness, H.R.H. the Princess of Wales. Sec., Cyril Jackson. Treas., Hon. A. Lyttelton. Office, 10, Buckingham St., Strand.** Similar efforts in New York, Berlin, etc., have been equally successful. In particular the fund which was organised in Liverpool in '83 has been attended with much benefit. It annually sends 2000 children into the country for three weeks. One-third of the cost is defrayed by the parents, the remainder being met by subscriptions. The secretary of the Liverpool branch is Miss Sampson, 5, Bold Street, Liverpool.

Children's Life Insurance Bill. See SESSION, sect. 54.

Chili. A republic governed by a President elected for five years, to whom the executive power is confided, and a Senate and Chamber of Deputies, who form the legislature. The Senate, of 37 members, is elected by the provinces for six years; the Chamber, of 109 members, by the departments for three years, by electors possessing a small property qualification. The Roman Catholic is the state religion, but all others are tolerated; universal and gratuitous education is given at the national charge. **Area** 293,970 sq. m.; **pop.** in '85 about 2,527,000; **capital, Santiago** (pop. 236,412); **estimated revenue** '89, 46,000,000 pesos; **expenditure**, 53,000,000 p.; **debt** (latest returns) £9,400,000. **Imports** in '87, 48,630,862 p.; **exports**, 59,549,958 p. (peso = 38.2d.). Tobacco growing and the production of raw silk have been attempted of late years, but only with indifferent success. Cattle breeding and sheep raising might both be profitably carried on in Chili. By law passed in '87, the army is not to exceed 5885. There is a national guard, composed of citizens, on duty to assist the regulars, who number 47,774, making a grand total of 53,659 effectives. (For navy see FOREIGN NAVIES.)—In '91 a revolution was reported to have occurred in the State (Jan. 8th), and that a naval insurrection had broken out (13th) at Buenos Ayres. At first the troops stood by the President, Balmaceda, but later a number of them joined the insurgents. Hostilities commenced by the bombardment of Coronel by the rebels (25th), and later on they attacked Pisagua, Coquimbo, and La Serena, and captured them, though a later report (Feb. 3rd) announced that they had been compelled to evacuate those places. The in-

surgents attacked other towns with varying success, the real truth being hard to discover, the despatches often directly contradicting each other. The President decreed the election of a new Congress, and it took place in April, the session being opened by the President in person (21st). The House of Deputies passed an Act authorising the President to levy a forced loan of \$20,000,000 to carry on the war (June 17th). Several other naval and land battles took place between Balmaceda's troops and those of the Junta. Matters came to a crisis (Aug. 21st), when a great fight began before Valparaiso. The fighting continued till the 23rd, when Balmaceda's troops had to give way. The insurgents took possession of the city (28th), and Balmaceda fled (31st). Incendiary fires were lighted, but were overcome, and the rioters dispersed. The insurgents took possession of Santiago the same day. Later news stated that Balmaceda's forces lost 3500 and the Congressists 600. The ex-President fled. The Junta decided (Sept.) to take up the \$27,000,000 of paper money issued by Balmaceda. The ex-President Balmaceda shot himself (19th) in a room at the Argentine Legation in Santiago. The elections for both municipal and legislative bodies passed off quietly (Oct. 18th). On appeal by the political prisoners the Supreme Court decided that they were illegally detained, but the Junta issued a decree suspending the law; it provided, however, for the trial of such prisoners within 24 days of their arrest. Some Chilians made an attack on several American sailors at Valparaiso, and matters became very strained between the two nationalities in the city (23rd), and United States men of war were sent to demand reparation. Congress was opened (Nov. 2nd). Señor Vicuña was nominated to the Presidency, and unanimously elected (6th).

"Chiltern Hundreds." See PARLIAMENTARY PROCEDURE.

China. The most populous, and, excluding Siberia, the largest empire in Asia. China Proper is still more remarkable as the most compact nationality in the world: area 1,298,000 sq. m., with a pop. of 380,000,000—the higher figures being a moderate computation, and 30,000,000 less than the returns for 1842. The rest of the empire (Manchuria, Mongolia, Tibet (*q.v.*), Jungaria, East Turkestan), covering 2,881,560 sq. m., contains about 21,000,000 souls. China has other claims to rank high in the family of nations besides her extent of territory and the multitude of her people. The industry of the latter and the antiquity of her history afford valid reasons for placing this country high among the nations of the earth. The government of China is most carefully organised. A number of boards or councils conduct business at the capital, Peking; while the eighteen provinces are divided among a certain number of governor-generals, who are assisted by governors of provinces and the "taotais" of the cities. A nineteenth province has been recently formed, out of the Central Asian territory, having its seat of government at Suidum, near the Russian frontier, in Semiretchia. The Manchu, or Tartar garrison, allotted to each important town, has a separate organisation, while the Green Flag Chinese army corresponds to our militia or the Turkish *redif*. The Manchu army is computed to number 324,000 men, and the Chinese as many as 650,000. The most efficient force is, how-

ever, Li Hung Chang's garrison of Pechihli, the nucleus of which was formed by the men who served under General Gordon against the Taepings. There are arsenals at Nankin, Shanghai, Tientsin, and other places, besides a dockyard at Kiangnan. The marine of China consists of a number of powerful gunboats named after the letters of the Greek alphabet (see FOREIGN NAVIES). The greater part of China is only very partially developed, and much benefit is anticipated to native and foreign trade by the introduction of railways, to which the Chinese government seems at last to have reconciled itself. (For history '86-9, see ed. '90.)—**History.** At the end of '90 there was great destitution in the Tientsin district, owing to the floods. In anti-Christian riots at Chung-Ning in November twenty native converts were killed, and their houses burned. Blight appeared in the Foochow tea gardens. By a powder-mill explosion at Wuhu 1000 houses were wrecked, and 300 people killed. The Queen of Corea was buried with great display. A Russian scientific expedition, under two brothers, Groum-Gojimailo, were told they could not enter the province of Koukon-Nor, and treated the Viceroy very cavalierly, in consequence of which they had to return precipitately into Russian territory (Dec.). It was reported (Jan. 2nd, '91) that no rain had fallen in the provinces, so that the rice crop had failed and a famine was imminent. Dr. M. M. Phillips, of the American Methodist Mission, Loo Chow Foo, and ladies were robbed by pirates while sailing from Shanghai. It was reported (15th) that the British Scientific and Political Expedition had reached Kashgar. The Emperor announced that he should in future personally receive the representatives of foreign Powers. The railway between Taipeh-fu and Kee-lung was completed. An Imperial naval college was opened at Nankin. The province of Petchili suffered severely from floods; great damage was done, and 1000 persons killed. The Imperial decree as to receiving foreign representatives was nullified by the derogatory ceremonies prescribed by it. It was reported (Feb. 16th) that the Chinese Viceroy of Hankow refused to receive the Czarewitch at Chu-Foo in the course of the latter's visit to China. The foreign Ministers at the Chinese Court were received in audience by the Emperor (March). It was reported that Mr. Keable, agent for the Chinese Customs, and his newly married wife were murdered by pirates on the Long Tcheon road. An anti-European riot broke out at Wuhu, on the Yang-tse-Kiang (May), when the Roman Catholic Mission was set fire to, but no lives were lost. The British Consulate was also reduced to a wreck. A band of rioters attacked and pillaged the city of Nankin (26th); the mob was finally dispersed, after setting fire to the Methodist Mission. Fresh reports of excesses were received in the early part of June. In consequence of the representations of the Diplomatic Corps, the Emperor issued a decree (June) ordering the authorities to protect all foreigners and mission stations in the empire. The first section of a railway from Phulang Thuong to Lang Son was opened (21st). There was another anti-Christian riot at Kin Kiang (July 5th), which was suppressed by the European gunboats. The riots and outrages continued through the month over the south of China. A riot occurred at Ichang (Sept.), and

the American Mission was destroyed. The Ichang riot on the 12th was an outbreak of Hunan soldiers. The riots continued growing (25th). Considerable pressure was brought to bear on the Government by the representatives of the various powers, with the result that the Governor of Wuhu was dismissed (30th). The Government were unable to control the mob at Hunan (Oct. 13th), and the Prefect was killed. Later reports stated that the riots at Ichang were the work of a few soldiers commanded by a mandarin. It was announced (15th) that Germany had entered into the agreement of the Powers as to the protection of European subjects in China. The operations of Russia on the Pamir reached such proportions that the new Governor of Kin Kiang was ordered to lose no time in reaching Kashgar (18th), and the Chinese Minister at St. Petersburg was instructed to seek explanations. Details were received (22nd) of the rebellion in the province of Fukien, the centre being the city of Thama, which was attacked by 2000 men under a man named Chen. After three days the city was taken, and the prisoners in the gaols released. The rebels fled on hearing that a thousand soldiers were coming against them. An epidemic of cholera was reported from Amoy. Mr. Mason, an English officer of the Imperial Customs, was arrested at Chinkiang on the charge of conspiring with the secret society, Kolao-Hu. In his possession was found some dynamite and some cases of rifles. He wrote a letter to the paper to the effect that he was not conspiring against the Government, but was endeavouring to get information about the Society which might be useful to foreigners. He was subsequently released. The anti-foreign movement in the Hunan province continued (26th), among the rebel chiefs being many of the Viceroy's magistrates and generals. One of the documents largely displayed is much to the following effect: "Let us, the inhabitants who are desirous of preventing the violation of our country, prepare a plan of defence so that every district may take up arms and assemble its forces. Every great district should furnish 20,000 men, every lesser district 15,000, and every small district 10,000. Let us chase from the province the devil-mouthed European pigs. Having power, money, and men, and being brave, let us destroy the enemy. It will be much better to burn the dwellings, churches, and mission buildings than to confiscate them for the purpose of increasing the revenues. We will extinguish fires dangerous to Chinese dwellings. Let us stamp out the cult of Jesus; let us punish the converted Chinese, the traitors; let us banish the families of the guilty on the ships of the American fleet. Germany comes flying to our aid." Mason pleaded guilty (28th), and was sentenced to nine months' imprisonment. A serious fire occurred at Hankow, which killed more than 200 women and children and destroyed 1500 houses.

Chitty, Sir Joseph William, is the second son of the late Mr. Thomas Chitty, well known as a legal author. Born in 1828, he was a distinguished athlete when at Oxford, rowing for his university, and acting as umpire at the annual contest until his elevation to the judicial bench. He was called to the bar in '56, and, devoting himself to Chancery work, soon acquired a large practice. Q.C. ('74), and was the acknowledged leader of the Rolls Court. At the general election of '80 he was returned

for Oxford City with Sir W. Harcourt in the Liberal interest. Elevated to the bench in '81.

Christian IX., King of Denmark, was b. 1818. He is the son of the late Duke William of Schleswig-Holstein-Sonderburg-Glücksburg, and father of the Princess of Wales, the Empress of Russia, and the King of Greece. By the Treaty of London, signed May 8th, '52, he was appointed the successor to the throne of Denmark, and by the law of succession of that country passed July '52. On the death of King Frederick VII., he ascended the throne Nov. 15th, '63. In the beginning of his reign arose the famous dispute about the duchies of Schleswig and Holstein, which by the Treaty of Peace of Vienna ('64) he had to surrender. He married in '42 the Princess Louise, the daughter of the Landgrave William of Hesse-Cassel. Her mother was a sister of Christian VIII., the predecessor of Frederick VII.

Christchurch, Capital of the province of Canterbury, in S. Island of New Zealand (q.v.); pop. 37,000.

Christian Evidence Society. Founded in 1870 by the late Bishop of London, the late Earl of Harrowby, and others, Churchmen and Non-conformists, with the conviction that it was necessary to do something to counteract the progress of unbelief amongst various classes. In '91, 490 indoor and 548 open-air lectures were given. **Fres.**, Archbishop of Canterbury; **Vice-Fres.**, Sir G. G. Stokes, Bart., P.R.S.; **Chairman**, the Lord Chancellor (Lord Halsbury); **Secs.**, Rev. T. T. Waterman, B.A., Rev. C. L. Engström, M.A.; **Offices**, 13, Buckingham Street, W.C.

Christianstadt, Capital of Santa Cruz (q.v.). **Christie, William Henry Mahony, F.R.S.**, **Astronomer Royal**, was b. at Woolwich 1845, is a son of the late Professor S. H. Christie, and was ed. at King's Coll. School, London, and Trinity Coll., Camb., and became a Fellow of his college. Graduated B.A. ('68) as fourth wrangler. Appointed ('70) chief assistant at the Royal Observatory, Greenwich. He contrived and introduced several valuable improvements in the scientific apparatus there in use, including a new form of spectroscope. On Sir G. B. Airy's retirement ('81), Mr. Christie was appointed **Astronomer Royal**. He is the author of the "Manual of Elementary Astronomy."

Christmas Island. A small island, lat. 11° S., long. 106° E. Situated midway between the Sandwich Islands (N.) and the Society Islands (S.). On June 6th, '88, Captain May, H.M. *Impérieuse*, by authority from the Admiralty, annexed this island.

Christ's Hospital (Blue Coat School), London. Founded 1547. The new schemes of the Charity Commissioners received Her Majesty's assent on Aug. 15th, '90, and came into force in Jan. '91. (Copies of the scheme may be obtained of Messrs. Eyre and Spottiswoode.) By it the London school will contain 700 pupils, while the preparatory school will receive 120 juniors. The girls' school will contain 350 scholars. These three establishments will be known as **hospital schools**. Two **day-schools**, accommodating 600 boys and 400 girls, will now be started. In this way education will be given under the new scheme to 2170 children, instead of nearly 1200. It will be noticed also that a large increase of female scholars will thus be educated. With relation to two-thirds of the scholars at the Hospital schools, fees ranging

from £10 to £20 may be charged if the Council of Almoners consider that "the parents or next friends are in a position to contribute substantially towards the child's education and maintenance." The system by which entrance to the Hospital schools is gained under the new scheme is by nomination or by competition. Presentation to 325 places lies in the hands of the President, certain City companies, and various officials. One hundred scholars are to be nominated by the Court of Almoners (which numbers forty-three members), and 150 scholars, whose names have been submitted by donation governors, may compete for places. The more notable change in the construction of the school is the distribution of the remainder of places. From metropolitan schools of a public elementary nature 170 successful competitors may come; various parishes which have hitherto possessed nominative powers will supply 12 scholars; and 400 places will be at the disposal of boys and girls nominated by the governors of endowed schools at which they have attended for the period of two years. Numerous exhibitions and prizes which have existed in the past will still remain as inducements. Hospital exhibition funds provide exhibitions to universities; there are also the *Times* scholarship, the "Moses," "Thomson," "Rowed," and "Pitt Club" exhibitions. **Head Master**, Rev. Richard Lee, M.A. **Alumni**: among a numerous list may be noted Bishop Stillingfleet, Coleridge, the poet; Leigh Hunt, Charles Lamb, Thomas Barnes, a late editor of the *Times*, James Scholefield, Regius Professor of Greek for Cambridge, and Sir Henry Sumner Maine, K.C.S.I.

Church, Anglican. See **ANGLICAN CHURCH**.
Church Army. A working-man's Church Mission to working-men, founded in 1882, directed by a committee acting under the Council, amongst whom are the three archbishops and twenty-six other English bishops. There are 180 officer evangelists and 50 mission nurses continually labouring for the Society. The C. A. has 13,000 regular communicant members. Over 90,000 meetings are held annually, attended by over 7,000,000 persons; 6000 adult converts have been confirmed, and over 1000 are waiting to be confirmed; over £10,500 has been received in subscriptions and donations, and over £14,000 locally, mostly in working-people's pence. Officer evangelists are sent to any parish for a period of not less than one week nor more than two years; mission nurses from one week to two years. **Organ, Church Army Gazette.** **Hon. Sec.**, Rev. W. Carlile. **Headquarters and Training Home**, 128 and 130, Edgware Road, W.; **Mission Nurses' Home**, 95, Edgware Road. **Tramps and Inebriates' Labour Home**, 45, Crawford Street, W. **Rescue Shelter**, 2, Titchborne Street, W. **Salesroom for the Poor**, 2, Little Queen Street. **Central Sec.**, Rev. J. J. Chambers.

Church Association. **The.** Instituted in 1865, to maintain the principles and doctrines established at the Reformation, and to preserve the purity of Protestant worship in the Church of England; to resist all innovations on the order of the service as prescribed by the joint authority of the Church and State, whether these innovations consist in vestments, ornaments, gestures, or practices borrowed from the Church of Rome; and especially to prevent "the idolatrous adoration of the Sacrament of the Lord's Supper"; to resist all attempts to

restore the use of the confessional, and every exercise of that priestly authority which was put down at the Reformation. The C. A. also seeks to vindicate for the laity their rightful share in all departments of Church life, and aims at the restoration to the parishioners of the election of churchwardens, giving to them a veto upon the appointment of incumbents by patrons, and the absorption of the ecclesiastical courts into the general judicature of the country. Colporteurs for the dissemination of Protestant literature have been appointed for the counties of Warwick, Hertfordshire, Devonshire, Surrey, and Sussex, and it is proposed to extend the number. **Organ of the Association, The Church Intelligencer.** **Chairman**, Capt. Cobham. **Sec.**, Henry Miller. **Offices**, 14, Buckingham Street, Strand. **Church Choir Guild** (Guild of Church Musicians), 35, Wellington Street, Strand, W.C. Among the objects in view are the following: (1) The advancement of church music by means of lectures, competitions, musical performances, an annual conference, services, organ recitals, etc. (2) To receive choirs in union and provide a code of rules for their use, and to encourage meetings of combined choirs for festivals. (3) The granting and registration of certificates of proficiency to members of enrolled choirs; and the conferring of the diplomas of Associate and Fellow (after examination) upon members of the Guild. (4) When possible, to afford pecuniary assistance to members of the Guild who may be in need. (5) To raise a fund for providing a Guild hall, with organ, reading room, library, etc., for the use of members. (6) The awarding of medals to members who have rendered important service to the Guild. (7) Any other means by which choral worship of the Church may be promoted and improved. **President**, The Very Rev. Francis Pigou, D.D.; **Warden and Licensed Chaplain**, J. H. Lewis, Mus. Doc., D.C.L.; **Hon. Sec.**, C. F. Passmore, Mus. B.

Church Congress, The. '91. The thirty-first session was held at Rhyl, Oct. 6th to 10th. The Bishop of St. Asaph presided. Opening services were held at the churches of St. John (preacher, Bishop of Ripon) and St. Thomas (preacher, Bishop of Manchester). The Archbishop of Canterbury was present at the Congress, and the opening ceremony took the form of an address of welcome to His Grace, from the Town Commissioners of Rhyl. The **President's address** took for its theme "The Church in Wales," his contention being that the position of the Church in the Principality had been grossly misrepresented by politicians presumably for party purposes. He read a letter from Mr. Gladstone on the question, and then proceeded to claim by statistics that the Church was rapidly gaining a firmer footing in Wales. He was followed by the Archbishop of Canterbury, who, in one of his most vigorous speeches, repudiated the idea of the Church in Wales being an "alien" Church. Papers were also read by the Dean of St. Asaph and Canon Bevan, whilst the Bishop of Chester and Sir R. Cunliffe, Bart., opened the discussion. At the evening meeting an important debate took place on "The Church in relation to Nonconformists—points of agreement and difference, and possibilities of co-operation." The Rev. H. A. James, B.D., a former Dean of St. Asaph—opened with an able paper, in which a tendency was shown to accentuate the points of difference rather than

those of agreement. Earl Nelson followed with a vigorous paper, in which he earnestly sought for co-operation with Nonconformists, but showed a lack of suggestion as to how the co-operation was to be brought about. The Rev. J. Morgan, Mr. J. A. Doyle, and Mr. G. Harwood contributed speeches on the subject, but the discussion which followed was not of an interesting character. The Archbishop of York ably summed up the whole meeting by saying that the Congress was discussing absorption and not co-operation. Indeed, it was felt by many that the Congress rules ought to have been relaxed to permit of one or more representative Nonconformists taking part in the discussion. The second day opened with "The Church's work in the Poorest Quarters of our Cities and in the Industrial and Mining Districts." The Bishop of Bedford read the first paper, which was naturally devoted to East London. He strongly emphasised the necessity for adaptation of the Church's services and ministrations to the needs and capacities of the poor people. He was followed by the Bishop of Wakefield, who devoted his paper to Church work in the industrial districts of Yorkshire. The Rev. A. H. Baynes also contributed a paper, whilst speeches were made by the Rev. A. F. W. Ingram, of the Oxford House, Bethnal Green, Prebendary Harry Jones, who had a kind word to say for the Salvation Army, and Mr. E. Clifford, who eulogised the work of the Church Army, an agency with which he is connected. A good discussion followed. The afternoon was given to a more abstruse subject—viz., "Criticism of Holy Scripture and the Church's gains thereby." (a) Confirmation of her witness; (b) juster statement of truth; (c) confronting new problems. Papers were read by the Rev. Professor Lias, Rev. Professor Ryle and Archdeacon Wilson, all men in the front ranks of criticism, whilst Professor Sanday was one of the leading speakers. Deep interest was centred in the evening meeting, which took up the question of **Foreign Missions**. Bishop Blyth, of Jerusalem, Mr. Eugene Stock, of the Church Missionary Society, and Canon Churton were the principal speakers; and although recent events pointed to the possibility of a duel of words between the two former, the meeting passed off quietly. Canon Churton denounced what he called the "Society system," especially as represented by the C.M.S. The Earl of Stamford and the Bishop of Calcutta took part in the discussion. The third day opened with "Church Education: to present state, and how to improve it" in (a) Universities and Public Schools; (b) Intermediate and Grammar Schools; (c) Elementary Schools; (d) Training Colleges. The statement of the last named branch was left to the Principal Gent, whilst the Rev. J. H. Maude, Principal Rendall, Archdeacon Edmondson and Prebendary Rowe dealt with the other parts of the subject. The discussion which followed naturally resolved itself into the consideration of elementary education in reference to free education, and the speeches delivered were strongly in favour of retaining the Church schools. The afternoon session was an entirely new departure on the part of the Congress. "Church Music" was the subject under discussion, and the proceedings were enlivened by musical illustrations from a Welsh choir. With the exception of the opening ceremony, for the President's address and

the Archbishop's speech, this subject brought together by far the largest audience in the list of meetings. Papers were read by Rev. C. Hylton-Stewart, Rev. Owen Jones and Mr. T. E. Griffiths. The evening meeting took up the subject of "The Divine Personality, and the bearing of Belief in the same on the Individual life": (a) The Agnostic position; (b) The Theistic position; and (c) The Christian position. Papers were read by Sir George Stokes, Bart., M.P., Rev. Canon Moberley and Rev. J. H. Bernard, whilst Mr. R. H. Hutton, Rev. A. J. Harrison and Rev. T. B. Strong opened up discussion on each branch of the subject. The large attendance of the clergy at this meeting showed that a deep interest prevailed in the various topics under consideration. The morning of the closing day of the Congress was devoted, as usual, to "Aids to the life of Godliness." This meeting has always been of a devotional character. In the afternoon a spirited meeting took place for the consideration of "The Parochial System": (a) Its deficiencies and how to meet them; (b) In relation to the diocese; (c) in relation to Church societies. The principal speakers were the Dean of Manchester, Col. Cornwallis-West, M.P., and Mr. Fredk. Sherlock, editor of *The Church Monthly*. In the evening a conversation was given in the Congress Hall by the Right Rev. the Lord Bishop of St. Asaph and Mrs. Edwards. This closed what must be termed a most successful congress, which throughout was marked by a spirit of unity and tenacity of purpose.

Church House. Originated early in '86 by a few clergy meeting at Westminster, who had observed the urgent need of such a building. Subsequently the Bishop of Carlisle, in a letter to the *Times*, suggested that the erection of such a House should be the Church's method of celebrating the Queen's Jubilee. An executive committee was appointed and funds have been collected to the amount of nearly £90,000. On Feb. 23rd, '88, a charter of incorporation was granted. The committee acquired in July '88 the freehold of a block of buildings, about an acre in extent, which is bounded by the south side of Dean's Yard, Westminster, by Tufton Street, Little Smith Street, and to a large extent by Great Smith Street, the purchase of which, together with the leasehold and other interests, amounts to £52,000. Plans for the C. H. have been prepared by Sir Arthur Blomfield, A.R.A. The principal elevation faces Dean's Yard, and the ground plan shows a group of buildings enclosing a quadrangle slightly irregular in form. The style of the building is Late Tudor, with suggestions from Hampton Court Palace. There will be spacious halls for the meeting of both Houses of Convocation, the House of Laymen and Church Societies. A great hall is to be provided capable of accommodating 2000 persons. The Council have begun to build the great hall and the southern wing. The foundation-stone was laid by H.R.H. the Duke of Connaught, on June 24th, '91. At present the work of the Corporation is being conducted in the temporary premises, 9, 10, and 11, Dean's Yard. Here there are reading-rooms, library, writing-room, committee-rooms, offices, etc., for the use of members. Membership of the corporation (open to all members of the Church of England) may be obtained by the annual subscription of one guinea. Life membership, £10 20s. Sec., Mr. Percy Crosse,

Dean's Yard, Westminster, S.W.; Assistant-Sec., Mr. J. Larcombe.

Church of England, The Established. By "established" is meant the effect of certain legal privileges and restraints imposed upon the Church of England by its connection with the State. These privileges and restraints are partly incorporated into statute law by the Acts of Henry VIII. and Elizabeth; partly they are a growth as old as the common law of England; and partly they have sprung from constant Parliamentary interference with the Church since the Restoration.—Its **History and Constitution.** The Church of England claims an apostolic foundation, asserting for its bishops an unbroken line of descent, in the laying-on of hands, from the Apostles themselves. Tertullian speaks of Christianity being widely disseminated in England as early as A.D. 202; and that the Church was from the first under episcopal supervision we find by the fact of three English bishops being present at the great Council of Arles in A.D. 314. Moreover, as the Roman missionaries under Augustine did not come over until A.D. 596, the English Church has always maintained its independent origin. Its **Government** is by its three Orders of Bishops, Priests, and Deacons. Its **Doctrine** is embodied in the three Creeds of Western Christendom—the Apostles', the Nicene, and the Athanasian. The Apostles' Creed is required of candidates for Baptism; the Nicene is recited at Holy Communion; and the Athanasian at certain special services. The clergy are also required to subscribe the Thirty-nine Articles. The form of worship of the Church is set forth in the Book of Common Prayer. Its **Clergy** number, in round figures, a total of about 24,000, divided as follows: Archbishops, 2; Bishops, 32; Suffragan Bishops, 17; Deans, 30; Archdeacons, 88; Residential Canons, 132; Rural Deans, 613; Beneficed Clergy, 13,640; Unbeneficed, 9500. The Archbishops and 24 of the Bishops have seats in the House of Lords.—**Progress.** No. of Dioceses in '76, 28; in '89, 34, with two more sees (Bristol and Birmingham) in course of endowment. The six new bishoprics are Truro, St. Albans, Liverpool, Newcastle, Southwell, and Wakefield. No. of Benefices in '31, 10,718; in '86, 13,600. No. of Parsonages in '31, 5947; in '86, 11,000. No. of Clergy in 1801, 10,307; in '41, 14,613; in '90, some 25,700. **Money raised for Church Building** alone, from '40 to '87 (purely by voluntary subscriptions, with the exception of one State grant of £1,500,000—vide Lord Hampton's Parliamentary Report '74)—£46,000,000; for Endowments, £3,771,000. **Amount annually raised**, by purely voluntary means: for Church Building and Restoration, £1,000,000; for Foreign Missions, £500,000; for Elementary Education, £500,000; for Home Missions, Temperance Work, Clubs and Charities, at least another £500,000. The **Revenues** of the Church, from endowments in tithes, land and voluntary offerings is estimated to amount to about eight millions sterling, of which nearly three millions is assured endowment; the exact amount is not known, although a Parliamentary return (still incomplete) has been published giving certain comprehensive details. The value of tithe is diminishing every year. Every £100 of tithe rent-charge, estimated by the corn averages, now yields little more than £80, with prospects of dwindling to £70. (See **TITHES**.)

The **Church population** of England is almost impossible to estimate, the qualification being so indeterminate, but the Church claims over 60 per cent. of the entire population. **Church accommodation** is represented by about 6,400,000 sittings. Spiritual supervision is provided for the whole country, which is divided, first into **Provinces** (Canterbury and York), presided over by the Archbishops; which are subdivided into **Dioceses**, presided over by Bishops; these again being broken up into **Archdeaconries**, the heads of which are the Archdeacons; these again into **Rural Deaneries**; and these into **Parishes**, which are in the charge of the minor clergy. **Daughter parishes** are districts separated from the statutory boundaries by Sir Robert Peel's Act enabling the ancient parishes to be thus subdivided. The **Educational work** of the Church is represented by (in round figures) 11,600 efficient schools, under Government inspection. These schools have been built at a cost to the Church of not less than £12,500,000. There are also, in connection with the Church of England, thirty training colleges for school teachers, erected at a cost of £195,000, towards the maintenance of which the Mother Church annually contributes £10,000.—**Church Parties.** The three great party divisions in the Church of England are said to be representative of the various types of mind which may be found in any large society. The "**High Church**" or historical party attach great importance to the historical position of the Church in the succession of her clergy. They uphold her authority in matters of doctrine and discipline; and value her rites and sacraments, not only as devotional aids and convenient symbols, but as peculiar and special means of grace, of which she is the only authorised administratrix. The "**Low Church**" or Puritan party think comparatively little of these things, but set the greatest value on conversion, justification by faith, without the works of the law. They consider themselves rather as members of the Church invisible than of the Church visible, and disregard niceties of ceremonial, as distracting the soul from true worship, and as unduly exalting the priestly office, or tending to false (chiefly Popish) doctrine. The "**Broad Church**," on the other hand, pay but little attention to either ceremony or dogma. They are for extending the liberty of belief within the Church to its utmost possible limits—as some assert even, to the borders of Unitarianism. They attach great importance to the social Christian virtues, to living a wholesome and cleanly life, adopting the precepts rather than the theology of religion. The three have been said to show forth respectively the body, the spirit, and the soul, of the Church. Recent years have witnessed several remarkable developments in the relations of the three parties. A **Royal Commission** reported ('85) against the existing state of ecclesiastical law, particularly in respect of its administration. In the **House of Lords** two or three **Bills** of a tentative character have been introduced, with the object of giving **statutory effect** (1) to the main recommendations of the Royal Commission on Ecclesiastical Courts, and (2) to the repugnance of Churchmen at the spectacle of clergymen being imprisoned for contumacy. These Bills, however, were dropped one after another. Meanwhile, as Ritualism was evidently spreading, there grew up among moderate Evangelicals and Broad Churchmen a dispositive

to be tolerant. A settled belief has arisen among Churchmen, that tolerance as a solution of the Ritual question is the only possible one, if further friction between the parties is to be avoided. And this opinion is strongly supported by the "finding" of the Archbishop of Canterbury in the Bishop of Lincoln's case. Consult *The Official Year-Book of the Church of England* and *The Clergy Directory*. See also BISHOPS, DEANS, DIOCESE, etc.

Church of England Young Men's Society. The, Leopold Rooms, Ludgate Circus, E.C., has for its object the promotion of the Spiritual, Social and Intellectual welfare of young men, with especial view to their consistent life as members of the Church of England, and their active personal labours for the good of others. The Society was established in 1844, with a central body in London and branches in various parts of the country. At present there are about 100 branches, and the aggregate membership is about 15,000. Among the most flourishing branches are those of Belfast (900 members), Norwich (850 members), and Holloway (600 members). The Leopold Rooms are the central buildings of the Society, and are regarded as a home for young men. There every member of the Society is welcomed, and those who are on a visit to the Metropolis can make the headquarters their home. Sleeping accommodation is provided, and it is satisfactory to note that it is fully taken advantage of not only by members, but also by young men who are in no way connected with the society. There is also to be found at the Leopold Rooms a splendid gymnasium under the care of Professor Mello; excellent rooms for reading and smoking, a large room, accommodating about 200, where lectures and concerts are constantly given, good class-rooms, a refreshment-room, and a library containing about 4,000 volumes. There are also classes for the study of French, German, etc., and also a class for Bible study. There are rowing, swimming, football, cricket, and other clubs for athletic purposes, and the society is also possessed of that indispensable adjunct to every society of the kind, a debating club. **President,** Lord Halsbury; **Chairman of the Council,** Mr. Robert Holmes White. It is the aim of the society to have a branch in every town and village, and if possible in every parish. Clergymen desiring to form branches should communicate with the Rev. J. Stephen Barrass, clerical organising secretary, who will render them every assistance. The formation of such branches, it is confidently believed, would do much towards keeping young men within the Church. The society also provides for young men sermons and addresses in City churches during Advent and Lent, also services in warehouses, church workers' associations and missionary guilds. The society publishes a monthly magazine—*Forward*—for young men.

Church of Scotland. The, The Scotch jealous of their liberty and rights, recognised the same orders as other Christians, but never acknowledged any supremacy of jurisdiction in the Episcopal order. In the earliest times all abbots were subordinate to the successor of St. Columba, the Abbot of Iona being Primate; but the Mediæval Church down to the fifteenth century had no Metropolitan; the chief government of the Church under the Pope devolving upon a Synod in which bishops, abbots, priests, and other ecclesiastics sat. In 1472, however,

Sixtus IV. raised St. Andrews to an Archiepiscopal and Metropolitan see; and in 1492, Innocent VIII., Glasgow was raised to a similar rank. When the Reformation began two parties arose, the bishops and the State being opposed to all change, and a party of reformers, known as the Congregation, demanding great changes. The latter party triumphed, and in 1560 the jurisdiction of the Pope was abolished by Parliament sitting at Edinburgh. A General Assembly then governed the Reformed Church. Doubts arose as to the desirability of abolishing the bishops, and men of tried Protestantism were elevated to the sees. A contest between Episcopacy and Presbyterianism succeeded, ending in the triumph of the latter. At the Restoration bishops were reappointed, but as they sided with James II., upon the accession of William and Mary, the prelates were abolished. Presbyterianism was then re-established, and the Westminster Confession of Faith adopted as the national standard of belief. The right of patrons to nominate to vacancies had been taken away, but was given back in 1712, and the exercise of that right led to much discussion, which resulted in 1843 by the dissentients leaving the General Assembly and forming the Free Church of Scotland. The Act of Queen Anne was repealed by Lord Beaconsfield in '72.

Churchmen in Council. A small body of influential clergymen of "moderate" views, including Dr. Ferowne (now Bishop of Worcester), the Archdeacon of London, and Revs. Canon T. Teignmouth Shore, Canon Edgar Jacoby, J. F. Kitto, W. S. Cartel, and C. J. Ridgeway, formed in June '89. **Object**—To unite Churchmen of all parties on questions at present or at any time disturbing the Church upon a basis of wide tolerance. Held a meeting in Feb. '90, when various questions were discussed, and have since met periodically at the Church House, Dean's Yard, Westminster. The Council is slowly but surely effecting a moderating influence upon extremists in the Church. In Feb. '91 a resolution was carried to the following effect: "That Churchmen in Council desire to enter their most solemn protest against renewed litigation in matters of ritual."

Church Rates. Originally, like tithes (*q.v.*), a charge upon the land of a parish for the maintenance of the church fabric. In later years levied as a rate, and paid by occupiers. Nonconformists having objected to them, they were abolished in 1868. The churches and services are now provided and maintained solely by Churchmen and Church endowments, whereby all apparent injustice to Nonconformists is entirely removed, and the rights of Nonconformist parishioners in the church fabric are not impaired. The Act of 1868, however, did not abolish church rates in cases where, at the time of the passing of the Act, money had been borrowed and remained due on the security of the church rate, or where the rate was applicable to purposes other than "ecclesiastical purposes," as defined by the Act, or had been originally authorised to be levied by special legislation in consideration of the abolition of tithes or for other valuable consideration. The most important case in which church rates continue to be levied, under the two last-mentioned exceptions, is that of the parish of Saint Marylebone, London, in which church rates to the amount of £5580 (which is nearly two-thirds of the total amount, of church rates

appearing in the returns as having been levied in the whole of England during the year) are annually raised by the vestry under powers conferred by two local Acts (51 Geo. III., c. cli., and 1 and 2 Geo. IV., c. xxi.). In several other parishes voluntary church rates are levied, principally for the purpose of paying the interest and principal in respect of loans raised on the security of that rate prior to the passing of the Act of 1868, but occasionally for the purpose of defraying vestry expenses.

Churchill, Rt. Hon. Lord Randolph, M.P., second son of the sixth Duke of Marlborough and of Lady Frances, daughter of the Marquis of Londonderry, was born at Blenheim Palace, Feb. 13th, 1849; entered Merton College, Oxford, where he graduated in '71. Hon. LL.D. Camb. '87. Married in '74, Jennie, daughter of the late Mr. L. Jerome, New York. In the same year he entered Parliament as Conservative **M.P.** for Woodstock. He made his maiden speech the first year he sat in parliament, and was complimented by his future antagonist Sir William Harcourt. Next year he took part in the debate on unincorporated boroughs. From '75 to '79 Lord Randolph rarely addressed the House. The collapse of the Conservative party at the general election of '80, acted, however, as a spur to Lord Randolph, who soon distinguished himself as an audacious and powerful debater. He was not quite alone in the independent course he had marked out for himself. Mr. (now Sir John) Gorst and Sir Henry Drummond-Wolff acted with him. These three sat together, and soon became known as the **Fourth Party**. Mr. Arthur Balfour and Earl Percy occasionally associated themselves with the three. Lord R. C. was the life and soul of this combination. He never lost an opportunity of damaging the Government, or of dragging his own leaders farther than they wished to go. He took a prominent part in the **Bradlaugh debates**. His persistence and ability won at last the admission that he was a man who must in future be reckoned with. Lord Randolph was frankly recognised as a new and powerful political force, which might either make or mar the party. He was elected **chairman of the National Union of Conservative Associations**, but resigned soon after, owing to a schism between the Union and the Central Conservative Committee, Lord Salisbury, Sir Stafford Northcote, and the recognised leaders of the party siding with the latter. The quarrel, if quarrel it could be called, only lasted a few days; and on the 9th of May, '84, at a meeting of Conservative members of the House of Commons, held at the Carlton Club, Lord Randolph consented to withdraw his resignation, and the threatened split was averted. The result was a victory by Lord Randolph over his own leaders, who agreed to adopt the policy of organisation which he recommended. From this point Lord Randolph rose steadily to the position of a recognised leader of the Conservative party. When the Liberal Government was overthrown on the Budget, in June '85, it resigned, and in the new Conservative administration Lord Randolph Churchill received the **Indian Secretaryship**. The general election took place in November '85, and though the position of the Conservatives was somewhat improved, they were in a considerable minority in the House of Commons. Lord Randolph Churchill was defeated at Birmingham, where he opposed the Rt. Hon. John Bright,

but was elected for **South Paddington**. In the following January the Government were overthrown on the motion brought forward by Mr. Jesse Collings, and immediately resigned. Mr. Gladstone succeeded Lord Salisbury; but was defeated on the second reading of his Home Rule Bill. Lord Salisbury was again called to the helm, and in the new Ministry, formed in July '86, Lord Randolph Churchill was appointed **leader of the House of Commons and Chancellor of the Exchequer**. His most remarkable speech during the recess was made at Dartford, where he unfolded a programme which his opponents declared to be Liberal, if not Radical, and which some of his friends felt to be anything but Conservative. The resignation of Lord Randolph, on Dec. 23rd, '86, took both friends and opponents by surprise. The announcement in the *Times* gave as his lordship's reasons for taking this unexpected course differences with his colleagues on the subject of the naval and military estimates. The attitude which his lordship assumed in advocacy of financial reforms led to the appointment of a Royal Commission of Inquiry into the civil administration of the great spending departments. In Jan. '88 Lord Randolph visited **St. Petersburg**. On the death of Mr. Bright, in March '89, his lordship declined an invitation to contest **Central Birmingham**. He did this at the request of Mr. Chamberlain, with whom he subsequently had an acrimonious controversy in the public press. Lord Randolph addressed his constituents (Feb. '91), on which occasion he said he would still reserve to himself the right to maintain an independent position with regard to the action of the Government. He also alluded to the labour question and to general politics. Started on a tour in **South Africa** in May, whence his lordship wrote a series of letters to the *Daily Graphic*.

Cinque Ports, The. A group of seven ports (originally five, whence the name) situated on the south coast of England (in Sussex and Kent). **Hastings, Romney, Hythe, Dover and Sandwich** were the original ports; **Winchelsea** and **Rye** being added afterwards. The original Cinque Ports were created by William the Conqueror and were endowed with various important privileges in consideration of their furnishing a certain quota of ships of war, for the king's use, when demanded. The **Lord Warden-ship** is now only an honorary dignity. Its holders have no special jurisdiction. The **Marquis of Dufferin and Ava** was nominated in Nov. '91.

City and Guilds Institute. See **TECHNICAL EDUCATION**.

City and South of London Railway. The line was formally opened by the Prince of Wales (Nov. 4th, '90). The railway is worked and lighted by electricity, and is approached by lifts which descend from the street level. There is no booking of passengers, but they pay their fares and pass on to the platform through a registering turnstile. (For history and earlier details see previous eds.) The line was opened to the public on Dec. 18th, '90. The company lodged a Bill for the Session of '91, to construct a line from the King William Street terminus to Islington. This extension, as described by Col. Haywood, in his report to the City Commissioners of Sewers, commenced beneath the centre of King William Street, at a point about 60 ft. north of Clement's Lane, passed northwards beneath King William St., Prince's St.,

Moorgate Street, Finsbury Pavement, Finsbury Square, and City Road, to a point close to the Angel. On Jan. 14th, '81, Mr. C. E. Spagnolotti read a paper at the Inventors' Institute, Chancery Lane, upon the locking and blocking systems in use on this electric railway. At the half-yearly meeting on Feb. 24th, the chairman said the results had so far proved satisfactory; they had run 60,000 miles, and had carried 900,000 passengers. The meeting approved of the Bill for the new northern line. The Bill was read a second time in the House of Commons on March 6th, when Mr. T. H. Bolton moved an instruction to the committee securing a contribution to the local authorities for the use of the subsoil, and also as to workmen's trains, but it was lost by 111 to 71 votes; a similar motion as to the Central London (q.v.) and South Kensington and Paddington Subway Bills was also rejected. On March 17th, after some discussion with the counsel engaged on the subject of their privileges in examination and cross-examination, the chairman of the House of Commons Committee (Mr. Hanbury) stated that the preamble of the Bill had not been proved, and it was therefore thrown out. The report for the half-year ending June 30th (the first completed half-yearly report in the company's history), stated that the receipts from all sources amounted to £19,688, and the expenses to £15,521, the net revenue account showed a balance of £4,693, of which the interest on debentures absorbed £4,138, leaving £555 to be carried forward. In the half-year 2,412,145 passengers were carried; the uniform rate of 2d. had been reduced at certain stations between certain hours to 1d., with good results; an increase in the rolling stock was announced. Later in the year season tickets were introduced.

City Companies. See CITY GUILDS.

City Guilds, The. There have been 100 companies founded, but the latest return only gives a total of 76, as follows:—The Worshipful Companies of Apothecaries, Armourers and Brasiers, Bakers, Barbers, Basketmakers, Blacksmiths, Bowyers, Brewers, Broderers, Butchers, Carmen Carpenters, Clockmakers, Clothworkers, Coachmakers, Cooks, Coopers, Cordwainers, Curriers, Cutlers, Distillers, Drapers, Dyers, Fanmakers, Farriers, Feltmakers, Fishmongers, Fletchers, Founders, Framework Knitters, Fruiterers, Girdlers, Glass-sellers, Glaziers, Glovers, Gold and Silver Wyre Drawers, Goldsmiths, Grocers, Gunmakers, Haberdashers, Horners, Innholders, Ironmongers, Joiners, Leather-sellers, Loriners, Makers of Playing Cards, Masons, Mercers, Merchant Taylors, Musicians, Needle-makers, Painters, Patten-makers, Paviers, Pewterers, Plasterers, Plumbers, Poulterers, Saddlers, Salters, Scriveners, Shipwrights, Skinners, Spectacle-makers, Stationers, Tallow-chandlers, Tylers and Bricklayers, Tinplate-workers, Turners, Upholders, Vintners, Wax-chandlers, Weavers, Wheelwrights, and Woolmen. The twelve principal companies are those of the Mercers, Grocers, Drapers, Fishmongers, Goldsmiths, Skinners, Merchant Taylors, Haberdashers, Salters, Ironmongers, Vintners, and Clothworkers; but two of the largest liveryies are those of the Loriners and Spectacle-makers, both of which, however, like most of the minor companies, have scarcely any income except such as arises from the fees and fines paid by the members. Nearly thirty of them are without halls. In '80 it was

estimated that the trust and corporate income of the livery companies of London was between £750,000 and £800,000, and the capital value of their property £15,000,000. The value of their plate and furniture was returned at about £270,000. On the whole it is estimated that the trust income is about £200,000 a year, and the corporate income from £550,000 to £600,000. Several of the companies possess a considerable amount of real property in the county of Londonderry. The total rent of the real property is above £600,000, and there is a further source of income exceeding £100,000 a year from investments. The contributions of existing members are from £15,000 to £20,000 a year. Of the £200,000 which forms the charitable or trust income, about £75,000 a year is expended on the support of almshouses and the relief of poor members, another £75,000 on education, and about £50,000 on charitable objects of a general character. Many of the charities of the companies are for the benefit of the inhabitants of provincial towns and villages where they possess land. The cost of the hospitality annually given by the companies is estimated at £85,000. Technical education (q.v.) has within the last few years been taken up by the Guilds. The Clothworkers' Company has promoted the establishment of Yorkshire College, at Leeds, where instruction is given in the manufacture of woollen goods, and similar institutions at Bradford, Huddersfield, and other places. The City and Guilds of London Institute, for the advancement of technical education, has also been formed. There is a technical college at Finsbury and a central institution at South Kensington. On July 29th, 1880, a Royal Commission was appointed to inquire into the circumstances and dates of the foundation of the City Livery Companies, the objects for which they were founded, and how far those objects are now being carried out. On May 28th, '84, the Commission issued its report, in which it recommended that the companies should be placed by Act of Parliament under such restrictions as regards the alienation of their real and personal estate as would remove all danger of the loss of any portion of their property; that the accounts of the companies should be open to public inspection; that no future admission to the livery of a company should confer the parliamentary franchise; the appointment of a commission which should undertake the allocation of a portion of the corporate incomes of the companies to objects of acknowledged public utility, the better application of the trust incomes, and should it prove practicable, the reorganisation of the constitution of the companies. A dissenting report was, however, issued by three members of the Commission. Nothing, however, has come of the Commission's investigation, though the London County Council have recently carried a resolution asking the Government to introduce a measure to give legal effect to the recommendations of the majority report.

City of London College. This institution (known as the Metropolitan Evening Classes at Crosby Hall) was founded in 1848 by the Rev. Charles Mackenzie, M.A., and was constituted the City of London College in '60. The new building in White Street, Moorfields, was erected at a cost of £16,000 (in '83). Evening classes are held in the various branches of

science, literature, and art. There is a large and commodious laboratory, also art and cast rooms, to meet the requirements of the students. There are also a good library and a spacious reading-room. **Principal**, Rev. Prebendary Whittington, M.A. **Sec.**, Mr. D. Savage.

City of London Parochial Charities (Central Scheme). See Session, sect. 12.

City of London Police. This force is under the control of a Commissioner, who is appointed by the Mayor, Aldermen and Common Council, subject to the approval of Her Majesty the Queen. The total strength of the force is 801, consisting of 1 Assistant-Commissioner, 1 chief superintendent, 2 superintendents, 4 chief inspectors, 8 first-class inspectors, 21 station inspectors, 12 detective inspectors, 66 sergeants, and 679 constables. In addition to the above, 1 sergeant and 82 constables are employed on private service duty at the expense of persons engaging their services, the charge being at the rate of £125 per annum for each man. The force has also a surgeon, receiver, chief clerk, and several assistant clerks. The detective department consists of a superintendent, 12 inspectors, 7 sergeants, 12 detective constables, and about 45 plain-clothes constables, who are selected from the uniform branch. They are chiefly concerned in the detection of commercial frauds and serious felonies. If, however, a banker or merchant requires a City detective to be sent abroad, or a long distance from London, he is obliged to pay the expenses of this mission. The Police area contains six divisions (exclusive of the chief and detective offices), each of which is under the immediate charge of two divisional inspectors, assisted by three station inspectors. The Superannuation Fund is provided from the stoppage of 2½ per cent. of the pay of the force, the amount of fines at Police Courts, etc., the balance being provided from the Police Rate. Members of the force of not less than 25 years' service and 50 years of age, are entitled, under the provisions of the City of London Police Superannuation Act of '89, to claim superannuation allowances. The total cost of the force is about £120,000 per annum, one-fourth of which is paid from the City's cash, the remainder by a rate of 5½d. on the assessable rental of the City. The City Police, unlike the Metropolitan Police Force, is supported entirely by the citizens, without Imperial aid. The pay of the force is considerably in advance of any other similar body in the United Kingdom. The members also enjoy other advantages, perhaps the greatest of which is the scheme for granting pensions to the widows of deceased members of the service. All married men contribute from 4d. to 1s. per week, according to their rank, the balance is made up by grants from the City's cash, the pensions varying from 7s. to 21s. per week. The services of nearly 800 men are daily required to cope with the enormous and ever-increasing traffic of the City, the most capable men being selected for this dangerous and important duty, for which they receive a small allowance of extra pay. **Headquarters**, Old Jewry, Cheapside. **Chief Clerk**, Mr. John Whatley.

City of London School, Thames Embankment. Established by the Corporation of London in 1834. Tenable at the Universities or other places of higher education are 26 scholarships varying from £80 to £200; and about 20 others tenable at the school. Pupils admitted between

the ages of 7 and 15. **Head Master**, Mr. A. F. Pollard, M.A. Its distinguished alumni include: J. R. Seeley, Senior Classic and 1st Chancellor's Medallist, '57; E. A. Abbott, same honours, '61; W. S. Aldis, Senior Wrangler and 1st Smith's Prizeman, '61; J. S. Reid, Senior Classic and 1st Chancellor's Medallist, '69; W. E. Barker, Senior Classic, '83. **Sec.**, George R. Kenwick.

Civil Establishments, Royal Commission on. To inquire into their administration at home and abroad. Appointed in '86, as the result of a resolution moved by Lord Randolph Churchill, then Chancellor of the Exchequer. In a Treasury minute, which disclosed the grounds for the initiation of this comprehensive inquiry, it was stated that the duty of the Commissioners would be to examine into the numbers, salaries, hours of labour, superannuation, cost of staff, as well as the administration, regulation, and organisation; and to report whether, in their opinion, the work of the different offices is effectually and economically performed; whether it can be simplified; whether the matter of procedure can be improved; and whether it is deficient or unnecessarily elaborate. The Commissioners have published several reports, but their labours are not yet completed. The following are the names of the Commissioners:—Sir M. W. Ridley, Bart., chairman; Earl Brownlow; Lord Lingen; Lord Rothschild; Lord Basing; Right Hon. H. H. Fowler, M.P.; Sir C. E. Lewis, M.P.; Mr. R. W. Hanbury, M.P.; Mr. H. L. W. Lawson, M.P.; Mr. J. W. Maclure, M.P., Mr. J. Cleg-horn, director of the North-Eastern Railway Company; Mr. A. S. Harvey, secretary to Glyn, Mills & Co.; and Mr. A. B. Freeman Milford, C.B. Mr. H. G. Walpole is the secretary to the Commission.

Civil List. The, is the annual grant of Parliament to the monarch, the yearly sum now being £385,000, the whole of which is devoted to Her Majesty's household and personal expenses, with the exception of £1200, which may be granted in pensions (*v.i.*). The grant originated in the reign of William and Mary, and covered the payment of civil offices and pensions, when the amount was £700,000 (£400,000 being derived from the Crown revenues and £300,000 from excise duties). Since this resulted in debt on the part of the king, the Court of Exchequer decided that, if he chose, the king could alienate his whole revenue. The List, after having reached £800,000, and in 1777 (George III.) £900,000, was, on the accession of William IV., cleared of all salaries, etc., upon it, and placed at £520,000, including a pension list of £75,000. The purposes to which the pensions were applied were, in 1834, limited to the deserving and needy; and in 1838, the year of Queen Victoria's coronation, it was provided that, in place of a grant of £75,000 for civil list pensions, "Her Majesty should be empowered to grant in every year new pensions on the civil list to the amount of £1200, all such pensions to be in strict conformity with the House of Commons' resolutions of 18th February, 1834." (1 Vict., c. 2).

Civil List Pensions Grants, 1890–June '91. **Brewer**, Rev. E. Cobham, LL.D., in consideration of his services to science and literature, and of his inadequate means of support (£50); **Scott**, Mrs. Ellen S., in consideration of the services of her late husband, Major-General Henry Scott, C.B., R.E., to science and

art, and of her inadequate means of support (£100); **Tupper**, Miss Ellen Isabelle, in recognition of the services of her late father, Mr. Martin F. Tupper, to literature, and in consideration of her inadequate means of support (£75); **Hatch**, Mrs. Bessie, in consideration of the services of her late husband, the Rev. Edwin Hatch, M.A., D.D., to theological learning, and of her inadequate means of support (£100); **Spark**, Dr. William, in consideration of his services to music, and of his inadequate means of support (£50); **Barnard**, Miss Rosamond, in consideration of the distinguished services of her late father, Major-General Sir H. W. Barnard, K.C.B., and of her inadequate means of support (£75); **Livingstone**, Mrs. Kate J., in consideration of the services rendered by her late father-in-law, Dr. David Livingstone, the African explorer, and of her inadequate means of support (£50); **Huggins**, Dr. William, LL.D., in recognition of his services to science, and in consideration of his inadequate means of support (£150); **Shilleto**, Miss Catherine, in consideration of the eminence of her late father, the Rev. R. Shilleto, as a classical scholar and teacher, and of her inadequate means of support (£50); **Wood**, Mrs. Jane Eleanor, in recognition of the services of her late husband, the Rev. J. G. Wood, to natural history, and in consideration of her inadequate means of support (£50); **Maguire**, the Misses Eliza and Mary, in recognition of the eminence of their late brother, Dr. Thomas Maguire, of Trinity College, Dublin, as a classical scholar, and in consideration of their inadequate means of support (£25 each); **Berkeley**, the Misses Rose, Margaret, Charlotte, and Ruth, in recognition of their late father's (the Rev. M. J. Berkeley, F.R.S.) services to botany, and in consideration of their inadequate means of support (£20 each); **Wood**, Mrs. Henrietta Elizabeth, in recognition of the labours of her late husband, Mr. J. T. Wood, at Ephesus, of his services to archaeology, and in consideration of her inadequate means of support (£75); **Absolon**, Mr. John, in recognition of his services, to art, of his merits as a painter in water colours, and in consideration of his inadequate means of support (£50); **Wilde**, Lady, in recognition of the services rendered by her late husband, Sir William W. R. Wilde, M.D., to statistical science and literature, and in consideration of her inadequate means of support (£70); **Blanchard**, Mrs. Caroline, in consideration of the services of her late husband, Mr. Edward L. Blanchard, to dramatic literature, of her own work with regard to colonial emigration, and of her inadequate means of support (£50); **Motteram**, Mrs. Augusta Therese, in recognition of the services of her late husband, Judge Motteram, to the reform of the Bankruptcy Laws, and in consideration of her inadequate means of support (£75); **Bingham**, Miss Ida, in consideration of her late father, Colonel Charles Bingham's (Royal Artillery) long and valuable services, and her straitened circumstances and of her ill-health (£100); **Whittier-Page**, Mrs. Anzella Maria, in recognition of the services rendered to literature and geological science by her late husband, Professor D. Page, of Durham, and in consideration of her inadequate means of support (£100); **Barkly**, Mrs. Fanny Alexander, in recognition of her late husband's services as Governor of Heligoland, and in consideration of her inadequate means of support (£50); **Davies**, Mrs. Ellen, in recognition of the

services of her late husband, Professor James F. Davies, M.A., to classical literature, and in consideration of her inadequate means of support (£100); **Schmitz**, Mrs. Eliza Mary, in recognition of the services of her late husband, Dr. Leonard Schmitz, to classical education and learning, and in consideration of her inadequate means of support (£75); **Burton**, Lady Isabella, in recognition of the services of her late husband, Sir Richard F. Burton, K.C.M.G., as an explorer in the eastern portion of Central Africa, of his services to science and literature, and in consideration of Lady Burton's inadequate means of support (£150); **Sullivan**, The Misses Kate and Finola, in recognition of the services of their late father, Dr. Sullivan, President of Queen's College, Cork, to literature, and of his labours in developing the industrial resources of Ireland, and in consideration also of their inadequate means of support (£25 each).—91. **Macdonald**, Miss Annie Cosnahan, in consideration of the army services of her late brother, Lieut.-Col. A. J. Macdonald, of her old age, and of her inadequate means of support (£50); **Redfern**, Mrs. Clara Margaret, in consideration of the services of her late husband, Mr. James Redfern, sculptor, to art, and of her inadequate means of support (£100); **Smith**, Mr. George Barnett, in consideration of his services to literature and of his inadequate means of support (£80); **Weymouth**, Dr. Richard Francis, in recognition of his services to literature, his merits as a scholar, and in consideration of his inadequate means of support (£100); **Hardy**, Miss Iza Duffus, in recognition of the long and valuable services of her late father, Sir. Thomas Duffus Hardy, and in consideration of her inadequate means of support (£100); **Weir**, Mr. Harrison, in recognition of his merits as an artist, and in consideration of his inadequate means of support (£100); **Bristow**, Mrs. Eliza, in recognition of the long services of her husband, the late Mr. H. W. Bristow, on the geological survey, and in consideration of her inadequate means of support (£45).

Civil Service. One of the oldest institutions of the country, and probably dates from the earliest monarchical times. It is only within perhaps the last hundred years that the English Civil Service has assumed its present vast proportions. The Civil Service comprises all persons who serve the Queen in a civil capacity, as opposed to those employed in the military and naval services. The total number of persons so employed cannot be far short of half a million. The chief department of the Civil Service is the **Treasury**, which exercises a control over all other departments, and from whom alone authority is obtained for all expenditure. Perhaps next in importance is the **Exchequer and Audit Department**, which is charged with the audit of the accounts of all other departments, and is required to see that the expenditure of each is in accordance with the authorities received from the Treasury. The **Foreign Office** (including the diplomatic service), the **India Office** and the **Colonial Office**, together with the **Home Office**, probably rank next amongst the numerous departments of the Home Civil Service. The three revenue departments—namely, the **Post Office**, **Inland Revenue**, and **Customs**—are of course important branches of the service; there are also, among what is known as the spending departments, the **War Office**, **Admiralty**, **Board of Trade**, **Office of Works**, **Education Office**, **Privy Council Office**, the **Stationery**

Offices, and many other smaller offices.—Most of the clerkships in the Civil Service are now thrown open to public competition, and the various offices are grouped into two grades. The recommendation of the **Playfair Commission** which sat in 1874 to inquire into the Civil Service—namely, that the Service should be divided into a **Higher** and a **Lower Division**, with a specified scale of salaries irrespective of office for each division—has never been fully carried out. Most of the better-class offices are grouped under Grade I., and the remainder under what was formerly known as Grade II.; in these latter, however, most of the vacancies are being filled up by the appointment of Lower Division clerks under the Playfair scheme. A Royal Commission (*q.v.*) has recently been appointed to inquire into the present state of the Civil Service. There is of course a considerable difference in the examinations for the two grades of the Service; and that for the higher grade is what is popularly termed a "stiff" one. Very good prizes are offered to the successful candidates in this examination, which therefore attracts candidates from amongst university men. The Lower Division examination is of a simpler character, and as the prizes offered are not so great, a different class of men is attracted. Full particulars of all examinations for the Civil Services, and of the situations to be competed for, can always be obtained on application to the **Civil Service Commission**, at Cannon Row, S.W. The permanent Civil Service Commissioners are Sir G. W. Dasent and Mr. W. J. Courthope. (Annual report is published by Eyre and Spottiswoode.) For details see FINANCE, NATIONAL.

Clarence and Avondale, H.R.H. Albert Victor, 1st Duke of, and Earl of Athlone, eldest son of T.R.H. the Prince and Princess of Wales, was b. Jan. 8th, 1864, and was educated at Trinity College, Camb., and Univ. of Heidelberg. Previous to his entering as an undergraduate, however, he had passed two years as a naval cadet on board the *Britannia*, and in '79 started with his brother Prince George of Wales on a voyage round the world in the *Bacchante*. He returned to England in '82. On leaving the university Prince Albert Victor proceeded to Aldershot to prepare for the army. H.R.H. was invested with the Order of the Garter in '83. In company with his brother he visited Ireland '87. Created hon. LL.D. of Cambridge, '88. H.R.H. returned in the spring of '90 from his visit to India. Took his seat in the House of Lords (June 23rd). Installed as Rt. Worshipful Provincial Grand Master of the province of Berkshire on Dec. 15th, '90, at Reading. At present he is fulfilling military duties in Ireland.

Clark, Sir Andrew, Bart., M.D., F.R.S., was b. 1826, and was ed. at Aberdeen and at Edinburgh. In the extra-academical medical school of the latter city he gained the first medals in anatomy, physiology, chemistry, botany, materia medica, surgery, pathology, and practice of physic. For four years Dr. Clark had charge of the pathological department of the **Royal Naval Hospital at Haslar, M.D. Aberdeen, '84**. He is senior physician to the **London Hospital**, and was re-elected **President of the Royal College of Physicians** April 15th, '89. Dr. Clark is the author of numerous essays, lectures and reviews, and has for some time been Mr. Gladstone's medical attendant. Created a baronet, '83.

Clarke, Sir Edward, Q.C., M.P., was b.

1841. Educated at the City Commercial School, Lombard Street, and Crosby Hall. Obtained writship in India Office by open competition '59, retired Oct. '60. Tancred Law Student '61. Called to the bar at Lincoln's Inn '64; created Q.C. '80; elected a bencher of his Inn '82. Returned as Conservative member for Southwark, Feb. '80; Plymouth '80-85; re-elected '85 and '86, when he was made **Solicitor-General** in Lord Salisbury's administration, and received the honour of knighthood. Sir E. C. was for some time a reporter in the House of Commons, and was on the literary staff of the *Morning Herald* and *Standard*. He made his mark in the celebrated **Penge case**, and successfully defended Mrs. Bartlett in the notorious **Pimlico poisoning case**. Appeared for the plaintiff in the baccarat trial (June '91).

Clayden, P. W., author and journalist, has been connected as a leader-writer with the *Daily News* (*q.v.*) ever since its reduction in price to one penny, and is now associated in the editorship of that newspaper with Mr. J. R. Robinson (*q.v.*). Has been an unsuccessful candidate for Parliamentary honours on three occasions—viz., at Nottingham ('68), Norwood Division of Lambeth ('85), and North Islington ('86). Is the author of "England under Lord Beaconsfield" ('80), "Samuel Sharpe, Philanthropist and Translator of the Bible" ('83), "**The Early Life of Samuel Rogers**" ('87), "**Rogers and his Contemporaries**," 2 vols. ('89), and of articles in the *Edinburgh Review*, *Fortnightly Review*, and *Cornhill Magazine*, as well as pamphlets on various political and metropolitan questions.

Clémenceau, Georges Benjamin, was b. at Mouilleron-en-Pareds, in the Vendée, Sept. 28th, 1841. He studied medicine in Paris, is an M.D., and practised at Montmartre. Elected mayor of the 18th arrondissement (Montmartre) in Sept. '70, and in '71 a deputy for the Seine. He soon after resigned the positions of mayor and deputy. He then became a member, and afterwards, **president**, of the **Paris Municipal Council**. He was re-elected to the Chamber of Deputies at the elections of Feb. '76, and again voted with the Extreme Left. During the latter years of Gambetta's life, Clémenceau was the political adversary of the "dead tribune." He sits for the department of the Var, having been also elected, at the general election of Oct. '85, as one of the deputies for Paris. He is proprietor of *La Justice*, an important Paris journal, and is regarded as one of the most expert swordsmen in France.

Clemens, Samuel Langhorne (better known as "**Mark Twain**"), was b. at Florida, Mo., U.S., 1835; was apprenticed in his youth to a printer, and subsequently served as a pilot on the Mississippi (he adopted his *nom de plume* from the cry of the leadsmen when his line "marked" two fathoms of water; the term varies with the depth, but for two fathoms it is "mark twain"). Afterwards obtained an appointment as reporter on a paper in California, whence, after some years' service, he removed to edit a paper at Buffalo. He is undoubtedly the most original and popular of the American humorists; his **best known works** are "**The Jumping Frog**," "**The Innocents Abroad**," "**The Gilded Age**," "**Roughing It**," "**Adventures of Tom Sawyer**," "**Life on the Mississippi**," "**The Stolen White Elephant**," "**Adventures of Huckleberry Finn**," "**A Yankee at the Court of King Arthur**," etc.

Clergy, Deceased (Dec. 1st, '90, to Nov. '91). See OBITUARY.

Clergy Discipline (Immorality) Bill. See SESSION, sect. 55.

Clerk of the Parliaments. See PARLIAMENTS, CLERK OF THE.

Clifford, Rev. John, M.A., D.D., Ex-President of the Baptist Union, was b. 1836 at Sawley. In '55 he entered the General Baptist College. During his third year at the College accepted an invitation from the Praed Street church, Paddington. Dr. C. graduated B.A. at London University in '61, B.Sc. in '62, in '64 taking the degree of M.A., and in '66 that of LL.B. The honorary degree of D.D. was conferred on him in '83 by Bates' University, U.S.A. His growing success at Praed Street led to the erection of Westbourne Park Chapel, which was opened

Sept. '77, and where Dr. C. still continues to minister. His works include the following: "Is Life worth Living?" "The Dawn of Manhood," and "Starting in Life."

Clifton College, Bristol. Founded 1860, received charter '77. It is under a Council of fifteen, Earl Ducie, being President. It is mainly classical, but has a military and engineering section, and prepares pupils specially for Sandhurst, Woolwich, or Cooper's Hill (*q.v.*); also for the Indian Civil Service (*q.v.*). Three exhibitions, ranging from £25 to £50 a year, tenable at the Universities, offered annually. Pupils, 670. **Head Master, Rev. Michael George Glazebrook, M.A. Registrar, A. W. D. Macpherson.** *Motto, Hoc studia oblectant.*

Closure. See PARLIAMENTARY PROCEDURE.

Clubs for Ladies. Among the noteworthy clubs which cater for ladies are the following, which may be regarded as representative: The **Albemarle**, 13, Albemarle Street, W., is a mixed club, both sexes being eligible for election. It is not a proprietary club, and the number of members is limited strictly to 750. No male member is admitted who is not already a member of a good West End club. This club is of a somewhat different and less exclusive character than the Denison Club, having been originally founded with the avowed object of bringing all classes in touch with each other. The usual

advantages are offered, and no one under the age of sixteen is admitted as a member. The entrance fee is eight guineas, the annual subscription being five guineas. The **Alexandra**, 12, Grosvenor Street, W., was established in '84, as a proprietary club for ladies only. The managership and proprietorship are vested in a financial committee, who undertake all liabilities and dispose of the payments made by members solely for the maintenance of the club and for promoting the advantages of the members. The club offers the customary club accommodation, and no lady is eligible who has been, or

who probably would be, precluded from attending Her Majesty's Drawing Room. There are at present more than eight hundred members, and no gentleman, under any circumstances whatever, is admitted to the club. No entrance fee is demanded, and the annual subscription is five guineas. **The Denison Club**, 15, Buckingham Street, Adelphi, W.C. The object of this club is to promote friendly intercourse and open discussion between men and women interested in social and industrial questions, and to encourage study and investigation. The club-room is open daily (except on Sundays) from 12 noon to 10 p.m. Writing materials are provided free, also newspapers and periodicals. Light refreshments can be obtained at moderate charges. On the first Wednesday of each month (excepting August and September) a paper is read on some subject of practical concern, and this is followed by conversation, but nothing of the nature of a formal debate is permitted. On other Wednesday evenings the club-room is reserved for the use of men, with no special subject for discussion. **The New Somerville Club**, 217, Oxford Street, W., is chiefly intended for professional women. It is open all day, and every evening (Sundays included). Members are at liberty to make appointments or to meet friends at the club, which is well supplied with light refreshments at moderate prices. There is a well-fitted lavatory, and provision is made for the care of parcels and letters. The reading-room is supplied with all the principal magazines, the daily and weekly papers, and has a good reference library. A distinguishing feature of this club is the frequent discussions and lectures held on Tuesday evenings, and the broad, general, and non party ground taken as regards the political, social, literary, and other subjects dealt with at these meetings. There is also a monthly social gathering. The entrance fee is 10s., the annual subscription being the same. **The University Club for Ladies**, 31, New Bond Street, W. This is exclusively a ladies' club. It admits the graduates of any university; any registered female medical practitioners of the United Kingdom; all students or lecturers who have been in residence for at least three terms at Gorton or Newnham Colleges, Cambridge, or Somerville or Lady Margaret Halls, Oxford. It also admits undergraduates of any university who have passed the examination next after matriculation, including students who have passed the first professional examination of any medical corporation. There is a good reading-room, well supplied with all leading papers and periodicals, and the club subscribes to the leading lending libraries, any work being procured for a member upon application to the secretary. The club-room is open on weekdays from 12.30 a.m. to 10 p.m., and on Sundays from 1 p.m. to 10 p.m.; and those members who wish to lunch in the club on Sundays can do so, by giving notice to the housekeeper on the previous day. The entrance fee is one guinea, and an annual fee of one guinea is due and payable from each member on the first day of January in each year. In addition to the foregoing there are numerous other clubs and friendly societies for girls and women in London; but these scarcely come into the category of clubs proper.

Clubs, Law as to, in '91. Proprietary club owners have been considerably disturbed by the decision of Mr. Cooke (Marlborough Street

Police Court, July 8th, '91) in the case of **Mr. Wells**, proprietor of the Pelican Club. The defendant was prosecuted by the Commissioners of Inland Revenue for selling tobacco, spirits, and wine without a licence. It was held that, as the profits of the establishment went into the proprietor's pockets, there was nothing to distinguish it from an hotel or restaurant. A penalty was therefore inflicted upon the defendant, who intimated his intention of appealing.—The case of **Bellamy v. Wells** (Chancery Division, Dec. '90) was an action brought by several residents in Gerrard Street, Soho, for an injunction to restrain the proprietor of the Pelican Club from creating a nuisance. It was alleged that the glove fights on the premises attracted crowds of disorderly persons, and that there was a continuous whistling for cabs, and music or singing in the early hours of the morning. Mr. Justice Romer gave judgment in favour of the plaintiffs as regarded the glove fights and whistling for cabs, holding that peace and quiet ought to be secured to the neighbourhood between midnight and seven o'clock in the morning.—A tradesman sued a football club, which was not a registered association, for an amount due for advertisements, but it was held that the club had no legal existence, and that the amount could not be recovered unless some member of the committee had personally pledged his credit, and thus made himself liable.

Coaching. Of recent years there has been a tendency towards reviving the practice of journeying between fixed points by coach; and whilst this mode of travelling was a necessity in the days prior to the introduction of railways, it is now chiefly indulged in for pleasure, and as a rule is confined to the summer months, a notable exception being that inaugurated by Mr. H. M'Calmont on Nov. 12th, '89, on which date he commenced running a coach between **Ross and Monmouth**, *via* Kerne Bridge and Whitechurch, during the winter. Throughout the summer season several coaches start on specified days from **Hatchett's Hotel**, Piccadilly (the famous White Horse Cellars), for Brighton, Virginia Water, Colchester (a new venture organised by Mr. Mackenzie), and other favoured resorts. The leading and best organised clubs are the **Coaching and Four-in-Hand** (the latter being the senior), their meets at the Magazine in Hyde Park always attracting large and aristocratic assemblages; next to which comes the **Tandem Club**, instituted in '87, chiefly through the exertions of Mr. Walter C. Goldsmith. The meets of this club take place at the Botanical Gardens, Regent's Park. Visitors from America evince a strong predilection for this old-fashioned conveyance, as affording better and more pleasant opportunities of viewing the beauties of the country and the historic castles, abbeys, and other landmarks which dot the picturesque coaching routes mapped out by our forefathers. For the **Lonsdale and Shrewsbury** match see **Turf**. Consult "Coaching," *Badminton Library Series*.

Coal. See **TRADE**, '91.

Coal Sales Act. This Act requires coals to be sold by weight, and provides that if it appears that a sack of coal is of less weight than represented by the seller, then the seller shall be liable to a penalty. It appeared, in the case of **Roberts v. Woodward** (Queen's Bench Div., July '90), that the coal merchant had coals

brought upon his premises in sacks which his men had weighed and represented to contain one or more hundredweight, and then these were sold and delivered to customers. A customer ordered 5 cwt., and five sacks were sent as containing a hundredweight each, and the man who was delivering them was stopped by an inspector, and it was found that one was 38 lb., another 17 lb., another 11 lb., and another 7 lb. short; upon which the coal merchant was summoned before a Metropolitan police magistrate, who, however, did not consider it was proved that the seller had made any representation as to the weight of the coal in the sacks, and dismissed the charge. The prosecutor, the inspector, on the part of the London County Council, appealed. The Court, however, was of opinion that there had been no representation at all by the seller of the coals—that is, the coal merchant—for the man who delivered the coal was not the seller. The magistrate was therefore right, and the appeal must be dismissed.

Coaling Stations, British (see previous editions). The improvement of the defences of colonial ports and coaling stations, for which provision was made in the Imperial Defence Act of 1888, and which it was then estimated would be completed in three years, has been continuous. The armament of the coaling stations, according to the programme then laid down, is on the point of completion with the addition of Table Bay. The armament has been sent to Singapore, Hong Kong, Table Bay, Simon's Bay, Colombo, Jamaica, St. Lucia, and Sierra Leone; and the guns for Aden and Mauritius are either on their way out or ready to go. The armament is also ready for Esquimaux, St. George's Sound and Torres Straits, but in these places the Colonial Governments have not completed, and in some cases have not begun, the necessary works for mounting the guns when sent out. Captain Moore, R.N., was sent out early in '91 in order to act in conjunction with a committee of Colonial Officers for the purpose of inspecting and reporting upon the proposed fortifications in King George's Sound and Torres Straits. An important exposition of the principles which govern the Imperial policy of national defence, including the protection of coaling stations, ports, etc., is to be found in two documents presented to Parliament at the close of '90. These papers emanated from the Colonial Office, and express the views of the Colonial Defence Committee, a body specially charged with the consideration of the larger questions of Imperial Defence. The chairman of the committee is the Inspector-General of fortifications, the Directors of Naval and Military Intelligence, as well as officers representing the departments of the Adjutant-General and of the Director of Artillery being also among its members. The subjects dealt with are—(1) the defence of the West Indies, and (2) the general aspect of the military position of the Australasian Colonies. With regard to the first it is pointed out, that history—and especially the history of the fighting which has taken place in the West Indies—clearly shows that territorial aggression cannot be successfully carried out in face of a superior naval force. In case of a war, therefore, the Government will maintain a superior naval force in West Indian water, and doing so, territorial aggression becomes impossible, and the necessity for

maintaining large bodies of Imperial troops in the islands no longer exists. But naval superiority will not entirely prevent the action of fast cruisers which may seek to make brief raids on unprotected ports with a view to requisition money, coal or other stores, or to inflict injury upon private property; moderate and inexpensive measures should therefore be taken for self-defence against such attacks by localities exposed to them, and the Government offers guns and arms to the colonies are willing to take steps for their protection against such minor raids. Jamaica and St. Lucia, being selected as coaling stations on account of their strategic importance in relation to the operations of the fleet in these waters, have been fortified, and therein the Imperial troops are now concentrated. The second memorandum deals with the reports drawn up by Major-General Sir J. B. Edwards in regard to the defences of the Australasian Colonies, and states that the Colonial Defence Committee, with full knowledge of the resources of other Powers, are unable to accept the point of view from which Sir Bevan Edwards appears to regard the military requirements of this portion of the Empire. Moreover, it is pointed out that while, as regards purely local matters, the Colonial Governments will doubtless be disposed to accept the opinions of the commandants of their forces, who are their military advisers upon the spot, these officers are selected in regard to their qualifications for the purposes of special duty only, and however able they may be, they have neither the knowledge nor the experience necessary to qualify them to deal with the larger questions of Imperial defence. The memorandum defines the conditions of probable attack in Australasian waters as follows:—Territorial aggression, except on a large scale, is out of the question; transport for an expeditionary force could not be prepared without the fact becoming known, when a corresponding redistribution, if necessary, of the British navy would be made. Such an expedition could not hope to reach its destination until the British navy had been definitely worsted. Even then the difficulties and the risks would be so considerable that it is almost inconceivable they would be made. History affords no parallel of such difficulties successfully overcome. Attack upon the Australian littoral thus reduces itself to raids by an enemy's cruisers based on his protected ports. The nearest French port is Nouméa, distant about 780 miles from Brisbane, 1100 miles from Sydney, and 1100 miles from Auckland. The next in point of distance is Saigon, 1700 miles from Brisbane and 4800 miles from Auckland. The French in Nouméa would have enough to do to busy themselves with defence, and Saigon falls within the scope of the British China squadron, and could not be utilised as a base till that squadron was defeated. Vladivostok, the only possible base of any other Great Power, 4900 miles from Brisbane, is closed by ice during from three to four months in the year, and the line of action passes through waters defended by the British China squadron. The naval force of Great Britain is far superior in Australasian waters to that of any other Power or combination of Powers, and its strength can, if it were necessary, be increased more rapidly than that of any other Power. The conditions thus sketched out supply a solid basis upon which the standard of

the armaments of the Australasian Colonies may safely rest. The most probable danger lies neither in territorial aggression, nor, as long as efficient land forces are maintained, in raids upon colonial ports, but in the loss of mercantile vessels in the neighbourhood of the ports. Defence against danger of this nature can only be provided by naval means. The committee, then, cannot accept Sir Bevan Edwards' point of view, that from 30,000 to 40,000 men are necessary for defence against territorial aggression; but at the same time, as the possibility of being able to take a vigorous offensive at the outset of war against points which might subsequently prove menacing would be a strategic advantage of the first importance, the committee, while differing from the line of argument laid down by Sir B. Edwards, concurs generally in the strength of the forces he lays down. When we recognise the vital importance of the maintenance of the national sea power, we may well feel satisfaction that the Australasian colonies have entered into a partnership with the mother country for the maintenance of a strong fleet in the Southern Pacific, and that the creation of local forces and the fortifications of Sydney, Melbourne, Brisbane, Adelaide, Auckland, Wellington, Lyttleton, Dunedin and Hobart have been undertaken. Bases and coaling stations are thus established for the British navy, and a force is established which can co-operate with the navy in the capture of the enemy's bases and coaling stations. No coaling-station, however strongly fortified, can hold out for long, if its communications are cut by sea. These places are valuable in war time only so long as their owners dominate the adjacent seas; naval supremacy having disappeared, the coal should be destroyed, and the fortifications demolished, before others seize them. Apart from armaments, at Sydney, N.S.W., naval works comprising naval and victualling stores, engine and ship repairing factory, deep-water wharf with slips to lift the heaviest guns and extensive magazines for naval ordnance stores are being carried out by, and at the expense of, the Colonial Government. The completion of these works will allow of the surrender of the Admiralty establishment at the Circular Quay, Sydney, to the Colonial Government. At Bombay, a dry dock has been constructed by the Port Trust of the following dimensions:—Length 500 feet, breadth at entrance 65½ feet, depth for docking 27½ feet at high water, ordinary spring tides. This dock will take first-class cruisers of the *Aurora* and *Edgar* classes, but not battleships. New docks at Halifax, Esquimaux and Hong Kong are now open and in use.

Cobbe, Frances Power, was b. in Dublin 1822. Has for years been associated with various social and philanthropic movements, and is the author of many works devoted to the solution of social and ethical problems. She was actively associated with the late Mary Carpenter in the work of bringing criminal and neglected children under healthy educational influence. She has been a powerful advocate for the removal of women's disabilities, and for the advancement of female education. She is also a prominent leader of the anti-vivisection agitation. Amongst the most important of her books are "An Essay on Intuitive Morals" ('55); "Religious Duty" ('57); "Darwinism in Morals" ('72); "Duties of Women" ('80); "The Scientific Spirit of the

Age" ('88). For many years Miss C. has contributed to various newspapers and periodicals.

Cochin-China. (1) Lower or French Cochin China consists of a portion of the old Annamese province of Champa, and comprises the whole of the Mekhong delta, but comprehends little or none of Cochin China proper. Area 23,082 sq. m., pop. 1,792,733. Capital, Saigon. (2) Cochin China proper is the protectorate kingdom of Annam, exclusive of Champa (or French Cochin China) and Tonquin. See ANNAM, and COLONIES OF EUROPEAN POWERS.

Cocos (or Keeling) Islands. A dependency of the Straits Settlements (*q.v.*), 700 miles southwest of Java. Area 9 sq. m., pop. 400. Consists of Horsing and Keeling, with several smaller islands. Abound in cocoa-nut palms.

Coinage Act, '91. See SESSION, sect. 56.

Cole, Vicat, R.A., landscape painter, was b. at Portsmouth 1833, and received early artistic instruction from his father. Exhibited his first paintings in '52, and six years later was elected member of the Society of British Artists. His picture entitled "A Surrey Cornfield: a View near Leith Hill," greatly increased his reputation, and gained for him the silver medal of the Society for the Encouragement of the Fine Arts ('60). Mr. C. became an Associate of the Royal Academy in '70, enjoying the distinction of being the first landscape painter deemed worthy of that honour after a period of thirty years. Elected R.A. ('80).

Coleridge, John Duke Coleridge, P.C., F.R.S., 1st Baron (creat. 1873), Lord Chief Justice; c. s. of the late Rt. Hon. Sir John Taylor Coleridge, of Heath's Court, Ottery St. Mary, Devon (a judge of the Court of Queen's Bench), was b. 1801, and ed. at Eton and at Balliol College, Oxford: B.A. ('42), M.A. ('46), Hon. D.C.L. ('77); was scholar of Balliol and Fellow of Exeter. Called to the bar at the Middle Temple ('46); made a Q.C. and bencher of his inn ('61); a sergeant-at-law (Nov. '73); was Recorder of Portsmouth ('55-65, when he resigned). He was leading counsel for the Tichborne family in the celebrated Tichborne case, and crowned his great success as an advocate by his masterly cross-examination of the "claimant." Was M.P. for Exeter (July '65 to Nov. '73); was Solicitor-General (Dec. '68 to Nov. '71); Attorney-General from the last date to '73, when he was appointed Chief Justice of the Common Pleas; and made Lord Chief Justice of England ('80). Paid a visit to the United States in '83, and was very cordially received, particularly by the judiciary and the bar. He has contributed to the *Edinburgh Review* and other periodicals. Lord C. distinguished himself in Parliament by his powerful advocacy of the removal of Dissenters' disabilities at the universities. He unveiled (Oct. 31st, '91) a bust of Matthew Arnold, in the Baptistery of Westminster Abbey, and delivered a felicitous eulogy.

Collins, Sir Richard Henn, newly appointed a judge of the High Court of Justice, was b. 1842. His father was Mr. Stephen Collins, Q.C., of Dublin. Was ed. at Trinity College, Dublin, and Downing College, Camb., where he was 4th in Classical Tripos. Was elected a Fellow of Downing College in '65. Called to the bar at the Middle Temple in '67, took silk in '83, and was appointed Bencher of his Inn in '84. Sir Richard is favourably known as joint author of "Smith's Leading Cases." In the recent *causes célèbres* of Sharp v. Wakefield and the

Clitheroe abduction case, the new judge acted as counsel. His appointment, in the place of Sir J. F. Stephen, was announced in April '91.

Cologne Seaport. In Aug. '91 it was stated that the municipality of Cologne, after considerable time spent in consideration and negotiation, had decided upon a scheme to open up the port to the sea. Preliminary investigation showed that the Rhine may be made to admit over 90 per cent. of the German ocean-going vessels to Cologne, existing bridges being converted into swing bridges, or side canals being made. The cost is estimated at 4½ millions sterling.

Colombo. Capital of Ceylon (*q.v.*), pop. about 120,000.

Colonial Institute. See ROYAL COLONIAL INSTITUTE.

Colonial Office. The authority of the Crown throughout our colonial dependencies is exercised by the Colonial Secretary. Governors of colonies are nominated to the Crown by him;

the enactments of all colonial legislatures come before him, for approval or disallowance (a pure formality in most cases); and in his office the constitution of new colonial legislatures is planned. The direct executive action of the department is mainly confined to Crown colonies, protectorates, etc. (see BRITISH EMPIRE). An **Emigrants' Information Office** (*q.v.*) is attached to the department. Crown colonies are represented in London by Crown Agents, and colonies having responsible governments by Agents-General (see DIPLOMACY). The **British Settlements Act 1887** enables Her Majesty in Council to provide for the government of her possessions acquired by settlement, and by Order in Council to establish all such laws and institutions, and constitute such courts and officers, and make such provisions and regulations for the administration of justice as may appear to be necessary.

Colombia. A republic of Central America, formed by the union in 1861 of nine states—viz., Antioquia, Bolivar, Boyaca, Cauca, Cundinamarca, Magdalena, Panama, Santander, and Tolima—under the title of the "United States of New Granada," changed in '71 to that of the "United States of Colombia." After the termination of the revolution, which prostrated this country in '84-5, a new constitution was promulgated in August '86. By this constitution, the Republic, from being Federal, has become Central; and the country is now styled the "Republic of Colombia." The sovereignty of the nine States is abolished, and they are now simple departments, their presidents being reduced to governors under the direct nomination of the President of the Republic, whose term of office has been extended to six years. The Senate, as before, consists of 27 members, 3 from each department, and the House of Representatives of 66 members, elected by universal suffrage, each department forming a constituency and returning one member for 50,000 inhabitants. Area, 513,938 sq. miles; population about 4,500,000. Capital, Bogota, pop. 100,000. Estimated revenue for '89, \$21,500,000 (dollar = 3s 4d.); expenditure, \$28,000,000; foreign debt, \$7,000,000, chiefly due to English creditors. Finances in a very unsatisfactory condition. Industries chiefly confined to agriculture and the rearing of cattle. Great attraction of Colombia its mineral wealth. Rich mines of gold, silver, iron, copper, lead, etc., and precious stones. Army, in time of peace, nominally 6,500 men. Education steadily progressing. Postal and telegraph services kept up as efficiently as the state of the country will admit. Railway construction extending. The bulk of the foreign trade is with Great Britain and the United States.

Colour-Blindness. In many persons there occurs an indifference of the retina of the eye to certain colours, which is not met with in normal-eyed individuals. This defective colour-perception is included by the term colour-blindness. The colours of the spectrum are, we know, red, orange, yellow, green, blue and violet, which are gradually merged the one into the other. These are called simple colours. When two or more of the spectrum rays fall upon the retina at the same spot, mixed colour sensations arise. Insensibility to red is commonly met with among the colour-blind. This was the case with Dalton, the celebrated chemist, and his own report upon it created such interest that his name became linked with the defect, though colour-blindness is now the accepted term. The French, however, still speak of Daltonism. This article does not permit our entering into the theory of colour-vision, and it must suffice to say that what is known as the Young-Helmholtz theory is that generally adopted. It gives red, green, and violet as three fundamental colour sensations, and it is sought to explain colour-blindness on this "three-colour theory." In a recent book, Captain Abney, one of our ablest physicists, supports this theory. The researches of Hering should, however, be studied in this connection. For some time past great dissatisfaction has been felt at the inadequate safeguards against the dangers of colour-blindness, so far as relates to the navigation of vessels on the high seas, and the employment of persons whose duty compels them to interpret coloured lights and signals. The Board of Trade have never

recognised the real importance of the question, and, although certain tests are in vogue, practical men have denounced them as insufficient, and, in working, frequently unjust. Some of the great shipping lines disregard these tests, and apply their own—the Cunard Company, for example,—while many of the Liverpool ship-owners refuse the Board of Trade certificate, and re-examine their employees. In Feb. '90 Mr. B. Brudenell Carter suggested that the Royal Society should investigate colour-blindness, and, the official sanction of the Board of Trade being extended, an inquiry was instituted. The members of this "colour-vision committee" are as follows: Lord Rayleigh (Chairman), Capt. Abney (Sec.), Mr. Carter, Prof. Church, Dr. J. Evans, Dr. Farquharson, M.P., Prof. M. Foster, Mr. F. Galton, Dr. Pole, and Sir G. G. Stokes, Bart., M.P. An immense amount of work has been done by the committee, and it is expected that their report will shortly be issued. As legislation by Parliament will probably follow, it is being awaited with much interest. The scope of the inquiry has embraced the examination of the chief railway officials, and of large numbers of employees, the former as to the tests in use and the methods of application, the latter as to vision; consideration of the tests of the Admiralty, the mercantile marine, the War Office, India Office, and shipping lines generally. Statistics have been obtained from various hospitals, and the physiology of colour-vision has been studied, so far as it relates to diseased conditions, such as tobacco amblyopia. Consult Reports, Marine Department, Board of Trade; "Colour-Blindness," by T. H. Bickerton (Nature Series); "Colour-Blindness," by Dr. Edridge-Green.

Commons, Principal Officers of House of. Chairman of Ways and Means, Rt. Hon. L. H. Courtney, M.P.—Clerk of the House, R. F. D. Palgrave, Esq., C.B.—Clerk Assistant, A. Miuman, Esq.; Second Ditto, F. B. G. Jenkinson, Esq.—Principal Clerks: W. A. Ferguson-Davie, Esq., Public Bills and Fees; C. E. Austen Leigh, Esq., Committee Office; James B. Bull, Esq., Clerk of the Journals; Felix H. Webber, Esq., Private Bill Office.—Senior Clerks: W. Gibbons, C. Forster, R. Dickinson, F. St. George Tupper, W. H. Ley, J. H. W. Somers, Esqs.—Assistant Clerks: H. C. Tower, C. E. Freire, L. T. Le Marchant, G. C. Giffard, A. W. Nicholson, Esq., Sir E. H. Doyle, S. L. Simeon, A. I. Dasent, E. C. Howe Browne, and H. Erskine Wemyss, H. West, H. A. Ferguson Davie, Esqs.—Examiners of Petitions for Private Bills, C. W. Campion, M. A. Thoms, Esqs.—Taxing Master, C. W. Campion, Esq.—Clerk to Examiners and Taxing Master, H. C. Tower, Esq.—Librarian, R. Walpole, Esq.—Shorthand Writer, W. H. G. Salter, Esq.—Secretary to Speaker, E. Ponsonby, Esq.—Sergeant-at-Arms, H. D. Erskine, Esq.—Deputy Sergeant, F. R. Gosset, Esq.—Assistant Sergeant, Hon. E. H. Legge.—Chaplain, Ven. Archdeacon Farrar.—Speaker's Counsel, Hon. E. Chandos Leigh, Q.C.—Referee of Private Bills, Alfred Bonham Carter, Esq.

Commons, House of. With certain exceptions any male of full age may be elected to represent a constituency in the House of Commons. English and Scotch peers are entirely disqualified, but Irish peers may be returned for any constituency in Great Britain. All English, Scotch and Irish judges, except the Master of the Rolls in England; clergymen

of the Established Church of either of the two kingdoms; Roman Catholic priests; the holders of various offices specially excluded by statute—including revenue officers—persons who have been convicted of certain offences, aliens who have been naturalised (except in special cases where exceptions are made), imbeciles, government contractors (except contractors for government loans), and sheriffs and returning officers within the constituencies for which they act, all these are disqualified. No candidate requires any property qualification, and no member receives any payment or allowance whatsoever from the country for his service in the House or on any committee thereof. The Speaker (*q.v.*) is the first to take the oath and subscribe the roll in a new House of Commons, and is followed by the other members, who come to the table without any ceremony, and are presented to him by the clerk. Members returned after a general election are introduced by two other members. The form of oath taken is as follows:—"I, —, do swear that I will be faithful and bear true allegiance to Her Majesty Queen Victoria, her heirs and successors, according to law. So help me God." Quakers, Moravians, Separatists, and others are permitted to make an affirmation to the same effect as the oath; and by 51 & 52 Vict. ch. 46 every person upon objecting to being sworn, and stating, as the ground of such objection, either that he has no religious belief, or that the taking of an oath is contrary to his religious belief, shall be permitted to make an affirmation instead of taking an oath in all places and for all purposes where an oath is and shall be required by law. A few years ago a valuable return was made to the House of all the members who had sat for hundreds of years before, and was printed and sold as a parliamentary paper. A seat in the House is vacated when the holder is created a peer or succeeds to the peerage, by death, or on his acceptance of any office of profit under the Crown; and there are also certain disabilities attached to bankruptcy. All the principal members of the Government, on accepting office, vacate their seats and are eligible for re-election; but the rule does not apply to such offices as Secretary to the Treasury or other similar appointments which are not held direct from the Crown. A change from one office held direct from Crown to another does not involve going again to the constituency. In theory a member cannot resign, but he can accept the office of honour or profit under the Crown of the stewardship of the Chiltern Hundreds, or of the manors of Northstead, which is granted to him by the Chancellor of the Exchequer, and resigned immediately its purpose is served. (See WRITS.) The Act of Union with Ireland increased the number of the House of Commons to 658, and though it stood nominally at this figure until the end of the Parliament of '80-85, the disfranchisement of 4 constituencies returning 6 members, and the suspension of 12 writs in 7 cities and boroughs, had reduced the total of members to 640. The Redistribution Act did not alter the apportionment of members to Ireland or Wales, but increased the number returnable by Scotland from 60 to 72, and these 12 new seats being added to the nominal number of the House brought it up to 670. An alphabetical list of members follows below, together with summary of the number and political bias of the

members returned by the boroughs, counties, and universities of England, Wales, Scotland and Ireland, to the Parliaments of '85-6 and August '86. The summary also exhibits the result of the changes which the subsequent bye-elections have made up to November 9th, '91. A word as to the parts of the House which the different sections of members occupy may be added here. The benches are fixed in two long rows, extending on either side from the chair to the bar, and each row is divided midway by a narrow passage known as the gangway. The front bench to the right of the chair and above the gangway is the Treasury Bench, and upon it sit the leader of the House and as many of his ministerial colleagues as can find accommodation there. The other benches on the Ministerial side are occupied by supporters of the Government; below the gangway having been, when the Liberals were in power, the resort, for the most part, of the Radical members. In the last Parliament the Liberal Unionists sat, some above and some below the gangway, Mr. Chamberlain and Sir G. Trevelyan taking the latter position, while Lord Hartington chose a place immediately behind the Treasury Bench. On the left of the chair are the Opposition benches, the front of which, above the gangway, is reserved to ex-Ministers and Privy Councillors. Now that the Liberals are in opposition Lord Hartington and Mr. Chamberlain, Mr. Gladstone and Sir W. Harcourt all sit on the front bench on this side. Since 1880 the Nationalists have always sat in opposition, and most of them keep below the gangway. The famous and now historic Fourth Party sat on the front bench of this quarter of the House, until its existence as such was terminated on the formation of the first Salisbury cabinet. By ancient custom the two members for the City of London sit on the Treasury Bench on the first day of the meeting of a new Parliament. The legislative duties of Ministers are familiar to most readers, but a word or two concerning some of them may be said here. If the Secretary for War and the First Lord of the Admiralty are peers, the Financial Secretary to the War Office generally, and the Secretary to the Admiralty, have charge of the Estimates. The Education Estimates for England and Wales are introduced by the Vice-President. A goodly number of the Civil Service Estimates are in charge of that hardly-worked official, the Financial Secretary to the Treasury; and he is bound to be well up in a large mass of detail, not only as regards them but other Parliamentary matters, for he arranges the course of Government business in the House of Commons. The Patronage Secretary as principal ministerial whip endeavours to secure a good attendance of members of his own side when Government business is being transacted, issuing on important occasions summonses, which are also called whips, and which, according to the urgency of the case, are emphasized by three, four, or five underlines. He is aided in his important party duties by the Junior Lords of the Treasury and the holders of subordinate Household appointments, or some of them; and with their assistance, too, he tells for the Government in divisions (*q.v.*). See PARLIAMENT, SPEAKER, ELECTION, etc. The important changes in the rules of the House, made during the sessions of '88, are noticed in detail under PARLIAMENTARY PROCEDURE.

COMPLETE ALPHABETICAL AND BIOGRAPHICAL LIST OF MEMBERS OF THE

NOTES.—(See also end of List.)—In cases where members possess a double surname

The asterisk (*) denotes Member of the last Parliament. For Members

* The bye elections held between this General Election and the next resulted in a Conservative gain of two seats.

† The Speaker is counted with the Liberal Unionists.

‡ After the South Molton Election. At this time three seats were vacant for North Wexford, Mr. J. Redmond having resigned to contest Cork city; North Leeds, Mr. Jackson having been appointed Chief Secretary for Ireland; and for East Dorset, by the decrease of Mr. Bond; and the table was made upon the assumption that they would be filled up by gentlemen holding the same political opinions as the late members.

† See heading IRISH (NATIONALIST) PARLIAMENTARY PARTIES.

Biographical.	No.
s. late Rev. A. Stewart, Barnet; J.P. Sussex; contested Spalding unsuccessfully in '86 and '87; Stewart Bros. & Spencer, Rochester	118
See biographical notice	119
s. late Sir T. Sykes; E. Rugby and Trin. Coll. Camb.; D.L. and J.P. E. Riding Yorks	120
s. of Rev. T. E. Thomas, J.P., Baptist minister; E. Clifton School and Lond. Univ., of which he is a B.A.; called bar '74, and practises on the S. Wales Circuit; J.P. County Pembroke.	121
s. late Samuel Thomas; E. Gonville and Caius Coll., Camb., B.A. '80, M.A. '83; managing partner of Thomas, Riches & Co., colliery owners, Cardiff; J.P. Glamorganshire.	122
See special biography	123
e.s. Sir Harry Verney, Bart., P.C.; E. Harrow; ent. R.N. '51, Comm. '66, Capt. '77, retired '84; served in Crimea and India with distinction; D.L. and J.P. Bucks and Anglesey; has been Chm. Quarter Sess. Anglesey; and Memb. London County Council, Brixton Div.	124
s. of Richard D. Webb, editor of <i>Anti-Slavery Advocate</i> , who was principal Irish worker in the cause of American anti-slavery; E. privately; was a master printer, but is now retired from business; was one of the secretaries of the Home Rule Association inaugurated in '70; author of a "Compendium of Irish Biography."	125
One of the originators of the Bristol Waggon Works Co.; has been for many years Chairman of the Patent Nut and Bolt Co.; J.P. Bristol; Mayor of that City '80-84.	126
s. John Wilson, of Ferguslie, Paisley; E. Paisley High School; head of the firm of Wilson & Co., iron tube manufacturers.	127
Worked as a miner for some years, and also spent some time at sea; assisted at the formation of the Miners' Association '69, app. '82 treasurer of that association; in '90 app. Fin. Sec. of that Association; he is Sec. of the Durham Miners Political Association.	128
e.s. Hon. Percy S. Wyndham, formerly M.P. for W. Cumberland; late Lieut. Coldstream Guards; served in Suakin expedition '85; private sec. to Rt. Hon. A. J. Balfour since '87.	129
A tenant farmer, who is well known in the district which he now represents.	

In the foregoing List the members of the House are divided into the usual four broad Parties--Conservative, Liberal Unionist, Gladstonian Liberal, and Nationalist, as they stood at the close of the General Election. Not the least noteworthy fact concerning the result of this election was the confusion into which the party nomenclature was thrown. Members who followed the leadership of Mr. Gladstone claimed to be Liberals, while to this designation those who disagreed with that statesman, but who had been formerly associated with that party, still laid claim. Thus it came about that the latter were called Liberal Unionists, while the former were classed as Gladstonian Liberals. The Irish party, who followed Mr. Parnell, were, in like manner, called Parnellites, but owing to events which split the party, we have now described all Irish members, not Conservatives, as Nationalists. (See IRISH PARLIAMENTARY PARTIES.) The following gentlemen desire to be described as follows:--Bright, Jacob, "Liberal, not Gladstonian Liberal;" Corbett, J., "Independent Unionist;" Grove, Sir T. F., "Liberal;" Hunter, W. A., "Liberal, not Gladstonian Liberal;" Palmer, Sir C. M., "Liberal;" Stewart, Halley, "Liberal, not Gladstonian Liberal;" Storey, S., "Radical, not Gladstonian Liberal;" Wilson, Henry J., "Radical and Home Ruler, not Gladstonian Liberal."

Pollings at the General Election of 1886, and at all subsequent Bye-Elections to Nov. 13th, '91.

The following is an alphabetical list of the Parliamentary constituencies of the United Kingdom, with the names of the member or members

returned by each, and, where there was a contest, the figures polled by the candidates, at the last general election (July '86), and at every subsequent bye-election to Nov. 13th, '91. The great majority of the old constituencies were by the last Redistribution Act split up into divisions each returning one member, and the name of these divisions is given in parentheses after the name of the county or borough, but as under an alphabetical arrangement of counties and boroughs it may not be easy to readily find some of these divisions which bear local names, a special list has been compiled, showing in one column the local name of the division and in the other the name of the county or borough in which it is situate. This list will be found at the beginning of the alphabetical list of constituencies. The few places which, like the City of London, Leicester, etc., were not broken up into single-member divisions, and still return two members, are distinguished in the alphabetical list of constituencies by a figure thus (2). The figures in brackets, e.g. [5280], show the number of electors on the register as revised for '91.

Local Names of Divisions and the County of Borough in which each is situate.

Comoro Islands, The. A group of volcanic islands in the Mozambique Channel, between the east coast of Africa and the north-west coast of Madagascar. Area 758 sq. m., pop. 63,000. The group consists of four small elevated islands—Great Comoro, Mohilla, or Little Comoro, Anjuan, erroneously called Johanna, and Mayotta or Mayotte. Mayotte is a French possession, and the other islands form a French protectorate. Commercially the most important is Mohilla, which carries on a brisk trade with Madagascar, Zanzibar, Mozambique, and the rest of the mainland. The people are Mohammedans, speak Arabic, and are akin to the mixed races of Zanzibar. A British consul is resident.

Companies Act (1862) Amendment Bill. See SESSION, sect. 57.

Company Law in '91. There has been the usual amount of litigation under the Acts relating to limited liability companies, and various important decisions have been pronounced. In the case of the **Britannia Fire Association**, a Judge in Chancery decided that where a father, now deceased, had applied for shares for his son without the latter's knowledge or authorisation, the father's executors could be placed on the list of contributories in respect of the shares. In the Court of Appeal, however (Dec. 6th, '90), it was held that, as there was no agreement by the father to take the shares himself, the Court could not hold his executors liable.—In April '89 a company was formed under the title of the **Zoutpansberg Prospecting Company**, and subsequently it promoted a second company, called the **Johannesburg Hotel Company**, arranging to secure some £3750 as their profit. As part of their payment the first company were allotted 2500 shares of the Hotel Company, but on the liquidation of the latter

concern it was discovered that this allotment of fully paid up shares had been made to the Prospecting Company without any registration of an agreement for their allotment as required by law. The shares, as a matter of fact, were not paid up, and the claim of the liquidator, that the Prospecting Company was therefore liable for £2,500, was maintained by Mr. Justice Clutton. The decision was affirmed in the Court of Appeal (Dec. 17th, '90). In the Queen's Bench Division (Dec. 20th, '90) **White's Asbestos Company, Limited**, sued Mr. Hoare in respect of allotment money and calls upon 1250 shares. It appeared that the company was formed with a capital of £100,000, to acquire and work certain asbestos properties in Quebec. According to the prospectus the land had been proved capable of profitable working, and a Mr. Boyd, who had prospected the property, was an engineer experienced in asbestos mining. The defendant alleged that these statements were inaccurate, and misleading, and alleged that the property, which had been bought originally for £500, was not a valuable asbestos property at all, and that the prospectus contained a report by a person wholly unfit to judge, the report being entirely untrue. It appeared, in the course of the case, that, though the directors' attention had been called to a newspaper article with reference to Mr. Boyd's report, they did nothing more than telegraph to him, and then proceeded to issue the shares. Mr. Justice Day held that the prospectus contained material statements which were substantially untrue, and for which the company was responsible. He therefore directed that the defendant should recover from the company the amount he had already paid, and that his name should be removed from the register, with costs.—Where a shareholder, though aware of misrepresentations in a prospectus, did not commence proceedings for the removal of his name from the list of shareholders for some months, he was held to have lost his right to relief. (*In re the Metropolitan Coal Consumers' Association, Dunk-*

ley's case, Chancery Division, Jan. 28th, '91.) In *Hyslop v. Morel* (Chancery Division, Feb. 4th, '91) the plaintiff instructed his clerk, Walter Morrison, to apply for 100 shares in the defendant company. Morrison also applied for 20 shares, which he desired for a friend, and the whole 120 shares were allotted to him, and he was placed upon the register of the company. Subsequently the hundred shares were transferred to the plaintiff, who was put upon the register in respect of them. He subsequently brought an action against the company, alleging that he was induced to take the shares by misrepresentations in the prospectus. It was held that the plaintiff could not succeed, as he had received his shares from a person who was not deceived by the prospectus. A shareholder in a company, which was wound up in order to be reconstructed, became entitled to cash and to shares in a new company. The latter rose to a considerable premium, but the shareholder's cash and shares were not handed over to him until the market value of the shares had gone down. It was held that the defendant, the liquidator in the voluntary winding up, was not liable for damages when his neglect was not wilful or fraudulent, and in no way arose from *mala fides* (*Knowles v. Scott*, Chancery Division, Feb. 20th, '91).—Where a prospectus stated that there had been "a recent discovery of a regular true lode of the rare and precious metal uranium," and the statement was in fact untrue, the plaintiffs were held entitled to removal from the list of shareholders. (*Cronbach v. Uranium Mines*, Chancery Division, Feb. 28th).—In the absence of fraud, claims by creditors of a company against its directors are barred after the dissolution of the company made under sect. 3 of the Companies' Act, 1862. (*Oxton v. Gorst*, Court of Appeal, April 22nd, '91).—In the case of the *Valley Gold Company, Limited* (Court of Appeal, April 18th, '91) the plaintiff had been induced to take a number of shares in consequence of the statement of the promoters in their prospectus that the directors had themselves received favourable reports as to the character of certain gold-bearing land in California. The fact was, however, that the report had not been made for the directors as stated, but for the vendors of the property, and had been afterwards adopted by the directors. Mr. Justice Romer held that the plaintiff was entitled to judgment, as he had shown that the report was not made by the directors' instructions; but the Court of Appeal held that there was no evidence of fraudulent action on the part of the directors, and released them from liability, though without costs. Had the prospectus been issued at a later date, this plea of absence of fraudulent intention would probably not have availed, as the directors would now have to prove an honest belief that the reports which they used were really made, as they alleged, for themselves.—In *re Bennett* (Chancery Division, June 2nd, '91) was an action brought by the liquidators of an insurance company against the representatives of a deceased director to recover certain amounts paid to the shareholders as interest or dividend. It appeared that the company had never earned any profits, but interest at the rate of 5 per cent. had been paid half-yearly to the shareholders until the Board of Trade interfered in '78. By the articles of association no dividend or bonus was payable except from the profits

of the company, and the Court therefore ordered that the amount claimed must be paid out of the estate of the deceased director with costs.

—A shareholder who has been settled upon the list of contributories for the amount due on his shares can be sued by the company, notwithstanding that a balance order for payment has been made in the winding up of the company under the Companies' Act, 62. (*Westmoreland Slate Company v. Fielding*, Court of Appeal, June 12th, '91).—Where the majority of the debenture holders of a company had resolved that the debentures of the company should be exchanged for paid-up preference shares in another company, it was held that, under the circumstances which existed, the absentees or dissentients were not bound. (*Mexican Investment Company v. International Company of Mexico*, Court of Appeal, July 4th, '91).

The case of *In re the North Australian Territory Company, Limited* (Chancery Division, July 6th, '91), raised the question whether a director, upon taking his qualification shares in a limited company, can enter into a bargain for insurance against any liability in respect of those shares. The point arose upon a summons by the liquidators of the above company against Mr. T. Archer, one of the late directors, calling upon him to make good the sum of £500 under the following circumstances: Mr. Archer was one of the first directors of the company, and, under the articles, had to hold the qualification of £500 in fifty shares of £10 each; but it appeared that, as one of the conditions of his being director, he made a bargain with the promoter, Mr. R. Murray Smith, under which, although in the first instance Mr. Archer paid for his shares, Mr. Smith agreed in writing to purchase them from him at any time at par. Mr. Archer afterwards retired from the board, and thereupon requested Mr. Smith to take the shares off his hands, which Mr. Smith did, about Nov. '88, by paying him £500, and the shares were thereupon transferred under Mr. Smith's direction, but were practically valueless. Mr. Justice Kekewich described the case as one of some difficulty, but held that as the company had not sustained any loss or damage the application must fail.—The case of *In re Bell Brothers, Limited* (Chancery Division, July 21st), raised important questions as to the proper exercise by directors of a joint stock company of powers conferred on them by the articles of the company of rejecting the nomination of a person as a member of the company. It appeared that the company was incorporated in '73 for the purpose of taking over the iron and colliery business of Bell Brothers, of Middlesbrough and Newcastle-upon-Tyne, previously carried on by two brothers of the name of Bell, and that the shares were allotted amongst and had hitherto been held by the two brothers and members of their families. One of the brothers, Mr. John Bell, having died, and it being desirable to provide for an annuity bequeathed by his will to his widow, arrangements were made for the sale of some of the shares to secure the annuity. Mr. George Hodgson, a gentleman of position in the north of England, became the purchaser of the shares, but the directors of the company declined to accept him as a transferee. A motion was now made by Mr. Hodgson, and also joined in by one of the executors and trustees of the will, to enforce the registration of Mr. Hodgson's name as holder of the shares. The motion was resisted

by the directors. Mr. Justice Chitty came to the conclusion that the only reason why the directors refused the transfer was their desire to keep the shares in the hands of the Bell family. They had approved Mr. Hodgson, subject only to an objection which was inadmissible, and he must therefore make the order for registration prayed.—In the case of the *Ceylon Land and Produce Company, Limited, ex parte Anderson* (Chancery Division, July 22nd), the company had declined, as was within their right, to register the transfer of a share which was not fully paid up, but had assigned no reason for their action. It was held that there was evidence of unfair conduct on the part of the board, and that as they had acted arbitrarily the register must be rectified by the placing of the transferee's name thereon.—The Court of Appeal (July 20th, '91) unanimously reversed the recent decision of Mr. Justice Cave and Mr. Justice Charles in the case of *The Queen v. The Registrar of Joint Stock Companies*. Ordinarily, when a company is started to take over an existing business, the transfer is liable to a substantial stamp duty, but there are provisions in the Companies' Acts which give special facilities for registration to existing "unincorporated" companies, and allow all their property to vest without any transfer to the incorporated company which comes into existence on registration. There being thus no need of transfer, no duty is payable. Tempted by this exemption, company lawyers brought into operation a device by which the same advantage was gained for private partnerships. In the present case the surviving partner in the publishing firm of Messrs. W. H. Allen and Company admitted six other gentlemen to an interest in the business, and a deed was executed by which they constituted themselves a company. There being thus the required number of seven shareholders, they applied for registration as an existing company, under the above provisions. The Registrar, acting on the instructions of the Board of Trade, refused, and the Court of Appeal sustained him in this refusal. The result is, that although no sale of a business may be desired, yet the partners will have to pay the duty as though it really took place. In other words, if they wish to acquire the benefits of limited liability they must pay stamp duty.—In connection with the winding up of the *Hansard Publishing Union, Limited*, and the *Anglo-Austrian Printing Union, Limited*, some extraordinary revelations were made public. It appeared that the Hansard Union was incorporated in April '89 for acquiring certain printing and publishing businesses. It had a capital of £375,000, and it paid the total sum of £325,000 for certain businesses, the owners of which received as their sale price £247,940. In July '89 the capital was increased by £125,000, and was subsequently further increased to £1,000,000. According to the Official Receiver, the businesses acquired had ever since been conducted at a loss, though considerable dividends had been paid, and the price paid for them was no doubt excessive. An approximate statement of the company's affairs on Feb. 28th, '91, showed liabilities to creditors £348,475, and share capital £922,600, with tangible assets as distinct from goodwill and copyrights roughly approximating £422,000. The Official Receiver reported that in his opinion further inquiry into the promotion and management of the company was necessary,

and on July 21st, '91, and subsequent dates, the directors and Mr. Bottomley, who was responsible for the formation of the union, were examined at great length.—In the case of the *Anglo-Austrian Printing Company*, it was incorporated on Nov. 8th, '89, for the purpose of purchasing thirteen businesses in Austria. On Feb. 22nd, '90, a prospectus was issued, from which it appeared that the Right Hon. Sir Henry Isaacs, then Lord Mayor of London, was the chairman, Mr. Horatio Bottomley, vice-chairman, and five gentlemen—Mr. Agg-Gardner, M.P., Mr. Coleridge J. Kennard, Sir Roper Lethbridge, M.L., Mr. C. Kegan Paul, and Lord Teynham—were directors. The businesses purchased were of different kinds, but all connected with the publication of newspapers or stationery business, and were described in the prospectus in very glowing terms. It appeared from the statement of counsel for the petitioner that these businesses were to be purchased from Mr. Bottomley for £600,000, of which the vendor agreed to take £200,000 in preference and ordinary shares, the balance being payable in cash, or cash and ordinary shares, at the option of the directors. The nominal share capital of the company was £500,000, divided into 250,000 preference and 250,000 ordinary shares. The articles provided, however, for the issue of £250,000 debentures, raising the nominal capital of the company to £750,000. Only a small portion of this capital, however, was applied for or issued, for it appeared that the total nominal amount allotted was £99,280, made up of 3888 ordinary shares, 388 preference shares, and 276 debentures. Of this the company actually received the sum of £93,022 in cash. It was alleged by the petitioner that of this sum of £93,022 no less than £88,500 was paid to Mr. Bottomley, £13,500 being for working capital; that a further sum of £216 was paid out of the capital in the form of dividend, and that the remainder of the £93,022, with the exception of a small balance of £26 5s., was appropriated to the payment of fees to the chairman and directors. In this case, also, there was a public examination of the directors and officers of the company. Mr. Bottomley was subsequently examined under a receiving order in bankruptcy, made on his own petition, on May 1st, '91. His liabilities were returned at £119,400 in the aggregate, of which £67,02 was expected to rank, with an estimated surplus in assets of £66,774. The Official Receiver, however, stated that the value of the latter appeared to have been considerably over-estimated, and that the claims which would rank against the estate would exceed the amount returned by the debtor. In the course of his examination Mr. Bottomley stated that he was thirty-one years of age. He was originally a solicitor's clerk, and afterwards started in business as a shorthand writer. Subsequently he became a director of printing and publishing companies. He was afterwards engaged in the forming and managing of the Catherine Street Publishing Association, Macrea, Curtee & Co., Ltd., and four other companies. He alleged that the Hansard Union never had sufficient capital to pay for the businesses it required, though its shares were sold at a premium. He himself received £52,000, less the expenses of printing, advertising, and underwriting, which he thought came to about £20,000. The union subsequently bought four businesses in the name of Mr. Julian for

£525,000, the price agreed to be paid by Mr. Julian for them being £416,000. The examination was adjourned until the Michaelmas sittings, when other revelations were made.

Comptroller and Auditor-General. See EXCHEQUER AND FINANCE.

Congo Railway. This line, which is to be 350 kil. in length, and to be completed by Dec. 31st, '94, at a cost of 25 million francs (see last ed.), will extend from Matadi on the Lower Congo to Indolo, Stanley Pool. A Brussels telegram, dated Dec. 8th, '90, was to the effect that two steamers with three locomotives had arrived at Matadi; 10 kil. of the line were nearly completed, and traffic was on the increase.

Congo River and Free State. The, was constituted and defined by the general Act of the International Congo Conference of Berlin, '86, and entered into treaties with all the great Powers, by which its status as a sovereign power was recognised. At the same time the boundaries of the new State were settled. Its area is estimated at 2,700,000 kilos., pop. 41,000,000. There are twelve territorial divisions, the capital being Boma. The central Government is at Brussels, and consists of the King of the Belgians as sovereign, and three departmental chiefs. On the Congo there is an Administrator-General, under whom are several European administrators of stations and districts. Among the chief exports, rubber, ivory, coffee, nuts, palm oil. Gold, copper, and other metals have been discovered. Districts are suitable for growing sugar, cotton, coffee, etc. In '86 Arab slave-dealers broke up the station at Stanley Falls. The army consists of 3624 black men, commanded by European officers, of whom 12 are captains. The navy comprises 5 steamboats on the Lower Congo, and 9 on the Upper Congo, besides a small flotilla.—The Commissioners of the State and Portugal for delimiting the frontier on the Lower Congo dissolved (Dec. '90) without coming to a decision. The matter was referred to the arbitration of Switzerland. A semi-official Note (11th) stated that France would adhere to the views of the Congo State and Great Britain in respect to the tariff system, and it was also reported (12th) that Holland would adhere to the General Act. The Budget for the State showed an expenditure of 4,500,000 fr. The Customs Conference arrived at a conclusion; the import duties were fixed at 5 per cent., and the export duties on ivory and guttapercha at 10 per cent.; the licence duty was suppressed, and the duties on spirituous liquors were reduced to one-third the actual value. The Dutch Minister signed the Conference Act (30th). M. Guillery was elected President of the Superior Council of the State. The Budget for '91 was fixed to balance at 4,554,031 fr. The exports in '90 amounted to 22,351,980 fr. Intelligence was received at Brussels (Oct. 4th) that Lieut Semarinel had returned from Katanga to Lusambo, and that the chief M'Siri had placed himself under the protectorate of the Congo State.

Congregational Council, International. '91. This, the first World's Council of the Congregational Churches, assembled in London on July 13th, '91, and continued in session until July 21st. More than 300 delegates were present as representatives of Congregational Churches in Great Britain and Ireland, the United States, Russia, Austria, Sweden, Den-

mark, New South Wales, Canada, Victoria, Tasmania, Queensland, South Australia, New Zealand, South Africa, India, China, Japan, Natal, West Indies, Madagascar, Samoa, Hawaii, and British Guiana. "Corresponding members" were present at the Council from the Baptist Union, the Wesleyan Conference, the Presbyterian Church of England, the Free Church of Scotland, the United Presbyterian Church, the Calvinistic Methodist Church of Wales, the Methodist New Connexion, the Primitive Methodist Connexion, the Methodist Free Church, the Society of Friends, and the Bible Christians. The origin of the Council was attributed to a conversation in '80 between Dr. Dexter and Dr. Hannay, both of whom died before the consummation of their hopes. An invitation from the Congregational Union of England and Wales was conveyed to the National Congregational Council of the United States, when the latter Council was in session at Worcester, U.S.A., in Oct. '89, with the result that a programme was conjointly drawn up by representatives of these organisations. Dr. R. W. Dale (*q.v.*) was chosen as President, and Dr. Llewellyn D. Bevan (Melbourne), Dr. Alonzo Quint (Boston), President C. W. Northrop (Minneapolis), and Rev. J. Guinness Rogers (*q.v.*) fulfilled the duties of Vice-Presidents at certain of the meetings. The Secretaries, who performed their arduous work in remarkably successful fashion, were Dr. Alexander Mackennal and Dr. Hazen. They were aided by the Revs. D. Burford Hooke, W. S. H. Fielden, W. H. Moore, and F. H. Browne, as assistant secretaries. The presidential address was entitled "The Divine Life in Man," and Dr. Dale pleaded that the Divine life which dwells in man should be present and active in all the infinite varieties of human effort and experience. Numerous papers were read before, and discussed by, the Council dealing with Congregationalism in connection with the home, the nation, the world, and the Church Catholic; the importance and the maintenance of the Congregational idea in the churches; its present position, methods, and its place; Home Missions; the training of ministers; Federation for the purpose of promoting National Righteousness and Foreign Missions; the Unity of the Church; Sacerdotalism; and Modern Belief. The Council Sermon was preached by the Rev. Dr. E. P. Goodwin, of Chicago. The business of the Council was pleasantly varied by generous entertainments by members of the Spicer family at Woodford, by Chief Justice Way, the executive committee of the Liberation Society, the Bible Society, and by various public bodies and private individuals. Interesting Excursions to Plymouth, Bedford and Scrooby (where the Independent Church was formed in 1607, from which came some of the Pilgrim Fathers), were also arranged for the delegates. A suitable pendant to a historic event was the unveiling at Leyden (July 24th) of a tablet to the memory of the Rev. John Robinson, at whose prompting the Pilgrim Fathers set forth to New England. A full record of the Council's proceedings was published by James Clarke & Co.

Congregationalism. This is the democratic form of church life. It is based upon three ideas: the right of each individual to take part in the government of the community; the autonomy of the local church; and its independence of all external ecclesiastical authority.

While complete in itself, the local church may voluntarily unite with other churches for consultation and common action. But no resolution of any such Union binds the individual church without its own consent. Usually each church has one minister or pastor, who is chosen by the free suffrages of the membership; but there is nothing to prevent there being more than one, and in fact such cases are not uncommon. In addition to the pastor or pastors, home missionaries and evangelists are sometimes appointed, whose work is distinct from, though subject to the supervision of, the regular pastorate. Congregational polity admits two orders of church officers only: bishops, elders, or pastors, who are the presidents or administrative rulers in the spiritual department of church life; and deacons, who have charge of its secular affairs. It claims to be of apostolic origin, and to be at once the highest and most natural organisation of the life of the Christian Church. It presupposes the Christian character of all members of the Church, and requires a credible profession of faith in Christ. There are in the **British Isles** 4733 Congregational churches, branch churches, and mission stations, with nearly 2900 recognised and accredited ministers, in addition to upwards of 300 evangelists. In **England and Wales** alone there are 4589 places of worship, with accommodation for 1,647,500 persons. **County or district associations** of these churches exist for the purpose of upholding and extending evangelical religion, of promoting the spiritual intercommunion of the churches, strengthening their fraternal relations, facilitating co-operation in everything affecting their common interest, aiding weak churches, and carrying on mission work within their respective areas. The **Congregational Church Aid and Home Missionary Society** expends in mission work through the county unions about £27,000 per annum. For foreign missions see **MISSIONARY SOCIETIES**. (**London Missionary Society**). There is also a general union of the churches, known as the **Congregational Union of England and Wales**, which in 1861 celebrated its jubilee by originating a fund for church extension, paying off church and chapel debts, and for evangelistic and home missionary purposes. The sum raised in connection with this celebration amounted to nearly £400,000. There are fifteen colleges belonging to the denomination in the three kingdoms, in which between 400 and 500 students are being trained for the regular ministry. Various societies have been formed for church extension; and for conducting mission work. In connection with their operations an amount of over £4,500,000 has been expended. The British Congregational churches raise for the support of religious worship, and for philanthropic purposes, in connection with their own organisations, upwards of £1,000,000 per annum. Congregationalism is also a prominent form of church life in the **United States of America**, throughout the British dependencies, and in other parts of the world. The annual meetings of the C. U. were held in '91 in **London** (May), and **Southport** (Oct.). Leading themes, including the Nonconformist Pulpit—how to retain its power; the opportunities of Congregationalism in the villages; the place and service of women in the Churches; modern Christian life in relation to money and pleasure. **Offices**, Memorial Hall, Farringdon Street, E.C. Sec. (vacant at present),

Chairman, '92, Rev. E. Herber Evans, D.D., Carnarvon. See **CONGREGATIONAL COUNCIL**, INTERNATIONAL, *supra*.

Connaught and Strathearn, H.R.H. Prince Arthur William Patrick Albert, 1st Duke of (creat. 1874), Earl of Sussex, P.C., K.G., K.T., K.P., G.C.S.I., G.C.M.G., K.C.B., Lieut.-Gen., Colonel of the Scots Guards, was b. 1850. The third son of the Queen. Mar. the Princess Louise Margaret, youngest dau. of Prince Fredk. Charles of Prussia (79). Commanded 1st Brigade, 1st Division, in the Egyptian Expedition (82). Late Commander-in-Chief, Bombay. Is now commanding the Southern District. During '91 H.R.H. visited Japan, and, on his return, took part in many social gatherings, including a meeting in connection with the Bible Society.

Conspiracy Law Amendment Bill. See **SESSION**, sect. 58.

Constantinople. Otherwise called **Byzantium**. Enlarged by Constantine the Great, who removed thither the seat of the Eastern Roman Empire (A.D. 330). This most powerful situation for dominating Europe has always been in the hands of a decaying power, the Turks wrested it from Christian hands (1452), and it is now the capital of Turkey, situated on the waterway between the Black Sea and Mediterranean. The population of Constantinople exceeds a million, and is, therefore, larger than that of any Russian city. To protect it, the Berlin Treaty left on the European side a portion of territory about the size of England and Scotland combined (80,000 sq. m.), and a population of 5,250,000.

Contagious Diseases (Animals) Bill. See **SESSION**, sect. 60.

Continuation Schools. The Royal Commissioners on Technical Education gave in their report abundant evidence that every Continental State was actively providing not merely for the elementary instruction of the children of the industrial classes, but for their advanced instruction in higher grade and apprenticeship schools. Speaking of the French schools, they stated that "besides the ordinary elementary schools there are in most of the large towns superior elementary schools (*écoles primaires complémentaires*), for literary and sometimes technical instruction. The cost of instruction in these schools, when it is not free to all, is very cheap, from seven to ten francs per month, and even these low fees are, in the case of the non-gratuitous schools, either partially or wholly remitted by means of scholarships (*bourses*) granted by the State, the departments and the communes. Some of these schools provide workshop instruction adapted to the wants of the industries of the respective districts. These schools are increasing rapidly in number, though they are still confined to the larger towns. The Commissioners visited some of the principal types of them in Paris, Rheims, Lyons, Rouen, Lille, Douai, Nismes, S. Etienne, Roubaix, and Amiens, where they found excellent provision made in them for the higher instruction of the pupils in industrial and commercial subjects—instruction such as goes to make the first-rate workman or the skilled commercial clerk. But the Commissioners called special attention to the French apprenticeship schools, which are being founded in France with excellent results. The Society of the Christian Brothers have three such schools,

one in the Rue de Vaugirard, Paris. The pupils of the ordinary schools are not received until they have a tolerable knowledge of the elementary subjects. The course of study embraces, on the one hand, moral and religious instruction, reading, writing, the elements of history, of geography, and of the French language and literature, arithmetic, the elements of algebra and geometry, surveying, linear and ornamental drawing, modelling, book-keeping, the elements of physics and chemistry, vocal and instrumental music, English, German, and gymnastics. On the trade side there is instruction in bookbinding, optical and mathematical instrument making, type setting, printing, wood carving, wood engraving, map engraving, and many other subjects. The Commissioners state that the pupils are well taught, and find employment readily after they have left the work-shops. The report of the Commissioners, proving as it does that every European country is alive to the necessity for the higher instruction of its future artisans and clerks, naturally attracted great attention in our own great industrial centres, and the great municipalities of Birmingham, Leeds, Liverpool, Manchester and Sheffield, through the instrumentality of their school boards, have set themselves resolutely to work to foster the desire and to provide the means for the continuation and perfection of the instruction in the day schools. The work of the Manchester School Board may be taken as typical of that of the great leading industrial centres, and persons desiring to learn the nature and extent of the work being done should put themselves in communication with Mr. C. H. Wyatt, one of the ablest of that most able body of men who, as clerks to the school boards, are doing so great a work in this country. The Manchester Board have evening science and art schools, commercial evening schools, evening institutes for women and girls, evening continuation schools and special classes. At the Elementary and Commercial Evening Schools (83 departments) they had on Oct. 1st '91, 5916 pupils; at the Science and Art Schools (10) 746; Institutes for Women and Girls (4), 422. The returns for the first week of the session promise a very satisfactory attendance. At the Central Commercial School the following subjects are taught: Arithmetic, book-keeping, commercial correspondence, geography and history, handwriting, shorthand and typewriting, French, German, Italian, Spanish and Portuguese; and, besides these subjects, lectures are given in banking, commercial law, commercial geography and insurance. For women and girls, instruction is provided in cookery, domestic economy and dressmaking. These great advantages are not, however, to be confined to the great towns. By the Local Taxation (Customs and Excise) Act of '90, the Council of any county or county borough may set aside for educational purposes a portion of their annual income, falling to them under this Act, for any of the purposes defined by the Technical Instruction Act. In the aggregate, the sum amounts to £74,300 for England and Wales, and already the Councils in almost every county are at work in the endeavour to provide for the higher instruction of the industrial or agricultural population. As typical of what is being done in the agricultural counties, it may be mentioned that the County Councils of Berkshire, Buckinghamshire, Cumberland, Derby, Devonshire, Durham, Gloucester, Hereford,

Leicestershire, Lincoln, Norfolk, Oxford, Somerset, Surrey, Worcester and Yorkshire have all allocated considerable sums for education. A special feature is to be made in all these counties of agricultural chemistry, and the principles of effective tillage, of manures as supplemental sources of plant food, the regulation of crops, and the varieties in their yield and quality. Great attention is also to be paid to dairy work and fruit growing. On the other hand, it may be stated that the County Councils of the great commercial and seaport towns, such as Kingston-on-Hull, Bradford, Bristol, Plymouth, Cardiff and Liverpool will, in their continuation schools, follow the example of Havre, and provide, besides instruction in the principles underlying local industries, for the higher commercial education, such as modern languages, shorthand, exchanges, banking and insurance, which will enable their own people to compete successfully with the highly trained foreign clerks, who have in many instances supplanted Englishmen in regions where they should be without a rival. The Education and Science and Art Departments of the Privy Council Office have never been more wisely directed than at the present time. Narrow views and pedantic restrictions are no longer powerful at Whitehall or South Kensington, and much may be hoped for from the co-operation of the central authorities with the indefatigable promoters of this higher education of which the country stands so much in need. See EDUCATION, TECHNICAL EDUCATION, MANUAL TRAINING, &c.

Conveyancing and Law of Property Act (1881) Amendment Bill. See SESSION, sect. 61.

Convicts. See PRISONS.

Convocation. The clerical parliament of the Church of England. Was prorogued in 1717, and did not meet again till the year 1850, when it once more found voice, after a silence of 135 years. Sits now three yearly. First sat in its present form in the fourteenth century. (Convocations or Synods without the authority of the Crown date from the very earliest times.) It consists of two Houses — the Upper and Lower. There is also a separate Convocation for each of the two great ecclesiastical divisions of England, called Provinces. The Upper House consists of the several bishops of the provinces, as enumerated below. The Lower House is composed of the Dean of every cathedral and Archdeacons of the dioceses of the province, with Proctors elected by the clergy of every diocese. They represent (1) the cathedral chapters, and (2) the minor clergy. A fresh election of Proctors is made with every new Parliament. In Convocation are discussed, and resolutions passed upon, all matters affecting the interests of the Church, both doctrinal and administrative, as also the spiritual welfare of the nation at large. But any resolutions which suggest an alteration in the services, rites and ceremonies, or the rubrics of the Church service, as contained in the Book of Common Prayer, cannot be discussed in Convocation with the purpose of making such alterations, either in the Prayer-Book or in the Canons, without the Queen's Licence and Letter of Business, giving them the authority so to do, having been first obtained. And no such alteration made by such authority can be adopted and put in force without the authority of both Houses of Parliament. **Houses of Convocation.** (In the Lower Houses those marked * are Pro-

tors for the Chapter: those marked † Proctors for the Clergy.] **PROVINCE OF CANTERBURY.**

—1. **The Upper House.** Archbishop of Canterbury, *President*; Bishops of London, Winchester, Bangor, Bath and Wells, Chichester, Ely, Exeter, Gloucester and Bristol, Hereford, Lichfield, Lincoln, Llandaff, Norwich, Oxford, Peterborough, Rochester, St. Albans, St. Asaph, St. Davids, Salisbury, Southwell, Truro, and Worcester. **2. The Lower House. Prolocutor:** Right Rev. George H. Sumner, D.D., Bishop Suffragan of Guildford. **Canterbury**—Dean R. P. Smith; Archdeacons Eden (Bishop Suffragan of Dover) and B. F. Smith; *Rev. Canon Rawlinson, †Rev. Canons Puckle and H. A. Jeffreys. **London**—Deans Gregory and Bradley; Archdeacons Sinclair, Hessey, and Farrar; *Revs. Canons Prothero and Newbolt; †Rev. A. J. Ingram and (vacant.) **Winchester**—Dean Kitchin; Archdeacons Sumner, Sapte, and Henry Haigh; *Rev. Canon Warburton, †Revs. V. Musgrave, and W. H. Lucas. **Bangor**—Dean Lewis; Archdeacons Pryce and Evans; †Revs. P. C. Ellis, T. Williams, and D. W. Thomas. **Bath and Wells**—Dean Jex-Blake; Archdeacons Denison, Browne, and Fitzgald; *Rev. Canon Bernard, †Rev. Prebendaries A. C. Ainslie and Edwin A. Salmon. **Chichester**—Dean (vacant); Archdeacons F. J. Mount and R. Sutton; *Rev. Canon J. F. Crosse, †Rev. H. Bailey. **Ely**—Dean Merivale; Archdeacons Emery, Chapman, Bathurst, and Vesey; *Lowce, †Rev. Canons F. Slater and J. H. Macaulay. **Exeter**—Dean Cowie; Archdeacons C. T. Wilkinson and E. G. Sandford; *Rev. Prebendary Kempe; †Rev. Prebendary Sadler and G. R. Prynn. **Gloucester and Bristol**—Deans Spence and Elliott; Archdeacons Norris, Hayward, and Sheringham; *Rev. Canons Tinsling and Nugent Wade, †Rev. Canons Medd and Mather. **Hereford**—Dean Herbert; Archdeacons Maddison and Stanhope; Revs. W. Poole, E. F. Clayton, and C. S. Palmer. **Lichfield**—Dean Bickersteth; Archdeacons T. B. Lloyd, M. H. Scott, and E. Lane; *Rev. Canon J. G. Lonsdale, †Revs. J. T. Jeffcock and Bishop Stamer. **Lincoln**—Dean Butler; Archdeacons Kaye and Frolope (Bishop Suffragan of Nottingham); *Rev. Sub-Dean Clements, †Revs. G. G. Ferry and A. S. Wilde. **Llandaff**—Dean Vaughan; Archdeacons W. C. Bruce and Griffiths; *Rev. Canon Evans, †Revs. C. R. Knight and J. T. Harding. **Norwich**—Dean Lefroy; Archdeacons Perowne, Woolley, and Neville; *Rev. Canon J. M. Nisbet, †Revs. Canon C. Freire and Hinds Howell. **Oxford**—Dean Liddell; Archdeacons Palmer, Pott, and Bishop Randall; *Rev. Canon Bright, †Revs. Canon E. Savory, and G. N. Freeling. **Peterborough**—Dean Angles; Archdeacons Thicknesse, Lightfoot, and Mitchinson (Assistant Bishop); * (vacant), †Rev. Canons Thos. Yard and H. Twells. **Rocheester**—Dean Hole; Archdeacons Cheetham, Richardson, and Burney; *Rev. Canon H. W. Burrows, †Rev. Canons Erskine Clarke and Bishop Yeatman. **Salisbury**—Dean Boyle; Archdeacons Lear, Sowter, and Buchanan; *Rev. Canon Swayne, †Revs. Canons A. A. Dayman and Prebendary R. B. Hutchings. **St. Albans**—Archdeacons Lawrance, Blomfield (Bishop Suffragan of Colchester), and Johnson; †Revs. E. T. Vaughan and T. Scott. **St. Asaph**—Dean Owen; Archdeacons D. R. Thomas and W. H. Williams; *Rev. William Howell Evans, †Revs. Canon William Richardson and J. E.

Hill. St. Davids—Dean Allen, Archdeacons De Winton, North, James, and Hulbers; *Rev. Canon Phillips, †Revs. Canon Bevan and T. Walters. **Southwell**—(no dean); Archdeacons Balston and Maltby; * (none); Rev. Canon Grey and Rev. Thomas H. Frere. **Truro**—(no dean); Archdeacons Cornish and Hobbhouse; * (none); †Rev. Canons Hockin and Thynne. **Windsor**—Dean Rev. J. F. Elliot; †Canon E. Capel Cure. **Worcester**—Dean Forrest; Archdeacons Bree and Lea; *Rev. Canon Melville, †Revs. W. W. Douglas and H. B. Bowlby. *Vicar-General*: Sir J. P. Deane, Q.C., D.C.L.; *Registrar*: Sir John Hassard; *Actuary*: F. Cobb, Esq.; *Apparitor-General*: Sir J. Hanham, Bart. **PROVINCE OF YORK.**

—1. **The Upper House.** Archbishop of York, *President*; Bishops of Durham, Ripon, Chester, Carlisle, Liverpool, Newcastle, Wakefield, and Sodor and Man. **2. The Lower House. Prolocutor:** Rev. Chancellor Espin, D.D. **York**—Dean Purey-Cust; Archdeacons Crosthwaite, Blakeney, Blunt, and Yeoman; *Rev. Canons Randolph and Fleming, †Revs. Canons Raine F. W. Peel, Machell, Watson, and Revs. C. N. Gray, H. Favell, W. R. Sharrock, and T. Rigby. **Durham**—Dean Lake; Archdeacons Long and Watkins; *Rev. Canon Tristram, †Rev. Canons R. W. Dixon, Falconer, Bailly, and Chancellor Espin. **Carlisle**—Dean Henderson; Archdeacons Cooper, Crosse, and Prescott; *Bishop of Barrow, †Rev. Canons Phillips, Knowles, Bell, Stock, Bardsley, and W. A. Matthews. **Chester**—Dean Darby; Archdeacons Barber and Gore; *Rev. Canons Hillyard and Feilden; †Rev. Canons Cooper and Dodd; Revs. H. J. Blackburne and E. C. Turner. **Liverpool**—(no dean); Archdeacons Clarke and Taylor; * (none); †Rev. Canons Jones, Blundell, Warr, and Penrhyn. **Manchester**—Dean Maclure; Archdeacons Wilson, Hornby, and Rawstorne; *Rev. Canon Crane, †Rev. Canons Birley and Heywood, and Revs. S. Hastings, E. Jackson, W. Champneys, and J. C. Keshaw. **Newcastle**—(no dean); Archdeacons Hamilton and Martin; * (none); †Rev. Canons Mason, Lloyd, Grey, and Waite. **Ripon**—Dean Fremantle; Archdeacons Cust and Boyd; * (vacant), †Rev. Canons Owen, Jackson, Ellison, and Rev. F. J. Wood. **Wakefield**—(no dean); Archdeacons Brooks and Stratton; no proctors yet elected. **Sodor and Man**—(no dean); Archdeacon Hughes-Games; †Rev. W. Kermode. *Archbishop's Commissioners*: the Dean, Canons Residentiary of York, and Canon Raine; *Synodal Secretary*: Rev. Canon Wright; *Registrar and Notary*: H. A. Hudson, Esq., Munster Yard, York; *Treasurer*: Canon Randolph.

Cook, Edward T., M.A., editor of the *Pall Mall Gazette* (q.v.), was ed. at New College, Oxford, where he attracted attention, both by his scholastic ability and by the speeches which he delivered at the Oxford Union. Mr. C. was also one of the prime movers in the Palmerston Club. On leaving Oxford, he was for some years secretary of the London branch of the **University Extension** movement. He subsequently joined the staff of the *Pall Mall Gazette*, and was responsible for more than one of the special handbooks issued by that newspaper. Mr. C. is an enthusiastic disciple of Mr. Ruskin, and wrote a work entitled "**Studies in Ruskin**" (90). He has recently compiled a "Guide to the National Gallery." Succeeded to the editorship Jan. '90.

Co-operation. In England co-operative societies are united under the **Co-operative Union**, which began to form after 1869, the year in which the first Co-operative Congress was held. A **central Co-operative Board** was then formed, consisting of London and provincial members. This Board now consists of **seven sections**—the Irish, Midland, Northern, North-Western, Scottish, Southern, and Western, and comprises sixty-four ordinary and seven honorary members. These seven sectional Boards meet twice every year—on the Saturday before the meeting of the Congress, and once during the Congress. The **governing body** of the Union is the **United Board**, the members of which are representatives from the above seven sectional Boards. This organisation directs and promotes the cause of co-operation. The number of societies already enrolled under the Union (which enrolment is conditional on the payment of a halfpenny per quarter per member) is, according to the latest published returns, in Great Britain 1554. The members of these societies number 1,117,055, their share capital is £12,261,952 sterling, loan capital £2,804,416, sale of goods realised in 1890 £43,215,710, their net profit was £4,170,038, and their investments amounted to £6,206,064. Every year the movement expands. During the last twenty-five years, the annual business of the retail stores has increased from about £4,000,000 to about £28,000,000, and the membership from 175,000 to over 1,000,000. In the same period, the business of the wholesale societies has grown from almost nothing to £10,000,000 a year. Corn-mills carried on by co-operation do a business of nearly £2,000,000 a year. A new flour mill was opened by the Co-operative Wholesale Society at Dunston-upon-Tyne, in April, upon which concern £130,000 of capital is employed. As instancing the accumulation of funds by co-operators, it may be mentioned that one society has invested £80,000 in railway shares, and that £110,000 of co-operators' money is invested in the Manchester Ship Canal. Besides its great distributive business, the English Wholesale Co-operative Society, whose headquarters are at Manchester, Newcastle, London, and Leicester, engages in the production of boots and shoes at Leicester and Heckmondwike, soap at Durham and Crumpsall, woollen goods at Batley, and manufactures large quantities of biscuits, sweets, jams, and other groceries. The Scottish Wholesale Society at Glasgow, in addition to its distribution, manufactures boots and shoes, shirts and jam, and carries on tailoring works, cabinet and printing works, with branches at Dundee, Leith and Kilmarnock. The banking department of the Wholesale had receipts last year of £12,440,739, and payments £12,205,782. **Shipping** business was carried on with six vessels of a gross tonnage of 3898 and earning £120,816, making a profit of £4629. Steady growth was shown during the year by the **Co-operative Insurance Company**, in which over £5,000,000 were insured in fire policies, £30,000 in life policies, and £120,800 in fidelity policies. In the last year, 123 new co-operative societies were registered as against 51 dissolved. Out of the 123, 53 societies were for general purposes; 11 were classed as agricultural; clubs, 7; coal supply, 3; furnishing and hire, and purchase, 4; investment, including loans, 7; manufactures in the different trades, 15; painting and decorat-

ing, 2; and various kinds of business, 8. The application of co-operation to **Farming** has been much discussed among co-operators of late years. Twenty co-operative societies in England have engaged in farming, and there are three strictly **Farming Societies**. Success has been chiefly gained by the Scottish Co-operative Farming Association. In Ireland a remarkable development took place in the establishment of **Co-operative Dairy Societies**. Within a year the number of co-operative creameries formed, or in process of formation, had risen from one to seventeen in the counties of Cork, Limerick and Clare. Sixteen of these co-operative societies showed a membership of 716; subscribed capital, £8836; cost of buildings, £4150; cost of machinery and plant, £7786; and number of cows promised, 14,200. With a view to encourage similar developments in the agricultural districts at large, the Co-operative Congress voted an additional grant of £200 to the Irish section towards the expenses of organising co-operative dairy farming in Ireland. The twenty-third **Annual Congress** of delegates from Co-operative Societies in Great Britain and Ireland was held at Lincoln, from Saturday, May 10th, to Wednesday, May 20th, the total number present at Congress being 580. The inaugural address was delivered on Monday, May 18th, by Mr. A. H. D. Acland, M.P.; and during the Congress discussions took place upon papers read by Mr. Sidney Webb, subject: "The best method of bringing Co-operation within the reach of the poorest of the population;" by Mr. W. G. Harrison, subject: "How best to consolidate and improve the position of the productive societies;" by Mr. H. Maskery, subject: "How best to utilise the surplus capital of the movement;" and by Mr. J. Arnold, subject: "The best means of bringing Co-operators and Trade-unionists together." The presentation of an address and testimonial to Mr. Edward Vansittart Neale, on his retirement from the office of General Secretary, was marked by the utmost enthusiasm. Mr. Neale was one of the founders of the Co-operative Union and an officer in its service for more than twenty years. (See biography of Mr. E. Vansittart Neale). The deputations to the Congress included two delegates from the Working Men's Club Union, Trade Union delegates, and two delegates, MM. Audouard and de Boyve, representing the National Federation of the co-operators of France. In connection with the Congress, an exhibition was held in the Corn Exchange, at which specimens of the productions of the wholesale and manufacturing societies were shown. The annual meeting of the **Women's Co-operative Guild**, consisting of 64 branches with 2500 members also formed part of the Congress proceedings. It was determined to hold the Congress for '92 at Rochdale, in Whitweek. The General Secretary of the Co-operative Union is now Mr. J. C. Gray, who for some years had been Assistant Secretary. The Union offices are at City Buildings, Corporation Street, Manchester. As illustrating the aims and results of the co-operative propaganda, the **National Co-operative Festival** held at the Crystal Palace on Aug. 15th, was particularly noteworthy. It was the fourth of its kind, and was very numerously attended by co-operators. Here, too, was a co-operative workshops exhibition, designed especially to display the products of workshops in various parts of the

country and in various branches of industry which admit their workers to participation in profits and management. Of such workshops the **Labour Association** for promoting co-operative production, by which the exhibition was organised, recognises about 76, representing 40 different trades. It is claimed by this Association that the productive side of the co-operative movement is now advancing even more quickly than the distributive. The majority of new societies registered are workshops in which the workers share profits, and a comparison of recent annual returns shows that while the distributive side has grown 14 or 15 per cent., the productive side has grown nearly 50 per cent. in the same time. Signs such as these point to the conclusion that co-operators are setting themselves to remove the objections frequently urged against co-operation as the system is worked out in practice in England; viz., that the societies tend to become close corporations of small capitalists, giving an inadequate or no share of profits to their *employees*, and thus derogating from the ideal of Co-operation as understood by the founders of the movement. The chief resolution passed at the Crystal Palace Festival must be taken as an avowal of adhesion to the early faith of co-operative principles. It was moved by Mr. Holyoake, one of the pioneer co-operators, and unanimously agreed to by the conference: "That whilst rejoicing at the success of our co-operative stores, we reaffirm that store-keeping is not the only end and aim of the co-operative movement, the course of which ought to be so guided by our official leaders as to promote the employment of the people in self-governing workshops, in the management of which they can take a part, and in the results of which they can share." The largest co-operative boot and shoe manufactory existing in the world was opened at Leicester on Nov. 4th, '91. It covers six acres, and about 1500 persons will be employed thereat.

Cooper, Thos. Sidney, R.A., was b. 1803, at Canterbury. After struggling against adversity in his early life, in '23 he entered the R.A. school, through the influence of Sir Thomas Lawrence, and subsequently set up as a drawing master at Canterbury. Travelled to Brussels, where, under the auspices of Verboeckhoven, the animal painter, he became a very successful artist. First exhibited at the Academy in '33, becoming A.R.A. in '45 and R.A. in '67. As an animal painter Mr. C. is supreme. His "**Ottie Reposing**" and "**King of the Meadows**" are amongst the best of his numerous paintings. Mr. C.'s works have been more frequently copied, perhaps, than those of any other living artist. After becoming famous Mr. C. returned to his native city, in the affairs of which he takes a lively interest. He presented its corporation with an **Art Institute** in '82. He has written his reminiscences. In the Royal Academy, '81, his picture "**The Fleecy Charge**" proved popular.

Cooper's Hill College. See **ROYAL INDIAN ENGINEERING COLLEGE**.

Copais Lake Drainage. To complete this great scheme of reclamation (which was described in ed. '87 and in our last ed.)—a drainage canal, the work of five years, was opened on June 12th, '86, in the presence of the French Minister and other distinguished persons from Athens, as mentioned in our last volume), the **French Company** was reconstructed in the form

of an **English Company**, and in Feb. '88 asked subscriptions for £150,000 of 6 per cent. First Mortgage debentures at £95 per £100. In their first annual report, made up to Oct. 31st in Greece and to Nov. 30th in London, it was stated that the above issue had been most favourably received. In Jan. '90 the balance of £150,000, of a total of £300,000 First Mortgage 6-per-cent. debentures, was issued at 92. It was then stated that the bed of the lake covers an area of sixty acres. "As a result of the work so far completed about 4000 acres are already let and under cultivation. Certain works are in progress providing for the irrigation of about 15,000 acres, and the value of these lands when the works referred to are completed is estimated at a minimum of £40 per acre." On July 2nd the dam between Lake Copais and Lake Likaris was successfully cut in the presence of the British *charge d'affaires* and other authorities.

Copenhagen Free Harbour. The Danish Government early in '90 introduced a Bill for the construction of a free harbour at Copenhagen, the matter having for some time been under discussion. According to the plans prepared by the harbourmaster and the director of State railways, which were adopted by the Government in their Bill, it is proposed to place the free harbour on the north of the town—through which runs a large natural waterway—where filling-up work has been going on for years. It will be protected by breakwaters between the naval forts of Lynetten and Trekroner, and to the north of the latter. There will be a north and south harbour, between which the steam ferry for the Copenhagen-Malmö traffic will be placed. The reservoir of the southern portion will be about 2000 ft. long by 650 ft. broad at bottom, and from the end near the Frederikshavn fortifications there will be a pier 250 ft. wide, separating the southern reservoir from the Copenhagen inner roads. The northern portion will include the new Kalkbränders harbour, except its north pier, and a reservoir 450 ft. broad. All the reservoirs will be 24 ft. deep, which may be increased to 28 ft., and the water area of the free harbour will amount to about 55 acres, with about 8800 ft. of quay. Including the free harbour itself, roads, and the extension of the Langelinie promenade, the cost is estimated at about £600,000. According to a report from the British Minister at Copenhagen, issued in Aug. '91 by the Foreign Office, the scheme is due to the fear that the Baltic and North Sea Canal (*q.v.*) will damage the port. The principal objects are to facilitate such transit trade as already exists at Copenhagen, to remove such trammels to trade as those which are inseparably connected with the collection of dues, and to encourage local industries by allowing the erection of works, etc., in the area of the free port. The British Minister says: "That it cannot fail to give a favourable impulse to the commerce of this place can hardly admit of a doubt, but whether it will prove profitable to our transit trade to the Baltic is another question." On Oct. 19th it was reported that one of the dams at the Free Harbour works had given way, the water rushing through and causing much damage.

Copper. See **TRADE**, '91.

Copyright, English. The first English Copyright Act, passed in the reign of Queen Anne, gave the author an absolute right of

fourteen years, with an additional fourteen years in case of the author or his representative surviving this term. By an Act of George III. the period was increased to twenty-eight years, and the remainder of the author's life, if any. The Act at present in force (5 and 6 Vict., c. 45) fixes copyright at forty-two years, or the period of the author's life, with a grace of seven years, whichever is the longer. Copyright covers literary, dramatic, artistic, and musical property. The Act provides that the owner of a copyright shall present one copy of the article protected, if published, to the Library of the British Museum, and one copy each, if demanded, to the Bodleian Library, Oxford, the University Library, Cambridge, the Advocates' Library, Edinburgh, and the Library of Trinity College, Dublin. See INTERNATIONAL COPYRIGHT.

Copyright in Government Publications. In a Treasury Minute relating to this subject, and dated 31st August, 1887, Government publications are classified as follows:—(1) Reports of Select Committees of the two Houses of Parliament, or of Royal Commissions. (2) Papers required by Statute to be laid before Parliament,—e.g., Orders in Council, Rules made by Government Departments, Accounts, Reports of Government Inspectors. (3) Papers laid before Parliament by Command—e.g., Treaties, Diplomatic Correspondence, Reports from Consuls and Secretaries of Legation, Reports of Inquiries into Explosions or Accidents, and other Special Reports made to Government Departments. (4) Acts of Parliament. (5) Official books—e.g., Queen's Regulations for the Army or Navy. (6) Literary or quasi-literary Works—e.g., the Reports of the Challenger Expedition, the Rolls Publications, the forthcoming State Trials, the "Board of Trade Journal." (7) Charts and Ordnance Maps. As respects the first five classes of publications, "the reproduction of them, with certain exceptions, should not," says the Treasury, "be restricted in any form whatever. Indeed, in most cases it is desirable that they should be made known to the public as widely as possible." The first exception is, that Acts of Parliament and official books should not, except when published under the authority of the Government, purport on the face of them to be published by authority. The second exception is, where a work of a literary or quasi-literary character comes accidentally within these classes. For example, the Reports of the Historical Manuscripts Commission would, but for the fact that they were produced under the direction of a Commission instead of under the Master of the Rolls, be published in the ordinary manner like the Rolls publications, and come within Class 6. So, again, a Report to a Government Department may be laid before Parliament made by a person of eminent scientific knowledge, who is willing to give the Government and the public the advantage of his knowledge, but not to allow it to be reproduced for the private benefit of an individual publisher. Other exceptions will, no doubt, from time to time occur, which can only be dealt with as they arise. As regards the sixth and seventh classes above mentioned, it seems desirable to the Treasury that the copyright in them should be enforced in the interests of the taxpayer and of literature and science. Notice of the intention to enforce the copyright in any work should, the Treasury say, be given to the public. In the case of

future works this can be given by prefixing to the work an announcement to the effect that the rights of copyright are reserved. In the case of past works it will be desirable to inform the publishing trade of those the reproduction of which without permission is forbidden. See STATIONERY OFFICE.

Coquelin, Benoît Constant, is the son of a baker, and was b. at Boulogne-sur-Mer, 1841. He was admitted to the Paris Conservatoire in '59, and made his *début* at Théâtre Française, Dec. 7th, '60, when he appeared as *Gros-René* in the "*Dépit Amoureux*." He is not only very popular as an actor, but is a great favourite in French society as a reciter. He is an elder brother of E. A. Coquelin, who is also a celebrated actor.

Corea. A kingdom embracing the peninsula lying between the Yellow Sea and the Sea of Japan, with an area of about 82,000 sq. m., and a population estimated at about 10,000,000. Capital, Seoul, pop. 250,000. Government modelled on that of China, which is the suzerain of Corea, and directs her foreign policy. Very little is known of the interior, either as to the people or the nature of the soil; but rice, millet, cotton, hemp, tobacco, and many fruits are grown on the fertile territory skirting the sea, and the people are similar in their habits and customs to the Chinese on the neighbouring mainland. The foreign commerce is carried on at the three *Treaty Ports* of Jenchuan, Fusan, and Yencsan.

Corfu. Is one of the Ionian Islands, on the east coast of Greece. Its area is 431 square miles, and population about 115,000. It is part of the Grecian kingdom. In '91 there was (April) an agitation against the Jews, who were much ill-treated, and in fear of their lives, so much so that for some time they dared not leave their houses. Vigorous action was taken by the higher authorities, and peace restored after some time.

Corinth Ship Canal. The first sod of this canal across the Isthmus of Corinth was turned by the King of Greece in April 1882. The isthmus is about 3½ miles in breadth, there being a backbone in the middle 120 to 180 feet high, which is approached on each side by a plain from the sea-shore. A port and harbour will exist at each end of the canal. (For some account of the work, its stoppage and recommencement, see last and previous eds.) According to the report of the Austrian engineer, Herr Deutch, who had been commissioned to inspect the works in progress, published in the *Temps* (Times, Jan. 8th, '91), the cause of the stoppage of the construction of the canal was the discovery that the slope of the banks was not sufficiently gradual. The total amount of excavation was originally calculated at 9½ million cubic metres, and the above discovery seems to have been made in July '89, at which time 8,200,000 cubic metres had been removed. It was deemed necessary to excavate 2 millions more, and to provide 125,000 cubic metres of masonry work, facing the banks with 6 ft. of stone or brick for a length of more than 2½ miles. Additional capital having been provided, Herr Deutch reported that the main portion of the work had been done. The time for completion has been extended to '94. The report of Mr. Hill, British Vice-Consul at the Piræus, published in this country in March '91, attributes the stoppage of the works in '89 to the financial difficulties

of the Comptoir d'Escompte; but they were recommenced on June 22nd, '90, by a Greek company, who sublet the work to French and Italian contractors. He says the work to be done was estimated at as much as 3,358,000 cubic metres, and that March 22nd, '93, was fixed for the opening, but that the completion of the work at the date was highly improbable.

Coroners' Inquiries. See INQUESTS, CORONERS'.

Coroners' Inquiries, Law as to, in '91. The Coroners' Act of 1887 provides that when an inquest has been held, and by reason of the rejection of evidence or the insufficiency of the inquiry or otherwise, it is desirable in the interests of justice that another inquiry should be held, the Court may order a second inquest to take place. It was under this statute that an application was made (March 23rd, '91, Queen's Bench Division) for an order for a second inquest, the case being officially stated as that of the *Queen v. the Coroner of Newbury—In re Heath and Chamberlain*. The Court held that it was not made out that the previous inquiry was insufficient, and declined to make the order asked for. It may be stated that only in two other instances within the last century has such an application been made, and that these were made at common law in the Road case and in the Bravo case.

Corporation of London, The. is the Municipal Authority for the City of London; but its powers and duties in that capacity are not regulated by the general law relating to Municipal Corporations; they have, however, to a certain extent been defined and regulated by special Acts of Parliament. Under the London Coal and Wine Duties Continuance Acts 1861, '63, and '68, the C. collected coal duties amounting to 1s. 1d. per ton on all coals coming into the Metropolitan Police District, and a wine duty of 4s. per ton on all wine imported by way of merchandise into the port of London. The net proceeds of this wine duty, and of 9d. out of the 1s. 1d. per ton coal duties, were required, by the above-mentioned Acts, to be paid by the C. to "The Thames Embankment and Metropolis Improvement Fund" at the Bank of England; the amounts thus paid being subsequently included as receipts in the accounts of the defunct Met. Board of Works. The net proceeds of the remaining 4d. out of the 1s. 1d. per ton coal duties are applicable primarily to the payment of interest and principal in respect of moneys borrowed under the Holborn Valley Improvement Acts '64, '67 and '69, and the Holborn Valley and Farringdon Market Improvement Act. The wine duty and the duty of 9d. per ton on coals ceased on July 5th, '80; the remaining duty of 4d. per ton on coals ceased on July 5th, '90. The C. were also empowered by the *Metage on Grain* (Port of London) Act, '72, to levy a grain duty of three-sixteenths of a penny per cwt. in respect of all grain brought into the port of London—which duty is, subject to the provisions of that Act, to be held by the C. for the preservation of open spaces in the neighbourhood of London, not within the Metropolis as defined by the Metropolis Management Act, '55. The only rates made by the C. are the *Police and Ward Rates*, which are made under the City of London Police Act '39. The Police Rates are applicable to the payment of three-fourths of the expenses of the City Police, the remaining fourth of which expenses are, under Section 57 of the above Act, payable

by the C. "out of their revenues and possessions." Of the estates of the C., the *Bridge House Estates*, prior to the passing of the Blackfriars Bridge Act '63, were held by the C. "in trust for the maintenance and support of London Bridge." By that Act, and the Blackfriars and Southwark Bridges Act '67, the C. were empowered to borrow on the credit of these estates, for the purpose of rebuilding Blackfriars Bridge and purchasing Southwark Bridge from the Southwark Bridge Company; and the expenses of lighting, watching, and maintaining the two last-mentioned bridges were made a charge on these estates. By the Corporation of London (Tower Bridge) Act, '85, the C. was empowered to borrow on these estates for the construction of the Tower Bridge and the works connected therewith. A considerable number of other local Acts have been passed at various times relating to the Corporation and their estates.

Corps of Commissionaires. The members of this institution are retired soldiers and sailors of Her Majesty's regular forces. At first they were selected from those who had served in the Crimea and Indian Mutiny. They receive their appointment from a society which was established by Captain Sir E. Walter, K.C.B., in 1859. Their number exceeds 1800. There are several divisions in the principal towns of England, Scotland and Ireland, all being subject to the same discipline and tariff. The men are employed in every capacity where high qualifications are required, and thus may be engaged for permanent or temporary service. Office, 419, Strand, W.C.

Corsica. An island of the Mediterranean, and a department of France, separated from Sardinia by the Strait of Bonifacio. Area, 33,6 sq. m.; pop., 278,501. Capital, Ajaccio.

Costa Rica is the most southern republic of Central America. Capital, San José. It is governed by a President, a Senate, and a Chamber of Representatives, each elected for four years by the "respectable" inhabitants. Constitution promulgated in 1859, but frequently interrupted by pronunciamientos, and practically suspended from '70 to '82. Area 23,000 sq. m.; estimated pop. in '86, 196,270. Estimated revenue in '91, \$5,624,000; expenditure, \$5,483,000. Foreign debt, \$13,000,000. Imports in '90, \$6,615,000; exports, \$20,063,000. The rate of exchange is about \$5 per £. Chief exports, coffee and bananas. Valuable metals exist in various parts of the country, and mining industry is making progress. For Ministry, etc., see DIPLOMATIC.—The Costa Rica railway, from the Atlantic to the capital, was finished in Dec. '90, the first train running over it from Simon to San José (25th). In '91 a conspiracy to depose the President was discovered (April 30th), but the conspirators were captured. Insurgents attacking the barracks were repulsed, and peace was restored in May.

Cottage Arts Association. See HOME ARTS ASSOCIATION.

Cotton, James Sutherland, was b. in India 1847, and was ed. at Winchester School and at Trinity College, Oxford; first class in moderations and in the final schools; Fellow of Queen's College. Called to the bar at Lincoln's Inn '74, and went the Western Circuit. Has undertaken much literary work in connection with India; assisted Sir W.W. Hunter (q.v.) in compiling the "Imperial Gazetteer of India," and in revising the second edition; wrote

"India" in Macmillan's "Citizen Series"; prepared for the Government a report upon the administration of India for the ten years '73-83. Editor of the *Academy* since '80.

Cotton, Rt. Hon. Sir Henry, ex-Lord Justice of Appeal, was b. 1821. Educated at Eton and Oxford. Called to the bar at Lincoln's Inn '46; Q.C. '66; Bench of his Inn '67. Standing counsel to the University of Oxford '72. Appointed a Lord Justice of Appeal '77, but resigned this office in the autumn of '90.

Cotton Trade during '91, &c. This trade has undergone considerable fluctuations in the last few months. In January the demand for British productions was falling off, but the industrial population was well employed. The continuous decline in the prices of raw cotton, owing to the superabundant crop of '90 in America, had the effect of restricting operations of buyers of cotton goods and yarns throughout the world, while the unsettled condition of the Eastern exchanges also tended to lessen the production of goods. In March further decline was arrested, though prices did not rise. The home demand for cotton goods was maintained, owing to the generally well-to-do condition of the population. A few thousands of looms, however, in Lancashire were stopped for want of orders. In April the magnitude of the American cotton crop coming to market prevented extensive purchases, except for early requirements, and it was doubtful if yarn spinning was really profitable. During the next month trade continued dull, but in the latter half of June some improvement was shown in the demand for cotton goods and yarns. In July much unsettlement prevailed in the minds of buyers of yarns and goods as to the probable prices of raw cotton, and a further decline was expected through the prospect of another large American crop of cotton. The slow decline of prices of cotton, yarns and goods involved many losses and seriously weakened some firms, but it was hoped that low prices would in turn stimulate demand sooner or later. A slight upward movement in prices led to purchases of magnitude in Liverpool by spinners—the price of raw material being lower than at any time since '48. A distinct revival of demand lasted during the earlier half of August, and Manchester exporters placed orders in India, China and the Levant with considerable freedom. The improvement was not destined to be maintained; the demand again fell off, and at the end of September the publication of the stocktaking accounts of many cotton mills showed that business had been carried on generally at a loss during the last three months. It is worth noting that the American cotton crop of '90-1 was the largest ever grown, the production reaching a total of 8,655,518 bales. In '80-1 the crop was 6,589,329 bales, and in '74-5 consisted of 3,832,991 bales. The average weight per bale last year was 499³/₄ lbs. The staple trade of Lancashire, the cotton industry, is carried on in 1793 spinning and manufacturing mills, containing 42,401,701 spindles, and 610,934 looms. With regard to the rapid development of the cotton trade in India, it has brought with it a great increase in the importation of building materials, coal, chemicals, dyeing materials, and machinery and mill-work. During the last few years the exports of Indian cotton yarn have increased at the rate of more than 26 per cent. annually. In 1883-4 exports of yarn amounted to 49'87,000,000 lbs., and in '88-9,

128'91,000,000 lbs., valued at 520 lakhs of rupees. In the same time Indian cotton piece goods rose from 55,564,000 yards to 70,244,000. Bombay possesses more than 95 per cent. of the trade in yarns, and more than 64 per cent. of the trade in woven goods. The number of mills rose from 47 in '76-7 to 105 in '89, the spindles from 1,100,112 to 2,625,546, and the looms from 9,139 to 21,676. The mills in the Bombay Presidency number 75; there are 7 around Calcutta and 8 in Madras.

Councils, Ecumenical. An Ecumenical Council is one which represents the whole Christian Church. Of these there have been four recognised by the Reformed English Church, viz. :—(1) The first of *Nicea* (A.D. 325), condemned Arianism and formulated the *Nicene Creed*. (2) *Constantinople* (380), added to the *Nicene Creed*. (3) *Ephesus* (431), condemned Nestorius. (4) *Chalcedon* (451), declared the divine and human nature of Christ, and set its seal on the additions to the *Nicene Creed* made at *Constantinople*. Amongst other Councils, reckoned by the Roman Church as Ecumenical, may be mentioned the *Second of Nicea* (787), permitting worship of images. *Fourth Lateran* (1215), transubstantiation held to be an article of faith. *Constance* (1414), the cup denied to the laity. *Trent* (1546-63), condemned the reformers. *Rome* (1869), decreed papal infallibility.

Countess of Huntingdon's Connexion, The. owes its existence to the religious revivals in the eighteenth century, with which Whitefield and the Wesleys are so prominently identified. The Countess of Huntingdon (d. 1791) had been a member of the Established Church, but finding that the parochial system interfered with her intense desire to have the gospel preached in every place in England, she cast in her lot with the Nonconformists. The *liturgy* formed part of the religious worship in her chapels, and it is still used in some of them. The Connexion has never been numerically strong. During life her control was absolute. Her successors were unable to exercise a similar control; and although a trust was created a few years after her death, many leasehold chapels lapsed into other hands. At one time the preaching stations numbered over a hundred; now those under the Trustees amount to over thirty, not including village stations vigorously maintained by the principal churches, and Countess's chapels which are beyond the control of the Trustees. *Cheshunt College*, of which the Rev. Henry E. Reynolds, D.D., is the Principal, has been rebuilt. *New Spa Fields Church* has been erected. The Connexion chapels generally have been adapted to the religious requirements of the age, and the trustees have faithfully endeavoured to maintain an evangelical ministry in every chapel of the Connexion. All its ministers have to subscribe to the "Fifteen Doctrinal Articles" of the Church of England, as do the professors of Cheshunt College and the students, with a view of carrying out the Countess's idea—the continuance of an earnest evangelical ministry. Sec., Rev. W. M. Lennox. Offices, Cheshunt Coll. Rooms, 13, Blomfield St., E.C.

County Councils. Under this heading are included lists of the aldermen and county councillors for the administrative counties of London, Bedford, Berks, Bucks, Essex, Herts, Kent, Middlesex, Oxford, Southampton, Surrey, and Sussex, there being added, in the case of London, some particulars regarding the election and con-

cerning such proceedings of the Council as were considered to be of sufficient importance to deserve preservation for purposes of reference. An outline of the main provisions of the Local Government (England and Wales) Act, 1888, reprinted from our '89 ed., will be found under its alphabetical heading. In pursuance of that Act the first elections of county councillors were held in January '89. The nominations took place on the 9th, and the only unopposed return in the county of London [1] was at St. George, Hanover Square. The polling in all the other constituencies took place on Jan. 17th, the results being declared either that night or on the following day. Subjoined are the returns. The names of candidates who were at that time members of the Metropolitan Board of Works are marked with an asterisk; the letter L signifies Liberal, C. Conservative, N. Non-Political, and Ind. Independent. The names of the unsuccessful candidates are printed in italics:—

BATTERSEA AND CLAPHAM: (Battersea) J. Burns (Socialist) 3,071, J. Tims (L.) 2,307, A. Cameron (L.) 2,279, R. A. Balpy (Ind.) 1,564, G. Harris (L.) 188, W. Davis (N.) 54; (Clapham) T. L. Corbett (C.) 2,501, Lt.-Col. A. Rotton (C.) 2,336, H. Turner (L.) 2,280, C. A. V. Cunybeare, M.P. (L.) 1,883.

BETHNAL GREEN: (North-East) J. F. Torr (L.) 1,740, W. Wren (L.) 1,700, T. Lumley (C.) 1,456, W. Wright (C.) 718, J. Bishop (N.) 484, J. Milbourne (L.) 401; (South-West) J. Branch (L.) 2,406, C. Harrison (L.) 2,466, T. H. Francis (N.) 975, A. Ewin (C.) 835, J. C. Walton (Ind. C.) 677.

CAMBERWELL: (North) R. Strong (L.) 1,069, Rev. H. B. Chapman (L.) 1,612, W. E. Teather (Ind.) 1,097, W. B. Thornton (C.) 1,071, P. D. Rogers (L.) 823; (Dulwich) W. M. Acworth (N.) 2,222, H. J. Powell (C.) 2,151, Lord Sandhurst (L.) 1,810, Dr. Guttridge (L.) 1,622, W. Matthews (L.) 1,400, Dr. H. M. Hardy (Ind.) 125, A. Fatten (Ind.) 88; (Peckham) E. Jones (L.) 2,608, R. Lyon (L.) 2,194, J. Howard (C.) 1,439, J. Borland (C.) 1,578, W. E. Dowton (Ind.) 975.

CHELSEA: G. W. Osborn (L.) 3,170, W. A. Smith (L.) 2,512, L. White (Ind.) 1,774, H. Jeffrey (C.) 1,617, C. Mossop (N.) 1,177, A. Thompson (N.) 211.

CITY OF LONDON: Sir J. Lubbock (N.) 8,976, Lord Rosebery (N.) 8,032, B. L. Cohen (C.) 4,025, H. Clarke, C.C. (C.) 3,622, G. Shaw (C.) 2,752, G. N. Johnson (N.) 729.

DEPTFORD: E. Collard (N.) 2,294, W. Phillips (L.) 2,283, H. Keylock (Labour) 1,871, A. A. Knight (N.) 1,047.

FINSBURY: (East) J. W. Benn (L.) 1,791, Capt. Sinclair (L.) 1,655, Mr. Morland (N.) 1,096, Mr. Berry (N.) 1,071, Mr. Hall (Ind.) 66; (Central) Lord Compton (N.) 2,333, F. A. Ford (L.) 1,461, H. E. Davis (N.) 1,074, Mr. Robson (N.) 841, W. Davies (N.) 561, Mr. Good (N.) 374, J. Ross (N.) 74; (Holborn) A. Hoare (Ind.) 1,430, J. W. Maule (N.) 975, Mr. Murray (Ind.) 749, W. R. Smith (Ind.) 712, Lt.-Col. Gardner (L.) 671, Mr. Blott (N.) 234.

FULHAM: J. Beal (L.) 2,309, R. A. Germaine (C.) 1,950, L. Scarth (N.) 1,509, P. P. Berry (N.) 1,203, E. G. Easton (N.) 366.

GREENWICH: G. Lidgett (L.) 3,192, R. S. Jackson (L.) 3,025, T. W. Boord, M.P. (C.) 2,440, Alderman Knill, C.C. (C.) 2,390.

HACKNEY: (North) J. Beck (C.) 1,980, A. Davies (L.) 1,805, J. Runtz (L.) 1,770, E. Jones (C.) 1,029; (South) J. Jones (C.) 2,071, G. B.

Holmes (L.) 1,968, J. Lobb (Ind.) 1,863, T. Jackson (L.) 1,786; (Central) J. Lowles (C.) 1,764, W. Johnson (C.) 1,602, R. Martin (L.) 1,455, A. Bowser (L.) 1,362.

HAMMERSMITH: C. C. Cramp (Ind. C.) 1,591, A. Arter (C.) 1,569, C. Cordingley (Ind. L.) 1,539, W. F. Laxton (C.) 1,127, Col. R. F. Webb (Ind.) 388.

HAMPSTEAD: J. S. Fletcher (N.) 1,730, H. Harben (N.) 1,630, E. K. Blyth (L.) 905, T. Birch (N.) 364.

ISLINGTON: (North) W. C. Parkinson (L.) 2,150, Dr. W. E. Grigsby (L.) 2,080, A. Chamberlayne (N.) 1,787, H. Stephen (L.) 1,464; (South) G. S. Elliott (N.) 2,603, R. Roberts (Ind.) 1,284, A. W. Memory (Economist) 1,012, S. Furlong (N.) 713; (West) D. H. Macfarlane (L.) 1,661, R. H. Carter (N.) 883, Col. Keene (N.) 854, J. May (Ind.) 798, W. Goodman (N.) 771, Dr. Slater (Ind. C.) 506; (East) A. M. Torrance (L.) 2,388, C. Horsley (C.) 2,066, H. R. Taylor (N.) 512, T. F. Stonelake (Ind.) 371, Miss Varley (Ind.) 226.

KENSINGTON: (North) F. C. Frye (L.) 3,026, J. Lloyd (L.) 2,163, E. M. Daniel (C.) 1,770, J. J. Stansfeld (L.) 559; (South) C. H. Campbell (N.) 2,080, Capt. W. H. James (N.) 2,075, T. Melhridge (L.) 861, J. Webb (C.) 738, W. A. Lindsay (N.) 699, J. W. Duffield (N.) 596.

LAMBETH: (Brixton) Capt. Verney (L.) 2,112, Lady Sandhurst (L.) 1,986, C. Bersford-Hope (C.) 1,686, H. Smallman (C.) 1,397; (Kennington) H. Myer (L.) 2,139, H. S. Foster (C.) 1,192, C. H. [2] The successful candidates were said to consist of 70 Reformers or Progressists, and 48 Moderates or Independents; and 85 councillors were pledged to vote against a renewal of the Coal Dues. We have reprinted the particulars of the polling at what may be described as the first general election of the Council, because the next election will take place in March '92, before the issue of the ANNUAL for '93, and the figures may be found useful to our readers for reference and comparison. In our '90 edition are briefly noticed the proceedings at the meeting of members of the provisional council, the election of aldermen and of chairman, the supersession of the Metropolitan Board of Works; the questions which arose as to the status of the lady members; the decisions come to by the Council upon a variety of important points; and the lamented death of Mr. Firth. In our edition for '91 the story is continued for another year, among the matters touched upon being the proceedings upon the *Strand Improvement Bill* and the withdrawal of that measure after the Commons Committee upon it had disagreed with the "betterment" clause; the effect of other legislation initiated by or affecting the Council; the resignation by Lord Rosebery,

owing to other calls upon his time, of the chairmanship, and the appointment of Sir John Lubbock as his successor. In the present edition the narrative is brought down to Nov. '91. Turning first to the all-important question of finance, on Feb. 10th the Special Committee on Beer and Spirit Duties brought up a report recommending (1) that the sum to be received from the beer and spirit duties on account of the current financial year, over and above the £140,000 which had been placed to the credit of the general county account, and which was estimated to be about £23,000, be devoted to the furtherance of technical education in London; (2) that in '91-2, and so long as an adequate amount might be received from the Government for the purpose, a sum to be determined each year, but in no case to exceed the estimated produce of a 1d. rate, be devoted to technical education in London; (3) that a standing committee on technical education be appointed to consider and report as to the application of the money devoted from time to time by the Council to that purpose, and generally to deal with the subject; (4) that the money be given to the following institutions in the form of capital grants, to be expended (save where specially ordered otherwise) in buildings, fittings, apparatus or plant to be used exclusively, or, at any rate, mainly, for the purpose of imparting technical education to persons of the artisan and labouring classes: Borough Road and Battersea Polytechnics, each £4000; St. Pancras and Holloway Polytechnics, each £3000; Chelsea Polytechnic, £2,500; Regent Street Polytechnic, £4000; Working Men's College, £500; Joint Committee for Providing Manual Training in the Elementary Schools, £1000; National School of Cookery (for training teachers), £500; and the University Extension Scheme (to organise lectures for artisans at low rates of admission), £500. Dr. Longstaff moved the adoption of the report. Mr. Benn moved an amendment to the effect that in view of the schemes which the Council now had, or might hereafter take in hand, for the housing of the working classes, the acquisition of open spaces, and similar efforts for the improvement of the condition of the London poor, the whole of the sum received from the beer and spirit duties be carried to the credit of the general county account. Mr. A. Smith seconded the amendment, and Sir T. Farrer hoped the report would be rejected. After further discussion Mr. Benn's amendment was carried by 50 votes to 45. The debate being resumed on a subsequent occasion, Mr. Charles Harrison moved a further amendment, proposing among other things that no grants for technical education be made as long as the incidence of the Metropolitan taxation upon the occupier remained unaltered. This was rejected, and Mr. Beachcroft moved to add to Mr. Benn's motion the words: "and that the Council do contribute from the general county account of the county fund £50,000 in aid of the technical or manual instruction in London." On a division, this was carried by 47 to 46 votes. An amendment reducing the £50,000 to £25,000 was adopted. Mr. Benn's amendment, as amended in respect to the grant of £25,000 from the county account, was put as the substantive motion and lost, whereupon Dr. Longstaff, on behalf of the committee, withdrew the remainder of the report. Lord Lingen (April 7th) submitted the estimate of the Finance Committee of the expenditure for the year ending

March 31st, '92, and was glad to be able to report, in the first instance, that there was a reduction in the year's estimate. The rate required for the county outside the city was 11'75d. in the pound against 13'25d. last year, and the sum required for the whole county, including the city, was 9 50d. against 11'25d. last year. The decrease was to some extent due to the increased valuation of the Metropolis, but mainly to the carrying to the general account of the balance of £23,000 which remained unappropriated from the beer and spirit duties, and £163,000, the estimated sum they would receive from those duties in the present year. Supposing they were to withdraw the £186,000 received from the duties from the rate account, it would be necessary to increase the rate by 1'2d. in the pound. The total estimated expenditure, including the balances, was £1,878,633, and the receipts from sources other than the rates were put down at £568,000, leaving £1,309,700 to be raised from the rates, or £164,524 less than was actually raised in the past year. The rateable value of the Metropolis was now £33,083,982, and a penny in the pound produced £137,849. They were providing this year for current expenditure amounting to £2,205,000 for a capital expenditure of nearly three millions for works, and a further sum of £1,700,000 for loans. He concluded by moving the adoption of the estimates. Mr. Beachcroft moved as an amendment: "That the estimate be amended by the omission of the sum of £163,192, being the estimated produce of beer and spirit duties, and that the estimated amount required to be raised in the year ending March 31st, '92, be correspondingly increased." The amendment was negatived and the recommendations of the committee agreed to. On May 5th a resolution was agreed to, making a county rate of 53d. in the pound, being 4 1/2d. for general county purposes, and 1 1/2d. for special county purposes. Sir John Lubbock, in his annual address, dealt with the complaint so commonly made, that the Council had greatly raised the rates, stating that the increase on the three years was really only a halfpenny. The last rate levied by the Metropolitan Board of Works was 10 1/2d., to which must be added the cost of services formerly paid out of the county rate, amounting to 1'63d.; new charges not borne by the Council's predecessors, such as election of county councillors and cost of increased chamber and office accommodation, electric lighting inspection, medical officer, rabies, etc., 37d.; payment to guardians of the poor of 4d. per head per day for indoor paupers, being a relief of local poor rates, 2'39d., total 14'49d. From this must be deducted the extra amount received from the Exchequer contribution of 2'49d., making a total amount of 1s. They must also deduct the difference in the reduced balance in hand equal to 8d., giving 11'2d. against their own present rate of 11'75d., showing an increase of 55d. When they considered all the circumstances—for instance, that a large increase in the expense of the main drainage necessarily followed from the new works at Barking and Crossness, that the desirability of increasing the efficiency of the Fire Brigade was generally admitted, and that the additions to the Parks and Open Spaces necessarily entailed additional expenditure, he thought it must be admitted that the increase was very moderate.—The whole debt of London—not the debt of the Council—amounted on

March 31st, '91, to nearly forty millions, but the Council's portion of the debt was at the same date, after deducting assets, £17,909,645. The chairman, in his annual address (June 3rd), observed that the additional expenditure which was looming in the distance was a most serious consideration for them all. It would cost say ten millions to provide an additional water supply, or, if the purchase of the water companies was included, it would be roughly £40,000,000; main drainage, at the very least, £4,500,000; or, if the sewage was to be taken to the sea, say £10,000,000; the Blackwall Tunnel would cost over £1,000,000; another lunatic asylum say £500,000, and there was also the reconstruction of some of the bridges. In housing of the working classes they had already spent £1,600,000; the Boundary Street scheme was to cost £300,000, and the committee had 270 other areas under consideration. Again, the provision of suitable offices and the improvement of the main lines of communication through the Metropolis would sooner or later have to be faced. These necessities showed the need of prudence and economy, and of some change in the incidence of London taxation. It now fell entirely on the present rate-payers; but many of the improvements made, or to be made, were of a permanent character, and would increase the value of the freehold, and it was only fair therefore that the owner should bear some part of the expense.—The Bills promoted by the Council during the session of '91 were the General Powers, Overhead Wires, Sky Signs, Water Supply, and Theatres. The first of these, which duly became law, made provision for the establishment of a superannuation and provident fund in respect of certain persons in the employment of the Council, and authorised the Council to widen St. George's Place, Knightsbridge; Fulham Palace Road; Queen Street, Hammersmith; and Fortress Road, Kentish Town; to make a new street from Evelyn Street to Creek Road, Deptford; to build several new bridges at the Isle of Dogs, and to reconstruct Barking Road Bridge, part of the cost of which last improvement is to be borne by West Ham. Under the same Act additions may be made to Bostal Heath and Peckham Rye, and the Council may incur costs and expenses not exceeding £1000 in prosecuting and conducting inquiries and negotiations relative to such existing markets and market rights as are not the property of, or under the control of the Corporation, and to the expediency of establishing new markets in or near the administrative county of London. The Overhead Wires Bill, which was the measure of the previous year, without the clause which led to the rejection of the proposal by the Commons, also became law, and gives the Council a controlling and regulating power over such of those wires as are situated in the county. The London Sky Signs Bill, which also received the approval of Parliament, established a system of inspection or survey of sky signs, and provided for the eventual removal of all sky signs at the end of six years, as well as for the repair of existing sky signs during that period. After the passing of the Act no additional sky signs were to be erected. The question of the water supply of the Metropolis formed the subject of a lengthy investigation before a select committee of the House of Commons, which will be found dealt with in the article Session, sect. 133.

The conclusions at which the Council arrived were to oppose both the Bill promoted by the Corporation and the measure known as the Vestry Bill, and to authorise the Parliamentary Committee to intimate to the Select Committee on the Hills, on behalf of the Council, that the Council was prepared to undertake the question of the water supply of London subject to the following conditions: that powers should be conferred on the Council for the introduction into Parliament of Bills dealing with the water question, including the establishment of a new supply and the improvement of the existing supplies, should further investigation prove such a course to be desirable. The Council also requested its Chairman to introduce into Parliament a public Bill with this object, with the view of its being referred to the same committee as the several pending Water Bills. The public Bill referred to was introduced, but no opportunity of bringing it on for second reading could be found. The **Theatres Bill** was also introduced, but did not come on for second reading. The Theatres and Music Halls Committee, of which Mr. Fardell is chairman, reported to the Council in June that negotiations had been continued with the representatives of the theatrical and musical professions, in order to bring about some general agreement by which the Bill might be submitted to a select committee of the House of Commons, but no agreement could be come to. A memorandum was therefore drawn up and agreed to by representatives of the Theatres Committee, and of the proprietors of theatres and of the Entertainment Association, that the Government should be asked by the Council to appoint either a royal commission or a select committee to inquire into the working of the Acts for licensing and regulating theatres and places of public entertainment, and to report upon any alterations which might appear desirable; and that, in the event of the Government agreeing to grant either one or the other, the Council's Bill should be withdrawn. This agreement was ratified by the Council. There was passed, in course of the session, the Act to give effect to the **Boundary Street, Bethnal Green, improvement scheme**. The number of persons of the working class who will be displaced by the scheme, if carried out in accordance with the Act, is 5,719; but it is proposed to provide in the area to which the scheme relates accommodation for 4600 persons of the working class, and in the vicinity further accommodation of an equally convenient character available for 800 persons has been, or is about to be, forthwith provided. The Council were to acquire the site of Goldsmith Square, and to cause to be erected thereon accommodation for 500 persons of the working class. The estimated net cost of the whole scheme was £300,000, for although £371,000 was to be paid for land, etc., and £35,000 for roads, being together £406,000, the Council count on a recoupment of £106,000. In this connection it may be stated that active steps are being taken by the Council towards the construction of a municipal lodging-house in Parker Street, Drury Lane. Another measure, which was also passed in course of the session, authorised the **Tottenham and Wood Green Joint Drainage Committee** to deliver, and the Council to receive into the main drainage system, the sewage from those districts in perpetuity. In the **London County Council (Money) Act, 1891** (54 & 55 Vict. c. 62), the net aggregate new borrow-

ing powers amounted to £1,210,243, of which £1,050,043 was for expenditure by the Council and £160,200 for loans. The **London Tramways Company** asked Parliament for powers to extend their lines **over Westminster Bridge**, and along the **Victoria Embankment as far as the Charing Cross railway bridge**. The Bill was objected to in the House of Commons on the ground of the effect it would have upon the amenities of the embankment, and also because the company had not agreed to accept the clause proposed by the County Council, under which no *employee* of the company should be worked on the said extension more than ten hours per day, and was thrown out by 170 to 137. In another case the **London County Council and the Harrow Road and Paddington Tramways Company** came to an agreement under which a clause was inserted in a Bill limiting the hours of labour of every person employed by the company upon or in connection with any tramways authorised by the Act to ten per diem; but this was struck out by the Chairman of Committees of the House of Lords, on the ground that legislation of the kind should be effected by a public Bill, and not by a private measure. As to legislation affecting the Council, there should be mentioned the **statute deferring the day of election** from November until March (see **Session**, sect. 62).—It appears, from a report of the **Asylums Committee**, that the Council has nearly 11,000 lunatics under its care. As regards the **Blackwall Tunnel**, the Council in February accepted a report of the **Bridges Committee** (of which Mr. Osborne is chairman), recommending that the committee be authorised to instruct the engineer to prepare drawings, specifications, and conditions of contract for a tunnel not more than 27 ft. external diameter, and not less than 23 ft. internal diameter, provision being made therein for vehicular and pedestrian traffic, and that tenders be invited by public advertisement for the construction of the works. It was notified in May that the property already acquired on both sides of the river had cost £161,635, and that that which was further required to enable the tunnel to be constructed would cost about £165,000. The committee had considered the question whether it would not be advisable to take sufficient land on either side of the river to enable a second tunnel to be formed, should it be found necessary in the future, and an additional sum of £20,000 only would have to be added to that estimate to provide sufficient land to enable that second tunnel to be made. They recommended that they be authorised to serve notices to treat for so much of the property as might be required, should a second tunnel be ultimately found to be necessary. In course of one year no less than 4,300,000 passengers and 210,000 vehicles were conveyed across the river by the **Woolwich Steam Ferry** of the Council.—Recent legislation in connection with electric lighting has thrown extra labour on the **Highways Committee**. It was this body on whose behalf Mr. B. Hopkins in March brought up a report, recommending that the Council should, under the statutory provisions in that behalf, exercise its right to require the **London Street Tramways Company** to sell to the Council the tramways and works and undertaking authorised by the **London Street Tramways Act, '70**, and that the clerk be directed to call proper statutory meeting of the Council required by the **Tramways Act, '70**, in order that the Council

might consider the matter, and, if it saw fit, pass the necessary resolution for the purpose referred to. The report was adopted. On June 9th Mr. B. Hopkins moved that a notice be served upon the London Street Tramways Company, requiring the company to sell to the Council the whole of the tramways and works authorised by this act of 1870." The lines it was proposed to take over were that running from the "Nag's Head," Holloway, to Fuston Road, and that running from Kentish Town to King's Cross—in all about four miles and a half. This was rather less than one-third of the whole undertaking, but it was all the Act allowed the Council to purchase at present. Next year 191 miles of the North Metropolitan line would fall in under the compulsory clause. Mr. Beachcroft wished to attach an addendum, declaring that the Council had no intention of working the tramway themselves, and this was accepted by Mr. Hopkins on behalf of the committee. A division having been taken, the chairman announced that there were 69 for and 2 against, but such a resolution could not be passed unless two-thirds of the Council took part in the division, and they were 23 short of the number. Mr. Harrison (chairman of the Parliamentary Committee) called attention to the fact that, when the division was taken, several members went into the gallery, and asked whether they, being present, were not bound to record their votes? The chairman said the gentlemen who went into the gallery were not technically present when he put the question. On July 14th Mr. Hopkins reintroduced the resolution, and 86 voted for and 3 against it. About a dozen members had withdrawn, and as it required the votes of 90 members to render the resolution valid the proposal again fell to the ground, and it was agreed to summon another statutory meeting. On July 22nd a recommendation of the Highways Committee, that the Council should seek Parliamentary powers to construct a tramway across Westminster Bridge and along the Embankment, and to enter into agreements with the London Tramways Company and others for the leasing of the line when constructed, was agreed to. The Committee on Local Government and Taxation was largely engaged with the question of assessments. In January the Council adopted a recommendation it made to appeal against the totals of the valuation lists in about a dozen metropolitan parishes, and at a subsequent meeting it was decided to proceed with all the appeals except in the case of one parish. It subsequently transpired that the committee had come to terms with all the vestries except two, the assessments being increased by agreement in the cases of the others. With regard to main drainage, the committee, of which Mr. Howell Williams is chairman, stated in their annual report to the Council that Sir Benjamin Baker, who, in conjunction with Mr. Binnie, chief engineer of the Council, had undertaken a thorough examination of the whole sewage system, had presented a report in which they drew the conclusion that the most urgent present requirements were the prevention, as far as possible, of floods due to rainfall, and the cessation of the discharge of crude sewage into the river during periods of comparatively small rainfall, and during the first portions of heavier falls. To improve the system of main drainage on the north and south sides of the river they suggested the execution of works, the approxi-

mate cost of which, it was stated, would amount to a total of £2,220,000. The remainder of the report of Sir B. Baker and Mr. Binnie dealt with the question of providing new outfalls at some point lower down the river or into the sea, and it was suggested that a new outfall might be conveniently placed, and the sewage treated, at a point near Shell Haven in Sea Reach, the capital expenditure being estimated approximately at £1,600,000, and the working expenses at £50,000 per annum. The alternative proposal was the discharge of the whole of the dry-weather sewage of the Metropolis into the sea. The cost of this would, the engineers consider, be not less than £8,000,000, and, in addition, the pumping would entail a probable annual charge of £80,000. With this latter portion of the subject, involving issues of so grave a character, the committee were not, they said, then in a position to deal; but as regards the proposed works for improving the existing system of main drainage, they considered that these were so urgent that no delay should take place, in so far acting upon the suggestions of the engineers as to direct the preparation for their consideration of detailed plans of the proposed new sewers on both sides of the river. The committee submitted a recommendation to the Council to this effect on March 10th. Following upon this they also repeated their recommendation of last year, that tenders should be obtained for the construction of a sludge vessel upon the model of the older and less costly ship with certain modifications to be described by the engineer. The condition of the river Thames occupied the constant attention of the committee, and they were glad to be able to record their opinion that the state of the river had been considerably improved by the Council's operations. They were confirmed in this view, they remarked, by a passage in the report of Sir B. Baker and Mr. Binnie. Tenders for the construction of the additional sludge vessel were subsequently obtained, and one of them was accepted on July 28th. In course of the year '90-1 the Council opened three new parks, viz., Dulwich Park, Maryon Park, and Brockwell Park, which was opened informally on Good Friday; and from '89 to March '91 the Council acquired no less than twenty five new open spaces. A proposal of the Parks Committee, of which Mr. Dickenson is chairman, for the establishment of a municipal band excited much interest. The recommendation was that the Council should (June 30th) authorise the expenditure of £1,300 for the formation of a band of fifty instrumentalists, to play in the parks and gardens and on the open spaces under its control for three months during the current season. An amendment of Mr. Beachcroft, to authorise the expenditure of a sum not exceeding £1500 to be applied in contributions towards the expense of providing bands to play in a selected number of the parks, gardens, or open spaces of the Metropolis during the remainder of the season, was adopted on July 7th, and successfully acted upon by the Parks Committee.—The Housing of the Working Classes Committee, of which Lord Compton is chairman, presented a valuable report on the subject of workmen's trains, as to which they had been in communication with representatives of railway companies. Mr. Henry Clarke, on behalf of the Improvement Committee, presented on July 21st a report recommending a number of important street

improvements. The first of these in order was a proposition to widen the Strand by the demolition of the island or block of buildings between Holywell Street and the main thoroughfare. Towards the estimated cost (£501,500) it was suggested that the owners of the north side of Holywell Street, which by the improvement would acquire frontages to the Strand, should contribute, by way of an improvement rate, a sum not to exceed one-half of the increased annual value of their property. The next, and most important, scheme, was one for the formation of a new street (90 ft. wide) from the Holborn end of Little Queen Street to the Strand, provision also being made for the widening of Wellington Street. With a view to the recoupment, the committee urged that this new street should be made a first-class thoroughfare, and they asked the Council to consider as to whether some novelty should not be introduced for this purpose, such as projecting galleries, somewhat similar to those in the Rue de Rivoli, Paris, and in Turin, or some system of glazed roofing, of which the gallery at Milan is suggestive. The suggested new street (combined with the probable widening of Southampton Row) lent itself, in the view of the Council, to the idea of a branch underground railway, as a feeder to the three northern railways. The estimated net cost of this improvement was £933,000, which includes £121,000 for rounding off the corner of Wellington street. Third in the list was a scheme for widening Tottenham Court Road by removing the block of buildings to the east of Bozier's Court, and rounding off the corner of the court at its junction with Oxford Street, at an estimated cost of £50,000. Another proposal was one for widening Nine Elms Lane, Battersea, at an estimated cost of £105,000. Battersea Park Road, which varies in width from about 35 ft. to about 50 ft., the committee recommended should be improved as to provide a minimum width of 50 ft., the estimated cost being £27,400. York Road, Battersea, it was proposed to widen so as to give a minimum width of 40 ft., the estimated cost being £74,000. Wandsworth Road, it was suggested, should be widened and improved at a cost of £61,000. A further suggested improvement was the formation of a good thoroughfare from Whitechapel to Bishopsgate, by way of Middlesex Street, Sandy's Row, and Widegate Street. In the event of the City Commissioners of Sewers agreeing to construct so much of the new street as would lie within the City boundary, the committee thought that the Council should make a contribution towards the cost, the total amount of which was estimated at £119,000. The last suggested improvement was the construction of a southern approach to the new Tower Bridge, at an estimated cost of £280,500. The Council's estimated net outlay on the whole of the above schemes, after deducting contributions, but without reckoning amounts to be received from the Strand improvement rate, was £2,133,625, being equivalent to a charge on rates for the net cost the first year (diminishing annually) of 7223d., or rather less than 3d. in the pound. These proposals were taken into consideration on July 24th, when Mr. Hubbard moved as an amendment: "That while thanking the Improvements Committee for their report, and fully recognising the importance of the improvements proposed, the Council is of opinion that in view of the near approach of the next

County Council election, it is not desirable that the present Council should commit their successors to such an expenditure as is suggested in the report of the committee." On a division the amendment was carried by 42 to 41. A proposal of Mr. Beachcroft, to exempt the Sandy's Row and Bishopsgate improvement from the resolution, was next adopted by 43 to 39; and words were added to Mr. Hubbard's amendment, referring it to the committee to bring up at the first meeting after the recess those improvements which they considered to be of great urgency. On July 28th there came before the Council a proposal of the committee, recommending that the engineer be instructed to prepare the necessary plans, and the valuer the books of reference with respect to certain of the above improvements, it being urged that if this work were left until the Council re-assembled the margin of time for enabling the committee to comply with the Parliamentary Standing Orders would be very small; but objection was taken to the report being considered without notice, and was held to be fatal to proceeding further at that time. Consideration of the matter was resumed on Sept. 20th, when the improvement committee reported that they had come to the conclusion that the most pressing improvements were (1) Sandys Row to Bishopsgate; (2) Bozier's Court, Tottenham Court Road; (3) the widening of the Strand at Holywell Street; and (4) the widening of Nine Elms Lane, Battersea. They accordingly recommended that the Council should apply in the next Session of Parliament for powers to carry out those improvements. The Committee added that they particularly regretted being obliged to contemplate the postponement of the proposed new street from Holborn to the Strand, as they felt it was one of those improvements which should be undertaken at the earliest moment which the Council's finances would admit of. Mr. Hubbard moved an amendment, agreeing as to the desirability of carrying out the improvement, but declining to apply to Parliament for powers to carry out any further improvements except where it would be detrimental to health and life not to do so, until Parliament had given the Council power to raise at least half the cost of such improvements by a rate levied on the ground landlords, "who reap the benefits of such improvements, or by some other means, so that the whole burden shall not fall upon the occupier." The amendment was negatived by 44 to 33, and the clause relative to the Sandys Row improvement was agreed to. The report being further discussed on a future occasion, Mr. C. Harrison, on the motion to adopt Clause 2 (relating to Bozier's Court), proposed an amendment to the effect that, having regard to the present exceptional position of lessees and occupiers in the Metropolis under old contracts in respect of the payment of rates, it was inequitable to increase the burden of such lessees by undertaking the improvement in question. This amendment was carried by 45 to 36. A similar amendment was adopted with regard to the contemplated widening of the Strand and the several other improvements recommended by the Committee. In reference to the Water Supply, the Council on Oct. 13th considered a report of the special committee recommending (1) that the Council, whilst expressing its readiness as far as its legal powers enable it to do so to undertake the duties and obligations

mentioned in the first, second, fourth and fifth recommendations in paragraph five of the report of the select committee [see Session, sect. 133], is unable to accept the condition contained in the third recommendation, "that the Council, if constituted the water authority, should be required to purchase the undertakings of the eight water companies by agreement, or failing agreement, by arbitration, within a fixed period"; (2) that the Council is prepared to accept and act upon the following recommendation contained in the report of Sir William Harcourt's Select Committee on Water Supply, viz., "That for certain purposes at least it would be desirable to acquire the undertakings of the existing companies, if the same could be obtained on fair and reasonable terms." (3) "That the Council is of opinion that the price to be given for the undertaking of any company should depend not merely on past dividends or on Stock Exchange values, but upon the true value of the undertaking, having regard to its legal position and liabilities, to the condition of the property, and to its ability to supply future wants." (4) "That in order to arrive at a satisfactory conclusion on this last question it is essential, before any terms of purchase can be considered, that the liabilities to capital expenditure for new or supplementary sources of supply in the immediate future should be authoritatively ascertained." Various amendments were proposed and rejected, and in the result the whole of the recommendations were agreed to. It was stated that the special committee of the Council and the Water Committee of the City Corporation were in entire agreement as to the position of the water question, and that the Corporation intended next Session to introduce a new Bill dealing with the question.—The tender of Messrs. S. Pearson & Son for the construction of the Blackwall Tunnel, amounting to £871,000 (this being the lowest of the four tenders submitted), was accepted in October. The Tramways question came up again on Oct. 27th, when Mr. Bassett Hopkins renewed his motion for a notice to the London Street Tramways Company, requiring them to sell the works and undertaking authorised by their Act of '70. An amendment of Mr. Beachcroft, asserting that the Council, in passing the resolution, had no intention of itself working or seeking power to work the tramways therein referred to, was carried by 35 to 47, and the original resolution, as amended, was adopted by 90 to 2.—In Oct. a rate for the second six months of the current year, of the same amount per £ as that passed for the previous six months, was agreed to. [3] On the Council's reassembling in Sept., the Chairman announced his intention of resigning in November, and a statement to the same effect was made by Sir T. Farrer and Mr. Haggis; but subsequently, on learning that it was the unanimous wish of his colleagues that he should continue to discharge the duties of chairman until the dissolution of the Council in March '92, Sir John said he should have much pleasure in complying with their request. Both the vice-chairman and deputy-chairman, on being appealed to, also consented to serve until March. Some friction which arose between himself and the Fire Brigade Committee, induced Captain Shaw, to his own regret, and to the great regret of many members of the Council and of the public, to resign the post of chief officer of the Metropolitan Fire Brigade,

which he had held for 30 years. The Council granted him a retiring pension of £466 13s. 4d., being two-thirds of his full salary and emoluments; and, having just received from her Majesty the honour of a Knight Commander of the Bath, he took farewell of the brigade on Oct. 31st.—Mr. Joseph Beck (North Hackney) died in course of the year, and Mr. James Beal, "father of Municipal Reform," also passed away. In October Sir John Lubbock opened Waterlow Park, Highgate, and the Woburn Place Gate was removed under the powers of the Act obtained by the Council in '90.—[4] Subjoined is a list of the Council corrected to Nov. 13th. Chairman, Rt. Hon. Sir J. Lubbock, Bart., M.P.; Vice-Chairman, Sir T. H. Farrer, Bart.; Deputy-Chairman, A. H. Haggis.—Aldermen (retire March '92): Barker, J.; Cons, Miss E.; Gibb, T. E.; Grosvenor, Hon. R. C.; Kennett-Barrington, Sir V.; Meath, Earl of; Spicer, E.; Stuart, J., M.P.; Tayler, S. S.; Williams, Rev. C. F. (To retire in '94): Arnold, A.; Debenham, F.; Farrer, Sir T. H., Bart.; Harrison, F.; Hobhouse, Lord; Hogg, O.; Lingen, Lord; Routledge, E.; Russell, G. W. E.—Councillors (retire March '92): Acworth, W. M., Dulwich; Ambrose, J., Limehouse; Antrobus, R. C., J.P., St. George, Hanover Square; Arter, A., Hammersmith; Austen, E., Hoxton; Beachcroft, E. M., North Paddington; (vacant) Fulham; Beaumont, Capt. W. S., J.P., Stepney; (vacant), North Hackney; Bell, H., North Lambeth; Benn, J. W., East Finsbury; Beresford-Hope, C. T., Brixton; Bott, W. Drummond, Petworth. **Public Analyst:** Otto Hehner, The Laboratory, 11, Billiter Sq., E.C.

County Councils (Elections) Bill. See Session, sect. 62.

County Courts. History.—The modern County Court, which must be carefully distinguished from the County Court of early English history, dates from the year 1846. Under the Act 9 & 10 Vict., c. 95, and subsequent Acts, a certain number of county court districts have been marked out in each county. The court for that county is held at short intervals in one or more places within each of these districts. Several districts are grouped in one circuit, and a judge is allotted to each circuit. The judge is appointed by the Lord Chancellor, and must be a barrister of at least seven years' standing. He has the assistance of a registrar and other officers. **Jurisdiction.**—County Courts have jurisdiction in the following cases:—(1) In actions in which the sum claimed by the plaintiff does not exceed £50; (2) in actions relating to real property, the annual value or rent of which does not exceed £20 per annum. But from the above cases must, generally speaking, be excepted all actions in which the validity of any devise, bequest or limitation in a will or settlement is disputed, and all actions for malicious prosecution, libel, slander, seduction, or breach of promise of marriage. But by consent in writing of both parties, any action whatever which could have been brought in the Queen's Bench Division may be brought in a County Court. And if

the plaintiff in a superior court recover no more than £50 in an action for breach of contract or £10 in an action of tort, he can get no costs except by special favour of the court; and in an action for breach of contract in a superior court, if the claim be not for more than £50, either party may apply to have the action transferred to the County Court; (3) in actions such as may be brought in the Chancery Division of the High Court of Justice, provided that the property in dispute does not exceed £500 in value; (4) in Admiralty actions in which the claim is for salvage, for towage, necessities or wages, for damages to cargo, or by collision, or arises out of agreements concerning the use or hire of any ship, the care of goods therein, etc., and does not exceed certain specified limits of amount; (5) actions in bankruptcy; (6) a variety of actions too numerous to be severally mentioned here. **Procedure.**—A jury may be summoned when the amount claimed exceeds £5 at the requisition of either party, and in other cases at the discretion of the judge upon the application of either party. The jury consists of five persons qualified to serve as jurors in the High Court. The plaintiff begins by entering a plaint in a book kept by the registrar. The officer of the Court then serves a summons upon the defendant. Both parties must appear on the day named in the summons. Pleadings are not in use. Evidence is taken *viva voce*. Solicitors as well as barristers may address the Court. If the debt or damage claimed exceeds £20, an appeal lies from the decision of the judge upon any question of law, or on the admission or rejection of evidence, unless the parties have previously agreed that such decision shall be final.

Coursing. With the exception of archery (*q.v.*), there are few sports more ancient than that of coursing the hare, and in all ages the greyhound has been admired for its graceful form and extraordinary speed. Its keenness of vision is also marvellous. The numerous enclosed meetings which have of late years been inaugurated in close proximity to our large towns fully testify to the popularity of coursing. **Prizes** of great value are offered for competition at these fixtures; and although many owners, attracted by rich rewards, too frequently devote their attention to the breeding of greyhounds chiefly for speed, to the neglect of that cleverness which is of so much more value in the open, the **Waterloo Cup** is still the leading trophy of the year. For this there are sixty-four nominations, which are awarded as a rule to the best known and most respected of coursers, at a subscription of £25 each, of which the winner takes £500, the runner-up £200, two dogs £50 each, four £30 each, eight £20 each, and sixteen £10 each, the balance being awarded to the leading dogs in the **Purse** and **Plate**, which are confined to the beaten dogs in the **Cup** and **Purse** respectively. The January meetings at Altcar Club and Haydock Park were abandoned owing to the inclemency of the weather. The Valentine Stakes at Haydock Park attracted 75 entries, and in the deciding course on Feb. 11th, Mr. F. Barrett's r or f d **Ked Hussar**, by Gay City—Redvale, beat Mr. J. Elcox's r or f d **Donald O'Fee**, by Millersdale—Dear Eleanor. The annual meeting of the **National Coursing Club** was held at the Adelphi Hotel, Liverpool, on Feb. 17th, when alterations were made in Rules 4 and 17, and the Earl of Sefton was re-elected as President, and Mr. Carruther as

Honorary Secretary. On the following day the **Waterloo Cup** contest was commenced over the Altcar Flats, and the finals of the coveted trophy, together with those of the **Purse** and **Plate**, were fought out with the following results:—**Cup**: Col. J. T. North's bd d Fullerton, by Greentick—Bit of Fashion, beat Mr. G. F. Fawcett's be b **Faster** and **Faster** (late **Pride of Oakfield**), by Northern Express—**Pride of Belmont**. **Purse**: Mr. E. Davey ns (Col. J. T. North's) bk d p Simonian, by Greentick—**Bit of Fashion**, beat Major H. Holme's bk d Hobart Town, by Puddletown—Houssa. **Plate**: Marquis of Anglesey ns (Mr. J. Russell's) bd d p Rhymes (late Times), by Greentick—Tinsel, was declared the winner, Mr. A. H. Jones' Jolly Mystery, by Misterton—Mermaid, being drawn from distress. One of the most remarkable incidents in the long history of the **Waterloo Cup** is the success which has attended **Colonel North's** representatives; for whilst many old coursers have vainly endeavoured year after year to enrol their names amongst the list of winning owners, the "Nitrate King" commenced by furnishing the runner-up in '88; in '89 he owned both the dogs which divided the stake. Fullerton won outright both in '90 and '91, and, as will be seen above, Simonian credited him with the **Purse**. Colonel North also won the **Gold Cup** at Haydock Park, on March 12th, the last two dogs left in being Simonian and Young Fullerton; and at the same gathering the Earlestown Maiden Stakes, with 64 subscribers, was awarded to Mr. J. Russell's Ruby Cordial (late Cherry Bloom), by Mullingar—Cherry Girl, which beat Mr. F. Baird's Paper Mill Boy, by Tullochgorum—Rustic Flirt in the deciding course. At the Carmichael open meeting held on March 24th, 25th and 26th, the deciding course for the cup resulted in favour of Sir R. Jardine's f b Gwenna, by Flanigan—Gladys, and Mr. R. Russell's bk b Regularity, by Pious Fraud—Wapiti, who divided, the former taking the cup and £55, and the latter £45. Sportsmen in Australia celebrated their "Waterloo Cup" meeting on July 18th, 20th, and 21st, on the Oval, Digger's Rest, Victoria, and as will be seen the conditions governing the three events are very similar to those at Altcar. **Waterloo Cup**: for sixty-four all ages, at £12 10s. each; and the Dawson whisky trophy, value 50 guineas. Final course, Mr. J. Munday ns High Rent (late Mimic), by Rent Charge—Minerva, beat Mr. W. Stapleton's Socialist, by Livingstone—Birchbroom. **Waterloo Purse**: for thirty-two dogs beaten in the first round of the cup. Final course, Mr. W. R. Hall's Heliotope, by Rent Charge—Red Hind, beat Mr. W. H. M'Millan ns Rectitude, by Padlock—Marigold. **Waterloo Plate**: for sixteen dogs beaten in the first ties of the Cup. Final course, Mr. J. H. Taylor's Harkaway, by Bazouk—Yellow Girl, beat Mr. H. Gore's Good News, by Livingstone—Latest News. The **Champion Produce Stakes** decided at Haydock Park on Sept. 16th, 17th and 18th, attracted 131 subscribers at £4 each, and terminated in an even division between Mr. Farley's Qui-sano, Mr. D. Brown's Bolton Fell, Col. North's Needham, and Mr. Skinner's Stick Fiddle and I and Silver City. On Oct. and, Mr. Graves' Gormanston, a black dog by Mullingar—Gladstone, was awarded the **Produce Stake** at the South of England Club meeting at Stockbridge, Mr. T. P. Hale's Haverhill Lass, the runner-up, being withdrawn through distress. At the

same meeting Mr. Ingram's Black Bart, by Pinkerton—Glen Maid defeated Mr. Hilliard's Harvest King V., by Lights o' London—Harvest Beer, in the deciding course for the Cup. At the Ridgway Club Meeting, held in the second week of October, Mr. Fletcher's First Away, Mr. Pilkington's Philario, and Colonel North's Nacton divided the North Lancashire Stakes; and the South Lancashire was credited to Mr. Pilkington by the aid of Phrynnette and Purissima, who divided. At the Border Union Meeting, three weeks later, the Netherby Cup terminated in a division between Colonel North's Young Fullerton, Mr. W. H. Smith's Donald o' Kane, and Mr. J. Russell's Real Lace and Race Course; whilst the Border Union Stakes were divided between Mr. Russell's Roman Oak, Mr. Fletcher's Friar in Orders Grey, Colonel North's Neston, and Mr. Dickson's Dolly Dillon. At the Newmarket Champion Meeting, which closed on Nov. 5th, the Champion Puppy Stakes resulted in a division between Colonel North's Narboro', Messrs. H. and W. Thompson's Threat, Mr. R. Watts' Nanette Potin, and Mr. F. Ward's Wild Clansman; and Col. North's Not Out and Mr. R. Rodrigo's Monowana divided the All-Aged Stakes. Consult "Coursing Calendar," edited by C. N. Brown, the *Field Office*, 346, Strand; and "The Greyhound Stud Book" compiled by Mr. D. Brown, Dalry, Ayrshire, N.B.

Courtesy Titles. The eldest son of a duke, a marquis, or an earl, takes by courtesy the second title of his father, which is generally, but not always, the next in degree. Thus the eldest son of the Duke of Devonshire takes the courtesy title of Marquis of Hartington, but the present Earl of Derby was Lord Stanley during the lifetime of his father, the second title being, not viscount, but baron. Where the second title is of the same name as the first it is dropped, to avoid confusion; for example, the Marquis of Salisbury is also Earl of Salisbury, so his eldest son is known as Viscount Cranborne. Younger sons of dukes and marquises prefix the courtesy title of lord, and all the daughters of earls, as well as of the higher degrees of nobility, the courtesy title of lady, to their Christian and surname, and the daughters may retain it after marriage with the altered surname. The courtesy title of master is given in Scotland to the eldest son of a baron. A duke's eldest son's eldest son or a marquis's eldest son's eldest son, sometimes takes by courtesy the third title of the duke or marquis. While these courtesy titles are invariably used when addressing the persons who take them, they are not accorded full recognition in certain formal documents: for example, the name of the Duke of Devonshire's eldest son appears sometimes in the House of Commons journals as "the Right Hon. Spencer Compton Cavendish, commonly called the Marquis of Hartington." In the following list the first column gives the courtesy title which is usually taken by the eldest son of a peer; but in many cases the courtesy title is not in present use, because the peer has no son. Thus a familiar title to English ears, the Marquis of Granby, was long in abeyance as a courtesy title, the late Duke of Rutland's heir presumptive having been his brother, Lord J. Manners, M.P.; but on the succession of the latter to the dukedom the courtesy title was revived in the person of his son, now M.P. for the Melton Division of

Leicestershire. In several cases where the eldest son has died, and the next survivor has taken another family title, the dignity in actual use is given.

Courtney, Rt. Hon. Leonard H., M.P., P.C., was b. 1832. Graduated (55) at St. John's College, Cambridge, as Second Wrangler, was bracketed first Smith's prizeman. Elected a hon. Fellow of St. John's ('89). He was called to the bar at Lincoln's Inn ('58); Benchers ('89). Professor of Political Economy at University College, London ('72-5). Entered parliament as Liberal member for Liskeard ('76-85). Successively Under-Secretary of State for the Home Department ('80), Under-Secretary of State for the Colonies ('81-2), and Financial Secretary to the Treasury ('82-5). Elected in the Liberal interest as member for South-East Cornwall (Bodmin) in '85, and re-elected as a Liberal-Unionist in '86. **Chairman of Committees of the House of Commons.** He was formerly leader-writer for the *Times*. He married in '83 Miss Catherine Potter, a lady well known for her exertions in behalf of the better housing of the poor in the East End of London. Privy Councillor '89. Appointed a member of the Labour Commission in '91.

Cowen, Frederic Hymen, one of the most popular of song composers, was b. in Kingston, Jamaica, 1852. From an early age he

was a pupil of Sir Julius Benedict and Sir John Goss, and further studied at Leipzig and Berlin. He has written an opera ("Pauline"), an oratorio ("The Deluge"), several cantatas, as well as other styles of music. Apart from a few of his songs, his most esteemed productions are his symphonies, his "*Language of Flowers*" orchestral suite, and his cantatas "*The Rose Maiden*" and "*The Sleeping Beauty*," the latter having been specially composed for the Birmingham Festival of '85. Mr. Cowen's oratorio "*Ruth*" was produced at Worcester Festival in Sept. '87. In May '88 Mr. C. left for a six months' visit to Melbourne, for the exhibition of which city he composed the "*Inaugural Ode*." Mr. C.'s latest work ('89) is entitled "*St. John's Eve*."

Crane, Walter, poet and painter, was b. 1845, and first exhibited at the Royal Academy '62. Has published various illustrated books, and is an authority on decorative art. Mr. C., who was elected a member of the Institute of Painters in Water Colours in '82, is an ardent advocate for the reform of the Royal Academy. He has published "*Walter Crane's Toy Books*," and many poems illustrated by himself. An interesting exhibition of his work was held in London during '91. His last book is entitled "*Queen Summer*."

Crawford, F. Marion, the novelist, spent a great portion of his early life in India, and is now accustomed to live for the most part of the year in Italy, where the plot of more than one of his novels is laid. His works include "*Tale of a Lonely Parish*" ('86), "*Saracinesca*," "*Paul Patoff*" ('87), "*Dr. Claudius*," "*Mr. Isaacs*," "*Marzio's Crucifix*" ('87), and "*With the Immortals*" ('88). One of his most popular books has been "*Marzio's Crucifix*," which depicts the life of an engraver on silver. Mr. C.'s most recent works, "*Greifenstein*," "*Sant' Ilario*," and "*A Cigarette-Maker's Romance*" ('90), have quite justified the already high reputation of their author. In '91 he published "*Khaled*" and "*The Witch of Prague*."

Crawford, Mrs. Emily, the well-known Paris correspondent of the *Daily News*, commenced her connection with that journal at the age of twenty-two, on her marriage to Mr. Crawford, who at that time occupied the position she now holds; and, until his death, successfully collaborated with him. She wrote, at one time, regularly for *Once a Week* and the *San Francisco Bulletin*; and, at the present time, contributes to *Truth* and the *New York Tribune*, as well as sending daily telegrams to the *Daily News*. One of her greatest journalistic successes occurred in connection with the celebrated debate of May 24th, at Versailles, at which, by the courtesy of M. Thiers, she was a spectator, and of which she telegraphed the fullest report of any paper. She wrote, under the head of "Paris Notes," the brilliant biographical sketch of General Boulanger, which appeared in *Truth* (Oct. '91). Mrs. C. was offered last year the Cross of the Legion of Honour "for her unswerving belief in the vitality of Republicanism in France, and for the many services she rendered to the Republican cause in the days of difficulty." She preferred, however, that her son, Mr. Robert Crawford, should accept it, especially as he was thanked by the late President Grévy when acting as special commissioner for the *Daily News* at Metz.

Crawford, Oswald, C.M.G., was ed. at Eton and Oxford. He became consul at Oporto in

'67, after some years' service in the Foreign Office. Is the author of "The World we Live In," "Sylvia Arden," "Beyond the Seas," and several standard works dealing with Portugal. Created C.M.G. in '90, and in the year published "Round the Calendar in Portugal."

Cremation. The disposal of the human body after death by the process of cremation, which rapidly resolves the body into its component elements, in an absolutely innocuous manner, is now largely practised throughout the civilised world, where formerly burial in the earth only was carried out. This modern movement in its favour commenced about fifteen years ago. Up to the present time, over 1500 bodies have been cremated in Italy and in Dresden. Cremation societies have been instituted in every European country, and many of the states of America possess them also, and cremation in these states has become a regular practice. There are two patterns of crematories in use—the German and the Italian. The latter was chosen for use at St. John's, Woking, Surrey, where upwards of 250 cremations have already been carried out, there being no legal bar to its performance in Great Britain or in the Colonies, except in New South Wales, where the Government at present decide against it. The cremation of an adult by either process is completed in about an hour and a half, and the ashes, which are perfectly white, weigh about 4 lb. The cost of reduction, were it to become common, would be less than thirty shillings; but at present is more than treble this sum, owing to the necessity of heating the crematory every time for each cremation. There is a chapel in connection with the crematorium at Woking. Rapid advance is reported to be taking place on the Continent. Hon. Sec. of Cremation Society, J. C. Swinburne Hanham, 8, New Cavendish St., London, W.

Crete, Kriti, or Candia. An island of the Mediterranean, lying to the south of the Aegean Sea and Archipelago, and appertaining to Turkey. Area over 3000 sq. m., pop. 279,200. Chief cities, *Kastron*, otherwise *Candia*; *Khania* or *Canea* (pop. 15,000); and *Retimo*.—In '91 *Giapias* and a number of companions, with arms and ammunition, succeeded in landing in Crete (*Jan.*), where they were enthusiastically received by the Cretans, notwithstanding the fact that two gunboats were cruising around the coast. In June the mayors of several eparchies sent a document to the British consul at *Canea* to the effect that the Turkish Government was utterly unable to maintain order and protect Christians, who would be forced to take up arms in self-defence. *Mahmoud Pasha*, the new Governor, arrived on the island (*Sept. 14th*). An encounter took place (*Oct. 28th*) near *Milopotamos* between a detachment of Turkish troops and an armed band under the chief *Zaulas*, who was amongst those killed in the fight, numbering about fifty.

Cricket. The season of '91 will be remembered as one of a disappointing character. No Australian or other colonial team visited our shores during the year; but on *Sept. 16th*, the following English amateurs, captained by Lord Hawke, left for a tour through the United States, and considerable astonishment was evinced when news arrived of their defeat in the first of their matches: Lord Hawke, Lord Thrawley, Hon. H. Miles, and Messrs. S. M. J. Woods, K. J. Key, H. T. Hewett, G. W. Rickett, C. W. Wright, C. Wreford-Brown, K.

M'Alpine, J. H. J. Hornsby, and G. W. Hilliard. On *Oct.*, and Lord Sheffield's team left by the P. and O. steamship *Arcadia* for Australia, and, as will be seen by the appended names, no stronger combination of amateurs and professionals could very well have been selected: Dr. W. G. Grace, and Messrs. A. E. Stoddart, G. McGregor, O. G. Radcliffe, H. Phillipson, G. A. Lohmann, Abel, W. Attewell, J. Briggs, Sharpe, Maurice Read, Peel, and Bean. The tour was fixed to open on *Nov. 20th*, with a match against South Australia, and it is intended that two matches shall be played against each of the colonies of Victoria, South Australia and New South Wales, and that combined Australia shall be met three times, respectively at Melbourne, Sydney and Adelaide.—Mr. W. G. Grace's book on "Cricket" was published early in May, and met with a ready sale.—The wisdom of the decision which had been arrived at to ignore drawn matches and merely deduct losses from gains in estimating the claims of the rival counties to championship honours, was generally conceded. The selection of Somersetshire amongst the "foremost nine" was amply justified by results; but considerable discussion took place towards the close of the season with reference to reducing the two years' residential qualification, and much diversity of opinion was expressed on the subject, owing to the undue advantage which any alteration in this respect would afford the wealthier counties, such as Surrey and Lancashire. The consistent good fortune which attended Mr. Shuter, the Surrey captain, in the "spin" for choice of innings, also gave rise to much correspondence, and various suggestions were made with a view to solving the difficulty, for it was admitted that an advantage invaluable rested with the side going in first. The recommendations which met with most favour were: (1) That the loser of the toss in the first match should have choice of innings in the second; and (2) that the visiting team should always have the option. The latter, in course of time, will probably be accepted as the most courteous and fair proposal, although the old practice of "tossing" appears at present to be the most popular with cricketers. According to the decision arrived at in Aug. '89, the Counties for the season of '91 were divided into three classes—namely, **First Class**—Gloucestershire, Kent, Lancashire, Middlesex, Nottinghamshire, Surrey, Sussex, Yorkshire; **Second Class**—Cheshire, Derbyshire, Essex, Hampshire, Leicestershire, Somersetshire, Staffordshire, Warwickshire; **Third Class**—Devonshire, Durham, Glamorganshire, Hertfordshire, Lincolnshire, Norfolk, Northamptonshire, Northumberland. The relative positions of the first-class counties in the contest for the championship is shown in the appended table:—

County.	Pl.	W.	L.	D.	Pts.
1 Surrey . . .	26	12	2	2	10
2 Lancashire . .	15	6	4	3	4
3 Middlesex . . .	16	8	5	3	3
4 Notts . . .	14	5	4	5	1
5 Kent . . .	15	4	5	6	1
6 Somersetshire .	12	5	6	1	1
7 Sussex . . .	24	4	7	3	3
8 Yorkshire . . .	26	5	10	1	5
9 Gloucestershire.	16	2	10	4	8

† Match, Lancashire v. Kent, abandoned (rain).

To furnish a complete series of out and home games with 9 counties a total of 72 matches would be required, but the number arranged fell short of this total by 4, Somersetshire not meeting Notts or Sussex. The total of 68 is, however, 14 in excess of the fixtures in '90, the increase being due to the dozen matches arranged with Somersetshire, and the renewal, after a lapse of a quarter of a century, of the meetings between Middlesex and Sussex. The actual number played this summer was, however, 67, not a ball being bowled in the Lancashire v. Kent match at Liverpool in June, in consequence of incessant rain. Of these 67 matches a definite decision was arrived at in 53 instances, there being 14 encounters left drawn. Nearly all of these were due to interference on the part of the weather; in fact, of the 14 only 3 can in any way be attributed to the scoring. In these 67 matches 34,200 runs were scored for the loss of 2032

wickets. The highest innings was 449, made by Surrey against Somersetshire, and the lowest 25, the number for which the latter county dismissed Gloucestershire on the Cheltenham College ground. Of individual scores of three figures there were 28, as follows: For Surrey—Abel 197 and 103, M. Read 135, Henderson 106; Lancashire—A. Ward 185, A. Smith 124; Middlesex—Mr. A. E. Stoddart 215 not out, Mr. O'Brien 113 and 111; Notts—Shrewsbury 178 and 165, Gunn 161 and 109, Flowers 116 not out, Barnes 104; Kent—Mr. F. Marchant 123, Mr. W. H. Patterson 120, Mr. C. J. M. Fox 103; Somersetshire—Mr. L. C. H. Palaret 100; Sussex—Bean 145 not out and 102, Mr. W. Newham 105; Yorkshire—Peel 128, Lord Hawke 126, Ulyett 118 and 109; and Gloucestershire—Mr. O. G. Radcliffe 116, Painter 101. The subjoined table shows at a glance the results of the various meetings between the leading counties:—

	Gloster.	Kent.	Lancs.	Mddlx.	Notts.	Somt.	Surrey.	Sussex.	Yorks.
Gloucestershire	—	DD	LL	DL	DW	LL	LL	LW	LL
Kent	DD	—	LA	WW	DD	LW	LL	DL	WD
Lancashire	WW	AW	—	LL	DL	WW	LD	DW	WW
Middlesex	WD	LL	WW	—	WD	DW	WL	WL	LW
Notts	LD	DD	WD	DL	—	—	LL	WW	WW
Somersetshire	WW	LW	LL	LD	—	—	WL	—	LW
Surrey	WW	WW	DW	WL	WW	WL	—	DW	WW
Sussex	LW	WD	LD	WL	LL	—	LD	—	WL
Yorkshire	WW	DL	LL	LW	LL	LW	LL	LW	—
W won.		L lost.		D drawn.		A abandoned.			

As was the case in '90, Surrey and Lancashire again head the list, but Kent and Yorkshire lost their positions, which were taken by Middlesex and Notts, Kent and Somersetshire being bracketed for fifth honours. Sussex advanced from the bottom of the list, and headed Yorkshire and Gloucestershire, the "County of the Graces" doing very badly indeed. The following are the highest averages in first-class county matches during the season: Surrey, batting—Abel, 43'61 for 916 runs; Maurice Read, 30'36 for 577; Lohmann, 26'31 for 579; Mr. W. W. Read, 22'68 for 499; Henderson, 22'33 for 492; and Wood 17'25 for 207. Bowling—Lohmann, 10'65 with 132 wickets; Lockwood, 12'85 with 42; Sharpe, 13'3 with 33; Brockwell, 16'57 with 7; Abel, 22'00 with 6; and Bowley, 23'25 with 4. Lancashire, batting—Mr. A. C. Maclaren, 44'40 for 223 runs; A. Ward, 29'47 for 678; Mr. S. M. Crossfield, 28'77 for 259; A. Smith, 23'25 for 327; F. H. Suggs, 20'86 for 458; and Mr. A. N. Hornby, 16'42 for 230. Bowling—Mold, 12'27 with 112 wickets; Briggs, 12'96 with 89; Smith, 15'86 with 12; and Watson, 18'12 with 20. Middlesex, batting—Mr. T. C. O'Brien, 35'95 for 755 runs; Mr. A. E. Stoddart, 30'71 for 645; Mr. S. W. Scott, 15'68 for 317; Mr. P. J. T. Henry, 14'45 for 159; Mr. E. A. Nepean, 14'40 for 288; Mr. E. M. Hadow, 12'36 for 272; and J. E. West, 12'25 for 147. Bowling—J. T. Hearne, 10'33 with 118 wickets; Rawlin, 12'72 with 65; Mr. Nepean, 16'80 with 41; Mr. Hadow, 17'20 with 5; and Phillips, 18'95 with 31. Notts, batting—Gunn, 43'33 for 780 runs; Shrewsbury, 41'78 for 794; Barnes, 30'25 for 363; Flowers, 24'3 for 468; W. Attewell, 18'93 for 303; and Mr. J. A. Dixon, 18'52 for 315. Bowling—W.

Attewell, 14'71 with 73 wickets; Mr. Dixon, 16'00 with 5; Barnes, 17'23 with 14; Bagguley, 18'94 with 19; Shacklock, 20'35 with 46; and Flowers, 27'24 with 29. Kent, batting—Mr. F. Marchant, 26'54 for 534 runs; Mr. W. H. Patterson, 19'25 for 308; Mr. C. J. M. Fox, 19'04 for 400; Mr. H. M. Braybrooke, 18'37 for 111; A. Hearne, 17'72 for 300; and Mr. W. Rashleigh, 17'56 for 231. Bowling—Martin, 13'20 with 98 wickets; A. Hearne, 16'75 with 40; G. G. Hearne, 20'58 with 17; and W. Wright, 22'3 with 56. Somersetshire, batting—Mr. L. C. H. Palaret, 31'11 for 560 runs; Mr. J. B. Challen, 25'28 for 354; Mr. R. C. N. Palaret, 19'00 for 266; Mr. H. T. Hewett, 18'47 for 388; Mr. S. M. J. Woods, 18'33 for 330; and Mr. W. N. Roe, 15'27 for 168. Bowling—Mr. Woods, 17'08 with 72 wickets; Nichols, 18'16 with 49; Mr. L. C. H. Palaret, 21'57 with 7; and Tyler, 22'31 with 48. Sussex, batting—Bean, 33'60 for 773 runs; Humphreys, 19'58 for 333; Mr. C. A. Smith, 19'00 for 266; Mr. W. Newham, 17'04 for 426; Marlow, 17'00 for 391; and G. Brann, 12'86 for 283. Bowling—Mr. C. A. Smith, 15'62 with 27 wickets; Tate, 17'06 with 60; Mitchell, 17'66 with 9; Humphreys, 18'10 with 49; Bean, 19'05 with 20; and J. Hilde, 36'25 with 8. Yorkshire, batting—Peel, 24'50 for 583 runs; Ulyett, 23'03 for 645; Hall, 22'14 for 620; Mr. F. S. Jackson, 16'90 for 186; and Lord Hawke, 16'78 for 235. Bowling—Wainwright, 14'14 with 67 wickets; Peel, 17'16 with 66; Harrison, 17'78 with 38; E. Smith, 12'00 with 15; and Mr. F. S. Jackson, 20'21 with 12. Gloucestershire, batting—Mr. O. G. Radcliffe, 22'07 for 618 runs; Mr. W. G. Grace, 20'95 for 440; Mr. E. M. Grace, 15'74 for 425; Mr. W. W. F. Pullen, 15'43 for 355; Painter, 14'78

for 414; and Mr. E. Sainsbury, 13'63 for 259. Bowling—Murch, 15'03 with 29 wickets; Roberts, 15'27 with 48; Mr. W. G. Grace, 16'81 with 37; and Woof, 17'65 with 61. In the first-class averages—which include, beyond the above, the matches between North and South, Gentlemen and Players, the chief fixtures of Oxford and Cambridge Universities, and the contests between the M.C.C. and the leading counties—the first dozen names in each branch are: Batting—Shrewsbury, 48'68 for 1071 runs; Gunn, 41'75 for 1336; Abel, 33'50 for 1139; Mr. T. C. O'Brien, 32'27 for 936; Mr. E. C. Streatfield, 31'00 for 279; Bean, 30'36 for 1002; A. Ward, 30'03 for 841; Mr. S. M. Crossfield, 29'09 for 320; Mr. A. E. Stoddart, 27'63 for 867; Mr. F. Marchant, 27'50 for 660; Mr. J. B. Challen, 26'26 for 394; and Maurice Read, 25'78 for 722. Bowling—J. T. Hearne, 11'23 with 129 wickets; Lohmann, 11'66 with 177; Rawlin, 12'30 with 69; Lockwood, 12'36 with 47; Mold, 12'68 with 138; Davidson, 13'09 with 11; Briggs, 13'22 with 128; Martin, 13'37 with 140; A. Smith, 13'50 with 18; Sharpe, 13'84 with 108; W. Attewell, 13'93 with 153; and Needham, 14'54 with 11; Mr. J. J. Ferris, the famous Australian, coming fifteenth on the list with 15'57 and 70 wickets. The Oxford and Cambridge Match terminated at Lord's on June 30th, in favour of the Light Blues, after some very exciting play, by 2 wickets; and of the 57 contests now decided between the Universities, Oxford have won 25 and Cambridge 29, the remainder having resulted in draws. The Eton and Harrow match, which always attracts a large and fashionable assemblage to the same ground, terminated in favour of the representatives of the latter school by 7 wickets. Of the 66 matches played, Harrow are credited with 28 and Eton with 27, 11 having ended in draws. The Rugby and Marlborough match had to be abandoned through rain; and of the 33 matches played between these public schools Rugby has won 19 and their rivals 10, 3 having been drawn and 1 abandoned. The Gentlemen beat the Players at Kennington Oval, on July 3rd, by an innings and 54 runs; but the return match at Lord's in the following week ended in a draw, owing to unfavourable weather. They met again, however, at Hastings, on Sept. 14th, 15th and 16th, when the Players amply atoned for their earlier defeat by winning by an innings and 128 runs, this being the last first-class match of the season. Of the North and South matches, that at Birmingham, in the closing week of the "leafy month," ended in a draw, but that at Scarborough, in the opening days of September, furnished some splendid play, and resulted in favour of the Southerners by 6 runs. The M.C.C. played 10 first-class matches during the season, of which they won 5 and lost 4, that against Lord Sheffield's Eleven ending in a draw, whilst both their fixtures with Yorkshire had to be abandoned without a ball being played. They defeated the Universities in all 4 matches, beating Cambridge on the first occasion by 4 wickets, and on the second by an innings and 134 runs; over Oxford they proved victorious in their opening match by 9 wickets, and in the return contest by 8 wickets. Their other success was achieved over Notts by an innings and 37 runs; but in turn they were beaten by Sussex, Lancashire, Kent and Somersetshire. Amongst the interesting records connected with the game may be mentioned the following:—Highest Individual

Scores: A. E. Stoddart, 485 (Hampstead v. Stoics), Aug. 4th, '86; J. S. Carrick (not out), 419, '85; W. N. Roe (not out), 415, '81; E. F. H. Tylecote, 404 (not out); and, in a first-class cricket match, 344, by Mr. W. G. Grace. Largest Gross Scores: Orleans Club v. Mickle Green, 920, on Aug. 3rd, '82; Hampstead (8 wickets down) v. Stoics, 814, on Aug. 4th, '86; New South Wales v. Victoria, Australia, 775, on Feb. 13th, '82; West Scotland (4 wickets down) v. Priory Park, Chichester, 745, on July 14th, '85; United Service v. Non-descripts, 734, on Aug. 10th, '82; Royal Engineers (8 wickets down), 724, in '75; Emmanuel Long Vacation Club (4 wickets down) v. Caius Long Vacation Club, 708, on July 12th, '81; and Cambridge University (9 wickets down) v. Sussex at Brighton, 703, in June '90. Lady Cricketers, under the titles of "Reds" and "Blues," played a number of matches during the season, and showed much greater skill with bat and ball than had been anticipated; but from a financial point of view their tour in the provinces proved a failure. Lord Hawke and his team returned to England on Nov. 4th, and of the eight matches played during their tour in the United States and Canada they won six and lost one, the other being drawn. A meeting is annually held in December at Lord's, when the fixtures for the succeeding year are arranged. Consult "Cricket," by A. G. Steel and Hon. H. R. Lyttelton (the Badminton Library).

Crime, Statistics of.—England and Wales. The last official returns, contained in a Parliamentary Blue Book entitled "Judicial Statistics" for '90, issued in October last, show that the total number of Indictable Offences for the year ending Oct. 1st, '90, was 38,650. As compared with the number for the previous year this gives a decrease equal to 6'3 per cent. The total number of apprehensions was 17,678, showing a decrease of 5'4 per cent. as compared with '89-90. The apprehensions in '89-90 were in the proportion of 45'7 per cent. to the number of crimes committed. Of the persons apprehended 29'4 per cent. were discharged, 6'3 were bailed to appear for trial, 0'4 were committed for want of sureties, and 60'9 were committed for trial. The number of persons committed for trial for indictable offences during the year was 10,761; and of these it may be computed that about 75 per cent., being about the usual proportion, would be convicted. To this number, in order to show the total convictions during the year, may be added 605,921 summary convictions before the magistrates, being an increase in the number on the same calculation for the preceding year of 8'1 per cent. In considering this increase it must be remembered that of the summary convictions, however, a large proportion were for offences of a trifling character. The total number of persons proceeded against summarily before magistrates in '89-90 was 738,061. The summary convictions showed an increase of 8'3 per cent. compared with the return for the previous year. The number of persons summarily proceeded against for each of the offences named in the following table was as follows for '88-9 and '89-90:—

1889-90. 1888-9.

Breaches of the peace and want of sureties, etc.	15,698	15,211
Cruelty to animals	10,884	10,955
Drunkenness, and drunk and disorderly	189,746	174,331

Other offences under the Licensing Act, 1872	14,490	11,180
Elementary Education Act, offences against	87,439	80,519
Employers and Workmen Act, 1875	7,323	7,776
Highway, Turnpike, Railways, Carriage Laws, etc.	33,373	31,363
Local Acts and Borough By-laws	59,051	51,633
Mutiny Acts	4,178	3,866
Nuisances and offences against health	9,296	9,557
Poor Law Acts	10,434	10,900
Police Acts	21,109	18,759
Prevention of Crimes Act, 1871	493	508
Revenue Laws, offences against	13,542	15,675
Vaccination Acts	2,739	2,375
Vagrant Laws	47,779	50,484
Weights and Measures Act	1,913	2,531

The number of the criminal classes at large in England and Wales in '89 was 31,225, a decrease of about five hundred compared with the previous year. The following are the totals of some of the principal offences during '89 '90:

Murder	140
Attempts to murder	58
Shooting at, wounding, stabbing, etc.	830
Manslaughter	701
Concealment of birth	81
Rape	218
Assaults on girls under 13 years of age	147
" " between 13 and 16 years	177
Assaults with intent, and indecent assaults	770
Assaults	508
Burglary and housebreaking	3,401
Breaking into shops, warehouses, etc., and attempts	2,164
Robbery and attempts with violence	350
Cattle stealing	31
Horse stealing	318
Sheep stealing	114
Larcenies, etc.	23,082

The total number of offenders committed to Reformatory Schools in the year '90 was 1,017 males, 170 females—total 1,217; giving a total since the passing of the Act of 4,310, being 35,465 males, 7,645 females. The number of offenders committed to Industrial Schools during '90 was 6,736—5,510 boys, 1,226 girls. The number under detention at the end of the year was 16,068—12,314 boys, 3,754 girls. The number of criminal lunatics under detention at the end of '90 was 926—701 males, 225 females.

Criminal Law and Procedure (Ireland) Act, '87, which is commonly spoken of as the "Crimes Bill" or "Coercion Bill" (see PARLIAMENTARY SESSION ed. '87), enacts that where a sworn information has been made, a resident magistrate may, upon the written order of the Attorney-General, hold a preliminary inquiry, although no person may be charged before him, and examine on oath every person whom he has reason to believe to be capable of giving material evidence, in regard to the committal of any felony or misdemeanour and any offence punishable under the Act, committed in a proclaimed district. Any person may be prosecuted before a court of summary jurisdiction who anywhere in Ireland takes part in a riot or unlawful assembly, or who, in a proclaimed district, takes part in any criminal conspiracy to compel or induce any person either not to fulfil his legal obligations, or not to let, hire,

use, or occupy land, or not to deal with, work for, or hire any person in the ordinary course of business, or to interfere with the administration of the law; who wrongfully uses violence and intimidation; who within twelve months after the execution of any writ of possession of any house or land shall wrongfully take or hold forcible possession; who shall assault or resist any officer of the law in the execution or in consequence of the execution of his duty, or who shall incite to commit any of these offences. The High Court may, on application by the Attorney-General for Ireland, or a defendant, order that a trial at assizes of a defendant charged with having committed a crime in a proclaimed district shall be by special jury; and on application of the Attorney-General for Ireland the Court may order the removal of a trial from a court of assize or quarter sessions in a proclaimed district to some other court in Ireland. For the purposes of these enactments the Lord-Lieutenant may by proclamation declare that all or any of them which relate to proclaimed districts are to be in force within any specified part of Ireland; but any such proclamation shall be deemed to have expired if an address is presented by either House of Parliament praying that it shall not continue in force. If the Lord-Lieutenant is satisfied that any association for the commission of crimes, or carrying on operations for or by the commission of crimes, or encouraging or aiding persons to commit crimes, inciting to violence or intimidation, or interfering with the administration of the law, exists in Ireland, he may, by the advice of the Privy Council, declare it by special proclamation to be dangerous, but such special proclamation shall not continue in force if an address against it is presented to Her Majesty by either House; and if when the special proclamation is issued Parliament is separated by such an adjournment or prorogation as will not expire within twenty days, it shall become void at the end of a week unless during that week Parliament shall be summoned to meet within twenty days. While the proclamation is in force the Lord-Lieutenant in Council may by order prohibit or suppress the proclaimed association in any specified district, after which any meeting of the association in that district will be unlawful, and any persons calling or taking part in a meeting thereof, or publishing any notice concerning it, shall be guilty of an offence, and may be prosecuted before a court of summary jurisdiction. Persons prosecuted before a court of summary jurisdiction under the Act are liable on conviction to imprisonment, with or without hard labour, for a term not exceeding six months. An agreement or combination which under the Trades Union Acts, or the Conspiracy and Protection of Property Act, '75, is legal, and any act done in pursuance of the same, is excepted from the provisions of this Act respecting conspiracy, intimidation, and dangerous associations. The Act is a permanent statute. The Peace Preservation (Ireland) Act, 1881, and the amending Act of '86, are continued for five years.

Criminal Prosecutions in '91. There have been comparatively few remarkable criminal cases to record during the past year. Perhaps the one that attracted most attention was that of **Captain Verney, M.P.** for North Bucks, who pleaded guilty at the Central Criminal

Court (May '91), and was sentenced to twelve months' imprisonment for an offence under the Criminal Law Amendment Act. Capt. Verney was subsequently expelled the House of Commons.—Some proceedings took place at Belfast having relation to serious charges made against Mr. E. S. W. De Cobain, M.P., who fled to the Continent, but subsequently wrote letters expressing his intention to return and meet the allegations.—A case which excited considerable comment arose out of the action of two police constables at Aldershot, who arrested a girl named Alice Millard on a charge of being a disorderly prostitute. A medical examination proved that there was no justification for this charge, though the policemen in question had sworn that the girl was known to be of immoral character. In the result the men in question, Alfred Bradbury and James Ootile, were charged with wilful and corrupt perjury. For the defence, it was pleaded that the prisoners in making their statement honestly believed it to be true, and that the girl's conduct had been such as would reasonably lead them to the conclusion which they stated. In the result the jury acquitted Bradbury, who was placed upon his trial, while expressing an opinion that the police had greatly neglected their duty in not making inquiries as to the character of the girl between the time of her arrest and her appearance before the magistrates. In the case of the second of the two policemen a formal verdict of not guilty was taken.—In the metropolis several cases came before the police courts in which policemen had either acted with unnecessary violence towards persons whom they had taken into custody, or had made untrue statements with respect to their conduct. In most newspapers cases entitled "The Police and the Public" were continually reported, and at length an intimation was circulated among the Metropolitan Police, pointing out that the utmost care should be exercised in the giving of evidence.—At Cambridge Assizes (Feb. 19th), Kate Elsdon, 17, was indicted for escaping from the custody of the keeper of the Spinning House, or House of Correction, in the University and town of Cambridge. It appeared that the defendant had been arrested by the proctor and his constables or "bull dogs," and had been taken to the Spinning House. Next day she was brought before the Vice-Chancellor, who, having taken evidence, though not on oath, ordered the defendant to be confined for 21 days for street walking. The defendant subsequently escaped from the building. It appeared from the evidence that the woman had no opportunity of being legally represented, and that it was not usual to take evidence upon oath. Mr. Baron Pollock, who heard the case, directed the jury that the defendant was in lawful custody, and that therefore if she escaped she was guilty of the offence charged. If the court was an improper one, it could be swept away by the legislature, but with this the jury had nothing to do. A verdict of guilty was returned, and the learned judge, declining to accept a rider, which the jury wished to add, sentenced the defendant to three weeks' imprisonment, without hard labour. The case, which excited considerable attention, was based upon the Charter of James I. (dated March 9th, 1604-5), by which it is provided that it "shall be lawful for the Chancellor, masters and scholars of the University, by themselves or by their deputies, as

well by day as by night, at their pleasure, to make scrutiny, search and inquiry in the town of Cambridge, and the suburbs of the same, of and for (*inter alia*) all common women, harlots, prostitutes, scholars passing the night out of their own colleges without just cause, and other persons suspected of evil; and all and singular whom upon any such scrutiny the said Chancellor, masters and scholars, or their deputies, officers and servants, shall find guilty or suspected of evil to punish by imprisonment as they shall see fit, without the impeachment, molestation, disturbance, or troubling of us, our heirs, or successors, any statute or Act of Parliament now passed, or hereafter to be passed, in any wise notwithstanding."—There were but few prosecutions under the Crimes Act (Ireland), but among those convicted were Mr. W. O'Brien, M.P., and Mr. J. Dillon, M.P., the prosecutions arising out of speeches which they had made to tenants on an evicted estate. While the case was under hearing, the defendants, who were on bail, embarked at Queenstown for America, and in their absence they were sentenced to six months' imprisonment. Afterwards they returned to Boulogne, and were arrested on arriving in England, subsequently completing their full term of imprisonment in Ireland.—Among the cases investigated during the year was that arising out of the conduct of the police outside the Court-house at Tipperary, in reference to which Mr. John Morley, M.P., a former Chief Secretary for Ireland, gave evidence adverse to the constabulary authorities.—By the provisions of the Eastbourne Improvement Act, musical processions through the streets on Sunday are rendered illegal. For contravening this local law a considerable number of bandmen of the Salvation Army were fined, and sent to prison in default of payment. In one case the magistrates committed nine of the defendants for trial at the Lewes Assizes, and Mr. Justice Hawkins, who heard the case (Aug. 8th, '91), suggested whether some arrangement between the Eastbourne Corporation on the one hand, and the Salvation Army on the other, could not be arrived at. For the defendants it was suggested that musical processions on Sunday should be restricted to a certain district at the back of the town, so that the band would in no way interfere with the comfort of visitors, and for the consideration of this suggestion Mr. Justice Hawkins directed the case to stand over, stating that if necessary he would hear it at some other time and place. Subsequently the Corporation of Eastbourne decided to adhere strictly to their local Act, and to prohibit Sunday musical processions in all parts of their jurisdiction. The disturbances have since been renewed.—In a case heard at the Central Criminal Court, in which a bankrupt jeweller was indicted for attempting to defraud his creditors by pawning jewellery which he had just obtained on credit, it was pleaded that a custom exists in the trade of pledging jewellery for its full market value, the transaction being in the nature of a sale to the pawnbroker, with an option of redemption. As several witnesses proved the existence of this custom, the accused was discharged.

Crispi, Francesco, is a native of Ribera, in Sicily, where he was born in 1819. He was educated for the law, and was called to the Neapolitan bar. His early aspirations for the realisation of Italian unity prompted him to

take an active part in the revolutionary movement of '48, when the kingdom of the two Sicilies was overthrown. He inspired the resistance of the Sicilians during the insurrection of Palermo, and was compelled to fly to France. He subsequently landed with Garibaldi at Palermo, and distinguished himself by his courage and capacity. In '61 he was elected to the first Italian Parliament as member for Palermo, and was recognised as the leader of the Constitutional party. On the death of Signor Depretis, in '87, Signor Crispi, who had been Minister of the Interior, became President of the Council and Minister for Foreign Affairs. In Sept. '89, while out driving, he was wounded by a sharp stone thrown at him by an Italian. The downfall of Signor C., consequent on the defeat of the Ministry, took place in Jan. '91.

Croatia. See AUSTRIA-HUNGARY.

Croton Aqueduct (New York). This great work is 38½ miles long, from Croton Lake to Central Park, New York; 29½ miles have been cut through solid rock, or occasionally loose soil, 2¾ miles is pipe line underground, and 1½ miles is open trench. It was reported in this country in Sept. '90 that the tunnel throughout most of its length had been lined with brick, which required 163,000,000 bricks. Some 5,800,000 lb. of dynamite were used in blasting, and 42 shafts were made, of which 28 are to remain open. The total cost up to June '90 was \$23,559,030. In Feb. '91 it was reported that the Aqueduct Commission had approved the report of the Construction Committee, recommending that steps should be taken to build the dam on the site proposed by Chief Engineer Fetley, which involved the abandonment of the great masonry dam at Quaker Bridge, and the erection of a smaller one near the old Croton Dam. This departure greatly reduces the estimated cost, although furnishing storage capacity enough for several years to come. The total height of the new dam will be 152 ft. The flow into the new aqueduct at Croton Dam was tested from Jan. 12th to Jan. 14th; exclusive of loss by percolation, some 150,000 gallons a day, the gain to the supply was nearly 4 million gallons a day.

Crown Agents for Colonies. See DIPLOMACY.

Crown Colonies. See BRITISH EMPIRE, COLONIES, ETC.

Cruelty to Children. See NATIONAL SOCIETY FOR PREVENTION OF.

Cuba. The largest of the West Indian islands, lying between Florida and the Caribbean Sea. The Queen of the Antilles, and the most important of all the Spanish colonial possessions. Divided into three provinces, containing 22 cities and towns and 204 villages. Capital, *Havana*, a splendid city, with pop. 50,000, connected with other towns by 1000 miles of railway. See COLONIES OF EUROPEAN POWERS.

Curaçao. An island in the Caribbean Sea, off the coast of Venezuela. It is a Dutch possession, and chief of Holland's West Indian possessions. The celebrated liqueur "Curaçao" is prepared extensively. Cattle, sheep and goats are bred for exportation. See COLONIES OF EUROPEAN POWERS.

Custody of Children Act, '91. See SESSION, OCT. 68.

Custody of Children, Law as to, in '91.—A novel point was raised in the Queen's Bench Division, May 4th, '91, with reference to the

right of a woman who had married the husband of her deceased sister to have the custody of the sister's children. The husband left the widow testamentary guardian of the children, and she desired to have them sent out to her in Canada, a course which was opposed by the children's paternal grandmother. The Court decided in the widow's favour, on the ground that she was the natural guardian appointed by the father, and was clothed in law with the authority of testamentary guardian.—In the case of *Barnardo v. W. Hugh* the House of Lords (July 30th, '91) gave a decision dealing with two important points. The first was whether an appeal lies in a matter of *habeas corpus*, and it was held that it would in a case in which the point at issue is the guardianship of a child. The other point was as to whether the mother of an illegitimate child had a right to its custody. The allegation made by Dr. Barnardo was that the mother was not a person of proper character to have its custody, but the House of Lords took an opposite view, holding that the desire of the mother was primarily to be considered. As to the wish of the mother that her offspring should become a Roman Catholic, whereas he (the child) had formerly been an inmate of a Protestant home, it was held that the change of religion was immaterial, the child not having arrived at an age when his faith would be likely to be unsettled. Moreover, the Courts could show no preference as to whether a child should be brought up as a Roman Catholic or as a Protestant—A curious point came before the Chancery Division (June 13th, '91) with respect to the proper mode of enforcing an order for the delivery up of a ward of court. The ward in question was a boy some ten years of age, whose parents had separated, under an agreement under which the lad spent part of his holidays with his mother, and the father selected a school for him at the seaside. At the end of a vacation the mother declined to part with the custody of the boy, on the ground that the school selected by the father was unsuited to her son's health. This contention, however, was not established, and an order was made for the delivery of the boy to a lady appointed by the father. The mother, however, disobeyed the order, and the father asked for further assistance from the Court in order to obtain the delivery of the lad. Mr. Justice Chitty said he might, no doubt, commit the mother, but the husband preferred to avoid such a proceeding, and therefore asked that the Sergeant-at-Arms should be directed to obtain the delivery of the boy. It had been a question, added the learned judge, whether there was still such an officer attending the Court, but, on inquiry, he was satisfied that there was such an officer, whom he should direct to take the infant from the mother, and convey him to the lady appointed by the father to receive him.—A singular case came before the Queen's Bench Division on July 25th, '91. A woman named Thompson sought to obtain the custody of two children aged eleven and eight, of whom she was the mother, their father, as she alleged, being a man named Thompson whom she had married after an irregular relationship with a person named Rourke. On the other hand, Rourke alleged that he was the father of the children, that he was married to the woman, and that the suggestion that Thompson was the name of the father was simply an invention, intended, if possible, to deprive him of the

custody of his children. No corroboration was produced in the shape of a marriage certificate, but the Court held that the evidence was in favour of Rourke's contention that he was the father of the children. Being, therefore, entitled to their custody, a rule nisi for *habeas corpus*, obtained by the mother, was discharged. The case was taken to the Court of Appeal (Aug. 6th, '91), when it was adjourned till November, for the production of further evidence.—Where a father had been convicted of unduly chastising his children, it was held that an isolated instance of cruelty would not justify the magistrate in ordering that the parent should be declared unfit to have the custody of his sons, and be ordered to contribute towards their maintenance. (Westminster Police Court, May and '91.)

Customs. See FINANCE, NATIONAL.

Customs Commissioners of, are Mr. H. Murray, Mr. Lewis W. Engelbach, and Mr. Horace Seymour. The Commissioners annually issue a report showing the receipts of customs revenue (see FINANCE, NATIONAL) up to March 31st.

Cycling. Numerous records were established in '91, and, as will be seen below, the majority of these were made on comparatively new tracks, constructed especially with a view to avoiding any diminution of speed in rounding the bends; and another reason for the rapidity now attained by cyclists is to be found in the excellence of their machines, prominent amongst the recent improvements being the pneumatic tire. The War Office have recognised the utility of bicycles for skirmishing operations; and the use of tricycles for business purposes is gradually becoming more common. The proposition to place a tax on these machines does not meet with favour, and cyclists have reason to be generally satisfied with the judgments given on points affecting their road rights. The popularity of cycling has extended to other countries, and both in France and America riders have attained high excellence. Among the names that will be always intimately associated with the history of amateur racing in England may be mentioned those of the late Hon. Ion Keith-Falconer, A. A. E. Weir, H. L. Cortis, C. E. Liles, G. L. Hillier, J. S. Wharton, H. A. Speechly, F. R. Fry, M. V. J. Webber, P. Furnivall, G. Gatehouse, M. J. Lowndes, A. F. Dixon, W. A. Illston, F. J. Osmond, H. Synner, F. P. Wood, H. Parsons, E. Leitch, W. C. Jones, though these do not by any means exhaust the list; and amongst professionals J. Keen, D. Stanton, R. Howell, Wood, English and Robb will always take high rank. Ireland claims as its leading riders P. P. Kilkelly, R. J. Macredy, A. du Cros, H. du Cros, Butler, McCabe, and Stagnicki; whilst "Bonnie Scotland" boasts of R. A. Vogt, A. M. Donaldson, H. Howie, J. B. Hume, M. Bruce, T. A. Paxton and E. Campbell. In the month of May P. W. Scheltema-Bedouin, who became the one-mile bicycle champion and also the bicycle champion of the London centre of the N.C.U.A., reduced W. C. Jones' record of 3½ sec. for a "flying" quarter (or, in other words, a quarter of a mile covered *en route*) to 3¼ sec. These fractional parts do not look much upon the watch, but the difference, on the track, would be more than half-a-dozen yards. The new track at Herne Hill, with its banked-up corners, soon became popular amongst the record-breaking fraternity, and frequent bests on record were created

there during the season. Meanwhile road-racing bicyclists had been exceptionally busy, and reputed records in that direction also were constantly being removed. Unfortunately, however, recent revelations, with reference to the shortness or otherwise of certain recognised routes, prevented the precise value being put upon what was done. As regards journeys of this kind, G. P. Mills' sensational ride between Bordeaux and Paris (beating, as he did, M. A. Holbein and numerous well-known French riders), and his still more marvellous achievements, later on, between Land's End and John O'Groat's—a distance of 874 miles in 4 days 11 hours 17 min., many hours faster than the previous best on record—stands out first and foremost. Mills' name will ever be associated with this remarkable journey, from the fact of his finishing in a semi-somnolent state. He had, on a previous occasion, accomplished what was deemed a remarkable performance, over the same route, which he had covered in July '86 in 5 days to hours. Reverting to recent track records, F. G. Bradbury rode a "starting" quarter of a mile in 3½ sec., or 4½ sec. faster than the previous best for safety machines for the distance with any other than a flying start. This event was mainly noticeable from the fact that it removed from the record books the last of a series of good performances bequeathed to cyclists by R. J. Macredy, the Irish rider, during his stay in England, and to whom English cyclists may consider themselves indebted for the first developments of speed on machines with pneumatic tyres. On June 13th certain of the N.C.U. championships took place at Bristol, when, in the mile, Scheltema-Bedouin won, as already intimated, but only after a dead-heat with the old record-holder, H. C. Jones. The 5 miles ordinary championship, on the same day, went to U. L. Lambley, a very consistent rider; whilst Louis Stroud, of Oxford University, won the 25 miles tricycle championship. He was similarly successful the year before. Towards the end of this month the faster division had settled down, at Herne Hill, on record-breaking thoughts intent. W. G. H. Bramson succeeded in lowering the flying ¼ of a mile tricycle time to 34 sec., whilst Scheltema-Bedouin and Crump, on the same day, reduced the tandem tricycle record for a mile to 2 min. 3½ sec. The month of July also opened well. F. P. Wood, whose name had been previously associated with the ordinary, or tall, machine, tested his powers on a safety, and with marked success. At his first attempt he won outright; in his second (a championship race) he was only beaten by a yard, and in the third—the 25 miles championship of the London centre of the N.C.U.—he scored an easy win. On the same day, July 5th, some more championships were decided at Bristol, and with so many events of a similar kind, and at similar distances, in Metropolitan and provincial towns, matters became somewhat confusing, and opinions were freely expressed that the title of champion was becoming a shade too cheap. The 25 miles safety championship at Bristol was noticeable for the success of F. J. Osmond, whose name had also, for many years, been associated with the taller type of machine. J. H. Adams won the mile ordinary championship, and W. G. H. Bramson was similarly successful in the 5 miles tricycling championship. The second and third week in July was prolific of record-breaking,

the **Herne Hill track** being the favourite rendezvous. On the 13th came F. J. Osmond's sensational mile ride on a safety in 2 min. 16 sec., beating W. C. Jones' previous best by 4½ sec., or, say, fully fifty yards. The next afternoon R. L. Ede rode 63 miles and 49 yards in 3 hours, establishing fresh records from six miles to the finish. Then, on the Wednesday, came the most remarkable feat of all—namely, F. J. Osmond's 23 miles 1260 yards in an hour, beating the record by 2 min. 32½ sec. This achievement was of so startling a nature that an impression at first prevailed that some mistake must have been made in the published reports, but the performance was found to be perfectly correct. The next day C. A. Smith rode from London to Bath and back on a bicycle, a distance of 212 miles, in 16 hours 13 min. 18 sec. He was accompanied by F. Lowe, on a safety, the two riding together, and both, consequently, beating the previous records for their respective types of machines. A list of records created during the latter part of the season would occupy too much space; suffice it to say that upwards of 1000 figures, which were in the record books a year ago, were obliterated by more meritorious performances. The most recent feat, however, is worthy of special reference. It was accomplished by a young rider named C. Leslie Newland, of the Argus and Bromley Cycling Clubs, who succeeded in covering 100 miles, at Herne Hill, in 5 hours 30 min. 12½ sec., or 10 min. 42½ sec. faster than the record made by R. L. Ede earlier in the year. There have also been the usual meetings at Keenington Oval and elsewhere. H. J. Howard, at the first-mentioned enclosure, gave conclusive proof that it is quite possible for a man to win an important event without adopting waiting tactics. He won the 10 miles scratch race with the utmost ease, defeating numerous well-known riders, and all the previous records for a grass track *en route*. Harking back, momentarily, to long-distance riders upon the road, the 24 hours race by the North Road Club, a journey from London to York and sundry such events have been decided. The North road fixture was considerably interfered with by unfavourable weather, torments of rain descending almost from start to finish. Despite the disadvantageous conditions under which the

competitors rode, Frank Shorland finished first, with 326 miles accredited to his name, J. F. Walsh was second, and F. T. Bidlake third. On Sept. 26th T. A. Edge, of the North and Waverley Road Clubs, finished his record bicycle ride from London to Edinburgh. The distance, 397 miles, was covered in 38 hours 44½ min., or 4 hours 40 min. faster than the previous record. Mr. G. Pembroke Coleman is the official timekeeper of the National Cyclists' Union, which body has control of all matters pertaining to the pastime, and the Roads Records Association check the times made on the roads. Consult "Cycling," by Viscount Bury and G. Lacy Hillier (Badminton Library).

Cyprus. An island and British colony in the Levant, 40 miles from Asia Minor, 60 from Syria, 258 from Port Said, and 1,117 from Malta. Area 3,584 sq. m., pop. 186,173. Divided into six districts. Capital Nicosia, pop. 11,500, inland. Chief produce, cotton, wine, salt, carobs, wheat, barley, wool, silk, spirits, sponges, raisins. Minerals: lead, building and ornamental stones, salt. The copper mines of Cyprus were of great importance in classical times, but no large deposits of the ore are now known. It was stated that the harvest and revenue of '90 were the largest on record, and that the deficit of £91,000 was reduced to £300. The census of '91 gave an increase of 23,000 over that of '81.

Cyprus Exploration Fund. Formed ('87) to undertake systematic archaeological researches in Cyprus, with a Committee on which the British Museum, the Universities of Oxford and Cambridge, and many leading archaeological societies, were represented. In '88 the site of the temple of Aphrodite at Paphos was excavated. In the spring of '89 excavations were made in the Neropolis of Arsinöe, the modern Poli, which resulted in the discovery of numerous terra-cottas, fragments of vases, etc. In '90 explorations on the site of Salamis disclosed the Agora and some important buildings, and yielded a number of statues, terra-cottas, inscriptions, etc. The objects found have been presented to the British Museum and other museums, and accounts of the excavations and their results have been published in the "Journal of Hellenic Studies." **Hon. Treas.,** Mr. Walter Leaf, M.A., Old Change, E.C. **Hon. Sec.,** Mr. H. Babington Smith.

D

"Daily Chronicle." Morning newspaper. Originally a local paper for the whole of London, it was purchased by Mr. Lloyd ('876), and converted into an Imperial Liberal organ with an independent line of action. It has given prominence to colonial news, under the title of "Greater Britain." Another feature has been its attention to the Labour question. **Editor,** Mr. A. E. Fletcher (q.v.). **Offices,** Fleet Street, E.C.

"Daily Graphic." An illustrated London daily newspaper; was first published on Jan. 4th, '90, and was launched under the direction of Mr. W. L. Thomas (q.v.). Its editorial and artistic staff are quite distinct from that of the *Graphic*. The political principles of the *Daily Graphic* are essentially neutral, but

signed contributions contain free expressions of opinion, and are a distinctive feature. During '91 Lord Randolph Churchill contributed a series of letters to this journal. **Editor,** Mr. T. Heath Joyce. **Office,** Milford Lane, Strand, W.C.

"Daily News." A prominent Liberal daily paper, and the organ of the Gladstonian party. Established 1846. It made much headway in '70-71, owing to its early and impartial telegrams respecting the Franco-German war; again in '76, when Mr. MacGahan, its special correspondent, first called attention to the Bulgarian Atrocities; and later during the Egyptian campaigns. Charles Dickens was its first editor, and it is at present edited by Mr.

J. E. Robinson (*q.v.*). Office, Bouverie Street, E.C.

"Daily Telegraph." Morning newspaper; founded 1855. Circulation approximates to a quarter of a million daily. Its politics are Independent Liberal, and it takes a foremost part in the discussion of great social problems. Has special wires from Paris and Vienna. In late years it has employed Mr. Smith on his successful special commission to Assyria, and Mr. Henry M. Stanley to Central Africa. A special feature of the *Daily Telegraph* is the correspondence on important social topics, which at frequent intervals appears in its columns. Amongst these may be mentioned, "Is Marriage a Failure?" "Are Men born Free and Equal?" "Beneficial Murder," "Matrimonial Agencies," and the "Slavery of Drink." Offices, Fleet Street, E.C.

Dale, Robert William, M.A., D.D., LL.D., was b. in London, 1829. Educated at Spring Hill Coll., Birmingham, graduated M.A. Lond. Univ. '53, Hon. LL.D. Glasgow '83. He was appointed pastor of Carr's Lane Congregational Church, Birmingham, in '53, in conjunction with the late John Angell James, on whose death he took the entire charge of the church. In '68 Dr. D. held the office of **Chairman of the Congregational Union of England and Wales**. He accepted the **Lyman Beecher Lectureship of Yale Coll.**, Connecticut, in '77, when he lectured on Preaching at that institution, the Senate of which conferred upon him the degree of D.D. He was a member of the **Royal Commission on the Elementary Education Acts, '86-8**. Dr. D. has published many theological works, the best known of which are "Laws of Christ for Common Life," "The Ultimate Principle of Protestantism," and "The Atonement"—a series of **Lectures** which have been translated into French and German. Dr. D. is one of the most eloquent of modern preachers and platform speakers, but has almost wholly retired from active politics. He published lectures on "The Living Christ and the Four Gospels" in '00, and sermons on "Fellowship with Christ," in '91. Acted as President over the International Congregational Council, which assembled in London during July '91. His illness shortly afterwards excited public sympathy.

Damaraland. A German protectorate in West Africa, coast extending from Cape Frio to Walfisch Bay, inland to 20° E. long. Coast infertile and desolate; inland are richer tracts. Ovampoland is partly within this territory. All mining and other rights conceded to these settlers by the native chiefs have been purchased by the **German West African Society**.

Danish Colonies. See COLONIES AND DEPENDENCIES OF EUROPEAN POWERS.

Danish Political Parties. In Denmark parties are broadly divided into supporters and opponents of a Parliamentary system like our own. The legislative assembly is called the **Rigsdag**, and has two houses—the **Landsting** and the **Folkething**. There is no hereditary membership in either house. The **Landsting** has 66 members, of whom 12 are life members named by the king, and 54 are chosen by a system of indirect election. The king's nominees must have been members of the **Rigsdag**. The members of the **Folkething** are elected by universal suffrage, and members of both houses receive a payment of 7s. 6d. a day when the **Rigsdag** is sitting, and their travelling expenses. There is a perpetual

contest between the two Houses. The present **Ministry**, under **Herr Estrup**, and their followers, the Conservatives, or **Right**, contend that by the constitutional law of Denmark (promulgated in 1849 and revised in '66) the **Folkething** has not—like the English House of Commons—the supremacy in matters of taxation and finance, and the power of practically deciding who shall be the ministers. They maintain that the king and **Landsting** together may overrule the **Folkething**. The **Left** are Parliamentary men attached to the English system. Hence an apparently interminable dispute, in which the decided majority of the **Landsting** are on one side, and an equally large majority of the **Folkething** (in proportion to its numbers) on the other. The majority of the popular House used to be called "the **United Left**," but they are no longer united.

Herr Berg, who was formerly both leader of the party and Speaker of the **Folkething**, absolutely refused to recognise the king's ministers, whom he considered to be governing against the will of the country. The king, on the other hand, would not dismiss his ministers. Hence there was an absolute deadlock. Some 60 or 65 members, in consequence, abandoned **Berg's** leadership, and he was left with a following of little more than a dozen members. The others chose **Count Holstein-Ledreborg** as leader. There were elections for both Houses in '90. The elected members of the **Landsting** sit for eight years, but one half of the House is elected every four years. In the last election there was only one notable change, which, however, did not affect the position of parties. Two Socialists for the first time obtained seats. They were elected by Copenhagen districts. The **Right** has 53 members, the **Left** has 13, and with two Socialists the House is complete. The **Folkething**, of which **Herr Hoegsbro** is now Speaker, contains from 22 to 26 members on the **Right**, **Herr Berg's** party reduced to about 14, the remainder of the **Left** numbering at least 60, and three or four Socialists, who generally vote with the **Left**. In July '91 the resignation of the Minister of Public Worship, M. Scavenius, was notified.

Danube Bridge. It was stated early in '91 that preparations had been made for the building of the long talked of bridge across the Danube, to connect Roumania with the **Dobrukscha**, and that operations had been commenced. The total length will be 2,460 feet, there being five spans, four of 460 feet, and one of 620 feet, some of the piers being 80 feet below water, and the rail level 115 feet above mean water level.

Danube (Iron Gates) Improvement. On May 28th, '88, the Hungarian Government brought into the Lower House a Bill to provide for the long-talked-of improvement in the navigation of that portion of the **Danube** between **Orsova** and **Turu-Severin** known as the **Iron Gates**. By the **Berlin Treaty**, the empire of Austria-Hungary was charged with this work, with provisions for levying tolls; but Austria undertaking the construction of the **Arlberg Railway**, which she completed, the **Danube** project fell to Hungary, but was hindered, it is said, by the local landowners, who fear the imports of Roumanian wheat, etc. The work was formally taken in hand on the above date, but the first sitting of the **Mixed Iron Gates Commission** took place on April 16th, '89. Several plans and schemes have been submitted for this, one of the greatest

works of the kind in Europe; and the one adopted is by a Hungarian engineer, **M. Wallandt**. It is now part of the plan to blast the most serious obstructions, and to construct a navigable channel 2 kilometres long, 2 deep, and 80 in width. Tenders were invited, but without response, as contractors declined to experiment at their own cost; so the Hungarian Government commenced operations themselves on Sept. 15th, '90, in the presence of a gathering of an international character, the Greben rock being partially blown up by a blast of 60 kilogrammes of dynamite. The task is to be completed in '95, and the cost is estimated at 9,000,000 fl. (see last ed.). In July '91, the Hungarian Minister of Ways and Communications inspected the works. At that time the locks of the future ship canal were half completed, and the blasting of the rocks was being proceeded with. The *Engineer* of Aug. 4th, gave an illustrated article on the subject of the work in progress. It was estimated that no less than 528,000 cubic yards of rock had to be removed from the bed of the river, besides 657,000 cubic yards of excavation on the right bank of the Danube at Greben.

Dardanelles, or Hellespont, is the narrow strait, about forty miles long, and varying in width from one to four miles, between the European and Asiatic coasts of the Turkish Empire between the Sea of Marmora and the Grecian Archipelago. Its geographical position is of great importance, inasmuch as it is the key to Constantinople. Both sides of the strait are strongly fortified.

Daudet, Alphonse, distinguished French novelist, was b. in humble circumstances at Nîmes, 1840. He commenced his career as a teacher, but after the publication of "*Les Amoureux*" devoted himself to literature and journalism. In '61 he became secretary to the Duke of Morny, under whose auspices he travelled in Italy and the East. Amongst his numerous works his greatest success was "*Fromont Jeune et Étienné Aîné*," a work which went through more than forty editions, and was crowned by the Academy. His dramatisation of "*Numa Roumestan*" was performed at the Odéon at Paris, Feb. '87. M. Daudet in '88 published "*L'Immortel*." His play, "*La Lutte pour la Vie*," was produced at the Gymnase at Paris, Oct. '89. Mme. D. is also a writer of some eminence, and collaboration with her husband has occasionally been hinted at in certain of his books. A new play, entitled "*L'Obstacle*," by M. Daudet, was produced at the Gymnase (Dec. '90).

Davey, Sir Horace, Q.C., was b. 1833, and after a distinguished career at Oxford, called to the bar ('61), Q.C. ('75), and is the leader of the Chancery Bar, as Sir Charles Russell is leader of the Common Law Bar. Mr. Davey became Solicitor-General when Mr. Gladstone formed his last Government, although he had had the misfortune to lose his seat at Christchurch. Was elected for Stockton on the retirement of Mr. Dodds, in Dec. '88. He was counsel for the prosecution at the trial of the Bishop of Lincoln. In the deeply interesting Berkeley Peerage case (*q.v.*), heard in the House of Lords (May and June '91), Sir H. appeared as leading counsel.

Davies, Mrs. Mary, popular vocalist, was b. in London of Welsh parents. At the age of fourteen the late Mr. Brinley Richards began to take an interest in her musical studies, and allowed

her when only sixteen to make her *début* at one of his concerts in Hanover Square Rooms. She won a scholarship at the Royal Academy of Music, where she became a pupil of Signor Kandeegger, and greatly distinguished herself in her studies, taking among other honours the **Parepa-Rosa gold medal** and the **Christine Nilsson prize**. In '78 she made her first appearance at the **Ballad Concerts**, whereat she has ever since held the position of first soprano soloist. Miss D. created the part of **Marguerite** in Berlioz's dramatic cantata "**Faust**," on the occasion of its first performance in English in this country, with which her name is identified. In '88 she was married to Mr. W. C. Davies, secretary and registrar of the University College of North Wales (*q.v.*).

Davis, Henry William Banks, R.A., b. at Finchley 1843, was a successful student of the Royal Academy, of which he was A.R.A. ('73). Is deservedly popular at the Royal Academy exhibitions. His "**Trotting Bull**," in bronze, shown in '72, obtained a medal for sculpture at the Vienna Exhibition, while his "**Returning to the Fold**," exhibited in '80, was purchased by the president and council of the Royal Academy under the terms of the Chantrey bequest. R.A. '77.

Davitt, Michael, was b. 1846 in the village of Stuaide, Mayo. His father, who was a small farmer, was evicted when Davitt was but four years of age; and he has frequently referred in speeches and writings to this event, as colouring his whole life, and forming the groundwork of his political creed and action. For several years he lived at Haslingden, Lancashire; when a boy he lost his right arm, through an accident in a mill. After this he was employed by a stationer of the town. He became connected with the **Fenian movement**, and was present at the attack on Chester castle. Afterwards he was engaged in buying and transporting arms to Ireland, and being detected, was tried, convicted, and sentenced to fifteen years' penal servitude. He was released after seven years and seven months of his sentence had expired. While in America he fell in with some leading Irish Americans, who had conceived the idea of a **new land movement** in Ireland, on the basis of peasant proprietary, and accepted their views. On his return to Ireland he succeeded, after many difficulties, in gaining the adhesion of several influential persons—and finally of Mr. Parnell—to his views. He organised a number of meetings first in County Mayo, where, owing to the three bad harvests of '77-8 and '79, there was great distress and a general inability to meet the existing rents. The first meeting was held at Irishtown, in that county, in April '79, and from this meeting the birth of the **Land League** is usually dated. Davitt was not present, owing to some accident. He then took a very active part in organising the new movement; again visited America; and shortly after his return was again arrested, and sent back to penal servitude. He was released after fifteen months' imprisonment. He was one of the parties concerned in the charges made in the articles on "**Parnellism and Crime**," and conducted his own case, making a powerful and effective speech in his own defence ('89). Commenced the **Labour World** (Oct. '90), but the paper ceased after a few months. Mr. Davitt visited the United States in '91.

Dawson, Sir John William, LL.D., F.R.S., F.G.S., geologist and naturalist, was b. at Pictou, Nova Scotia, 1820. Ed. at Edinburgh Univ., and returning home devoted himself to the study of the natural history and geology of Nova Scotia and New Brunswick. Accompanied Sir Charles Lyell ('42 and '52) in his explorations in Nova Scotia, aiding him materially in his investigations. He has made important discoveries, amongst these being *Eosoon Canadense*, the oldest known foraminifer. In '50 he was appointed Superintendent of Education for Nova Scotia. Principal of the **McGill University** ('55) at Montreal, of which he is now **Vice-Chancellor**. Author of "The Story of the Earth and Man" ('72), in which he combats the Darwinian theory of the origin of species, and of "Modern Science in Bible Lands." Created C.M.G. ('81). Was **President of the British Association** for '86.

Day, Sir John Charles, was b. 1826. Joined the Middle Temple '45. Called to the bar '49; Q.C. '72. Appointed a judge of the Queen's Bench division '82. Mr. Justice Day, who is a Roman Catholic, was **chairman of the Belfast Riots Commission** in '86, and was subsequently appointed one of the judges on the **Farnell Commission**. He is the editor of the "Common Law Procedure Acts," and of Roscoe's "Nisi Prius."

Dean and Chapter. A corporate body, consisting of the Dean, who is president, together with his canons and prebendaries, who form the Chapter. They are the council of a Bishop, govern the cathedral under him, and also assist in the celebration of divine service.

Deans. From Latin *decanus*. The term dean was originally applied to heads of chapters, because they presided over ten prebendaries or canons. Formerly the chapter was regarded as (1) the bishop's council, (2) a collegiate institution, and (3) a body of learned canonists charged with the maintenance of rubrical strictness in the discipline of the Church.

—Deans Peculiar. This term is applied to the following nominal heads of obsolete capitular bodies: Dean of Battle (Very Rev. E. R. Currie); Deans (two) of Bocking (Very Revs. H. Carrington and E. Spooner); Dean of Guernsey (Very Rev. C. Brock); Dean of Stamford (Rev. W. W. Howard). The **Dean of Jersey** presides over a council of twelve rectors, in whose direction are the affairs of the Church in the Channel Islands. **—Royal Peculiars** are the deaneries of Westminster and Windsor. The term is also applied to another class of dignities, such as **Dean of the Closet**, **Dean of the Chapel Royal**, and to the chaplains of Knightly Orders, e.g., **Dean of the Thistle**, who is a Presbyterian. Ancient collegiate chapters which have been suppressed are those of Middleham (extinguished 1856), Wolverhampton (extinguished by 3 & 4 Vict. c. 123), and Southwell collegiate church, now the cathedral church of that see. **—Greater and Lesser Chapters.** Nominally the chapter comprises all canons and prebendaries who have been appointed to stalls by the bishop, but statutorily only the prebendaries of the old foundation are competent to transact capitular business. Of late it has been sometimes the practice to invite all prebendaries, including **honorary canons**, into consultation with the dean and statutory canons. It has been decided that the dean is not responsible to the bishop for the conduct of divine service in any cathedral church. St.

Albans, Liverpool, Southwell, Wakefield, and Newcastle are without deans. The Bishop of Truro is also dean of St. Mary's Cathedral, Truro. The dean of Bristol ranks with the dean of Gloucester in the diocese of Gloucester and Bristol. **—Rural Dean** (see **DIOCESE**), an honorary office involving the right of observing and reporting to the archdeacon or bishop in matters concerning the welfare of parishes within a specified district, and in examining candidates for confirmation. **—Dean Cardinal.** The senior Cardinal Bishop of the Sacred College of Cardinals at Rome, who, among other honours, receives the first visits of foreign ambassadors, and consecrates the Pope, should he not be a bishop. **—Dean of Faculty**, also called **Master of Faculty**, is the head of the Faculty Committee, a tribunal pertaining to the Archbishop of Canterbury, which creates rights to pews, monuments, burials, grants, dispensations, etc. The following are deans of the Church of England:—

Canterbury	Robert Payne Smith, D.D.
York	A. Percival Purey-Cust, D.D.
London	Robert Gregory, M.A.
Durham	William Charles Lake, D.D.
Winchester	George William Kitchen, D.D.
Bangor	Evan Lewis, M.A.
Bath and Wells	T. W. Jex-Blake, D.D.
Bristol	Francis Pigou, D.D.
Carlisle	W. G. Henderson, D.D., D.C.L.
Chester	J. L. Darby, D.D.
Chichester	(vacant).
Ely	Charles Merivale, D.D.
Exeter	Benjamin Morgan Cowie, D.D.
Gloucester	H. D. M. Spence, D.D.
Hereford	Hon. George Herbert, M.A.
Lichfield	Edward Bickersteth, D.D.
Lincoln	W. J. Butler, D.D.
Llandaff	Charles John Vaughan, D.D.
Manchester	Edward Craig Maclure, D.D.
Norwich	William Lefroy, D.D.
Oxford	Henry George Liddell, D.D.
Peterborough	Marshall Angles, M.A.
Ripon	William R. Fremantle, D.D.
Rochester	S. Reynolds Hole, D.D.
St. Asaph	John Owen, M.A.
St. David's	James Allen, M.A.
Salisbury	George David Boyle, M.A.
Truro	The Lord Bishop.
Worcester	R. W. Forrest, D.D.
Westminster	G. Granville Bradley, D.D.
Windsor	Philip F. Eliot, M.A.

Debates and Proceedings in Parliament. See SESSION.

Deceased Wife's Sister, Marriage with. See MARRIAGE WITH DECEASED WIFE'S SISTER.
Deer Forests. See SESSION, Sect. 15.

Delagoa Bay. Situated on the E. coast of South Africa, on the twenty-sixth parallel of S. latitude. It forms the southern extremity of the Portuguese territory of **Mozambique**. The port and settlement is **Lorenzo Marques**, a young town now rapidly growing. Delagoa Bay is available for vessels of large tonnage; the Olifants or Krokodil river, flowing into it, is navigable for steam launches for a considerable distance; but there are swamps around the coast, and some malarial fever is prevalent. The Transvaal border begins 32 miles inland. Concessions for the construction of a railway from the Bay to Pretoria were granted by the King of Portugal in '76. In Dec. '90 the following order respecting the acquisition of land at Delagoa Bay was promulgated: "No foreign residents or foreigners not residing in

the district of Lorenzo Marquez will be hereafter allowed to make a claim or claims of land greater in extent than 2500 square metres; nor will they be allowed to attend public auctions of Crown lands for the purpose of buying such lands; neither will they be allowed to bid for such lands at such public auctions."

Delagoa Bay Railway. In the course of the negotiations between Great Britain and Portugal as to the action of the latter power in East Africa (*q.v.*), the claims of the Delagoa Bay Railway Co. for compensation for the seizure of the line by Portugal on June 29th, '89, were brought forward. A Durban telegram (Jan. 24th, '90) reported that the railway from Lorenzo Marquez to the Portuguese frontier was completed on that day. In a ministerial order published on Jan. 31st the Portuguese Government authorised the working of the last section, from Incomati to the Transvaal frontier, the whole line thus being placed under State administration. In our last and previous editions we gave a description of the line itself and an account of the prolonged negotiations, to secure which both the British and American Governments had to bring considerable pressure to bear on that of Portugal. A telegram from Lisbon, dated Dec. 29th, '90, stated that the arbitration between the Governments in question respecting the seizure of the line was shortly to be gone into by the Commission of three Swiss jurists which had been appointed. The correspondent added that, owing to strong representations of the United States, the whole question of the conduct of the Portuguese Government was to be considered; but in a telegram from the Portuguese capital, dated Jan. 2nd, '91, doubt was thrown upon the latter statement. The following were appointed arbitrators:—M. Joseph Blais, Vice-President of the Swiss Federal Tribunal; M. Charles Soldam, President of the Council of State in Canton Vaud; and M. Andreas Heussler, Professor of Law at Bâle University. A preliminary meeting of the arbitrators was held at Schwytz, on Aug. 3rd. From Lisbon, Sept. 13th, it was stated that in consequence of comments on the delay in the arbitration, the local papers published a *resumé* of what had really been done. It was stated that after the Portuguese Government had presented the arbitrators with the preamble of its case, and sent a copy to the principal foreign Powers, the general terms of process were agreed upon by the British, American and Portuguese Ministers at Berne, on June 14th. The arbitrators deliberated upon this agreement till Aug. 3rd, but had not communicated their decision. A Lisbon telegram of Sept. 26th stated that the Portuguese Government had received the arbitration terms and had to reply within thirty days. From Berne, Oct. 22nd, it was reported that the objections and observations of the two parties as to the principle of the arbitration had been received and were found to relate to superficial matters. The proposed procedure was therefore approved in all essentials.

Delyannis, M., the Greek Premier, was Minister for Foreign Affairs in '63, and fourteen years later he was associated with what was named the "Economic Ministry," serving afterwards under M. Koumoundouros. At the Berlin Congress he acted as the representative of Greece. Was Premier for a year ('85-6). On the defeat and resignation of M. Tricoupis, in

Oct. '90, he was called upon to form a ministry, and took the oath (Nov. 9th) on assuming office as President of the Ministry, Minister of the Interior, and Minister of War, the latter position being *ad interim*.

Demerara. One of the three counties of British Guiana (*q.v.*).

Denison, The Ven. Geo. Anthony, Archdeacon of Taunton, was b. 1805. Educated at Eton and Christ Ch., Oxford, graduating First Class in Classical Honours '26. Elected Fellow of Oriel '28. He held successively the curacy of Cuddesdon, Oxon, and the vicarages of Broadwindsor, Dorset, and East Brent, Somerset. He was appointed to the Archdeaconry of Taunton '51. He resigned his examining chaplaincy to the Bishop of Bath and Wells in '53, when Dr. Spencer charged him with holding views on the Doctrine of the Real Presence contrary to those sanctioned by the Articles of the Church. In consequence of three sermons which he preached on that subject in Wells Cathedral ('54), he was deprived of his preferments by an Ecclesiastical Court presided over by the primate at Bath. On his appeal, however, to the Court of Arches this sentence was set aside, and on further appeal to the Privy Council in '58, the decision of the Court of Arches was confirmed. Archdeacon D. was for many years editor of the "Church and State Review," and has written "Notes of my Life" ('78), and "Mr. Gladstone," a pamphlet which had a large sale, in '85. The Archdeacon expressed strong disapprobation of "Lux Mundi" in Convocation, '91.

Denman, Hon. George, the fourth son of the first Lord Denman, was b. 1829. Educated at Cambridge. Called to the bar ('46). After two unsuccessful attempts to enter Parliament, Mr. Denman was elected member for Tiverton, his colleague in the Liberal interest being Lord Palmerston. He continued to sit for Tiverton, with a brief exception, until '72, and carried through Parliament two useful measures modifying the laws of evidence. In '72 he was appointed a judge of the Court of Common Pleas, and is now, by the operation of the Judicature Act, a judge of the High Court.

Denmark. Kingdom under Christian IX., of Glücksburg. By charter of 1849 (modified in '55, '63, '65 and '66) the executive power is vested in king and ministers, the legislative in the Rigsdag or Diet jointly with the sovereign. The Rigsdag is composed of the Landsting (or Upper House of 66 members; 12 crown nominees, and 54 indirectly elected by the people for eight years), and of the Folkething (or House of Commons of 102 members directly elected by universal suffrage for three years). The Rigsdag must meet every October, and all money Bills be submitted to the Folkething. Colonies comprise Iceland (which has its own constitution and assembly of 36 members, with a minister nominated by the king), the Faeroe Islands, Greenland, and three small West Indian islands. The state religion is Lutheran, but all others are tolerated, and there are no civil disabilities to dissenters. Area (excluding Faeroe Islands), 13,784 sq. m.; estimated pop. in '86 2,108,000. The total revenue for '91-2 was 53,500,000 kr.; expenditure, 58,500,000 kr. Total public debt, £10,368,094; but State investments, about £5,800,000, reduce to nearly one-half. Imports ('88), £15,000,000; exports, £10,700,000 (krone = 18. 13d.). The United Kingdom ranks second in the trade with Denmark, coming next after

Germany. Chief exports to Great Britain, butter and butterine, cattle, eggs, lard; chief imports, cotton and woollen manufactures, iron, sugar. The agricultural returns for the past three or four years show that the foreign demand for Danish agricultural produce continues to increase. Cattle breeding is at the same time taking more and more the place of arable farming. Above all, dairy farming is being pursued with unparalleled skill and success. The export of butter and other dairy produce is now the main source of the wealth of Denmark. (For army and navy see FOREIGN ARMIES AND NAVIES; and for history '73-89 see previous eds.)—'91. The Danish Government officially recognised the Brazilian Republic early in January. Cremation was prohibited, in consequence of the decision of the Supreme Court (Jan. 16th), tall the passing of the new law for the disposal of the dead. The Session of the Rigsdag closed (April 1st) without agreement between the two Chambers as to the Budget, and consequently the King sanctioned a provisional Budget, authorising the Government to increase the existing taxes and duties, and to disburse such sums as were necessary. An Englishman, president of the Scandinavian branch of the English Sailors' Union, was (June 29th) taken into custody as an "obnoxious foreigner." The King gave a banquet (July 6th) in honour of the officers of the French Squadron; all the Royal family and the chief Court and naval officials were present. The Grand Cross of the Daneberg Order was conferred on the French admiral. In Aug. the customary annual royal family gathering took place at Fredensborg. The Czar and Czarina, the Prince and Princess of Wales, the Duchess of Edinburgh, and their families, were among the party. The Rigsdag opened (Oct. 5th).

Denmark, King of. See CHRISTIAN IX.

Derby, The. See TURF.

Detroit River Tunnel. This is a project to construct a tunnel for a double track railway below the present Michigan transfer ferry, opening on the main line a mile from the shore on the Detroit side of the river. Total length 12,033 ft., of which 2100 ft. will be an open cutting on the Canadian side, and 1500 ft. on the Detroit side. The tunnel will be lined with steel plates, enclosing five rings of brick and concrete; inside diameter 27 ft. The material to be penetrated is a clay formation.

De Worms, Rt. Hon. Baron Henry, M.P., is the second son of the 1st Baron de Worms, and was b. 1840. Ed. at King's Coll., Lond., and was called to the bar of the Inner Temple in '63. He entered Parliament as Conservative member for Greenwich in '80, and continued to represent this constituency till '85; since then he has sat for the Toxteth Div. of Liverpool. Has held office as Parliamentary Secretary to the Board of Trade '85, '86, and '86-8, and as Under-Secretary of State for the Colonies since Feb. '88. He acted as President of the International Conference on Sugar Bounties, P.C. '89.

Dicksee, Frank, R.A., was b. in London, Nov. 27th, 1853. He entered the schools of the Royal Academy in '69, and exhibited his picture "Elijah" at the R.A. in '75. He illustrated certain magazines at this time, including the *Graphic*. In '77 his picture "Harmony" created much interest, and was followed two years later by "Evangeline." Elected A.E.A. in '81, when he exhibited "The Symbol," and E.A. June '91. Other well-known pictures by Mr. D. are "The Passing of Arthur" and "The

Redemption of Tannhäuser." In '91 his subject entitled "The Crisis" was undoubtedly one of the attractions of the Academy.

Didon, Father, the famous Roman Catholic preacher, was b. at Thouvet, Isère, on March 17th, '40, and is the son of a sheriff's officer. He was ed. at Grenoble Seminary, and entered the order of the Dominicans in '58. From Lacordaire he seems to have caught some of his oratorical power. He pronounced his final vows four years later, and proceeded to Rome. Returning in '68 to France, he preached at St. Germain-des-Près. His first book was "Man according to Science and Faith." He next published "The Higher Education of the Catholic Universities." He attracted great congregations in Paris, in '79, by a course of sermons dealing with "The Church before Modern Society." He was banished to the monastery of Carbara, in Corsica, but being released visited the Holy Land and also Germany. Both these countries furnished him with themes for new books. He wrote on "The Germans," in '91 his great work, entitled "La Vie de Jesus," which has been translated into English.

Diggle, Joseph Richard, M.A., is a native of Lancashire and was b. 1845. Ed. at Wadham Coll., Oxford, where he graduated. Ordained priest '75, and for four years was curate of St. Mary's, Bryanston Square. Elected a member of the London School Board for Marylebone in '82, and chairman of the Board in succession to Mr. E. N. Buxton, progressist, who was defeated by the newly returned clerical majority (of which Mr. Diggle was leader), on the reassembling of the Board in '85. Re-elected to the chair '88. Took steps in '90 to divest himself of ecclesiastical position, in order to remove disability for entering Parliament.

Dillon, John, M.P., L.R.C.S.I., son of the late John Dillon, M.P., of '48 celebrity, was b. 1851. Educated at the Catholic University of Dublin. Returned as Nationalist for Lipperry ('80), but owing to ill health resigned the seat ('83). Elected for East Mayo in '85, and again in '86. Mr. Dillon has recently been identified with the "Plan of Campaign"; and in Nov. '86, while carrying that plan into operation at Loughrea by receiving the rents of the tenants, was arrested by the police. He was subsequently tried for the offence, but not convicted. Mr. D. was twice imprisoned under Mr. Forster's Coercion Act. He is one of the most powerful speakers in the House of Commons. At the Mell Petty Sessions, Drogheda, on May 11th, '88, for "having on April 8th, at Tullyallen, co. Louth, taken part in the criminal conspiracy known as the Plan of Campaign," Mr. D. was sentenced to six months' imprisonment. The sentence was confirmed on appeal on June 21st. Mr. D. was sent to Dundalk Prison, but was liberated Sept. '88. He returned in '90 from a tour of the Australian Colonies, where he collected large contributions to the funds of the Irish Nationalist party. Was arrested (Sept.) and tried on a political charge, but escaped with Mr. W. O'Brien, M.P., to Cherbourg, when out on bail. Mr. D. afterwards visited the United States, and in Feb. '91 surrendered himself, and was imprisoned in Ireland. Released from Galway gaol on July 30th, and delivered a speech, repudiating Mr. Parnell's leadership, at Mallow (Aug. 9th).

Diocesan Courts. Ecclesiastical courts for exercising general jurisdiction in diocesan affairs. They consist of the Consistory Courts, the Courts of Commissaries, and the Courts of Archdeacons (see ECCLESIASTICAL COURTS).

Diocesan Lay Readers. See LAY READERS.

Diocese. Anciently the Established Church of England (*q.v.*) was divided into three provinces—viz., Canterbury, York, and Caerleon. The latter, however, was abolished, and the several dioceses in it added to the Province of Canterbury, in 1147. Including these, the number of dioceses now contained in the Province of Canterbury is twenty-five; those of the Province of York numbering ten. (See ANGLICAN CHURCH.) Immediately under the authority of the Bishops are **Bishops Suffragan**. (See BISHOPS.) Next in rank are **Deans** (*q.v.*), and **CONVOCACTIONS**, with whom come the **Greater Chapter**, including the Archdeacons holding stalls. The **Minor Canons** read the prayers and control the musical part of the services in cathedrals. The Bishop nominates **resident chaplains** and **examining chaplains**, the latter being employed in examining candidates for ordination by the Bishop. The other **diocesan officials**, lay and clerical, are as follows.—**Chancellor** (usually a lawyer), diocesan inspectors (charged with the inspection of Church schools), **Pluralities Act commissioners**, secretaries, registrar, architect, chapter-clerk, and organist. The principal lay officers are the two vicars-general (Sir J. Parker Deane and Lord Grimthorpe). Territorially, each diocese is subdivided into **archdeaconries** and again into **rural deaneries**. The office of the archdeacon is to act as *oculus episcopi*—the Bishop's eye; while that of rural dean is to assist the archdeacon. Both are entitled to be heard in the Bishop's Court. Most of the cathedral patronage is vested in the Chapter, while that of the diocese is vested in the Bishop. **Geographically** the limits of diocesan jurisdiction are usually continuous with county divisions, though there are several important exceptions. The Northern Province is divided from the Southern by a zigzag line extending from the Mersey to the Humber, touching Newcastle-under-Lyme at its south-western and Hull at its north-eastern extremities. Jurisdiction in London and suburbs is shared by no less than four bishops—viz., London (Middlesex), St. Albans (Essex), Rochester (Surrey), and Canterbury (Kent). The largest diocese in point of acreage is St. Davids, with 2,360,000, and the smallest London, with 181,000. London has the greatest population, viz., 2,920,000, and Bangor the least, 226,000. The diocese of Norwich has the greatest number of benefices, 908, to 1,006 clergy, while London has the largest number of clergy, 1,200, to 580 benefices. For information respecting **Sootch and Roman Catholic dioceses** see CHURCH OF SCOTLAND, ROMAN CATHOLIC BISHOPS, etc.

Diplomatic. The following list gives the names of the Cabinet, or Executive Council, or principal members of the Government, of each of the leading Foreign States, and of the more important British Colonies:—

ADEN. *Political Resident*, Brigadier-General J. Jopp.

AFGHANISTAN. *Agent to the Governor-General of India*, Col. Attaoolia Khan, 10th Bengal Lancers.

AFRICA, EAST—SOMALI COAST. *Consul*, Lt.-Col. E. V. Stace, C.B.

AFRICA, SOUTH. *High Commissioner*, Sir H. B. Loch, G.C.M.G., K.C.B.—*Secretary to the High Commission*, Graham Bower.—*Deputy Commissioner for Bechuanaland*, Sir S. G. A. Sheppard.—*Assistant Commissioner for the Protectorate resident with Lo Bengula*, J. F. Moffat, C.M.G.—*Deputy Commissioner for Pondoland*, J. P. Scott.—*British Agent at Pretoria*, Sir J. A. de Wet, K.C.M.G.—*Acting British Consul in Nyassaland*, John Buchanan, C.M.G. See also **British South Africa Company**, **Imperial British East Africa Company**, **Royal Niger Company**, **South African Republic**, etc.

ALGERIA. *Chief Commissioner*, G. H. Trevor, M.S.C.

ALGIERS AND TUNIS. *Governor-General of Algeria*, M. Cambon.—*British Consul-General*, Sir K. L. Playfair, K.C.M.G. See also **Tunis**.

ARGENTINE REPUBLIC. *President*, Dr. Carlos Pellegrini.

Ministry: *Minister of Foreign Affairs*, Dr. Eduardo Costa.—

Minister of the Interior, General J. A. Roca.—

Minister of Finance, Dr. V. P. Lopez.—*Minister of War and Marine*, General N. Levalle.—

Minister of Justice, Worship, and Public Instruction, Dr. J. M. Gutierrez.—*Minister in London*, Don Luis L. Dominguez, 16, Kensington Palace Gardens, W.—*Secretary of Legation*, Florencio L. Dominguez.—*Consul-General*, Alejandro Paz.—*Consul*, Alfredo O. Lumb, 16, Bishopsgate Without, E.C.—*British Minister at Buenos Ayres*—Hon. F. J. Pakenham.

ASSAM. *Chief Commissioner*, W. E. Ward, C.S.I.—*Secretary to Commissioner*, F. C. Dankes.

AUSTRALIA, SOUTH. *Governor*, Rt. Hon. the Earl of Kintore, G.C.M.G.—*Lieutenant-Governor*, His Honour Chief Justice Way, D.C.L.—*Treasurer and Premier*, Hon. Thomas Playford, M.P.—*Chief Secretary*, Hon. Sir J. C. Bray, K.C.M.G., M.P.—*Attorney-General*, Hon. Robert Homburg, M.P.—*Commissioner of Crown Lands and Immigration*, Hon. Wm. Copley, M.L.C.—*Commissioner of Public Works*, Hon. W. B. Rounsevell, M.P.—*Minister of Education*, Hon. T. G. Jenkins, M.P.—*Agent-General in London*, Sir Arthur Blyth, K.C.M.G., C.B., Victoria Chambers, 15, Victoria Street, Westminster, S.W.—*Assistant Agent-General*, Samuel Deering, Esq., I.P.

AUSTRALIA, WESTERN. *Executive Council:* *President*, The Governor, Sir W. C. F. Robinson, G.C.M.G.—*Premier*, Sir John Forrest, K.C.M.G.—*Colonial Secretary*, Hon. George Shenton.—*Attorney-General*, Hon. S. Burt, O.C.—*Commissioner of Lands*, Hon. W. E. Marmion.—*Commissioner of Railways and Director of Public Works*, Hon. H. W. Venn.—*Office of the Agent-General in London*, 15, Victoria Street, Westminster, W.

AUSTRIA-HUNGARY. *I. and R. Minister of the Imperial House and for Foreign Affairs*, Count Gustav Kalnoky de Köröspatak.—*Imperial and Royal Minister of Finance*, Benjamin Kállay de Nagy-Kálló.—*Imperial and Royal Minister of War*, Baron Bauer.—*Ministerial Council for Austria:* *Minister President*, and *Minister for Home Affairs*, Count Eduard Taaffe.—*Agriculture*, Count Julius Falkenhayn.—*Justice*, Count Schoenborn.—*Worship and Education*, Baron Gautsch de Frankenthurn.—*Military Service*, Count Zeno von Welsersheimb.—*Finance*, Dr. Emil Steinbach.—*Commerce*, Marquis Olivier de Raquehem.—*Ministers (without portfolio)*, Baron Alois Piazak and Chevalier Philipp de Zaleski.

Ministerial Council for Hungary: *Minister President*, Count Julius Szápáry. — *Worship and Public Education*, Count Csaki. — *Croatia, Slavonia, and Dalmatia*, Emerich de Izvipoich. — *Justice*, Desiderius de Szilagy. — *Finance*, Alexander de Weckerle. — *Minister for Home Affairs*, Count Géza Teleki; *Minister at H. M. Court*, Ladislás de Szoegenyi. — *Minister of Military Service*, Baron Géza de Fejerváry. — *Commerce*, Baross von Bellus. — *Agriculture*, Count Bethlen. — *Ambassador in London*, Count Deym, 18, Belgrave Square, S.W. — *Hon. Consul-General*, Baron Alfred de Rothschild. — *Acting Consul-General*, Chevalier Ferdinand Krapf de Liverhoff. — *Vice-Consul*, Eugène Liebmann. — *Secretary*, Julius Kohn, Mansion House Chambers, 11, Queen Victoria Street, E.C. — *British Ambassador*, Rt. Hon. Sir Augustus Berkeley Paget, G.C.B.

BADEN, *President of Ministry*, Dr. L. Turban. — *British Chargé d'Affaires*, Hon. W. N. Jocelyn, C.B.

BAHAMAS, *Governor and Commander-in-Chief*, Sir Ambrose Shea, K.C.M.G.; *Private Secretary and Clerk to Executive Council*, J. Gurdon. — *Executive Council*: H. M. Jackson, *Colonial Secretary*; O. D. Malcolm, Q.C., *Attorney-General*; the officer in command of the troops; R. Butler, *Receiver-General*; R. H. Sawyer; G. T. R. Kemp, M.D.; W. E. Armbrister; R. W. Farrington; and Joseph Brown.

BARBADOS, *Governor*, Sir W. J. Sendall, K.C.M.G. — *Executive Council: Officer commanding the Troops*, — *Colonial Secretary*, Hon. C. E. Knollys, M.A. — *Attorney-General*, Hon. H. A. Bovell. — *Hon. G. C. Pile*, M.L.C.; Hon. W. N. Greaves, Q.C.

BARODA, *Resident and Agent to Governor-General*, Sir H. N. D. Prendergast, K.C.B., V.C., R.E.

BASUTOLAND, *Resident Commissioner*, Col. Sir Marshall Jas. Clarke, K.C.M.G.

BAVARIA, *Ministers: Minister of State and Foreign*, Baron Von Crailsheim. — *Instruction and Worship*, Dr. Von Müller. — *Justice*, Von Leonrod. — *Finance*, Dr. Von Riedel. — *Interior*, Baron Von Feilitzsch. — *Minister of War*, Von Safferling. — *British Minister Resident at Munich*, Victor A. W. Drummond.

BELGIUM, *Finance*, M. A. Beernaert. — *Justice*, M. Jules Lejeune. — *Home and Public Instruction*, M. E. Menst. — *Foreign Affairs*, Prince de Chimay. — *Agriculture, Industry, and Public Works*, Léon de Bruyn. — *War*, Gen. C. Pontus. — *Railways, Posts, and Telegraphs*, M. J. Vanden-Pereboom. — *Minister in London*, Baron Solvyns, 35, Grosvenor Gardens, S.W. — *Consul-General*, M. François H. Lenders, 118, Bishopsgate Street Within, E.C. — *British Minister at Brussels*, Lord Vivian, G.C.M.G., C.B.

BELUCHISTAN, *Agent to the Governor-General for India*, Col. Sir R. G. Sandeman, K.C.S.I., B.S.C.

BENGAL, *Lieutenant-Governor and President of Council*, Hon. Sir C. A. Elliot, K.C.S.I. — *Council of the Lieutenant-Governor*, The Honourables Sir G. C. Paul, K.C.M.E.; Sir H. L. Harrison; T. T. ZULULAND. *Governor, The Governor of Natal.—Secretary, W. Windham.—Resident Commissioner and Chief Magistrate, M. Osborn, C.M.G.*

Disestablishment. While the State does not concern itself about the affairs of other religious bodies, the Churches of England and Scotland are national church establishments; and disestablishment means the placing of them on exactly the same footing, as regards the laws and government of the country, as those other bodies. The Protestant Episcopal Church in Ireland was established at one period, but was disestablished by an Act of Parliament passed in 1869. (For arguments relating to this question see previous eds.) With regard to disestablishment, it should be stated that the advocates of disestablishment propose to scrupulously respect all existing life interests, and also to leave the disestablished churches in possession of the buildings and endowments which have been the result of their own liberality during the last sixty years. During '91, the subject of Disestablishment for Wales assumed clearer proportions, being included in the Liberal programme, as propounded by Mr. Gladstone at Newcastle. It was much discussed at the Church Congress, held at Rhyl. The organisation which is most closely identi-

fied with the disestablishment movement is popularly known as "The Liberation Society," its full title being *The Society for the Liberation of Religion from State Patronage and Control*. It was founded in the year 1844, under the title of *The British Anti-State Church Association*, that title having been changed in 1853. Its chief office and depot for publications is 2, Serjeant's Inn, Fleet Street; Secretaries, Mr. John Fisher and Mr. Sydney Robjohns. On the other side *The Church Defence Institution* (Offices: 62 to 67, Palace Chambers, Westminster, S.W.; Secretary, Rev. H. G. Dickson, M.A.) is organised for defence of the Church.

Disestablishment in Wales. See SESSION, sect. 11.

Disorning Cattle. Law as to, in '89. The Scottish Courts have decided that the operation of disorning cattle may be necessary in the interests of the animals themselves, and that therefore a person performing the operation cannot be held guilty of cruelty. This judgment is contrary to the decision of the English and Irish Courts on the subject.

Dispensaries. See HOSPITALS.

Distilling Industry of the United Kingdom. The number of distilleries in operation during the year ending Sept. 30th, '90 (latest returns) were 10 in England, 124 in Scotland, and 29 in Ireland, being a decrease of two in Scotland, and an increase of two in Ireland, as compared with the previous year. The number of proof gallons of British spirits distilled for the year ending the 31st March, '91, was 44,623,584, of which 10,533,637 were produced in England, 21,101,023 in Scotland, and 12,988,924 in Ireland. The estimated quantities of the principal materials used include 946,398 quarters of malt, 1,140,580 quarters of unmalted grain, 175,573 cwt. of molasses, 41,993 cwt. of rice, 453 cwt. of sugar, and 37,041 cwts. of saccharine. The number of proof gallons of British and Irish spirits in bonded warehouses on the 31st March was: English, 9,912,952; Scotch, 54,312,195; and Irish, 26,993,477; total, 91,128,624 as against 85,470,017 for the corresponding period of the previous year. For the year ended on 31st March the number of detections made by the Excise authorities in connection with illicit distillation were 1 in England, 15 in Scotland, and 1518 in Ireland. The number of Proof Gallons of British Spirits distilled in each Kingdom in the years ended 31st March, '91 and '90 are as under:—

	Year ended	
	31st March 1891.	31st March 1890.
	Gallons.	Gallons.
England . . .	10,533,637	9,061,288
Scotland . . .	21,101,023	20,990,935
Ireland . . .	12,988,124	12,818,072
United Kingdom .	44,623,584	40,970,295

Distinguished Service Order. Her Majesty having taken into consideration that the means of adequately rewarding the distinguished services of officers in the naval and military services who had been honourably mentioned in despatches were limited, instituted and created for the purpose of rewarding individual

instances of meritorious and distinguished service in war a new naval and military Order of distinction. The statutes of the Order, which are dated Balmoral, Sept. 6th '86, but which were not issued from the War Office until Nov. 6th in that year, provide that no person shall be eligible for the distinction who does not hold, at the time of his nomination, a commission in the navy, in the land forces, or marines, or the Indian or Colonial naval or military forces, or a commission in one of the departments of the army or navy the holder of which is entitled to honorary or relative navy or army rank; nor shall any person be nominated unless his services shall have been marked by the especial mention of his name by the admiral or senior naval officer commanding a squadron or detached naval force, or by the commander-in-chief of the forces in the field, in despatches for meritorious or distinguished service in the field or before the enemy. Foreign officers who have been associated in naval and military operations with our forces are eligible to be honorary members; and the Order ranks next to the Order of the Indian Empire. The badge, which consists of a gold cross, enamelled white, edged gold, having on one side thereof in the centre, within a wreath of laurel enamelled green, the Imperial Crown in gold upon a red enamelled ground, and on the reverse, within a similar wreath and on a similar red ground, the Imperial and Royal cypher V.R.I., is to be suspended from the left breast by a red riband edged blue of one inch in width.

Distress for Rent, Law as to, in '91. The first case under the recent Sheriff's Act was that of *Bagge v. Whitehead*, in which the plaintiff sued the Sheriff of the county of London for the neglect of his officer in not leaving on his premises wearing apparel, bedding, and implements of trade, to the value of £5. Mr. Justice Wills said the Act in question only made the sheriff or his officer liable if he had been personally guilty of neglect. The action was, therefore, brought against the wrong person, and judgment must be for the defendant. His lordship added that the liability under the Act was criminal, and not civil, and that it was never intended that A. should be sent to prison because B. had been guilty of some act of default under the statute. In the Queen's Bench Division, *Baron von Knoop* sued *Messrs. Moss & Jameson*, auctioneers, for detaining of an oil painting by Mr. Caton Woodville, entitled, "The Last Ride of the Emperor Frederick William." It appeared that the plaintiff commissioned Mr. Woodville to paint the picture for 150 guineas, and it was afterwards returned to the artist's studio at Fulham, as the plaintiff desired the background to be altered. The plaintiff heard nothing further until the beginning of Jan. '90, when he learned that the picture had been seized under a distress for rent at Mr. Woodville's house in Tite Street. He communicated with the defendants, who had made the distress, and were to conduct the sale, claiming the picture; but they replied that they could do nothing in the matter, but would send him a catalogue. It was not, however, until two or three hours after the sale began, that the plaintiff's solicitor received a catalogue, and on driving to the auction rooms he found that the picture had been sold for £8. Mr. Jameson stating that the catalogue had been posted in ample time. The purchaser stood out for a large price, and an action was then brought in which

he was made a defendant, and gave an undertaking not to part with the picture; but he had since died in America, and it was not known what had become of the painting. For the defence it was shown that when the picture was seized, it was hanging up in Mr. Woodville's house in Tite Street, where there was no studio, and that the sale was conducted in a *bonâ fide* manner. It was contended that the picture, being on demised premises, was liable to distress, as no privilege had been made out. An artist did not exercise a public trade, and even if he did his business would only extend to his studio, which, in this case, was at Fulham, and not to the house at Tite Street. Mr. Justice Mathew held that the defendants could not be treated as having sold a privileged article, and that they had received no notice that any privilege was claimed. He gave judgment for the defendants with costs.

District Messengers. See MESSENGER SERVICES.

Divisions. At the conclusion of a debate in the House of Commons the Speaker puts the question, and calls upon as many as are of that opinion to say "Aye," the contrary "No," and declares whether in his opinion the "Ayes" or the "Noes" have it. Unless his opinion be acquiesced in by the minority, the question is determined by a division. The Speaker calls upon strangers to withdraw, and the Clerk turns a two-minute sand-glass. When this has run out and the strangers below the bar have retired, the doors are locked and the question again put in the same form; the Speaker directs the "Ayes" to go into the right lobby and the "Noes" into the left lobby, and appoints two tellers for each party. In a great party division the tellers are usually the Whips on either side. Should there not be two tellers on either side the Speaker declares the resolution of the House; and when in his opinion a division is frivolously or vexatiously claimed, he may take the vote of the House by calling upon members to rise in their places (see PARLIAMENTARY PROCEDURE). Every member in returning from either lobby is counted by the tellers, and his name is recorded by the division clerks on a large printed sheet of names. If a member go into the wrong lobby he is not permitted to correct his error. No member may speak after the question has been put except upon a point of order which may arise, and then he must, while speaking, remain sitting and covered. Divisions in committees are taken in the same manner as in the House itself. The two sides in a Lords division are termed "Contents" and "Not-Contents."

Divorce Cases in '91. The Court of Appeal (Jan. 10th, '91) affirmed the decision of Mr. Justice Butt refusing *Mrs. Beaulieu* a divorce from her husband. The parties had separated in '70, and had been living apart ever since, and it was on the ground of the delay in bringing the action that the Court refused the divorce.—In the case of *Guttman v. Guttman* (Divorce Court, June 18th) it was suggested, though not apparently proved, that the parties were originally brought together by a "shodkin"—a person who arranges marriages between members of the Jewish community, and is paid a fee by one or both of the parties. The Jews, it was stated, regard the promotion of marriage as a religious act; so that the "shodkin," while earning his fee, is performing a religious duty.—A wife obtained a decree of divorce from a husband on the ground of his

adultery and cruelty, and the Divorce Court directed the husband to make a permanent allowance for his wife's maintenance, subject to the provision that the allowance should come to an end in the event of her marrying again, or leading an immoral life. The wife appealed, and the Court of Appeal decided (*Wood v. Wood*, April 23rd, '91) that the *dum sola et casta* clause should be struck out, in view of the innocence of the wife, the misconduct of the husband, the fact that the wife had no property, and the smallness of the allowance made to her (£60). In the Divorce Court, Sir James Hannen (new Lord Hannen) held that each case must be judged upon its merits, and declined in a particular instance to impose the *dum sola* penalty on the wife's conduct.—An action for divorce, brought by Edward T. Taplin against his wife, resulted not only in the decree nisi obtained being subsequently rescinded at the instance of the Queen's Proctor, but in the prosecution of Taplin and a man named Jephunneh Owen for conspiring to commit perjury. It appeared that there was an arrangement between the parties whereby Owen went into the wife's bedroom, and was afterwards discovered there by Taplin, who pretended to beat Owen, and did, in fact, beat his wife unmercifully. Afterwards, a prayer-meeting was held in the house, "because things had gone off so nicely." Taplin was sentenced to 18, and Owen to 15 months' imprisonment (Central Criminal Court, July 6th, '91).

Dobson, Wm. Charles T., R.A., was b. 1817, evinced an early taste for art, and, after studying at the British Museum, became a student of the Royal Academy in '36. He was appointed headmaster of the Government School of Design at Birmingham ('43), but resigned this office ('45), and subsequently proceeded to Italy and Germany, studying art in both countries. Elected A.R.A. ('60), R.A. ('72). He is also a member of the Society of Painters in Water Colours.

Dock Strikes, London. See LABOUR.

Dockers' Union. See LABOUR.

Dods, Rev. Marcus, D.D., was b. 1834 at Belford, Northumberland, where his father was minister of the Presbyterian Church. Ed. at Edinburgh Academy and University, graduated M.A. in '54; subsequently entered Free Church Coll., Edinburgh, and passed through its four years' curriculum. Ordained minister of Renfield Free Church, Glasgow, in '64, and appointed Professor of New Testament Exegesis in Edinburgh New College '89. Dr. Dods is the author of works on the Parables, Genesis, 1 Corinthians, in the Expositor's Bible; "Mohammed, Buddha, and Christ" etc. In '91 Dr. D. published a volume on the Gospel of St. John.

Dog Licences.—Every person keeping a dog over six months old, with two exceptions, must have a licence, the cost of which is 7s. 6d. The licence can be obtained either of an excise officer or at a post-office, and it is in force from Jan. 1st to Dec. 31st. The exceptions are: a blind person keeping a dog for guidance, and a man who keeps his dog solely for tending sheep and cattle; but certificates of exemption must be obtained from the Commissioners of Inland Revenue. The penalty for breach of the law is 5s.

Dominica. An island in the West Indies forming a Presidency of the British colony of the Leeward Islands. Area 275 sq. m., pop. 28,211. Capital, *Roseau*; second town St. Joseph.—The island is mountainous, rising to

6,000 feet. Volcanic rocks and hot springs abound, and there are large deposits of sulphur. The island is well timbered and well watered, and the arable parts are very fertile. Less than one-third is under cultivation, the rest being clothed with fine forest. Sugar, cacao, lime-juice, coffee, fruits, and spices, are the chief productions. The people are generally Catholics, of French descent. A few aborigines (Caribs) still exist here. There was a volcanic eruption in 1880.—A President and Local Council administer internal affairs, subject to the Federal Government. For statistics see BRITISH EMPIRE, etc. (table).

Dover Harbour of Refuge. As stated in our last edition, the Dover Harbour Board decided at a meeting on Oct. 3rd, '90, to take steps to secure the passing of a Parliamentary measure for the construction of this harbour. The Bill, as introduced in the House of Lords early in '91, asked for powers to abandon the works authorised in '82, the proposed new works consisting mainly of an extension of the Admiralty Pier for a distance running eastward of 580 ft., together with a new pier commencing on the foreshore and running in a south-easterly direction seaward for a distance of 1,650 ft., then curving in a south-westerly direction for a further 1,000 ft. Powers are also sought for the necessary subsidiary works, such as the approach road, and for the transfer to the Board of the Admiralty Pier. The Bill, which preserves the rights of the London, Chatham and Dover, and South Eastern Railway Companies, empowers the Board to borrow £661,737, of which £61,737 is to pay off the present mortgage debt, and also to construct two jetties, each 400 ft. long, providing 1,600 ft. of berthing with 15 ft. of water at low spring tides. The Board of Trade issued a report, which on the whole was favourable to the scheme. It referred to the large number of steam vessels now using the harbour, which in '90 conveyed 262,692 passengers between Dover and Calais, and 73,823 between Dover and Ostend. The Admiralty pier cost, exclusive of the War Office expenditure on the turret, £716,000 of public money, and the Board required certain stipulations before handing it over to the Harbour Board. The Bill was read a third time in the House of Lords on May 17th, and passed, and in the Commons July 10th. It received the Royal assent on July 21st. At a meeting of the Dover Town Council (Nov. 10th), the Mayor said the Board of Trade had agreed to transfer the Admiralty Pier to the Harbour Board.

Downen, Edward, LL.D., was b. in Cork, 1843. Ed. at Queen's Coll., Cork, and Trin. Coll., Dublin, where he gained the Vice-Chancellor's prizes for English Verse and Prose. In '63 he obtained the Senior Moderatorship in Logic and Ethics. He became ('67) a candidate for the Erasmus Smith's Professorship of Oratory in Dublin Univ., which he obtained by examination, being afterwards appointed Professor of English Literature. Prof. D. is the author of "Shakespeare Primer," "Poems," "Shakespeare: a Study of his Mind and Art," "Southey's Correspondence with Caroline Bowles," a *Life of Southey* for the series entitled "English Men of Letters"; a "Life of Percy Bysshe Shelley," and "Correspondence of Henry Taylor." He is also a contributor to Cassell's "International Shakespeare." Pres. of the Goethe Society (9.v.).

Professor D. made an interesting discovery of the original book of the words of Handel's "Messiah" (Aug. '91).

Drama, The, '91. A dramatic year marked by an extraordinary number of disappointments, will best be remembered by the vigorous attempt in the earlier months to secure a firm footing on the metropolitan stage for the plays of Henrik Ibsen. During the preceding decade, but two of his works had been produced in England—namely, "*Pillars of Society*" and "*A Doll's House*," considerable attention being drawn to the latter by reason of the expressive acting of Miss Janet Achurch as the puzzling heroine. The disciples of the Norwegian dramatist presented a formidable front in the beginning of 1891, and ere their efforts relaxed, four of their master's plays (including his latest, "*Hedda Gabler*") were added to London boards. "*Rosmersholm*" was played at the Vaudeville; one performance of "*Ghosts*" was given in March at the Royalty Theatre under altogether exceptional circumstances by the newly formed Independent Theatre Company; "*The Lady from the Sea*" was tried at Terry's; and "*Hedda Gabler*" (produced in April) obtained a run at the Vaudeville. Before the Ibsen movement became inactive Miss Rose Norreys essayed Nora Helmer in "*A Doll's House*." Of these productions "*Ghosts*" and "*Hedda Gabler*" naturally aroused the most discussion. Remarkable pains were taken to ensure an adequate rendering of the last-named, and the result was a performance replete with intelligence and conscientiousness. The motives of the restless, weary, dissatisfied Hedda might still be inexplicable to many of the audience, but it was impossible to restrain admiration of the dramatic force exhibited by Miss Elizabeth Robins in the title part, of the graphic manner in which Miss Marion Lee indicated the distressing helplessness of the gentler married woman, and of the judgment displayed by Miss Cowen, Messrs. Scott Buist, Arthur Elwood, and Charles Sugden. The cast deserves mention, as, in its artistic issue, it proved one of the most striking the entire year produced. The Ibsen craze naturally gave scope to the burlesque writer and satirist. The doctrine of "Heredity" suggested to Mr. Robert Buchanan an original farcical piece, called "*The Gifted Lady*," which at the Avenue did not appear to be thoroughly understood by the public. Far happier in this respect was an anonymous writer (reported to be Mr. J. M. Barrie) with an absurdity, or "hedda," called "*Ibsen's Ghost*," produced at Toole's just before the house closed for the season. For several months at the Lyceum there were frequent changes. When the picturesque "*Ravenwood*," founded on Scott's "*The Bride of Lammermoor*," had run for some time, Mr. Henry Irving determined upon a series of elaborate revivals of plays in which he had not been seen during later years. Among these reproductions were "*Much Ado about Nothing*," "*Charles I.*," "*Olivia*," "*The Lyons Mail*," and "*The Corsican Brothers*." Naturally, too, there was "*The Bells*." Although in two or three of these pieces there was no part for Miss Ellen Terry, the distinguished actress was enabled to appear in the programme, in consequence of adding to her *répertoire* the character of Nance Oldfield in a one-act piece written about forty years ago by Charles Reade. The revivals were exceedingly interesting and uniformly

successful; but general satisfaction was evinced on the last night of the season when Mr. Irving declared his intention to revert to Shakespeare by producing "*Henry VIII.*" in fitting style. In September Mr. Irving again went with his company to the Grand Theatre at Islington for a fortnight. Here they played four or five pieces to overflowing audiences. Then the Lyceum troupe, headed by Mr. Irving and Miss Ellen Terry, went on a provincial tour, every week being booked until the middle of December. Whilst they were away the home stage was once more occupied by Mr. Augustin Daly's American company of comedians. Miss Ada Rehan, Miss Gilbert, Mr. John Drew, Mr. James Lewis, and their companions were warmly welcomed, and, thanks to the brilliant acting of the first-named lady, a great success was gained for Mr. Daly's latest novelty, a comedy called "*The Last Word*," adapted from the German. Mr. Beerbohm Tree enjoyed undeviating prosperity at the Haymarket. Produced in the middle of January, Mr. Henry A. Jones' play of modern life, "*The Dancing Girl*," held its own until the autumn recess. Here, again, the advisability of judicious casting was obvious. In their respective characters the Misses Julia Neilson and Rose Norreys and Messrs. Beerbohm Tree, Fernandez, F. Terry, and F. Keir could not be surpassed. Independently of the splendid interpretation it received, "*The Dancing Girl*," with its strong interest and sturdy independence of thought, proved the most remarkable play of the year. Whilst on a provincial tour, before resuming the run of Mr. Jones' work in London, Mr. Tree played "*Hamlet*" in a manner that won the approval of experienced critics. Mr. Jones's second contribution during the year was a comedy called "*The Crusaders*," for the production of which (in November) he became manager of the Avenue Theatre. For the commencement of his campaign at the St. James's Theatre towards the end of February, Mr. George Alexander was fortunate enough to select "*The Idler*," a play by Mr. C. Haddon Chambers, which won an unquestioned success, and also exhibited the histrionic abilities of the manager in a character bearing little resemblance to any in which he had previously been seen. With Miss Marion Terry, Lady Monckton, Mr. Alexander, and Mr. Herbert Waring in serious parts, the drama had strong claims upon the public, and the response was liberal. In the firmness of its hold of the spectator, "*The Idler*" might indeed be classed with "*The Dancing Girl*." Keeping its place on the programme through the summer it was, after Mr. Alexander's provincial tour, again brought forward, with the supplement of a one-act tragedy called "*Molière*," by Mr. Walter Frith, in which the manager embodied with much nicety of detail the famous author represented as becoming reconciled to his fickle wife just previous to his death. In Nov., Mr. Alexander produced "*Lord Anselwy*" with not a little success. Mrs. Langtry made some diversified experiments at the Princess's. The fine spectacle of "*Antony and Cleopatra*" was superseded in February by "*Lady Barter*," a comedy somewhat cynical in tone, by Mr. Coghlan, which did not realise managerial expectations. In April reliance was placed upon "*Linda Grey*," a drama by the late Sir Charles Young, but shortly afterwards Mrs. Langtry relinquished her enterprise.

The house was re-opened in July by Mr. Sidney Herbert Basing with an exciting drama, entitled "*Fate and Fortune*," by Mr. James Blood, and later came a revival of "*Arrah-na-Pogue*." Another Boucicaltian success of former days, "*The Streets of London*," helped at the Adelphi to bridge the interval between the withdrawal of Messrs. Sims and Buchanan's "*The English Rose*" and the production of a new drama by the same authors, entitled "*The Trumpet Call*," which was very well received. Resolving to keep open Drury Lane Theatre through the summer, Sir Augustus Harris carefully revived the spirited "*Never Too Late to Mend*," the now almost forgotten "*Formosa*," and the eventful "*Drink*," the first and third-named having again the benefit of Mr. Charles Warner's services. For his September production the manager settled upon a new drama by Mr. Henry Pettitt, called "*A Sailor's Knot*," in which the quaint costumes of the first quarter of the nineteenth century were employed in the embellishment of a nautical theme abounding with incident. During his stay at the New Olympic, Mr. Wilson Barrett produced a piece from his own pen, styled "*The Mountebank*," in which he appeared as our old friend Belphegor, and also did his best for "*Father Buonaparte*," a novelty by Mr. Charles Hudson, formerly a member of his company. Mr. Barrett gave an opportunity of comparing the old with the new order of pathetic drama by reviving "*The Stranger*," and repeated "*Hamlet*" and other of his familiar assumptions. In the autumn the house passed under the management of Mr. Kelly, who reproduced the English version of "*Theodora*," with Miss Grace Hawthorne, and presented a new drama by Mr. Wills, called "*A Royal Divorce*," dealing with the First Napoleon and Josephine. One of the most noteworthy events of the year was the production in March, at the Prince of Wales's Theatre, of "*L'Enfant Prodigue*," an entertainment transferred from Paris, where it had been highly successful, and described as "a musical play without words." The homely story of a lad yielding to temptation and after a brief spell of luxury returning penitent to his sorrowing parents, was set forth with such directness by M. Michel Carré, *fils*, illustrated with such pleasing and graphic music by M. André Wormser, and played in dumb show with such skill by Mlle. Jane May (the prodigal), M. Courtès (the father), and others, that the success was immediate and prolonged. The wordless play was voted something entirely new and original, and became the talk of the day. A performance on similar lines was tried in the autumn at the Avenue, but "*Yvette*" (action designed by MM. Michel Carré, *fils*, and Henri Rémond, music by M. André Gédalge) only lived a few nights. The most popular farcical comedies produced were "*The Late Lamented*," adapted by Mr. Fred Horner from "*Feu Toupinal*," and "*Husband and Wife*," by Messrs. F. C. Phillips and Percy Fendall. The former was originally produced by Mrs. John Wood at the Court Theatre, and was later given into the charge of Mr. Willie Edouin at the Strand. "*Husband and Wife*," a diverting skit upon feminine pretensions to equality with man in every respect, sustained the *prestige* of the Comedy Theatre for mirthful entertainment. "*Private Inquiry*" and "*A Night's Frolic*," both at the Strand; "*Outcasts*" at Terry's; and "*The Volcano*" at

the Court, had a much briefer existence. Other farcical pieces were Mr. William Yardley's "*The Planter*" (adapted from the French), brought out at the Prince of Wales's; "*God-papa*," by Messrs. Phillips and Brookfield, at the Comedy; and the very unfortunate "*Pamela's Prodigy*," by Mr. Clyde Fitch, at the Court. Mr. Pinero's comedy "*Lady Bountiful*," produced at the Garrick in March, did not carry Mr. Hare through the season, a revival of "*A Pair of Spectacles*," taking place prior to the recess. The re-opening in the autumn was with the late Mr. Tom Robertson's "*School*," in which Mr. H. B. Irving, eldest son of the Lyceum actor-manager, made his *debut* on the professional stage as Lord Beaufof, and young Mr. Gilbert Hare appeared as the spiteful Mr. Krux. In October a great success was achieved at Terry's Theatre with Mr. Pinero's brilliantly written comedy "*The Times*." A play meriting a longer run than was accorded it, was Mr. Bronson Howard's "*The Henrietta*," a story treating of the feverish financial speculation prevailing on the New York Exchange, produced by Mr. Henry Lee during the spring at the Avenue Theatre. It had obtained popularity in America; it was novel in subject, and it was capably acted. "*Handfast*," a stirring drama previously seen at a *matinée*, was elaborately placed upon the Shaftesbury stage, and remained before the public for several weeks. Another piece given on the strength of a *matinée* success was Mr. Jerome's "*Woodbarrow Farm*," with which Mr. Thomas Thorne opened the reconstructed Vaudeville. "*The Mischief-Maker*," also a *matinée* essay, was played during the summer at the Vaudeville by Mr. Harry Paulton, who earlier in the year had been connected with a revival of Mr. Pigott's "*The Bookmaker*" at the Globe. An acquisition to the list of literary, as distinct from dramatic, playwrights, was made in Mr. Henry James, who adapted his own novel, "*The American*," for the opening in September of the Opéra Comique by Mr. Edward Compton. Mr. Charles Wyndham at the Criterion mounted "*The School for Scandal*" (Mrs. Bernard Beere playing Lady Teazle), and revived "*Wild Oats*," and, of course, "*David Garrick*." In July he took under his managerial wing "*Miss Decima*," an operatic comedy by Mr. Burnand, adapted from Boucheron's "*Miss Helyett*" (music by Audran). Securing for the heroine Miss Nesville, a piquant actress who had played the part in Brussels, and giving her the support of Mr. David James as the clerical father, Mr. Wyndham went the right way to command popularity for his new venture. Handsomely staged musical burlesque was represented at the Gaiety by "*Carmen up to Date*," and by a second edition of "*Joan of Arc*," the latter of which had drawn crowded houses to the Opéra Comique in the spring. Such a hit was made at Terry's Theatre with three short pieces—Mr. Brandon Thomas' "*The Lancashire Sailor*," Mr. Weedon Grossmith's "*A Commission*," and Mr. Cecil Clay's mirthful "*A Pantomime Rehearsal*,"—that they were subsequently removed to the larger area of the Shaftesbury, and still later to Toole's Theatre. Mr. T. G. Warren's "*Houp La!*" afterwards re-christened "*Rosabel*," well received at the Comedy, and the more serious "*The Queen's Room* (seen at the Opéra Comique) must also be included in the well-written short pieces of the year. An interesting occurrence at the end of August was the appearance at the

Globe of Mr. David Christie Murray, the fiction writer, in a piece of his own, for which, after a difficulty which showed the necessity of a better system of the registration of titles, an unused name was discovered in "Ned's Chum." The accustomed splendid ballets were produced at the Alhambra and the Empire. Among the miscellaneous events were the re-appearance in April of Mr. Toole after his Australian tour; the return to the stage of Miss Alice Atherton; the performance at a Criterion *matinée* in April of "Richard Savage," a play by Messrs. Barrie and Marriott Watson; *matinée* representations at the Vaudeville in the summer of Dr. Todhunter's "A Sicilian Idyll" and "The Poison Flower"; the re-appearance (at the Vaudeville) of Miss Minnie Palmer in her favourite piece, "My Sweetheart"; the production (also at the Vaudeville) of a new dramatic version of Mark Twain's "The Prince and the Pauper," in which Miss Jessie Hatton doubled the two title parts; the introduction to England (at the Royal) of a translation of Zola's *Thérèse Raquin*; and the Guards' burlesque at Chelsea Barracks on "Robinson Crusoe." Through a new copyright arrangement with America, Mr. Henry Arthur Jones set the example of publication by a dramatic author of his own plays.

Drawing Society of Great Britain and Ireland. The object of this society is to promote the teaching of drawing in schools, as a subject essential to general education. It provides annual examination and annual exhibition. **Hon. Director's Office**, 50, Queen Anne's Gate, W.

Drummond, Prof. Henry, was b. at Stirling and ed. at the University of Edinburgh. He subsequently passed through the Free Church Divinity Hall, and after his ordination was appointed to a mission station in Malta. On his return to Scotland he was appointed a lecturer in science at the Free Church College, Glasgow, and also took charge of a Working Men's Mission in that city. He subsequently travelled in the Rocky Mountains and South Africa. His popularity as a writer is based on his "Natural Law in the Spiritual World," which has attained an extraordinary circulation. Professor D. has also written some interesting accounts of his travels. Prof. D.'s work, "The Greatest Thing in the World," appeared Nov. '89. He published at Christmas-tide, '90, a booklet entitled "Pax Vobiscum." In March '91 another booklet, "The Changed Life" was issued by Professor D.

Drunkards, Habitual. See SESSION, sect. 21.

Drunkenness. During the past year public attention was drawn to this subject by an exhaustive correspondence which appeared in the columns of the *Daily Telegraph*. Following an able summary of the question which appeared in that journal, there was printed in the *Times* a letter from Dr. J. Mortimer Granville, in which he claimed that there was much value in stimulants, when taken in moderation. This gave rise to an interesting discussion in the *Times* between such advocates of total abstinence as Sir Wilfrid Lawson, Bart., M.P., Dr. Dawson Burns, Dr. Alfred Carpenter, Rev. Newman Hall, and opponents like Lord Grimthorpe, and certain members of the medical profession. The following statistics on the subject have, therefore, an especial interest. During '90, out of the estimated population of

29,001,018 for England and Wales, there were 173,036 persons convicted for drunkenness. The proportion was 162,786 England, and 10,250 Wales. For drunkenness on Sundays, between 12.30 noon and midnight, there were 15,942 convictions. In the metropolitan police district there were 23,222 convictions, while Lancaster produced the highest total (13,154) among the counties.

Dublin University. The University of Dublin, commonly known as Trinity College, Dublin, was founded in 1591 by Queen Elizabeth, who also established in the same year a college under the style of the Holy and Undivided Trinity, near Dublin. Its constitution has been altered by numerous Royal charters. In the Treaty of Union between Great Britain and Ireland (1800) it is spoken of as the University of Trinity College. The Chancellor of the University is the Earl of Rosse, and the Vice-chancellor, Right Hon. J. T. Ball, LL.D. The undergraduates exceed 800. Certificates of proficiency granted to women. **Degrees.**—D.D. (hood scarlet cloth, lined with black silk); B.D. (h. plain black silk); M.A. (h. black silk, lined with blue silk); B.A. (h. black silk or stuff, lined with white fur); M.D. (h. scarlet cloth, lined with crimson silk); M.B. (h. black silk, lined with white fur); M.Ch. (h. crimson silk, lined with white silk); B.Ch. (h. crimson silk, lined with black silk); LL.D. (h. scarlet cloth, lined with pink silk); LL.B. (h. black silk, lined with white silk); Mus.D. (h. crimson cloth, lined with white silk); Mus.B. (h. blue silk, hemmed with white fur); M.Engin. (h. white silk, lined with green silk); B.Engin. (h. black silk, lined with green silk). **Parliamentary representatives.**—Rt. Hon. D. Plunket and Mr. D. H. Madden, Q.C. **Provost**, Rev. George Salmon, D.D.; **Vice-Provost**, Rev. Joseph Carson, D.D.; **Proctor**, Rev. Samuel Houghton, M.D. **Registrar**, George P. Shaw, LL.D. **Consult Dublin University Calendar.**

Dufferin and Ava, Frederick Temple Hamilton-Blackwood, P.C. 1st Marquis of (creat. 1889), 1st Earl of Dufferin (71); Baron Dufferin (1800); was b. at Florence '26. His lordship is a lineal descendant of Sheridan. Assumed the name of Hamilton by royal licence ('62); succeeded his father in the English barony and the Irish honours ('41). Ed. at Christ Church, Oxford; was a Lord-in-waiting to the Queen, and was attached to Earl Russell's special mission to Vienna in '55; British commissioner to Syria in relation to the massacre of Christians ('60); was Under-Secretary of State for India (Nov. '64 to Feb. '66), and Under-Secretary for War from the last date till June following; Chancellor of the Duchy of Lancaster (Dec. '68 to April '72); Governor-General of the Dominion of Canada ('72-78); Ambassador at St. Petersburg ('79-81), when he was appointed to Constantinople. He was subsequently sent on a special mission to Egypt; and in '84 succeeded Lord Ripon as Viceroy of India; resigned '88. The freedom of the City of London was conferred on his lordship in '89. Lord D. published in '90 a volume containing the able speeches which he delivered while Viceroy of India. His book, entitled "Higher Latitudes," has had great popularity. On his installation (April 6th, '91) as Lord Rector of St. Andrew's University, his lordship delivered a most interesting address drawn from his own experience in public life. He

received from Cambridge University (June) the honorary degree of LL.D. Is at present Ambassador at Rome. He was appointed Lord Warden of the Cinque Ports in November. His lordship married in '62 a daughter of the late Mr. Archibald R. Hamilton, of Killyleagh Castle, Down. Lady Dufferin has done a great work in connection with the education of women as medical practitioners in India, an interesting account of which she gave in the Sheldonian Theatre, Oxford, in May. She published last year an interesting "Record of Three Years' Work" in respect of this movement, and a volume entitled "Our Viceregal Life in India."

Dulwich College (Alley's "College of God's Gift" at Dulwich) was founded in the year A.D. 1619, by Edward Alleyn, the Actor, under Letters Patent of King James I., by which a licence was granted to Alleyn to establish a College "to endure and remain for ever," and to be called "The College of God's Gift in Dulwich, in the County of Surrey." Reconstituted '58, and removed to new site and new building '70. Present numbers in the school, 605. No boy may enter the school before the age of 10, or remain after the age of 19. Endowment about £4000 per annum. £1000 may be annually allotted among "boys proceeding to a place of higher education." Head Master, A. H. Gilkes, M.A.; School Sec., Rev. G. C. Allen, M.A.; Motto—*Detur Gloria Soli Deo*.

Dumas fils, Alexandre, French novelist and dramatist, was b. at Paris, July 28th, 1824. He is the son of Alexandre Dumas *père*, the well-known author of "Monte Cristo." He was educated at the Collège Bourbon, and at the age of seventeen published a little volume of poems, "Pêchés de Jeunesse." He then accompanied his father on travels in Spain and in North Africa. On his return he published numerous novels, the most characteristic being "La Dame aux Camélias," which created a general sensation. His drama entitled "Francillon," was produced Jan. 17th, '87, at the Théâtre Français. In '75 he was elected to the French Academy. M. Dumas has been promoted to the rank of Commander of the Legion of Honour.

Du Maurier, George L. P. E., was b. 1834; a naturalised British subject. Coming to England when aged seventeen, he entered as a student of chemistry at Univ. Coll., Lond., and afterwards returned to Paris to study painting under M. Gleyre. He made his *début* as an artist with contributions of sketches to *Once a Week*, and afterwards contributed to the *Cornhill Magazine* and *Punch*. He subsequently joined the staff of the latter periodical, the pages of which he has enriched with the well-known caricature sketches of society life, as typified by "Mrs. Ponsoby de Tomkyns" and others. Mr. Du M. has also illustrated Thackeray's "Emond"; and "Ballads," and other books. In '91 a novel by M. Du Maurier, entitled "Peter Ibbetson," appeared in *Harper's Magazine*.

Duration of Speeches (Parliament) Bill. See SESSION, sect. 68.

Durham, Rt. Rev. Brooke Foss Westcott, Lord Bishop of. The see was founded in 635. His lordship, the 84th bishop, was b. 1825. Ed. at Cambridge, where his career was most distinguished. He took his degree at the age of

23, and was bracketed Senior Classic, as well as 2nd Chancellor's Medallist and 23rd Wrangler. Shortly after his election as a Fellow of Trinity Coll., became assistant master at Harrow, and remained in this position for sixteen years. Twenty years ago he was appointed Regius Professor of Divinity at Cambridge. Assisted in the revision of the New Testament, and published, in collaboration with Dr. Hort, a new edition of the Greek Testament. Canon of Peterborough ('69), and became canon of Westminster fifteen years later. His work on "The Canon" brought him a great reputation for his scholarship, as did also his commentaries on the Gospel and Epistles of St. John and on the Epistle to the Hebrews. Was appointed (Mar. '90) to the bishopric of Durham. Lectured on the topic of "Ideals" before the University Extension Association (March '91).

Durham University, founded 1832, comprises University College (37), Bishop Hatfield's Hall (46), and the Colleges of Medicine and Science at Newcastle-upon-Tyne. The students number about 400. Unattached students first admitted '71. Affiliated are Coddington College, Barbadoes, and Forough Bay College, Sierra Leone. Warden, the Dean of Durham, W. C. Lake, D.D., who is also President of the College of Science; President of the College of Medicine, G. Y. Heath, M.D.—Degrees; D.D. (hood scarlet cashmere, lined with palatinate purple silk); B.D. (h. black silk); M.A. (h. black silk, lined with palatinate purple silk); B.A. (h. black cord, edged with white fur); D.C.L. (h. scarlet cashmere, lined with white silk); B.C.L. (h. palatinate purple silk, edged with white fur); M.D. (h. scarlet cashmere, lined scarlet silk, faced with palatinate purple silk); M.B. (h. scarlet silk, lined palatinate purple silk, edged with white fur); Mus.D. (h. white brocaded satin, lined with palatinate purple silk); Mus.B. (h. palatinate purple silk, edged with white fur); L.Th. (h. black silk, faced with velvet and bound palatinate purple silk); B.S. (h. rose silk, lined palatinate purple, edged with white fur); M.S. (h. rose silk, lined palatinate purple). Certificates of proficiency in sanitary science and general education also granted. Local University Lectures are also given in connection with this University. Consult *Durham University Calendar*.

Dutch Colonies. See COLONIES AND DEPENDENCIES OF EUROPEAN POWERS.

Dvorak, Anton (pronounced Dvorshak), is a Bohemian, and was b. 1841, at Mùhlhausen-on-the-Moldau, the son of an innkeeper. He learnt music first from the gipsies, but at sixteen entered the Prague Conservatoire, finally obtaining a living as bandsman and organist. Applying for help to the Minister of Public Instruction, his case was referred to Brahms, who befriended him. It was his "Stabat Mater," produced under the composer's direction in London in '83, which stamped him as a really great composer. His "Spectre Bride," composed for the Birmingham Festival of '85, met with a very enthusiastic reception. His oratorio "St. Ludmila" was introduced at the Leeds Festival in October '86. A new symphony in G major was produced at the Philharmonic Society (April '90). The honorary degree of Doctor of Music was conferred upon him by Cambridge University (June '91). At the Birmingham Festival his new "Requiem" was produced in October.

E

Earl Marshal, The, is one of the great officers of State, and takes precedence next after the Lord High Constable. The latter office ceased to be hereditary in 1521, since which it has been only temporarily revived for successive coronations, and once for a trial by combat, which, however, did not take place. One of the functions of this exalted personage is, in company with the Earl Marshal, to usher the **King's Champion** into Westminster Hall just before the second course of the coronation banquet. It is usual to appoint to the office some person of high rank and great distinction, and the first **Duke of Wellington** was selected to fill it at the coronations of George IV., William IV., and Her Majesty. The L. H. C. and the E. M. were formerly judges of the ancient Court of Chivalry; but when the former office ceased to be hereditary, the sole jurisdiction in questions of honour and arms was vested in the E. M., who is head of the College of Arms (see **GARTER KING-OF-ARMS**). The office of E. M. is hereditary in the family of the Duke of Norfolk. **Office,** Queen Victoria Street, E.C.

Early Closing Association and Traders' Parliamentary Alliance. Founded for promoting: (1) An abridgment of the hours of labour in all departments of industrial life, wherever unduly prolonged—especially on Saturday nights; (2) The adoption of a Saturday or other weekly half-holiday; (3) The abolition of unnecessary Sunday labour; (4) The early payment of wages; (5) The promotion, as far as possible, of a profitable employment of leisure hours; (6) To watch over and promote the interests of traders and their assistants in matters requiring municipal or legislative control. Assistants, by subscribing *as. 6d.* half-yearly, are entitled to receive gratuitous medical advice from any of the Society's honorary medical staff.—On Nov. 1st, '86, the **Shop Hours Regulation Act** came into operation, by which the hours of labour of young persons under eighteen were limited to seventy-four in a week. This Act still continues in force, and in the absence of Government inspection is administered as far as possible by the Association, whose income is about £1500 a year. **Sec.,** James A. Stacey. **Office,** 21, New Bridge Street, E.C.

East Africa. See **ANGLO-PORTUGUESE CONVENTION**.

Eastern Roumelia. Autonomous province created by the Treaty of Berlin in '78; since the revolution of Sept. 17th, '85, united to Bulgaria (*q.v.*), and now usually known as **Southern Bulgaria**.

East of Europe Railways (see previous *eds.*). The opening of the Bosnian Railway from Serajevo to Konitz was announced in the summer of '91. It connects the Hungarian system with the Adriatic, and in some places is carried along the face of precipices at a high elevation, the scenery being very striking. Though a short one (33 miles), the section was very difficult to construct, owing to the hill Ivan, 3,000 feet above sea level, being directly in the line chosen. The Abt system was adopted in preference to tunnelling, but even this involved six short tunnels, and altogether the line cost £400,000. Further railway projects are under consideration. From Vienna,

Oct. 3th, it was reported that the new railway from Mitrowitz to Vinkoes, which connects the port of Fiume with the east, had been opened for passenger traffic.

Ecclesiastical Commissioners, The, owe their origin to the Act 6 and 7 Will. IV., c. 77. Incorporated for the purpose of making schemes to carry out the recommendations of certain earlier commissions appointed to inquire into the endowment of bishoprics, the state of cathedral and collegiate churches, the best way of providing for the cure of souls, etc. The Act provided that the two Archbishops, the Bishop of London, the Lord Chancellor, Lord President, and First Lord of the Treasury for the time being, as well as a Secretary of State named by the sovereign, with three others therein named, should be of the commission. A subsequent Act added all the remaining bishops in England and Wales, the Chief Justice, and others. Membership of the Church of England has always been an indispensable condition of holding the office. By an Act of 1856 the Church Building Commissioners had their powers transferred to the Ecclesiastical Commissioners. Generally it may be said that the function of the Ecclesiastical Commissioners is to provide for the adjustment of the endowments to the wants of the Church. The proceedings of the Commissioners are controlled by numerous Acts of Parliament, and various duties have from time to time been imposed upon them, *e.g.*, the formation of new parishes and alteration of boundaries where required. The augmentation and endowment of poor benefices in populous places, the sale and leasing of glebe lands, etc., etc. In the early years of the Commission it was estimated that the amount which would ultimately be available for the augmentation of poor benefices would not be likely to exceed the sum of £300,000 per annum, equivalent to a capital sum of £9,000,000. During a period of fifty years, extending from 1840 (when the common fund was first created) to the 31st October last, the Commissioners have augmented and endowed upwards of 5,700 benefices by annual payments charged on the fund; by capital sums expended in the provision of parsonage houses, etc.; and by the annexation of lands, tithe rent-charges, etc. The value of these grants exceeds £781,400 per annum, in perpetuity, and is equivalent to a capital sum of, say, £21,469,000. The value of benefactions, consisting of lands, tithe and other rent-charges, stock, cash, etc., secured to benefices, and met for the most part by grants from the Commissioners, exceeds £164,340 per annum, in perpetuity, and is equivalent to a permanent increase of endowment of, say, £4,930,000. A sum exceeding £26,000 per annum is also contributed by benefactors to meet the Commissioners' grants for curates in mining districts. The total increase in the incomes of benefices thus resulting from the operation of the Commissioners exceeds £971,700 per annum, and may be taken to represent a capital sum of £29,179,000. **Office,** 10, Whitehall Place, S.W. **A. De Bock Porter, Secretary.**

Ecclesiastical Courts. These are of three degrees of jurisdiction. First there are the purely spiritual courts, including the Arch

deacon's Court, the Bishop's Consistory, and the Archbishop's Court; second, courts of mixed spiritual and secular jurisdiction—*e.g.*, the Court of Arches and the Court of the Official Principal of York; and, third, courts of purely secular constitution—*e.g.*, the Judicial Committee of Privy Council, which is the Court of Final Appeal in ecclesiastical causes. Practically none of these courts now pretends to undisputed authority. The report of the Royal Commission on Ecclesiastical Courts ('83), while vindicating the historical position of them all, bewailed the confusion into which the administration of ecclesiastical law had fallen, and urged the adoption of various reforms. Absolute power, however, meanwhile rests with Lord Penzance, "Judge of the Provincial Courts of Canterbury and York," under the Public Worship Regulation Act, '74, and, as such, Dean of the Arches and Master of the Faculties (see *ARCHES, COURT OF*). By the issue of writs of *contumacia capiendo* clergymen have been, and may be, imprisoned for defying sentences of *monition*, by inhibition, *suspension*, or *deprivation* decreed by this court. The judgments of the Judicial Committee may be upheld and enforced by any of the High Courts of Justice. The *Archdeacon's Court* is a survival, and nothing more. It is a court of first instance, and appeals lie to the bishop, but its aid is seldom invoked. That at one time the Court was no sinecure is proved by the fact that the Archdeacon of Cornwall so lately as 1840 had a particular jurisdiction to grant probates of wills.—*Consistory*. Every bishop has his Consistory Court held before his Chancellor or Commissary, in his cathedral church, or other convenient place in his diocese. In this court are granted *faculties* for the alteration, repair, and renovation of churches. Nothing can be added to, or taken from, the *ornaments of the Church* (see *ORNAMENTS RUBRIC*) without a faculty. The *Archbishop's Court*, distinguished from the Provincial Court, is the canonical tribunal for the hearing of spiritual causes. Until the modification of the Court of Arches by the P. W. R. Act, '74, its revival was not demanded. It was specially prominent in '89, because the highest secular courts then decided that the Archbishop of Canterbury had power to try in person the Bishop of Lincoln (Dr. King), who was charged with practising and countenancing illegalities of ritual and doctrine. But since the Archbishop's decision in the Lincoln case the Promoters have appealed to the Judicial Committee of the Privy Council, whose verdict is now anxiously awaited. *Lord Penzance's Court*, or the old Court of Arches modified as stated, unites the powers of the *jus canonicum* with new powers conceded by the Church Discipline Act, '41, and the similar statute of '74, exercising authority in both Provinces. Lastly, the Judicial Committee of Privy Council, as representing the Royal Supremacy, is the absolute though not the canonical court of final appeal.

Ecclesiastical Law Cases in '91. In the case of *Read and Others v. the Bishop of Lincoln*, the Archbishop of Canterbury delivered judgment on Nov. 21st, '90. The Bishop was charged with seven distinct violations of the law in his manner of celebrating the Holy Communion. These were that—(1) he used lighted candles not needed for light; (2) used wine mixed with water; (3) adopted the "eastward position"; (4) stood while consecrating

the elements, so that his manual acts could not be seen by the people; (5) allowed a certain hymn to be sung during the ceremony; (6) made the sign of the cross at the close; and (7) took part in what is called the "ceremony of ablution," the washing of the vessels used in the Communion, and the consumption of what remained of the consecrated wine. These acts, the promoters of the suit alleged, were; each and all of them, contrary to law, and were notoriously some of the chief points in regard to which the Ritualists were seeking to assimilate the services of the Established Church to those of the Church of Rome. The result of the Archbishop's judgment was that the Bishop of Lincoln was condemned on two of the charges, and acquitted on the other five. The standing so as to prevent the congregation from seeing the manual acts, and making the sign of the cross in the air were declared to be illegal; but the use of altar lights, the "mixed chalice" (but not the mixing of the water and the wine in the presence of the congregation), the eastward position, the singing of the *Agnus Dei*, and the ceremony of ablution, were all declared to be permissible.—The litigation in respect of the new reredos in St. Paul's Cathedral was terminated by a decision given by the House of Lords (July '91). The Bishop had vetoed a proposed suit which was intended to try the legality of the reredos, which among other things contains a figure of the Virgin Mary. The court of Queen's Bench decided that the Public Worship Regulation Act limited the discretion of the Bishop, but the House of Lords decided otherwise, and laid it down that in considering the whole circumstances of the case he might justly include considerations of the good or the mischief involved in the proceedings he was asked to sanction. The decision, it will be observed, does not in any degree settle the question raised as to the legality of the reredos itself, but it bars the way against all proceedings in the courts in respect of it.—In the *Queen v. the Mayor and Corporation of Liverpool* (Queen's Bench Division, May 11th, '91), the Court held that an organist is not a necessary officer of a church. The defendants were bound by a private Act to from time to time appoint proper officers and servants to attend to St. George's Church, for the better and more decent keeping, cleansing and preserving the same. The corporation had, it was stated, paid the organist and all expenses for more than 500 years, but, in consequence of some dispute with the minister, had now withdrawn the salary of the organist. The Court held that the organ could not be regarded as part of the church, and that the organist was not an officer of the church within the Act.

"Echo, The." An evening paper, established Dec. 1868. Its principles are Liberal. *The Echo* gives daily, in a condensed form, the chief and latest news of the day, foreign, home, and commercial, of which it treats in an independent manner. Several new features have recently been introduced in the *Echo*, special prominence being given to topics of social interest. Office, 22, Catherine Street, Strand, W.C.

Ecuador. A republic of equatorial South America, governed by a President, with the assistance of a Congress composed of a Senate representing the provinces, and a Chamber of

Deputies, the people. Area 720,000 sq. miles; pop. 1,004,651. Capital **Quito**, pop. 50,000. Revenue (1889-90), 4,252,522 sucres; expenditure, 4,429,246 s. (sucré = 3s.); debt £3,704,680. Imports in '90 amounted to £1,565,055, and exports to £1,325,255. The foreign commerce is largely with the United Kingdom, and centres in Guayaquil. Exports, cocoa, indiarubber, hides, coffee, ivory. The gold mines in '90 yielded £12,325. Army about 1600 men. The history of Ecuador since 1870 presents few features of importance, beyond the civil wars and pronunciamientos, almost normal in the district. Between Ecuador, Peru, and Columbia, there have been for some time boundary disputes, at present unsettled. For Ministry, etc., see DIPLOMATIC.

Edinburgh, H.R.H. Prince Alfred Alexander William Ernest Albert, 1st Duke of (creat. 1866), P.C., K.G., K.T., K.P., G.C.S.I., G.C.M.G., was b. 1844; second son of the Queen. Mar. (74) the Grand Duchess Marie Alexandrovna, dau. of the late Alexander II. of Russia. Entered the Royal Navy ('58); **Admiral** in command of the **Mediterranean Squadron** ('86). Is Master of the Trinity House, and heir presumptive to the Duchy of Saxe-Coburg and Gotha. In '88 H.R.H., in command of the Mediterranean Squadron, visited some of the chief Continental capitals. In June ('88) he was promoted to the honorary rank of a **General of Infantry** in the German army. Is at present **Commander-in-Chief** at **Devonport**.

Edinburgh University, founded 1582, has since become one of the chief medical centres in the world. Of 3500 students, about half belong to the faculty of medicine. Chancellor, the Rt. Hon. A. J. Balfour; **Principal** and **Vice-Chancellor**, Sir Wm. Muir, K.C.S.I., D.C.L., LL.D., etc.; **Lord Rector**, Rt. Hon. G. J. Goschen, M.P. (appointed '91). Jointly with **St. Andrews** it sends a representative to Parliament; present member Sir Charles Pearson, Q.C. Its **Degrees** are—**M.A.** (hood black silk lined with white silk); **B.D.** (h. black silk lined with purple silk, bordered with white fur); **D.D.** (h. black cloth lined with purple silk); **LL.B.** (h. black silk lined with blue silk, bordered with white fur); **B.L.** (h. black silk edged with blue silk three inches broad, trimmed with white fur); **LL.D.** (h. black cloth lined with blue silk); **M.B.**, **C.M.** (h. black silk lined with crimson silk, bordered with white fur); **M.D.** (h. black cloth with appended cape, lined and faced with crimson silk); **B.Sc.** (h. black silk lined with green silk, bordered with white fur); **D.Sc.** (h. black cloth lined with green silk). Also grants degrees in mental science, philology, mathematical science, physical experimental sciences, natural sciences, engineering, public health, and agriculture. Connected with it is the **Edinburgh Association for the University Education of Women**, which prepares candidates for the University Pass Certificate Examinations, the equivalent of the M.A. examinations for males. E. U. has recently developed a scheme of **University Extension**. In July '91, Mr. Andrew Seth, M.A., was elected to the Chair of Logic and Metaphysics. **Alumni** include Sir William Hamilton, Carlyle, Hume; Nasmyth, the engineer; Sir Walter Scott, Mungo Park, James Mill, Owen, the anatomist, Sir C. Wyville Thomson, scientific chief of the *Challenger* expedition; Dugald

Stewart, Lord Brougham, and R. Louis Stevenson (*q.v.*), the author. **Sec. of Senatus**, Prof. Kirkpatrick. Consult *Edinburgh University Calendar*.

Education. The educational system of the United Kingdom is a complex arrangement, the nature of which can only be understood by a reference to the history of its development in its various aspects. In its technical aspect the subject will be found treated in separate articles (see **TECHNICAL EDUCATION**; **MANUAL TRAINING**; **EDUCATION, COMMERCIAL**; AND **CONTINUATION SCHOOLS**). It remains for us here to deal with it in its three aspects—primary, secondary, and higher education. (1) **PRIMARY, OR ELEMENTARY EDUCATION.**—

The history of the movement which led to the adoption of the present educational law, as regards public elementary education, dates from a comparatively recent period. Previous to 1832, when the first **Parliamentary grant** for educational purposes was made, the education of the country was left entirely to private individuals and the religious bodies, and it was not until '39 that Parliament exercised direct control over the administration of the funds periodically voted for education. Early in the century a great impetus was given to the popular demand for instruction by various voluntary associations—the chief of which were the **British and Foreign School Society**, founded through the efforts of **Joseph Lancaster**, supported by the Society of Friends and the Nonconformist bodies; and the **National Society for Promoting the Education of the Poor**, founded in '11, chiefly through the influence of Lancaster's rival, **Dr. Bell**. The first grant of £20,000 voted by Parliament, in '32, was towards the building of schools in connection with one or other of these societies. A building grant of the same amount was made annually until '39, when the vote was increased to £30,000, and a committee of the Privy Council (The **Committee of Council on Education**), was appointed to administer it. In '40 a new departure was made by granting subsidies in augmentation of teachers' salaries. In the same year the **Queen's Scholarships**, for enabling pupil teachers to attend training colleges, which are also aided by Government grants, were instituted. In '53 the **capitation grant** was instituted. In '58 the **Duke of Newcastle's Commission** was appointed, to inquire into the whole system of education in England and Wales. It was reported that the interference of the State had been beneficial: that the supply of efficient schools was inadequate, that only one in eight of the population attended any school, and of these only one-fourth, consisting of children of the upper classes, were efficiently instructed. Trained teachers were found to be superior to other teachers, and the Committee recommended that examinations should be conducted in every school where grants were to be paid, and that these grants should be apportioned upon the examination of individual children—i.e., on the principle of **payment by results**. This system is peculiar to this country, and is now condemned by many educational authorities. The Newcastle Commission was also the parent of the **Revised Code**, drawn up by **Mr. Robert Lowe** (now Lord Sherbrooke) in '62. Under the **Revised Code** direct payments of Government grants to teachers were abolished, and school managers, or committees of unpaid

local representatives were appointed, and power was given to them to select certified teachers and to pay to them the grant earned. The Code has undergone subsequent revisions, and that now in force is called the **New Code, '90** (see Session, sect. 69.) In '70 the sum voted by Parliament for educational purposes had reached £840,000. The extension of the Parliamentary franchise to the working classes had, however, created the demand for the education of all children of school age, and at that time only a small portion of them were under instruction. The celebrated **Elementary Education Act (q.v.)**, introduced by the late **Mr. W. E. Forster** on Feb. 17th, '70, and adopted on Aug. 9th of the same year, was the result of this popular demand. The Act provided that the whole of the country should be divided into school districts, the Metropolis forming one itself, the boroughs another set, and the rural parishes the rest. Under the Act sufficient school accommodation was required to be provided in every district for all the resident children. **School Boards (q.v.)** were established under this Act. The Act was further amended in '73; in '76, when **compulsory education** was adopted and **school attendance committees (q.v.)** were appointed; and in '80, when all school boards and school attendance committees were required to make bye-laws for the compulsory attendance of children at school where such bye-laws did not already exist. Notwithstanding this provision, however, the law relating to compulsion has had but imperfect results, owing to the refusal of many magistrates to convict parents for non-compliance with it. In '86 a **Royal Commission**, under the chairmanship of Viscount Cross, was appointed to inquire into the working of these Acts, and published a report in '88. It consists of nine parts, and is one of the most voluminous and exhaustive documents ever issued. Amongst its numerous recommendations is one which provoked great opposition, on the ground that it is an attempt to upset the compromise on the subject of religious instruction agreed to in '70. This recommendation is that assistance from the rates should be given to voluntary or denominational schools. This report was signed only by a majority of the Commissioners. A minority report, protesting against this proposal, and objecting to other recommendations of the majority, was signed by Sir John Lubbock, Sir R. Sainselson, Dr. Dale, Mr. Lyulph Stanley, Mr. Henry Richard, Mr. G. Shipton, Mr. Heller, and Mr. S. Buxton. In Scotland an excellent system of elementary education was adopted long before the passing of the **Scottish Elementary Education Act** in '72. Just as in Germany the intellectual impulse was given by Luther, so in Scotland education was born of the reforming energy of John Knox. In 1666 a law was passed establishing a school in every parish of Scotland. The great secession from the Church of Scotland in '43, which led to the establishment of the Free Church, effected the break-down of the parochial school system. The Free Church schools were set up side by side with the schools of the Establishment, and the division of interests and the means of support was not conducive to educational efficiency. Hence, two years after the adoption of Mr. Forster's Act in England and Wales the **Scottish Education Act** was passed, establishing a **School Board** in every Scottish parish, and giving it the control of all parochial schools, not only elementary schools, but also the academics

and high schools, and empowering it to erect and maintain new schools, according to the needs of the population. Grants are given to all schools under school boards, except those defined as "high-class public schools." The Scotch Education Act is administered by a Committee of the Privy Council, called the **Scotch Education Department**. The **Scotch Code** differs from that of England and Wales, in that it provides for the teaching of more advanced subjects, and differently defines the term "training college." Free elementary education has now been generally adopted in Scotland under the powers of Acts passed in '89 and '90. In Ireland national education is under the control of the **Commissioners of National Education** in Ireland, consisting of twenty members, of whom ten are Protestant and ten Roman Catholic. The Commissioners, who are appointed by the Lord Lieutenant, administer the **Government Grants**, which are made to **Vested Schools**, maintained as National Schools, directly by the Commissioners or by trustees; **Non-vested Schools**, belonging to private individuals, but under the control of patrons or managers; **Model Schools**, in which young people are trained as teachers; **Agricultural National Schools**; certain **Technical Schools**, in which instruction is given in embroidery; **Convent and Monastery Schools** (Vested and Non-vested); and **Workhouse National Schools**. The Commissioners have framed regulations for withdrawing any child from religious instruction of which its parents or guardians do not approve. **Statistics**.—On Aug. 31st, '90, the date to which the last return (published in Sept. '91) is made up, there were in **England and Wales** 19,498 elementary schools inspected, with accommodation for 5,566,507 scholars. The average daily attendance was 3,732,327. The Government grant amounted to £3,289,285, or 17s. 9½d. per scholar in average attendance. This shows an increase over the amount granted in the year previous. An idea of the progress that has been made in the provision of elementary education since '70 may be formed from the fact that in that year accommodation was only provided for 8.75 per cent. of the population, whereas in '90 the percentage was 18.75. Since the adoption of the first Education Act, in '70, the elementary education of the country has been conducted by two powerful organisations—the one consisting of the School Boards, under the direct control of the ratepayers; the other of the Voluntary Schools of the Church of England and various other religious denominations. These latter schools, though earning the Government capitation grant, are not under the control of the ratepayers. The cost of education per head has steadily increased since the passing of the first Education Act. In '71 the cost per head was £1 7s. 5d.; in '79, £1 26s. 10½d.; in '85, £1 29s. 1½d.; and in '90, £2 4s. 6½d. in Voluntary Schools, and £2 6s. in Board Schools. The discussion and passage of the School Fees Act has been the chief incident of the year '91. The result will shortly be to make the Elementary schools entirely free. See also **SCHOOL BOARD FOR LONDON**; **TECHNICAL EDUCATION**; **MANUAL TRAINING**; **CONTINUATION SCHOOLS**; **HIGHER EDUCATION FOR WOMEN**; **EDUCATION, COMMERCIAL**; and **SCHOOL BOARDS**. The amount raised during '89 (latest returns) for purposes of public elementary education in England and Wales will be seen from the following table:—

SCHOOLS.	Endowment.	School Board Rates.	Voluntary Contributions.	School Pence.		Government Grant (1888-89).	Other Sources.	Total.

In Scotland, for which the last returns are made up to Sept. 30th, '81, there were at that date 317 schools inspected, furnishing accommodation for 723,840 scholars, of whom 519,738 were in average daily attendance. The parliamentary grant amounted to £481,177 4s. 8d., or 19s. 4d. per head. **SECONDARY EDUCATION.** In Scotland Education is, as we have seen, to a great extent under the control of school boards, and in Ireland certain inadequate provision for it has been made by the Government. But in England and Wales secondary education is entirely in the hands of trustees of endowments, companies and private individuals. In Scotland a great step towards systematising secondary education was taken in Jan. '86, when the Scotch Education Department instituted examinations for Leaving Certificates in the higher-class schools, the head-masters or rectors of which willingly co-operated in promoting the success of this innovation. In England and Wales, though the State has at present exercised no direct control over secondary education, it has instituted several inquiries into its condition, presumably with the view to future legislation on the subject. In '61 a Royal Commission, under the chairmanship of the Earl of Clarendon, was appointed to inquire into the condition of "certain public schools in England." These public schools were nine—viz., Eton, Winchester, Westminster, Charterhouse, St. Paul's, Merchant Taylors', Harrow, Rugby, and Shrewsbury. (See under their several headings.) In '64 another Royal Commission was appointed, under the chairmanship of Lord Taunton, to inquire into the condition of "all schools other than those receiving the Parliamentary grant and the nine great public schools already referred to." The Commissioners divided the schools they examined into (1) Endowed (grammar schools), (2) Private, and (3) Proprietary. They reported that reform must begin with the endowed schools, and drew up a series of recommendations which led to the adoption of the Endowed Schools Act of '66. This Act is administered by the Charity Commissioners. The inquiry of the Commission was also especially interesting on account of the evidence they took on the secondary education of girls. Their report gave great stimulus to the movement for promoting this object, and its publication was followed by the formation of "The National Union for Improving the Education of Women," of which the leading spirits were the Princess Louise, Mrs. William Grey, and Miss Shirreff. It was under the auspices of this Association that the Girls' Public Day Schools Company was established. In Wales the state of secondary education formed the subject of a Departmental Committee of Inquiry, under the chairmanship of Lord Aberdare, in '80. With regard to secondary schools the committee recommended: (1) That existing endowed schools should be made efficient and suitable. (2) That in the reorganisation of endowments, (a) all schools should be made unsectarian; (b) the governing bodies should be to a large extent properly chosen; (c) schools should be adapted to local requirements. (3) Where there were no endowments available, schools should be provided from other funds. A Bill framed on the lines of these recommendations was introduced into Parliament last session.—**HIGHER EDUCATION** is comprehended in the work of the Universities and Colleges of University

rank (see Universities and Provincial Colleges under their several headings, and HIGHER EDUCATION FOR WOMEN). A grant of £15,000 (which will probably be annually voted) for the assistance of university colleges in Great Britain was adopted by Parliament last session. Consult for elementary education "Annual Report of the Committee of Council on Education" (Eyre & Spottiswoode); for higher education the calendars of the various Universities (issued annually), and for the subject generally the *Cyclopædia of Education*, ed. by A. E. Fletcher, the Reports of the Royal Commission on the Education Act, 1888, the Annual Reports of the Education Department, and the following educational journals:—*The Journal of Education* (editor, F. Storr); *The Educational Times* (editor, Dr. Wormell); *The Private Schoolmaster* (edited by E. Markwick) (monthly); *The Schoolmaster*; *The Schoolmistress*; *The School Guardian*; *The Educational Review* (editors, R. W. Macan and Oscar Browning); and *The School Board Chronicle* (editor, K. Gowing).

Education, Commercial. "A new departure" in the direction of making the national education more worthy of the first commercial country in the world, and more suited to modern conditions, and at least as efficient as that provided in those foreign countries—especially Germany—which are successfully competing with British traders in their oldest markets, was inaugurated in 1887. The commercial and educational communities were at last awakened to the need for immediate action, and before long youths who are intended for a commercial career, instead of entering an office without even an elementary knowledge of trade or commerce, will have an opportunity of obtaining that special training which is given to those who are intended for the learned professions. Technical Education has already done, and is doing, much for our artisans and operatives engaged for the most part in manual labour. C. E., or as it has been called, the "trained intelligence" of the merchant, the banker, the manufacturer, the manager, the commercial traveller, and the clerk, has been comparatively neglected in this country; and a young man entering a house of business, in spite of classical and mathematical efficiency at school or college, finds that he has learned very little that is of practical value to him at the outset of his career. It is only after a long and sometimes expensive experience that he realises the thousand-and-one conditions that enter into the consideration of the successful business man. In commerce, as in everything else, there are things that only experience can teach; but it is contended that, with a knowledge of the objects of commerce, of the economic laws and regulations which control it, of commercial law, of commercial geography, and of modern languages, a young man will at once be able to take a more intelligent and therefore a more useful part in the business he adopts. Such is the principle recognised by the Germans and other foreigners whose competition we have experienced at home and abroad in recent years, and there is no doubt that their educational superiority has stimulated it. The Royal Commission on Depression of Trade (see ed. '87) stated in their report: "In the matter of education we seem to be particularly deficient, as compared with some of our foreign competitors; and this remark applies not only to what

is usually called technical education, but to the ordinary commercial education which is required in mercantile houses, and especially the knowledge of foreign languages." This statement of the position has been generally accepted. The C. E. movement is steadily gaining ground. The Chambers of Commerce have given a great impetus to it. The Oxford and Cambridge Schools Examination Board, after conferring with representatives of the Chambers of Commerce, have adopted a scheme under which certificates are granted for proficiency in commercial knowledge preparatory to entering upon a mercantile career. Secs., E. J. Cross, M.A., Caius College, Cambridge, and P. E. Matheson, New College, Oxford, from whom all information can be obtained. In various parts of the country—and especially in London—evening classes have been instituted for imparting knowledge on commercial subjects, and efforts are being made to induce the governors and teachers of existing schools to modify their curriculum with the same object. By this means, and with the aid of the ample endowments already devoted to educational purposes in many places, it may be fairly hoped that the Englishman will no longer be placed at a disadvantage compared with his foreign rivals. The movement has been fully recorded in the *Chamber of Commerce Journal* (Botolph House, London, E.C.). The new scheme for junior and higher commercial education was drafted by the committee of the London Chamber early in '89; and under this examinations have been held in March '90, when sixty-five candidates presented themselves, of whom seventeen received junior certificates, and in June '91, when there were 86 candidates, of whom 42 gained certificates. As a result of the first examination the scheme was revised in some respects, most important of these being the grouping of (1) Commercial History and Geography, and (2) Algebra, Geometry and Elementary Mechanics; while, on the other hand, greater prominence is given to Arithmetic and Book-keeping by treating them as separate subjects. Another important addition is that of Latin as a second optional subject in the Junior Course. All information in connection with future examinations, past papers, etc., can now be obtained at the offices of the London Chamber of Commerce, Botolph House, Eastcheap, E.C. At King's College, the City of London School, the Central Foundation Schools (under the control of the Charity Commissioners), the Y.M.C.A. (Aldersgate Street branch), and the Polytechnic Y.M.C.I., among other institutions in London, special provision has been made for a course of education in accordance with the scheme of the London Chamber. The Yorkshire College at Leeds has arranged for a special curriculum for students intended for commercial life, and the Manchester Chamber of Commerce have instituted Junior and Senior Commercial Certificates, for awarding which special examinations are held, the first of which took place in June '91, when there were 110 candidates and 44 certificates were allotted.

Education Department is a committee of the Privy Council, in which are included the President of the Council and the Vice-President for education, assisted by a large permanent staff. The greater share of ministerial work falls upon the vice-president, who is responsible to the House of Commons. The Department distributes the Parliamentary grant, frames the code, and appoints a staff of inspectors

by whom schools in receipt of the grant are visited and the scholars examined, and training schools for teachers are inspected; it sanctions the borrowing of loans by School Boards on the security of the rates, and may grant provisional orders for the compulsory acquisition of land for school sites. **Council office, Whitehall, S.W.** (See EDUCATION, ELEMENTARY EDUCATION ACTS, SCHOOL ATTENDANCE COMMITTEES, etc.) **Seco., Mr. Geo. W. Kekewich.** There is a separate Department for Scotland. **Office, Dover House, Whitehall.**

Education, Free. See SESSION, sect. 69.

Edwards, Amelia B., was b. 1831. At first it seemed as though she would embrace the art of music, but finally literature asserted its sway, and she soon became known by her novels—"Barbara's History" ('64), "Half a Million of Money," which had appeared in *All the Year Round*, "Debenham's Vow" ('70), "In the Days of My Youth" ('73), and "Lord Braokenbury" ('80), which has been five times translated. Her books of travel have also attained great popularity, including, as they do, "Untrodden Peaks and Unfrequented Valleys" ('73), followed four years later by "A Thousand Miles up the Nile." As an archaeologist Miss E. contributes to the leading reviews and magazines. It was principally due to her exertions, together with those put forth by Prof. R. S. Poole, LL.D., and the late Sir Erasmus Wilson, that the **Egypt Exploration Fund** was founded ('83), Miss E. becoming hon. sec. at first in conjunction with Mr. Poole, and afterwards taking the work alone. Miss E. has had many honours paid to her painstaking labours for the preservation and study of monuments in ancient Egypt, among the most noteworthy being the conferment of the hon. degree of **L.H.D.** by Columbia Coll., N.Y., at the celebration of its centenary in 1887. Prof. Tyndall and the Provost of Queen's Coll. were the only other British subjects sharing in this honour. She has recently published a new book, entitled, "**Pharaohs, Fellahs, and Explorers**," and is at present at work on a third and revised edition of Sir E. Wilson's "**Egypt of the Past**."

Egypt. A state, nominally dependant on Turkey, consisting of the Nile Delta and the valley of the Nile as far south as Wady Halfa, under the rule of Mohammed Tewfik, sixth of the dynasty founded by Mohammed Aly, his great-grandfather. The first four rulers bore the title of **Vah** or **Viceroy**, but in '06 Ismail, then ruler, received from the Sultan the title of **Khedive** or king, and the succession was made direct from father to son, instead of descending, in accordance with the original treaty, to the eldest male of the family of Mohammed Aly. In '73 the right of concluding commercial treaties with foreign powers, of issuing coinage, and of maintaining an army, was also conceded. **Area of Egypt, 394,240 sq. m.** Cultivable area, 5,185,000 acres. **Pop. ('82), 6,806,381.** Principal products, cotton, sugar and cereals. Estimated revenue, '91, £9,820,000; estimated expenditure, £9,320,000. (For history from '81 to '90, see all previous editions.) **HISTORY.**—The Porte decided (Dec. and, '90), in regard to the difficulty with the Greek Patriarchate, that the will of a Christian confirmed by the Patriarch, a Metropolitan, or Bishop shall be valid, and that the programmes of the schools shall be subject to the inspection of the Director of Public Education. The Government, having agreed to the abolition of the Raftich system, has also agreed to the conversion of the

Tribute Loans. The Government decided to allow private persons to excavate for antiquities on condition that they gave half to the museum, the latter having prior claim to unique objects. Mr. Justice Scott, on his return from his tour in Upper Egypt ('8th), was of opinion that the Egyptian Government would succeed in forming a good judicial administration if the efforts to set things right were not relaxed. In '91 the Government decided (Jan. 4th) to appoint two European inspectors to insure the preservation of ancient monuments. A Commission to report on Judge Scott's Judicial Reform scheme was constituted ('24th). The dervishes became troublesome towards the end of the month, and made a raid ('27th), carrying off cattle, and killing two troopers; they were, however, defeated, and forty taken prisoners. Two battalions of Sudanese infantry and a force of Egyptian cavalry, with the Governor-General, proceeded against the dervishes, and thoroughly routed them with severe loss, Handsule being taken ('28th). The Commission on the Judicial Reform scheme (Feb. 1st) rejected all its proposals. The Khedive arrived at Cairo ('8th), after a five weeks' tour extending as far south as Wady Halfa. A vast tomb of the priests of Ammon, two storeys high, and twenty-five metres below the surface, was discovered at Luxor. Only one of the storeys was opened, and contained sarcophagi dating as far back as 2500 B.C. It was decided ('9th) to occupy Tokar, and drive out the band of robbers which formed part of Osman Digna's force. The Judicial Reform Commission adjourned *sine die*. A body of men ('200) left Suakim for Tokar ('11th). The Khedive decided that the Judicial Reform proposals of Justice Scott should be accepted. The terms accepted were that Mr. Justice Scott be Judicial Adviser to the Government and President of the Committee for the Superintendence of the Native Tribunals, with Signor Moriondo, an eminent Italian Judge, and the Egyptian Procureur-Général as colleagues; that an additional English Judge be named to the Court of Appeal, having a perfect knowledge of Arabic and law; and that Mr. Justice Scott be empowered to attend the Council of Ministers with a consultative voice in questions of justice. At Luxor there were also found 120 cases of statuettes and votive offerings, 77 papyri, and statues of Isis, Nephtis, and Osiris, and other treasures. The Government accounts for '90 showed ('18th) a revenue, £Exo, 250,000; expenditure, £Exo, 600,000; reserve, £Exo, 744,000. It was reported that the French Minister officially protested ('17th) against the Judicial Reform. Tokar was taken by the troops ('20th) after an hour and a half's fighting; the Egyptian loss was 1 officer and 12 men killed, and 5 officers and 42 men wounded. Afafit was occupied the same day. The surrounding sheikhs sent in their submissions and were pardoned. A raid by 600 Agamebics was checked, 200 of the men being killed, and many wounded ('22nd). A French firm secured the contract for the construction of the bridge over the Nile at Mansourah for £30,000. A decree was published (March 20th) announcing the contract with Messrs. Rothschild for a loan to be called the Four Per Cent. A large reservoir of water was discovered at El Golea, in the Sahara; it threw up 120 gals. a minute, from about 120 ft. underground. The Porte accepted (May) the scheme of Judge Scott and Col. Kitchener for

the reorganisation of the police. Riaz Pasha handed in his resignation (13th), which was accepted by the Khedive. A new Cabinet was formed (13th), as follows: Mustapha Pasha Femy, Premier and Minister of the Interior; Rushdi Pasha, Minister of Finance; Zeki Pasha, Minister of Public Works; Tigrane Pasha, Minister for Foreign Affairs; Fakhri Pasha, Minister of Justice; Artin Pasha, Director-General of Education. Locusts began to appear in Upper Egypt (16th). The Court of Appeal of Mixed Tribunals sanctioned Government decrees (June), providing that every person practising medicine or its branches, also druggists, must pay a fee for a Government licence. Druggists are subjected to special regulations. All public establishments, theatres, clubs, *cafés*, hotels, and lodging-houses are placed under special police regulations and supervision. The Mixed Tribunals inflict penalties for contraventions. The Legislative Council approved the following measures: first, giving the police more power for the investigation of crime; second, suppressing vagabondage and the able-bodied beggars who are daily increasing the supply of material for criminal classes; third, regulating by licence the carrying of arms, which facilitates brigandage; fourth, enforcing work and discipline upon prisoners; fifth, abolishing the system of many judges sitting together in cases of small importance, thus utilising their services to greater advantage; and sixth, enforcing the execution of sentences and insuring celerity in criminal justice. The new Vagrancy Law and the Arms Act were passed (July 6th). Queen Victoria conferred the Grand Cross of St. Michael and St. George on the hereditary Prince Abbas Bey, on attaining his majority. He also received the Grand Cordon of Francis Joseph from the Emperor of Austria. Three statues, 10 feet high, of rose granite, were discovered at Aboukir. The first two represented in one group *Rameses II.* and Queen *Hentmara* seated on the same throne, which is unique among Egyptian statues. The third statue represented *Rameses* standing upright in military attire, a sceptre in his hand and a crown upon his head. Both bore hieroglyphic inscriptions, and both had been thrown from their pedestals face downward. Their site was on the ancient Cape Zephyrium, near the remains of the Temple of *Venus at Arsinoe*. Relics of the early Christians were found in the same locality. The French Consul and druggists objected to the inspection of their drug stock by the Commission appointed under the Khedivial Decree. The Government decided (23rd) to suspend the application of the police regulations against which the French protested. There was considerable agitation amongst the inhabitants of the island of *Thasos* in the *Ægean Sea*, at the maladministration and exactions of the Governor. Sir C. Scott Moncrieff resigned his post as Under Secretary of Public Works, and was succeeded by Mr. W. E. Garstin, Inspector of Irrigation. The railway bridge over the Nile at *Embahé*, just constructed by some French contractors, was (Nov.) declared to be defective, and some alterations were ordered.

Egypt Exploration Fund, The. Founded 1883, under the presidency of the late Sir *Erasmus Wilson* (d. 1884), for the purpose of historical investigation in Egypt, conducted in a scientific manner, with the object of solving

some of the many important questions which await the result of excavation. Special attention has been directed to all that can bear on the history of the sojourn and exodus of the Israelites and the early sources of Greek art. The work is conducted on the principle of careful examination of all details and preservation of the objects found. These objects are of great interest in illustrating comparative art by the influences of Egyptian, Greek, and Syrian styles on one another, the technical processes of metal work, metrology and the ceramic arts. The antiquities found, after the claims of the *National Museum of Egypt* have been satisfied, are divided between the *British Museum*, the *Museum of Fine Arts*, *Boston, Mass. (U.S.A.)*, and various local museums in England and the Colonies. The distribution depends mainly on the amount of local support which has been contributed by the several districts represented by the museums. Annual volumes are published, giving the results of each season's work, with maps and plates. In the spring of '90 M. Naville, accompanied as before by Count d'Hulst, made a short archaeological tour in Lower Egypt and the Fayum, with a view to exploring the mounds of *Ahnas-el-Medineh*, the *Heracléopolis* of the Greeks, the *Hanes of the Bible*. The extensive mounds of this ancient city, which was the seat of government of the kings of the obscure 13th and 14th Egyptian Dynasties, were excavated by M. Naville, assisted by Count d'Hulst, in '91, large trenches being driven through the mounds in all directions. The remains of the temple, which proved to have been wrecked and plundered in ancient times, were found to consist chiefly of fallen architraves and columns of large size, sculptured with representations of *Rameses II.* (19th Dynasty) and his successor, making offerings to various deities. Some architraves bearing the royal ovals of *Usertesen II.* (21st Dynasty) were also found, together with a large number of very curious and elaborate decorative carvings of the early Christian (Coptic) period. Unfortunately, no records of the 13th or 14th Dynasties were brought to light. In addition to its work of exploration, the Society has during the past year commenced a new and important undertaking—namely, an *Archæological Survey of Egypt*. The object of this Survey is to map, plan, photograph, and copy all the most important sites, sculptures, paintings, and inscriptions yet extant in the Valley of the Nile between *Cairo* and *Assouan*. Mr. Percy E. Newberry and Mr. George Fraser, officers of the Fund, were accordingly despatched to Upper Egypt during the past season to begin work on the celebrated tombs of *Beni Hasan* in the province of *Minieh*, where they were afterwards joined by Mr. Blackden, artist. The thirty rock-cut sepulchres excavated in the Eastern cliffs are separated into two groups, Northern and Southern. Taking the Northern group for their first season's work, Mr. Newberry and Mr. Fraser copied all the hieroglyphic texts in the twelve inscribed tombs, and traced the whole of the wall-paintings in six tombs. Mr. Blackden made fac-simile drawings in colour of the most interesting scenes, including special studies of the various birds, beasts, flowers, implements, musical instruments, and other interesting objects depicted in these tableaux. Many hitherto unknown inscriptions, (some of especial historical interest) have also been discovered.

in the process of clearing the tombs down to the original level. The survey of the Southern group of chambers will occupy the officers of the Archaeological Survey during the present season. M. Naville's work on "The Festival Hall of Bubastis," with numerous illustrations, and the first volume of *The Archaeological Survey*, with chromo-lithographic and phototype plates, plans, etc., are in preparation. The offices of the Egypt Exploration Fund are at 17, Oxford Mansions, Oxford Circus, W. President, Sir John Fowler, K.C.M.G.; Sec., H. Gosselin; Hon. Sec., Miss Amelia B. Edwards, LL.D., etc., Westbury-on-Trym, Bristol.

Egypt, Khedive. See **KHEDIVE OF EGYPT.**
Egyptian Railway Extensions and Nile Bridge (see previous ed.). The contract for the construction of a bridge at Mansourah, connecting the railway between Zagazig and Alexandria, as described in our last edition, was, according to a Cairo telegram of March 4th, '91, adjudged to a French firm. The tender was for £30,000, being £7000 below the nearest; and the same firm are engaged on a bridge at Embabeh. At the same time it was reported that a Commission to report on the practicability of a proposed shortened route eastward by a bridge over the Nile at Kench, thence by railway to Kosseir, were about to start. The members were Baron Richtofen and Prince Mourousi of the Public Debt Commission, M. Boinet of the Finance Department, M. Batois of the Public Works Department, and others. From Cairo, April 5th, it was reported that the Government and the Suez Canal Co. (q.v.) had agreed upon terms for the construction and working of a light railway from Ismailia to Port Said, the line to be narrow gauge, and to be worked by the Canal Co. exclusively for their own service. An Alexandria telegram of Aug. 10th stated that the Khedive had inaugurated the railway from Damanhour to Rahmanieh, being one of the three short branches lately completed by the German contractors. The Government favoured the plan of payment by annuities extending over twenty years or more. From Cairo, Nov. 3rd, it was reported that the railway bridge across the Nile at Embabeh, just constructed by French contractors, had been declared defective, one of its nine piers was to be rebuilt and portions of the ironwork replaced at the contractors' expense. This causes delay to the junction at Cairo of the railways of Lower and Upper Egypt.

Eight Hours Bill. See **SESSION**, sect. 66.
Eisteddfod. The name of an annual bardic congress in Wales, having for its objects the preservation of the music and the general literature of the Principality, the maintenance of the Welsh language and ancient national customs, and the cultivation of a spirit of patriotism among the people. Its origin is lost in antiquity, but it is certain that three such congresses were held in the reign of Edward III., one of them being under the patronage of Earl Mortimer. (For history of E. see ed. '88.) On Oct. 23rd, 1566, Queen Elizabeth issued a "letter of commission," calling another Eisteddfod at Caerwys for May 26th, 1568. This royal letter is dated from Chester. Fifty-five musical and bardic degrees were conferred at this meeting, entitling their possessors to live by the wandering minstrel profession. So far as we know, the next Eisteddfod which was held was also at Caerwys, in 1798, under the patronage of

the Society of "Gwyneddigion," or natives of North Wales, a society established in London, which has since developed into the *Gymre-dorion (Aborigines) Society*. The Eisteddfod was held in '91 at Swansea, and among the visitors was H.R.H. Prince Henry of Battenberg. An accident, attended by the death of a woman, unfortunately occurred on the first day of the proceedings. The next Eisteddfod will take place at Rhyl. A preliminary Gorsedd (this word means throne, but in an Eisteddfodic sense it signifies the four-and-twenty stones of the Druidic circle, whence a year and a day beforehand the Eisteddfod is proclaimed "in the face of the sun, the eye of light," and where bardic and musical degrees are conferred) is held at the place selected, where a year and a day's notice of the event is given.

Election Law in '91. The right of women to sit and vote as members of the London County Council was tested in the courts of law, when Mr. Justice Day held that Miss Cobden, despite the fact that her election must be deemed valid, as it had not been challenged within twelve months, must pay penalties of £25 for each of the five occasions on which she had sat and voted. The Court of Appeal (April 17th, '91) affirmed this decision, but reduced the penalty to 10s. in each case.—Members of the Salvation Army who had gone to prison in default of paying fines were held to have lost their right to be on the Eastbourne register of parliamentary electors.

Election of a Member of Parliament. Under the provisions of the Ballot Act, the returning officer is required, in the case of a county election within two days after the day on which he receives the writ, and in the case of a borough election on the day on which he receives the writ or the following day, to give notice of election. The day of nomination is to be fixed as follows: in the case of an election for a county or district borough, not later than the ninth day after the day on which he receives the writ, with an interval of not less than three clear days between the day on which he gives the notice and the day of nomination; and in the case of an election for any borough other than a district borough, not later than the fourth day after the day on which he receives the writ, with an interval of not less than two clear days between the day on which he gives the notice and the day of nomination. The candidate is nominated in writing, subscribed by two registered electors as proposer and seconder, and by eight other electors, who must also be registered in the same constituency. If at the expiration of one hour after the time appointed for the election not more candidates stand nominated than there are vacancies to be filled up, the returning officer is to forthwith declare the candidate nominated to be elected; but if at the end of one hour more candidates stand nominated than there are seats to be filled up, the returning officer is to adjourn the election and take a poll. The poll is to take place on such day as the returning officer may appoint, not being, in the case of an election for a county or district borough, less than two or more than six clear days, and not being, in the case of an election for a borough other than a district borough, more than three clear days after the day fixed for the nomination. Sundays, Christmas Day, Good Friday, and any day set apart for a public fast or thanksgiving, are not counted.

The following calendar, which will probably make the matter quite clear, shows the time for nomination and poll in boroughs and counties, assuming that the writ has been received by the returning officer on the 1st of any given month:—

<i>Day of Month.</i>	<i>County.</i>
1	Receipt of writ.
2	
3	Last possible day for notice of election.
4	
5	First possible day for nomination.
6	
7	
8	First possible day for poll.
9	
10	Last possible day for nomination.
11	
12	
13	
14	
15	
16	
17	Last possible day for poll.
	<i>Borough.</i>
1	Receipt of writ.
2	Last possible day for notice of election.
3	
4	First possible day for nomination.
5	{ Last possible day for nomination.
6	{ First possible day for poll.
7	
8	
9	Last possible day for poll.

In using either table, regard must be had to the intimation given above, that **Sundays, Christmas Day, etc.**, do not count. Thus, if an election in a county be fixed for the latest possible day, the poll would, on account of the Sundays, be at least two days later, or on the nineteenth, and in some cases three days later, or on the twentieth day. There is a special allowance of time in the case of the constituency of Orkney and Shetland. Where an **equality of votes** is found to exist between any candidates at an election for a county or borough, and the addition of a vote would entitle any of such candidates to be declared elected, the returning officer, if a registered elector of such county or borough, may give such additional vote, but shall not in any other case be entitled to vote at an election for which he is returning officer. But the returning officer may, if qualified, decline to give the **casting vote**; and if he be not qualified, or if he decline to act, the names of the two candidates are endorsed on the writ and a double return made. Neither candidate returned may vote until the right to the seat has been determined. A petition may be presented by a person qualified to vote, a person claiming to have the right to be returned, and by a person alleging himself to have been the candidate; the petition may be presented on various grounds, and it may allege bribery and corruption. Thus, where there has been an equality of votes, and the casting vote has been given by the returning officer, or where a double return has been made, the seat may be claimed on petition. The voting papers would then be scrutinised by the Court, and some deductions would probably be made on the ground of spoiled papers, dis-

qualification of the voter, etc., which would reduce one party's number more than it would the figure of the other. All election petitions are tried by two judges, who determine and report to the Speaker whether the member petitioned against, or what other person, if any, was duly elected, or whether the election was void; and when corrupt practices have been alleged, the judges report also whether any such practices have been committed, and, if so, whether it was with the knowledge or consent of any candidate, and the nature thereof; the names of the persons proved to have been guilty of such corrupt practices; and whether during the election there was an extensive prevalence of corrupt practices. When such a report as the latter is made to the House, it is usual to appoint a **Royal Commission**, on whose report, if it disclose a serious state of things, the writs for a fresh election may be suspended, so that the constituency remains temporarily unrepresented. Any member returned for two or more places in any part of the United Kingdom is to make his selection for which of the places he will serve within one week after it shall appear that there is no question upon the return for that place. See also **WRITS, CORRUPT PRACTICES, PARLIAMENT, HOUSE OF COMMONS, etc.**

Electoral Disabilities Removal Bill. See Session, sect. 67.

Electors Registration (Acceleration) Bill. See Session, sect. 68.

Electricity, '91. Completely overshadowing all other electric events of '91, the successful experiment in the long-distance transmission of power at the **Frankfort International Electrical Exhibition**, certainly marks a new era in applied electrical science, and perhaps also in industrial development. At noon, on Aug. 25th, the electric lamps in the exhibition were for the first time lighted by a current transmitted from the generating centre at the Lauffen Falls of the river Neckar, 109 miles distant from the city of Frankfort (see also **NECKAR**). The conducting part of the apparatus consisted of three overhead copper wires, each 0.158 in. in thickness, supported on poles such as are used for ordinary telegraphic lines. Over the distance (over a hundred miles) intervening between the source of the power (the water falls) and its application, a current was transmitted strong enough to feed a thousand sixteen candle lamps. In the absence of precise calculations as to the strength of the current, it is estimated to be something like 100 or 110 horse power. This was done without excessive loss, by actually maintaining a potential difference of some eighteen thousand volts between each pair of wires. An infinite vista of industrial possibilities is opened up by the success of this experiment. Fifteen years ago, engineers had scarcely dreamed of including electrical conductors among the various methods of transmitting power to a distance. Twelve years ago the electrical transmission of power had not passed the stage of theoretical discussion. In '79 the largest firm of electrical engineers in Europe could not be induced to tender for transmitting power over ten miles in India. Since then, there has been a series of experimental gropings, which so far culminate in the Frankfort realisation. A revolution in the arts of production is freely prophesied. Towns like Milan and Turin, which are within

thirty, forty, or fifty miles of vast water power, may become the industrial centres of the future. In the light of the Frankfort feat, such sources of water power are comparable to inexhaustible fields of smokeless, dustless coal, through the possibility of their being harnessed to the local mills and factories. Amongst the minor features of the Frankfort Electrical Exhibition (which was scarcely more than International in name) was an application of long-distance telephony, by which the opera at Munich (some two hundred miles away) was heard with "marvellous clearness" every evening in Frankfort. The **Faraday Centenary** was celebrated by a brilliant gathering at the Royal Institution in London on June 17th, at which Lord Rayleigh reviewed Faraday's contributions to electricity. At the Cardiff meeting of the **British Association** (*q.v.*) the President of the Physical Science Section (Professor Oliver J. Lodge) suggested the formation of a great national (government) institution to take charge of the mechanical routine of all future discovery in electricity and the other physical sciences. In the maintenance of electrical standards, for instance, its duties would be analogous to certain functions of the Royal Astronomical Observatory. **Electric Lighting** (see previous eds.). In view of the early expiring of the Government Provisional Orders, several additional provincial municipal corporations have this year decided to undertake an installation rather than allow a joint stock company to step in between the ratepayers and the town councils. The Electrical Exhibition opened by the Lord Mayor in the **St. Pancras Vestry Hall** on March 14th was an incident in the decision of the Vestry to supply that large parish with electric light without the intervention of a company (see ed. '91). An Electrical Exhibition held at **Providence** (U.S.A.), in February, was intended by the American Electric Light Association to signalise the close of the first decade of "electric lighting commercially." In **Paris**, in the last three years, the number of arc and glow lamps has increased 140 and 170 per cent. respectively. The adoption (two years ago) of electricity as an illuminant *vice* coal gas in the **Savings Bank Department** of the London General Post Office, has been followed by a marked reduction in the amount of sick leave. A small glow lamp (photophone) at the end of an elastic tube is now used by doctors for exploring the mouth, ear, and other cavities of the body. **Electric Telephony**. The rapid and widespread extension of telephonic communication, both between the large towns of the United Kingdom as well as within smaller urban and suburban districts, is eclipsed by the completion of the international London to Paris telephone (first proposed by the French Government). The telephone cable (the joint property of the two Governments) laid in March by H.M.S. *Monarch* across the Straits of Dover, is the first ever made for the open sea. This submarine cable (owing to more perfect insulation) gives far more precise and delicate results than the wires that connect adjacent streets. Every minute inflection and accentuation of the voice, either in speaking or in singing, can be noted. New applications of telephony are said to have been made to meteorological forecasts, and to seismography (microphone). **Electric Telegraphy**. The great storm of October, by temporarily disorganising the telegraphic ser-

vices throughout the United Kingdom, resurrected the once perennial outcry in the press for subterranean trunk cables (as in Germany) between the chief industrial centres. A similar breakdown, formerly an (at least) annual occurrence, had not been experienced for some years, the Post Office having effected great improvements in the construction of the connecting lines. At the opening of a new telegraph office in San Francisco the following experiment was tried—the superintendent wired to New York, Washington, London, Causo (Nova Scotia), and other places, inquiring about the weather. The reply came from New York in 3 m. 10 s.; from Washington, in 3 m. 11 s.; from Nova Scotia, 4 m. 20 s.; and from London in 6 m. 22 s.—**Electric Traction**. Leeds has now in operation the first British electrical tramway on the overhead system. The tramway comprises two miles of double lines and one and a half of single line. The gradients vary from 1 in 20 to 1 in 38. The cars are run at a speed of about 8 miles an hour.

Elementary Education Acts, '70-80. These Acts contain all the statute law regarding the public provision of elementary education in England. The **administrative area**, for the purpose of elementary education is either the borough or the parish. Any area may have a school board if those who would have votes for a school board apply to the Education Department; and any area must have one if the school accommodation already provided is not sufficient. The board is elected outside the Metropolis by the burgesses of the borough or the ratepayers of the parish; within the Metropolis by those who would be entitled to vote for common councilmen in the City of London, or for vestrymen in other districts. Each voter has as many votes as there are members to be elected, and may give them all to one candidate. Outside the Metropolis the school board must number not less than five, nor more than fifteen. Members hold office for three years. In any area in which there is no school board there must be a school attendance committee, of not more than twelve nor less than six, annually appointed out of their own number, by the town council if it be a borough, or by the guardians of the union if it be a parish. The school board, or school attendance committee, must see that every child of school age receives sufficient elementary instruction in reading, writing, and arithmetic, and that no person employs (a) any child under the age of ten years; (b) any child under the age of fourteen years who has not obtained a certificate of proficiency (unless such child comes under the provisions of the **Factory and Workshops Act, 1878**). The school board, moreover, is to provide for any deficiency of school accommodation, and for that purpose has powers of compulsory purchase. It may establish a free school anywhere within its district, having first satisfied the Education Department that such a school is needed. It may contribute to, or, with the consent of the Education Department, establish an industrial school. It may take over, upon certain conditions, any elementary school already established in its district. A parent who is unable to pay the school fees may apply to the guardians of the poor, and if he prove his inability they are to pay the fees without his thereby incurring any disqualification. All fees, Parliamentary grants, sums borrowed, &c., must be carried to the school

fund, out of which all expenses are to be defrayed, and any deficiency be met out of the rates. The school board is to serve on the rating authority its precept requiring payment of a sum therein specified, which the rating authority must pay to the school board treasurer. Should the rating authority make default, all its rating powers may be exercised by officers appointed for that purpose by the school board. No religious catechism or formulary distinctive of any denomination is to be taught in a board school, nor is a child to receive any religious instruction contrary to the wish of his parent, nor is a Government inspector to examine any child in any religious subject. (For other provisions see text of Acts.) The Acts are supplemented by the Code annually issued by the Education Department, which is laid upon the tables of both Houses of Parliament, and, if not objected to within a certain time, has the force of law. The Acts are further supplemented by the bye-laws made by the several school authorities.

Elementary Education Act, 1891. See Session, sect. 68.

Ely, Rt. Rev. Lord Alwyne Compton, Lord Bishop of. The diocese was founded 1109. The present income is £5500. His lordship, the 59th bishop in order of succession, brother to the Marquis of Northampton, was b. July 28th, 1825. Ed. Trin. Coll., Camb., graduating as 14th Wrangler (48), and proceeded D.D. (79). Ordained (50). Formerly his lordship was rector of Castle Ashby, Northamptonshire (52-79), Hon. Canon of Peterborough (56-79), Rural Dean of Preston and Archdeacon of Oakham (74), Dean of Worcester and High Almoner to Her Majesty (79), Prolocutor of the Lower House of Convocation of Province of Canterbury (80). Appointed to see of Ely (86). He still holds the position of High Almoner to the Queen.

Emigration. The following statistics were issued during '91 relating to emigration from the United Kingdom during the four last years.

Emigration '87, '88 '89 and '90.

	Total, including Foreigners.	Emigrants of British and Irish Origin only.
No. of emigrants in '90	315,980	218,116
" " '89	342,641	253,795
" " '88	398,494	279,928
" " '87	396,494	281,487

The decrease in the total emigration, foreigners as well as British and Irish included, amounts to 26,661. The decrease in British and Irish emigrants, for the year ending Dec. 31st, '90, amounts to no less than 35,679.

Emigrants' Information Office. This office was established by Her Majesty's Government in 1886, for the purpose of supplying intending emigrants with information respecting emigration chiefly to the British Colonies and is under the direction of the Colonial Office. The classes chiefly required in the Colonies at present are farm labourers and others connected with the land, female domestic servants, and farmers with £200 capital; but competent mechanics with a little money should also do well. Hardly

any assisted passages are now granted, Queensland, Western Australia, the Cape and Natal giving the most encouragement. The importance of the subject is shown by the fact that the exodus from Great Britain has averaged during the last decade about 250,000 persons annually, of whom about three-fourths now go to the United States. Printed particulars, which are revised quarterly, are exhibited at every post-office; and free circulars and penny handbooks with maps can be obtained on application by post or personally to the Chief Clerk, at 31, Broadway, Westminster, S.W. See also SELF-HELP EMIGRATION SOCIETY.

Emin Pasha (Eduard Schnitzler) was b. March 28th, 1840, in Oppeln, Silesia. He was educated at the Neisse Gymnasium, and at the medical schools of Breslau and Berlin, where he graduated in '64. He subsequently acquired the mastery of several European and Asiatic languages. About '65 he set out for Turkey, where he fell in with Hakkî Pasha, whom he accompanied on official journeys through Armenia, Syria, and Arabia. In '68 he took up his residence at Scutari, and secured the close friendship of Ismail, the Governor. On the disgrace of the latter, Emin accompanied him in his exile to Trebizond. Ismail was restored to favour, and Emin shared his good fortune. It was probably under the influence of Ismail, or his widow, whom Emin married, that he became a convert from Judaism to Mohammedanism. In '75 he returned home, only to stay, however, for a few months; for in '76 we find him acting as surgeon in the Egyptian army as Dr. Emin Effendi, and in that capacity he was ordered to Khartoum. In '78, when General Gordon was Governor of the Sudan, Emin was appointed Governor of the Equatorial Province of Egypt. In '86 he appealed for help. In consequence of this appeal a relief expedition, under Stanley, was sent out in Jan. '87, and succeeded in reaching him. Emin, however, preferred to remain in the land of his choice. The patron's medal of the Royal Geographical Society was awarded to Emin (June '90), and was received on his behalf by Dr. Felkin.

Employers' Liability Act, '80. Before the passing of this Act, a master was not liable to his servant for injury caused by the negligence of a fellow-servant. The Act provides that where injury has been caused to a workman by reason of any defect in the works, machinery, etc., or of the negligence of any person in his employer's service intrusted with superintendence or with authority over the injured man, or of any act or omission done or made in obedience to the orders or bye-laws of the employer, or of the negligence of any person in charge of railway signals, points, etc.; the injured workman, or if the injury results in death, his personal representatives, shall have the same right of compensation against the employer as if he had not been in the employer's service. Certain exceptions are made, to protect an employer morally innocent of the injury. An action under the Act must be brought within six months from the time of the accident, or twelve months from the time of death, as the case may be; and notice that injury has been sustained must be given within six weeks. The compensation recoverable is not to exceed the equivalent of three years' earnings of a person in the same employment and district. Any money payable by the employer to the workman as a penalty

under any other Act of Parliament is to be deducted from the compensation recovered under this Act. Actions under the Act are to be brought in the county court, but may be removed into a superior court in the same manner as other actions. The Act came into operation on Jan. 1st, 1880.

Employers' Liability Act, Cases under, in '91. The House of Lords gave an important decision, July 21st, '91, in the case of *Smith (pauper) v. Baker & Sons*. The appellant, Smith, was engaged with another man in drilling a hole in a quarry, when a steam crane, by which stones were being carried over his head, was jibed in a certain direction, and a large stone fell upon him, causing him serious injury. The appellant's case was that he did not see the stone above him, nor was any warning given that it was to be jibed in his direction, though whenever he saw the stones were being "craned up" above him he got out of the way. The County Court judge gave judgment for the plaintiff, and the Queen's Bench Division, while dismissing an appeal, gave leave to proceed to the Court of Appeal. The latter Court reversed the judgment of the Court below, on the ground that there was no evidence of negligence on the part of the defendants, the Lord Chief Justice expressing an opinion that the plaintiff knew and took the risk of the occupation in which he was engaged. The House of Lords, after reviewing the cases on the point, restored the judgment of the County Court.—As to the doctrine of "common employment," the House of Lords gave an important decision July 28th, '91. The plaintiff, *Johnson*, was engaged at work upon a house which his employers, Messrs. Higgs & Hill, were erecting. At the top of the building provision was to be made for drying clothes, and for this purpose the seventh story was to be fitted with a fire-proof floor. The work, being of a special kind, was not undertaken by Messrs. Higgs & Hill; but the piece of it, which was included in the contract, was to be paid by them to a firm approved by the architect. The firm selected was Messrs. Lindsay & Co., the defendants. In connection with the work concrete had to be hoisted to the top of the house, and the defendant's workmen had to do this by means of a bucket attached to a chain working over a pulley. While the operation was going on the plaintiff had to pass from time to time under the bucket, and it fell upon him, injuring him seriously. He was picked up by Messrs. Lindsay's workmen, who, when asked why they did not hook the bucket securely, said they were in a hurry. Johnson brought an action against Messrs. Lindsay & Co., and obtained fifty guineas damages; but the Divisional Court and the majority of the Court of Appeal set the verdict aside, on the ground that Messrs. Lindsay & Co. were subcontractors under Messrs. Higgs & Hill, and that they and their men were consequently all in one common employment with the plaintiff. The House of Lords restored the verdict originally given for the plaintiff, holding that, as Johnson was not working under Messrs. Lindsay & Co., there was no reason why they should not be held responsible for the consequences of the carelessness of their own workmen.

Engadine Railway. In July '91 some particulars of a proposed railway to the Engadine were made public. The latest suggestion is to continue the ordinary gauge line from Chur

through the Schyn Pass and by tunnel through the Albula Pass into the Engadine, thence down the valley to Lernetz and through the Ofen Pass to Meran, thus connecting Basle by a direct ordinary gauge railway with the system of the Austrian Tyrol. One advantage of the line would be that it would provide the shortest overland route to Suez. The length is about 93 miles, and a rough estimate places the cost at six millions sterling.

Engineering. Details of some of the most important of the great industrial engineering schemes either in progress or planned out in different parts of the world at the present time are given under their respective alphabetical headings.

English Church Union (33,340 communicants). Formed in 1859, after the Protestant riots at St. George's-in-the-East, for the purpose of uniting clergy and laity "in defence of the doctrine and discipline of the Church of England, and of the rights and liberties of her faithful children." Viscount Halifax is the President, and the vice-presidents include many distinguished churchmen. It comprises 25 bishops, 4090 other clergy, and 29,285 laity. Its object is to defend and maintain unimpaired the doctrine, discipline, and ritual of the Church of England against Erastianism, Rationalism, Puritanism and Romanism, and to repel all attacks on the Church's Marriage Law, and on religious education in Church schools. The Union contends for the recognition of the Church's right to settle disputes concerning spiritual questions in Courts of her own appointment, and refuses to acknowledge the Judicial Committee of the Privy Council, or any other court or judge appointed by Parliament alone, as possessing any authority in spiritual matters. **Organ.** *The Church Union Gazette*. **Offices,** 35, Wellington St., Strand. **Sec.,** Col. John Brathwaite Hardy.

English Political Parties. The present House of Commons was elected in July-Aug. '86, and consisted of 670 members, of whom 393 were Unionists and 277 Home Rulers. The leading principle of the first-named party is the maintenance of the union of the parliaments of Great Britain and Ireland as settled by the Act of Union of 1801. The Home Rulers, on the contrary, advocate the abrogation of the Act of Union and the restoration to Ireland of a separate parliament. This main division of parties dates only from the summer of '86, when Mr. Gladstone, up to that time the acknowledged head of the whole Liberal party, declared himself in favour of Irish Home Rule, and united his forces, or so many of them as he could carry with him in his new departure, with those of the Irish Nationalists led by Mr. Parnell. A considerable minority of Liberals, resenting Mr. Gladstone's sudden change of front, declined to continue their support, and combined with the Conservatives to form that Unionist majority which succeeded in defeating the Home Rule Bill, first in the House of Commons, and afterwards, and more decidedly at the polling-booths. The anti-Home Rule Liberals, although cordially working with and supporting the Conservative Government which necessarily resulted from the successful combination, retained their independence, and formed themselves, indeed, into a separate party, with a separate organization, separate leaders, and separate whips. They called themselves Liberal-Unionists, but

were described by the Gladstonians as **Dissentient Liberals**. Their principal leaders were Lord Hartington, Mr. Goschen, and Mr. Chamberlain, the former two representing those who had belonged to the Whig section, and the latter those who had been included in the Radical section of the old Liberal party. The **Liberal Unionists**, or **Dissentient Liberals**, numbered 77, and the **Conservatives** 316, thus bringing up the total of Unionists to 393, and giving them a majority of 116 over their opponents. As the Conservatives did not of themselves form a majority of the whole House, the Government could only exist by reason of the support of the **Liberal-Unionists**. The **277 Home Rulers** were made up of 192 English, Welsh, and Scotch Liberals and Radicals (led by Mr. Gladstone, with Sir W. Harcourt and Mr. John Morley as his principal lieutenants), and (including the seat subsequently gained on petition at Londonderry city) 86 Irish Nationalists, or Parnellites—so named after their leader, Mr. Charles Stewart Parnell. Of these 85 sit for Irish constituencies, and one, Mr. T. P. O'Connor, for the Scotland division of Liverpool. By their opponents the Home Rulers are often termed **Separatists**, although they warmly repudiate the imputation that the measures they advocate involve the separation of the two countries. The **Conservatives** form a more homogeneous party than their Liberal opponents, having, perhaps, less conspicuous internal divisions. Their professed policy is the maintenance of the Empire at all cost, the preservation of the Constitution, the union of Church and State, and the upholding of the rights of property. Subject to these principles, the Conservatives have shown themselves to be as well disposed towards useful legislation and the reform of abuses as any other party in the State. The **Gladstonian Home Rulers** base their claim to public support on the superiority of their legislation, the greater purity of their administration, and their devotion to the principles of peace, retrenchment, and reform. They are divided in opinion as to the maintenance of the State Church and the House of Lords. The sole programme of the **Nationalist party** consists of the demand for an Irish Parliament, and they treat every other political question as of subordinate importance. So far as the Opposition is concerned, the most interesting event of the past twelve months, and, perhaps, of the entire Parliament, is the **Nationalist rupture**, the history of which is dealt with under the heading of **IRISH PARLIAMENTARY PARTIES**. The Gladstonians claim that the split has had no effect on the bye-elections which have taken place since it occurred. At these they have (Nov. 16) gained five seats, and at other contests at which they have not been successful they have decreased their opponents' majority. The **Unionists** decline to accept the results of the bye-elections as indicative of what is to happen at the general election, which it seems to be understood is to take place in the autumn of '92, they, and for the matter of that some Gladstonian sympathisers, arguing that those results do not evidence any advance of English opinion in favour of Home Rule, and that they were largely due to the promises given upon industrial and popular agricultural topics by the Gladstonian candidates. Since the last General Election the **Liberal-Unionists** have sustained at successive bye-elections a net loss of seven seats, and the **Conservatives** a

net loss of twelve seats; while Sir T. Grove, and four other members, who were formerly classed as **Liberal-Unionists**, have now, virtually, seceded from that party. The **present relative strength of parties** is (Nov. 16th, '91, allowing for these changes, about as follows:—**Liberal Unionists** 65, **Conservatives** 304—total **Unionist strength** 369; **Gladstonians** 215, **Nationalists** 86—total 301; **Unionist majority** 68. (For further details see pollings at bye-elections and summary given at end of Commons, House of.) Despite their falling off in numbers, the **Liberal-Unionists** are still masters of the situation. The party as a body has consistently voted with the Government on all vital questions, and early in '88 Mr. Parnell was forced to recognise that on any matter affecting the Union the Home Rulers could not hope to break the ranks of their opponents in the House of Commons as then constituted. Attempts to compose the difference between the **Liberal-Unionists** and **Gladstonians** have been made, notably at the Round Table Conference (*q.v.*, ed. '88), but without success. Lord E. Churchill's resignation placed the Government in a somewhat critical position; but the acceptance by Mr. Goschen, with the sanction of Lord Hartington, of the Chancellorship of the Exchequer, more than compensated for the defection of Lord Randolph. The death of Mr. W. H. Smith, Oct. '91, was a matter for sincere regret by men of all shades of opinion. Mr. Arthur Balfour, Mr. Goschen, and Sir M. Hicks Beach were mentioned in connection with the vacancy in the Leadership of the House of Commons thus created, but in Conservative opinion the claims of the first-named were paramount. Sir M. Hicks Beach stated on Oct. 13th, in reference to the suggestion of his name for the leadership, that he neither expected nor desired that the office should be conferred upon him. Mr. Goschen, two days' later, remarked in course of a public speech that, as Mr. Balfour had triumphed over the Irish spectre, nothing was more natural than that he should in the House of Commons lead the **Unionist** hosts to those further battles on which the cause they all had at heart had to be sustained; and on Oct. 19th it was officially stated that the Queen had been pleased to approve the appointment of Mr. Balfour to be the First Lord of the Treasury in the room of the late Right Hon. W. H. Smith. The gratifying announcement that Her Majesty had been pleased to confer the dignity of a peerage of the United Kingdom upon Mrs. W. H. Smith was made upon the same occasion.

Envoys and Plenipotentiaries. See DIPLOMATIC.

Eras, The Five. These are the Greek (Olympiads); the Roman; the Christian; the Julian Period; and the Mohammedan Era.

Erzeroum. An important Turkish strategic centre in Armenia, which, since the annexation of Kara by Russia (1878), has become the principal frontier fortress and point of resistance to a Russian advance from the Caucasus to Constantinople. It is about 100 miles south-west of Trebizond, on the great commercial highway leading from that town over the plateau to the Persian frontier, and is a chief halting place for pilgrim caravans from Teheran to Mecca. The population is variously estimated at from 30,000 to 60,000, and as the administrative capital of a Turkish vilayet, covering 27,000 square miles, with a population

of 675,000, it attracts a fair amount of trade. It has a Catholic bishop of the Armenian religion.

Esher, William Balliol Brett, 1st Baron (creat. 1885); was b. 1815. Ed. at Westminster, and at Caius Coll., Camb. (B.A., senior opt., '36, M.A. '40). Called to the bar at Lincoln's Inn ('46), made Q.C. ('60). Was M.P. for Helston ('66-68). Has successively held the offices of Solicitor-General ('68), justice of the Common Pleas ('68-75), judge of the High Court of Justice, Common Pleas Div. ('75-6), and a Lord Justice of Appeal ('76-83), in which latter year he was appointed **Master of the Rolls**.

Esquimaux. A harbour and naval station on the south-east of Vancouver Island, about three miles from Victoria, capital of the province of British Columbia, in the Dominion of Canada. Since the opening of the Canadian Pacific Railway its importance has become evident, and it is now being fortified and provided with strong armaments and all the necessities of a first-class naval arsenal. A large graving-dock has recently been constructed, and the place is connected by rail with the large coal mines at Nanaimo. Both the British and Canadian Governments have voted large sums for the creation of a *place d'armes*, and the latter is raising a permanent artillery force for its defence. See **BRITISH COLUMBIA**, and **CANADA**.

Essequibo. One of the three counties of **British Guiana** (*q.v.*).

Essex, County Council for. See **COUNTY COUNCILS**.

Established Church. See **CHURCH OF ENGLAND**.

Ether as an Intoxicant. See **SESSION**, sect. 125.

Ethical Society, London. An association for promoting ethical culture. Its principles are: (1) the good life has a claim upon us in virtue of its supreme worthiness, and this claim is the highest it can have; (2) it is therefore in no way dependent upon belief in a system of supernatural rewards and punishments; (3) in practice it is to be realised by accepting and acting in the spirit of such common obligations as are enjoined by the relationships of family and society, in so far as these are a means to the fullest development of our nature as man. The ethical movement was initiated by Dr. Felix Adler of New York, and has spread to Philadelphia, Chicago and St. Louis. Meeting Place: Essex Hall, Essex Street, Strand. **Hon. Sec., J. H. Muirhead, M.A.**, 34, Great Ormond Street, W.C. Other Societies in England: South Place Ethical Society, Finsbury, E.C.; Bethnal Green Ethical Society, Cottage Grove, E.; Cambridge Ethical Society, President. Professor Henry Sidgwick.

Eton and Harrow Cricket Match. See **CRICKET**.

Eton School. Founded 1440. Endowment exceeds £20,000 per annum. Pupils consist of King's scholars or "Collegers" (of whom there are 70, and who enter college between twelve and fourteen years of age), and of *Oppidans* or "Town-boys," who enter between ten and fourteen years of age. Exhibitions and scholarships to both Universities, ranging from £50 for four years downwards. *Motto*—*Floreat Etona*. Among its alumni occur the names of Horace Walpole; Bolingbroke; Porson; Hallam; Gray; the poet; Shelley; Wellington; Pitt; Canning; Fox; Lord North; Chenevix, the late editor of the *Times*; Dean Milman; W. E. Gladstone;

Dr. Pusey; Lord Iddesleigh; Lord Brabourne; Sir John Lubbock; Goldwin Smith; Lord Salisbury; Lord Coleridge, Lord Justice Cotton. **Read Master.** Rev. Edmond Warre, D.D. A mission is supported by past and present Etonians at Hackney Wick. Consult the *College Calendar*.

European Telegrams. See **TELEGRAPHS**.
Evangelical Alliance, The. Founded 1845-6, to enable Evangelical Christians of different denominations, and of all countries, to manifest their true unity in the essential doctrines of the Gospel, and in the defence of religious liberty. **International meetings** of the Alliance have been held in London, Paris, Berlin, Amsterdam, New York, Geneva, Basle, Florence, and Copenhagen, besides **Annual Conferences** in various towns in the United Kingdom, and great national Conferences in other countries where there are branches of the Alliance. A **Week of Universal Prayer** is observed in the early part of January each year throughout the whole world. **President**, Lord Folwarth. **Secs.** Gen. Sir J. Field, K.C.B., and A. J. Arnold. **Office**, 7, Adam St., Strand, W.C.

Evans, Alderman David, Lord Mayor of London, was b. at Llantrissant, Glamorganshire, in 1849. He entered the firm of Richard Evans & Co. in '68, and is now the sole partner. Was elected Common Councilman for Cordwainer Ward in '74, and ten years later became Alderman of Castle Baynard Ward. Served as Sheriff in '85-6. Is a Director of the Imperial Bank. For five years he held the mastership of the Surrey Farmers' Stagbonds. Was elected **Lord Mayor of London** on Sept. 29th, '91.

Evans, John, hon. D.C.L. Oxon., and LL.D. Dublin, Treasurer and Vice-President R.S., F.S.A., F.G.S., etc., was b. 1823. Author of several works on the ancient coins, implements, weapons, and ornaments of Great Britain and Ireland, and has contributed a variety of papers in the *Archæologia*, and in the *Numismatic Chronicle*, of which he is one of the editors. President of the Geological Society ('75-6), and of the Anthropological Institute ('78-9); **Pres. Numismatic Society** since '75, and has continually manifested his interest in all antiquarian subjects. **Hon. LL.D. (Camb.)** conferred on Dr. E. (June '90).

Evans, Rev. E. Herber, D.D., Chairman of the Congregational Union of England and Wales, has been pastor of **Salem Church, Carnarvon**, since 65. The church had been formed three years previous to Dr. Evans' settlement. He was educated at Brecon College, and entered the ministry in '62. He is treasurer of the Northern division of the Carnarvonshire Congregational Union. Dr. E. has long been a very popular speaker, and has often taken part in the annual meetings in connection with the denomination. He was elected **Chairman for '92** of the Union.

"Evening News and Post." A daily half-penny paper of Democratic and Conservative principles. It is an amalgamation (May '89) of the *Evening News* and the *Evening Post*. It gives the latest political, general, and financial intelligence of the hour, and pays special attention to cable-news and labour problems. It is the exponent of the new and progressive Toryism. Sporting news is a prominent feature. Managing editor, **Mr. J. H. Copleston**. **Office**, 12, Whitefriars St., E.C.

Evidence in Criminal Cases Bill. See **SESSION**, sect. 70.

Excise. See FINANCE, NATIONAL.

Executor. It is the custom in making a will in personal estate to name an executor or executors. Immediately upon the testator's death the executor becomes entitled to all the testator's personal property. He is bound first of all to bury the deceased and prove his will, then to pay out of it any debts due by the testator; and then to distribute the property, so far as it will go, in accordance with the will. Should there be more than one executor, each can exercise all the powers of the office, except that all must join in bringing any action respecting the estate. The office continues to the survivors or survivor. Should the executor renounce, or die, before taking out probate, or not appear when cited to take probate, his rights of executorship cease entirely. But when the last surviving executor dies, then his executors are also executors of the original testator. If the executor is an infant, the Probate, Divorce, and Admiralty Division of the High Court will grant administration to his guardian or some other person who becomes administrator *durante minoritate* (during the minority). An executor merely in virtue of his appointment is released from any debts due from him to the testator, and may retain out of the assets any debt due from the testator to him in priority to all other debts of the same degree; but this provision is so guarded in equity as to be practically of no effect. Any person who takes upon himself to be executor without having been appointed, is said to be an executor *de son tort* ("of his own wrong"), and is not allowed to derive any benefit from the office. Should no executor be available, the Court will grant letters of administration *cum testamento annexo* (with the will annexed), as distinct from the ordinary letters

of administration granted when a person dies without making a will.

Exeter, Rt. Rev. Edward Henry Bickersteth, Lord Bishop of. The see was founded in 1046, the earlier prelates taking the title of Bishops of Devonshire from the year 909. The present income is £4200. His lordship, the 63rd bishop in succession, was b. 1825, and is the only son of the late Rev. E. Bickersteth, rector of Watton, Herts. Ed. at Trin. Coll., Cambridge. Was Chancellor's English Medalist three years in succession ('44-6), graduated B.A., Sen. Opt., and 3rd class Classical Tripos ('47), M.A. ('50), Hon. D.D. ('85), Priest ('49). Vicar of Christ Church, Hampstead ('55-85); and rural dean of Highgate ('78-85). Appointed Dean of Gloucester ('85), and in the same year consecrated Lord Bishop of Exeter. Among his chief works are "Poems" ('40), "Yesterday, To-day, and For Ever—a Poem in Twelve Books" ('66), the "Hymnal Companion to the Book of Common Prayer," a "Commentary on the New Testament," and "The Shadowed Home and the Light Beyond."

Exeter Hall, Strand, London. (Headquarters of the Y.M.C.A.) Erected in 1830-31 by Deering, for the holding of religious and philanthropic meetings. Celebrated as the scene of the religious meetings held annually in the month of May. Now the property of the Central Young Men's Christian Association, having been purchased and presented to that body by friends of the Institution at a total cost of £61,000. The Exeter Hall Gymnasium in Long Acre was opened in '88 by the Prince of Wales. Gen. sec., E. J. Kennedy; Fin. sec., Clarence Hooper. See YOUNG MEN'S CHRISTIAN ASSOCIATION.

Explosions in Mines Commission. See MINES.

Extraordinary Tithes. See TITHES.

F

Fabian Society. Founded in 1883 for the purposes of carrying on a socialist propaganda among the middle classes. According to its manifesto, the Society "aims at the re-organisation of society by the emancipation of land and industrial capital from individual and class ownership and the vesting of them in the community for the general benefit." The parent Society has 450 members, of whom 120 are lecturers. Over 1400 lectures were given gratuitously by members in the year ending March '91, in London and all parts of England, at Radical clubs, etc. Local Fabian societies have been established in Bombay, South Australia, New York, and in fifteen towns in the United Kingdom. The Society has published "Fabian Essays in Socialism," which has had a large sale, and "Fabian Tracts," dealing with the theory and the application of Socialism, especially in relation to current national and local politics. The Society has fortnightly lectures in London, followed by discussion, which are usually open to the public. Sec., E. R. Pease, 276, Strand, W.C.

Factory and Workshop Act, '78. This Act consolidates a series of statutes for the regulation of factories and workshops extending

from the commencement of the century down to the present time. It contains practically all the law dealing with this subject, and extends to a hundred and seven sections. The first part contains the general provisions for drainage, ventilation, and fencing of dangerous machinery, vats, etc., as well as the rules regulating the hours of labour for women, young persons and children. In textile factories the hours of labour for women and young persons are not to exceed ten, and Saturday is to be a half-holiday. The hours of labour for children are fixed at half of those allowed to women or young persons. These rules are modified in their application to other factories and workshops. Provision is made for holidays; for insuring the attendance at school of children employed in factories or workshops; for certificates of fitness for employment to be obtained by children and young persons; for giving notice of accidents to inspectors and certifying surgeons appointed under the Act. The second part contains special provisions relating to particular classes of factories and workshops—e.g., to insure lime-washing, etc.; restriction upon the employment of women, young persons or children in special industries, and exceptions relaxing the

law in favour of certain industries, etc. The third part regulates the appointment and functions of inspectors and certifying surgeons, fixes penalties and provides for their recovery before a court of summary jurisdiction. The fourth part contains miscellaneous provisions, and defines a "child" as any person under fourteen years of age, and "young person" as any person between the ages of fourteen and eighteen years.

Factory and Workshop Act, '91. See Session, sect. 71.

Faculties, Court of. A court of the Archbishop of Canterbury, presided over by the Master of the Faculties. To him must be made all applications for admitting notaries to or removing them from their office. The judge of the Provincial Courts of Canterbury and York is *ex-officio* Master of the Faculties.

Faer, Thomas, R.A., was b. at Burley Mill, Kirkcudbright, 1826; devoted himself first to water-colours, but subsequently he commenced painting in oils. His popular picture, "Scott and his Friends at Abbotsford," brought him prominently into notice. He settled in London in '52. His work "The Mitherless Bairn," shown at the Royal Academy Exhibition in '55, was spoken of as "the picture of the season." Amongst other of his famous pictures are "The First Break in the Family," "Sunday in the Backwoods," and "The Last of the Clan." Elected R.A. '64.

Faeroe Islands ("Sheep Islands"). A group in the North Atlantic forming a Danish dependency. Capital *Thorshavn*, on Stromoe Island. The islands (22 in number, 17 inhabited) are represented in the legislature of Denmark by a deputy, named by the king. See COLONIES OF FOREIGN POWERS.

Fairbairn, Rev. A. M., M.A., D.D., Principal of Mansfield Coll., Oxford, was b. 1838, near Edinburgh, and was ed. at the universities of Edinburgh, Glasgow, and Berlin. Commenced ministry ('60) at Bathgate, Linlithgow, afterwards removing to Aberdeen. In '77 he became Principal of Airedale Coll., Bradford, and for five years Dr. F. lectured at his *alma mater*, Edinburgh University, on "The Comparative History of Religions," and in '83 was selected as *Chairman of the Congregational Union of England and Wales*. The great work of his life, however, commenced with his removal in '86 to Oxford, and his appointment to the principalship of Mansfield College. A visit to America was undertaken by Dr. F. in the summer of '90. Has edited the Hibbert Lectures, '88, of the late Dr. Hatch. He is a frequent contributor to the *Contemporary Review*, and has also written many books, including "Studies in the Philosophy of Religion and History," "Studies in the Life of Christ," and "Religion in the History and Life of To-day." As an eloquent preacher, Dr. F. has acquired considerable popularity.

Faithfull, Emily, was b. at Headley rectory, Surrey, 1835. In '60 she started a "composing" room in Great Corn Street, for the training of females in type-setting. The Queen granted her a warrant appointing her printer and publisher in ordinary to Her Majesty. In the *Victoria Magazine* and other periodicals, Miss Faithfull has been a powerful advocate of the claims of women to remunerative employment. She is the author of a capital novel, "Change upon Change." For many years she was a popular lecturer. She was the founder of the

West London Express, in the printing of which she employed a large number of female compositors. In '88 Miss F. received an autographed portrait of the Queen. Visited, by request, the Queen of Roumania (Sept. '90), and detailed the various movements of women's work in England to Her Majesty.

Falkland Islands. Otherwise called *Les Iles Malouines*. A British colony situated in the South Atlantic, about 240 miles east of Magellan's Straits. Capital and port *Stanley*, on East Falkland, which island contains 3000 sq. m.; West Falkland has an area of 2300 sq. m., and lesser islands about 1200. *South Georgia*, an island 800 miles E.S.E., has been annexed to the colony. Its area is 1570 sq. m., but it is snow-covered, sterile, and uninhabited. The Falklands consist of low, hilly grass and moorland. The flora and fauna are Patagonian. Frozen mutton is exported to England. The Governor is assisted by an Executive and a Legislative Council; administration being that of a Crown colony. For statistics see BRITISH EMPIRE, etc. (table).

Farrar, Frederick William, D.D., F.R.S., Archdeacon of Westminster, was b. at Bombay 1831. Ed. at Cambridge, where he graduated with first-class classical honours, and became a Fellow of Trinity College. He obtained the Chancellor's prize for English verse. Ordained '57. Subsequently assistant master at Harrow, and Head Master of Marlborough School. Chaplain in Ordinary to the Queen, '73. Canon of Westminster and rector of St. Margaret's ('76); also Archdeacon of Westminster and Rural Dean, '83. Canon Farrar is an eloquent preacher and writer, his chief works being "Life of Christ" ('74), "Life of St. Paul," "The Early Days of Christianity," "Everyday Christian Life; or, Sermons by the Way" ('87), "Lives of the Fathers" ('88), "Sketches of Church History," ('89), etc. He is also an ardent temperance reformer; and recently associated himself with the movement for the institution of an Anglican monastic order with modern aims. Was appointed chaplain to the Speaker of the House of Commons (Oct. '90), in succession to the late Rev. Henry White. In Oct. '91, his new book, entitled "Darkness and Dawn," was published.

Fawcett, Mrs. Henry, the widow of the late Rt. Hon. Henry Fawcett, Postmaster-General, was b. 1847, at Aldeburgh, Suffolk. She is the author of several works, amongst which may be mentioned "Political Economy for Beginners," and "Tales in Political Economy." Mrs. Fawcett possesses oratorical powers of a very high order, and she is a frequent speaker at social meetings in London. Mrs. F. is an advocate of Higher Female Education, and has always taken a great interest in the movement for extending the parliamentary franchise to women. She was in '89 appointed President of the Women's Unionist Association.

Federation, Australian. See AUSTRALIAN FEDERATION.

Federation, Imperial. See IMPERIAL FEDERATION.

Ferdinand, Prince of Bulgaria, was b. in Vienna, 1861, youngest son of Prince Augustus of Saxe-Coburg and Princess Clémentine of Bourbon-Orleans, a daughter of Louis Philippe. The Prince served as an officer in the Austrian army, and possesses large estates in Hungary. After the deposition of Prince Alexander, Prince Ferdinand received a deputation from the *Sobranje* in '87, offering him the vacant

throne. He accepted the offer, and on the 14th August took the oath to the **Bulgarian constitution** at Tirnova. His sovereignty, however, has not been formally recognised by the Powers. He was in '91 received by the Emperor of Austria, and the fourth anniversary of his accession was celebrated with considerable festivity (Aug. 15th).

Fergusson, Rt. Hon. Sir James, Bart., M.P., G.C.S.I., K.C.M.G., Postmaster-General, is *c. s.* of the late Sir Charles D. Fergusson, and was b. in 1832, in Edinburgh. Ed. at Rugby and at Univ. Coll., Oxford. Succeeded his father in the baronetcy in '49. Served in the Grenadier Guards '51-5, going through the Crimean war. Retiring from the army, he entered Parliament, representing Ayrshire '54-7 and '59-68. He was Under-Sec. for India from '66 to '67, and Under-Sec. for the Home Office from '67 to '68, when he became Governor of South Australia. He held this position till '73, when he was appointed Governor of New Zealand. His next office was the governorship of Bombay, which he filled from '80 to '85. Returning to England, Sir James re-entered the House of Commons as M.P. for N.E. Manchester in '85, and was appointed Under-Sec. for Foreign Affairs in the following year. Sir James received the office of Postmaster-General in Sept. '91, on the decease of Mr. Raikes. In his varied career he has displayed much capacity for administration.

Fernando Po. A volcanic island in the Gulf of Guinea. Discovered in 1471 by a Portuguese sailor of same name, and ceded by Portugal to Spain in 1778. Capital Clarence Cove, originally an English settlement, established in 1827. Dense forests, luxuriant vegetation, picturesque scenery. The natives, Anlo or "Boobies," stupid and repulsive in appearance. Exports, india-rubber and palm oil. Now used as a place of exile for political offenders. See COLONIES OF EUROPEAN POWERS.

Ferry, Jules François Camille, distinguished French statesman, was b. at St. Dié, Department of the Vosges, in 1832. He was called to the French bar '54. Making himself conspicuous by his opposition to the Empire, and as one of the "thirteen," he was, in '64, tried and condemned. In '69 he was returned for the Corps Legislatif, and became from that time a prominent member of the Left under the Empire. The revolution of Sept. 4th, '70, made him a member of the Government of National Defence. In '71 he was returned to the National Assembly for his native department of the Vosges. He was afterwards Prefect of the Seine, but soon resigned. From '72 to '73 he held the post of French Minister at Athens. He was returned at the general election ('76-7), and in '79 Minister of Public Instruction and the Fine Arts. As Minister of Education he brought in a Bill directed against the Jesuits and their influence in schools, which, although passed by the Deputies, was rejected by the Senate. The cabinet revived disused laws and expelled the Jesuits by decree. Difference of opinion arose, and the Ministry fell. M. Ferry was Prime Minister ('80-81), his cabinet resigning on the question of the Expedition to Tunisia. He became Prime Minister again (Feb. '83), but his ministry was overthrown ('84) by an adverse vote relative to the war with China. At the General Election in Sept. '89 he was rejected by his old constituents, but in Jan. '91 was triumphantly returned.

Fiji. An island group and British Crown colony in the South Pacific. Name a corruption of Viti, the native name. Consists of two considerable islands: Viti Levu, 4250 sq. m.; Vanua Levu, 2600 sq. m.; and 225 smaller. Total area 7740 sq. m.; total pop. 127,444. Capital Suva, in Viti Levu; second town Levuka, in Ovalau. Port of call for steamers is Kantavu, the southernmost island of the group. Colony divided into sixteen provinces. Island of Rotumah (pop. 2409), to the north, annexed to Fiji in 1881. The islands are mountainous, well wooded, with luxuriant vegetation and fertile soil, tropical, the larger being of volcanic origin, the smaller of coral formation. Peaks 5000 feet high. Reefs and rocks abound in the seas. Various important rivers: the Rewa, in Viti Levu, is navigable 40 miles up. Forests contain valuable timber. Birds and fishes abundant, but hardly any animals except stock introduced. Minerals are iron, with, it is said, copper and gold. Natural productions are fruits, pearl-shell, bêche-de-mer, timber, dye and scent woods, etc. Climate tropical, but healthy and favourable to Europeans.—Fiji is a Crown Colony under a Governor, who is also Her Majesty's High Commissioner and Consul-General for the Western Pacific. The Legislative Council consists of six official and six unofficial members, appointed by the Governor. The Colony is represented in the Federal Council of Australasia. Two provinces and Rotumah are administered by English commissioners; fourteen provinces locally governed by chiefs called Roko Tui. Religion and missionary work divided among Church of England, Roman Catholic, Wesleyan, and Presbyterian. Prior to the introduction of Christianity, cannibalism and human sacrifices prevailed to a most alarming extent. Two State-aided public schools. For defence there is a body of about a hundred native constabulary. Industries are growing sugar, tea, coffee, cotton, coconut, arrowroot, tapioca, etc., which form the exports. Bananas are also rapidly becoming an important item. For financial statistics see BRITISH EMPIRE, etc. (table). Natives Polynesian with Papuan intermixture; are peaceable, orderly, becoming christianised and civilised. Europeans number 3567, and there are some 10,000 Indian and Polynesian labourers. During the American civil war European cotton growers first appeared in Fiji. The principal chief, "King" Thakombau, then offered sovereignty to England, which was refused. White adventurers mingled in his government about '70, and disturbances ensued. In '74 the "king" and chiefs gladly ceded the group to England. An epidemic of measles soon after carried off one-fourth of the native population. Boundaries determined in '80. For Executive Council see DIPLOMACY.

Fildes, Luke, R.A., studied in the schools at South Kensington, and later at the Royal Academy. He began his career by furnishing drawings on the wood to several papers and magazines, including *Cornhill*, *Once a Week*, and the *Graphic*. He also illustrated books. He first exhibited at the Royal Academy in '68, when he sent "Nightfall," followed in a few years by "The Empty Chair," which achieved no small popularity. A still greater success was made with "The Cassals," a realistic treatment of a sad theme. In those days Mr. Fildes was somewhat fond of mournful subjects, but

later he forsook them for a series of gay scenes of Venetian life, single figures of attractive women, and several brilliant portraits. In '81 he returned to a sad theme, "The Doctor," which proved to be one of the most popular pictures at the Royal Academy. Mr. Fildes was elected R.A. in '87.

Finance, National. The public revenue is now derived from customs and excise duties, probate and legacy, etc., duties, stamps, land tax, house duty, property and income tax, the post office, the telegraph service, the hereditary revenues of the Crown from woods, forests and land, and a number of miscellaneous sources, including fee and patent stamps. Little more than half a century ago, scarcely a necessary of life, not to mention luxuries, escaped taxation; and an idea of the extent to which the system was carried may be gained from the statement that whereas the total number of articles and subdivisions of articles in the English Tariff of Import Duties was 53 in '75, in '59 it was 307, and in '40 no less than 1,046. The public expenditure may be classed under two heads:—(1) Consolidated Fund Services, or sums the payment of which from the Consolidated Fund has been already authorised by Acts of Parliament, and which are issued at the proper time without the annual intervention of Parliament; and (2) Supply Services, which are the numerous items brought forward every year in Committee of Supply. Under the first head are included the charges for interest and management of the National Debt, the Civil List and Annuities to the Royal Family, and many salaries and pensions which are set forth in some detail below, and which in the national balance-sheet are included under "Other Consolidated Fund Charges." The total expenditure for Consolidated Fund Services in '90-91 was £28,703,104, and for Supply Services, £59,029,751. The financial year ends on March 31st, and generally after but sometimes before that day the Chancellor of the Exchequer makes the financial statement of income, expenditure, and national indebtedness, known as the Budget. There is a standing committee of the House of Commons for the examination of the accounts, showing the appropriation of the sums granted by Parliament to meet the public expenditure; and the Comptroller and Auditor-General, who has the duty of auditing all public accounts, reports to this committee whether or not the expenditure has been in accordance with the purpose for which it was granted.—The Civil Service votes, given in detail below, will be found well worthy of study. In these estimates were formerly included a number of grants in aid of local taxation,

and charges transferred from Local to Imperial Funds, which are now replaced by the transfer to local authorities of certain sources of taxation producing a considerably larger sum than the discontinued grants in aid. In Table A. we give the totals of the grants in aid in '90-91 and the estimates for '91-2. The taxation above referred to as having been transferred to the local authorities consists of Licence Duties, one moiety of the Probate Duty (see heading LOCAL GOVERNMENT ACT); the additional beer duty of threepence, and the extra spirit duty of sixpence, which was imposed in '90 for purposes of local finance. It will be remembered that Mr. Goschen's proposals were that the produce of this threepenny beer duty with the additional spirit duty should be distributed in the same proportions as were fixed in regard to the moiety of the Probate Duty, England getting 80 per cent., which was to be allocated: £150,000 to Metropolitan Police Superannuation, £150,000 to the County Police Fund, also for superannuation, £350,000 to the local authorities for the purchase of liquor licences; the residue, £300,000, to go towards reinforcing the funds of the County Councils. On the abandonment of the compensation proposals it was enacted that after the payment of the sums for police superannuation the residue of England's share should be distributed between county and county borough funds, any borough or county council being empowered to contribute any sum received in respect of the residue, or any part of that sum, for purposes of technical education. The licence and other duties just referred to are collected by the Government, but the sums allocated for local purposes are paid over to the Local Taxation Accounts, so that the amounts do not form a part of the revenue as given in the Imperial Budget. During the year ending March 31st, '91, there were transferred to the Local Taxation Account £1,235,502, being the produce of the additional beer duty and spirit duty; £3,334,419 8s. 7d. on account of Licences, and £2,404,401 3s. 1d. moiety of Probate Duty; total, £6,974,412 11s. 8d. Table B. shows the figures in more detail.

Table A.

	1891-92.	1890-91.
England and Wales	£ 1,019,236	£ 1,020,429
Scotland	231,236	250,873
Ireland	2,008,510	2,102,273
Total for United Kingdom	£ 3,258,982	£ 3,373,575

Table B.

	Local Taxation (Customs and Excise) Duties.	Licences.	Probate Duty.	Total.
	£	£ s. d.	£ s. d.	£ s. d.
England and Wales	991,673	3,024,419 8 7	1,931,520 18 6	5,947,613 7 1

Ireland	113,065	212,796 2 1	325,861 2 1
Total	1,235,592	3,334,419 8 7	2,404,401 3 1	6,974,412 11 8

On the succeeding page is given the National Balance Sheet for the year ending March 31st, '91, with the Budget Estimate for the current financial year which commenced on the 1st April. We

subjoin figures showing the produce from the principal articles contributing to Customs. But it should be noted that, in this case as in those of excise and stamps, the detailed figures given below show the receipts of the various heads of duty collected by Imperial officers. It is true that the whole or part of some of these items is paid over to the Local Taxation Accounts as explained above, the remainder only going to the Exchequer; but it was thought that the more convenient course would be to show what the duties actually yielded:—

Beer, Mum, Spruce, etc.	£13,136
Chicory	66,055
Cocoa and Chocolate	105,014
Coffee	182,006
Currants	118,314

The items Land Tax and House Duty speak for themselves. In regard to the Property and Income Tax , which was at the rate of <i>6d.</i> in the <i>£</i> , an approximate appropriation of the net produce under the different schedules, if based on the statistics of assessments for '89-90, would be:— Schedule A , Lands, Tenements, etc., £3,983,119; Schedule B , Occupation of Lands, Tenements, etc., £218,610; Schedule C , Annuities, Dividends, etc., £1,020,643; Schedule D , Professions, Trades, etc., £7,059,212; Schedule E , Public Offices, etc., £802,348.—The gross Post Office receipts were composed of postage collected by postmasters in the country and Metropolis, postage stamps sold, commission on money orders (£129,426), commission on postal orders (£212,728), and other items.—The figures given in the balance-sheet annexed show the net receipts. The sum which appears against the heading of Crown Lands is the net produce of the Woods, Forests and Land Revenues of the Crown, which is paid over and consolidated with the rest of the public revenue in return for the Royal Civil List. The interest received on the Sardinian Loan amounted to £24,945, on the Cape Railway Loan to £6,165, and the interest on the purchase money of Suez Canal Shares received from the Egyptian Government was £198,829. " Miscellaneous " contains numerous features of interest. Small branches of the hereditary revenue, under which is included £795 for "Rents and Royalties of Guano, etc., Islands," brought in £58,271; in the total of £1,588,679, Receipts by Civil Departments are included, £470,931 fees and fines received at county courts, £640 received at the Foreign Office for passport fees, £978 received in fees at the Friendly Societies Registry, £5,359 received at the Home Office for fees on appointments, naturalisation, under the Explosives and other Acts, from pedlars in the Metropolis, and for chimney-sweepers' licences in the Metropolis; £32,641 received in fees on Private Bills at the House of Commons, £27,813 fees received at the House of Lords, £67,757 Supreme Court of Judicature, England; Mint (including £364,710, seigniorage on silver purchased for coinage, £99,558 profit on bronze coinage, £741, repayment of expenses of coinage and specimen dies for Colonial and Foreign Governments, etc., £468,424); admission fees to the National Gallery, £1,045; fines and fees at the Police Courts, London, Chatham, and Sheerness, £16,415; South Kensington Museum, admissions and fees, £5,488; Stationery Office (including sale of publications, £36,947;	

sale of waste paper, £8,013; sale of ordnance maps, £13,705; income of London, Edinburgh, and Dublin *Gazettes*, £5,972—which sum is in addition to £20,516, revenue of the London *Gazette* collected in stamps), £94,926; fees received from visitors to the Jewel House, Tower of London, £2,667; candidates' fees, University of London, £15,065. Under the head of Post Office Savings Banks is shown £36,050, surplus of interest accrued to 31st December, '89, from securities to the credit of the P.O. Savings Bank Fund, beyond the interest paid or credited to depositors. The last great item under the head of Miscellaneous is £809,860, for Fee and Patent Stamps. Among the sums in this total were Companies' Registration, £46,146; County Courts, Ireland, £23,783; District Audit, £33,149; Judicature, England, £361,514; Judicature, Ireland, £35,739; Metropolitan Police Courts, £10,049; Patents for Inventions, £187,051.—Turning to the **Expenditure** for '90-91, some references to the **National Debt Charges**, and to the capital of the Debt, will be found lower down. The second column of the table, being the Budget Estimate for '91-92, is also dealt with later on. The item in col. 1 for the Naval Defence Fund is the second annual contribution towards the special fund of £10,000,000 which the Government obtained the sanction of Parliament to raise for strengthening the navy. Analysing item "Other Consolidated Fund Services," there is first the sum of £410,061 issued on account of the Civil List, which is made up of £60,000 for Her Majesty's Privy Purse; £131,260 for salaries of Her Majesty's household and retired allowances; £172,500 expenses of Her Majesty's household; £13,200 for Royal Bounty, Alms, and Special Services; £6,040 unappropriated; and £25,061 for pensions on the Civil List limited to £1,200 per annum (see Civil List PENSIONS). Next comes a charge of £168,000, being the amount of the **annuities to the Royal Family**. In addition there is a list of **pensions for naval and military services**, the amount and duration of the grants being: Lord Rodney (and all the heirs male to whom the title shall descend), £2,000; Earl Nelson (and to whom the title shall descend), £5,000; Duke of Wellington (for life of the present duke), £4,000; Viscount Combermere (to present viscount and next heir male on whom the title shall descend), £2,000; Viscount Exmouth (and to the heirs male on whom the title shall descend), £2,000; Lord Seaton (for life of present baron), £2,000; Lord Keane (for life of present baron), £2,000; Viscount Hardinge (to present viscount and next heir male who may succeed to the title), £3,000; Viscount Gough (to present viscount and next heir male who may succeed to the title), £2,000; Lord Raglan (for life), £2,000; Sir H. Havelock-Allan, Bart. (for life), £1,000; Lord Napier of Magdala (to the present baron), £2,000; and the heirs of the Duke of Schomberg, £720; total, £29,720 (see heading PERPETUAL PENSIONS). **Pensions for political and civil services** amounted during the year to £13,841, and the recipients included the Countess of Elgin and the Countess of Mayo, widows of Governors-General of India; Mr. S. H. Walpole, £2,000; Mr. Childers, M.P., £1,133; Mr. C. P. Villiers, M.P., £1,200; Lord Emly, £1,200. Viscount Hampden received a pension of £4,000 a year as late Speaker of the House of Commons. **Pensions for judicial services** (England) amounted to £43,977; among

the recipients being the Earl of Selborne, £5,000; Lord Herschell, £5,000; Lord Blackburn, £3,750; Sir J. Bacon, Lord Bramwell, Sir W. Grove, Lord Penzance, and Sir M. F. Smith, retired judges, each £3,500; Sir H. Cotton £570, being at the rate of £350 a year from Nov. 7th, '90; Lord Field, £304, being at the rate of £350 from Feb. 22nd, '90; and several retired county court judges—who as a rule received £1,000 each. A large sum is paid by way of compensation, some amounts being issued to persons formerly attached to the old Courts of Requests, the Marshalsea, and the Ecclesiastical and Prerogative Courts. Other sums were paid as judicial pensions to retired judges in Scotland and Ireland; and there were a few pensions for diplomatic services granted prior to 1869, the pensions granted for these services since that time being now voted in the Civil Service Estimates. The miscellaneous pensions, amounting to the comparatively small sum of £4,067, include two pensions formerly on the Civil List of George III. The salaries and allowances comprise the sums of £5,000 paid to the Speaker of the House of Commons, £20,000 to the Lord Lieutenant of Ireland; the salaries of the judges, the Lords of Appeal in Ordinary receiving £6,000 per annum each, the judges of the Court of Appeal, of the Chancery Division, and of the Queen's Bench Division receiving £5,000 each, with the exceptions of the Master of the Rolls (£6,000), and the Lord Chief Justice (£8,000); the salaries of the county court judges (£1,500); the salaries of the Metropolitan police magistrates, one at £1,800 and twenty-four at £1,500 per annum; the salaries of the Scotch judges, sheriffs and sheriffs' substitutes, and of the Irish judges. Miscellaneous services charged on the Consolidated Fund include £62,910, being the amount of annuities for ten years payable to the National Debt Commissioners, and created to redeem perpetual annuities and pensions. The cost of the "Army" and "Navy" will be found under those headings; the Civil Service Votes granted in the Session of '90, with the estimates for '91-92, are as follows:—

Post Office and kindred services will be found in the general balance-sheet above.—Having discussed the income and expenditure for '90-91, and so far as the supply services are concerned, the expenditure for '91-2, we may pass on to consider the state of that great burden upon the country, which is known as the **National Debt**. This debt was instituted by **William III.**, whose first regular loan, obtained in 1694, consisted of £1,200,000. Since that time other advances have been made by the Bank, and also by the Bank of Ireland, and enormous loans have been negotiated for the Government. Thus, at the accession of **Anne** the debt had grown to nearly thirteen millions; when **George III.** ascended the throne it amounted to more than a hundred millions; at the conclusion of the **American War**, in 1784, it stood at £249,851,000, and though there was a small decrease during the period of peace, 1784-93, additions amounting to £601,500,000 were made during the **French War**, and after the battle of **Waterloo** the debt reached the startling figure of £885,000,000. Since that year it has been considerably reduced, and at the end of the last financial year (**March 31st, '91**), it stood at £684,070,959. The gross totals of debt on **March 31st, '90**, and **March 31st, '91**, were made up as follows:—

	1890	1891
(1) Funded Debt	£585,959,852	£579,472,082
(2) Terminable Annuities	71,731,869	68,458,798
(3) Unfunded Debt	32,252,305	36,140,079

Total National Debt (D) £689,944,026 £684,070,959

(1) This consists of the various stocks, and of the debts to the Banks of England and Ireland. On **March 31st, '91**, the Funded Debt was made up as follows:—

	£
3½ per cents.	225,746
2½ per cent. Consols	527,099,915
2½ per cents. (1905)	4,647,799

Exchequer Bonds (2½ per cents.)	418,300

565,826,213

The debts to the Banks of England and Ireland at 3 per cent.—£13,645,869—added to the total at the end of the previous column, will be seen to produce a grand total of £579,472,082. (2) These are annuities in which the payment is made for lives or terms of years, after which it ceases altogether, the return made being increased as the period of time is shortened; in other words, a portion of the principal is repaid with the interest in each year while the arrangement continues. In estimating the amount of the Debt, these annuities are capitalised. (3) This consists of temporary loans raised upon the security of bills and bonds issued by the Exchequer and Treasury. We may now turn for a moment to a matter which was formerly mixed up with, but is now separated from, the National Debt. The State has for nearly a century made advances of money to bodies and individuals in furtherance of objects approved by Parliament, which advances have been managed by the Treasury, Public Works Loan Commissioners and West Indian Incorporated Estates Commissioners, the Irish Board of Works and the Paymaster of Civil Services, and the Irish Land Commissioners. Up to **March 31st, '91**, there had been advanced in

this way a total of £117,956,319, of which £66,246,251 had been repaid, £12,020,607 had been remitted, and £66,385 had been written off from the account of assets, the assets of the Local Loans Fund on the above date being estimated at £39,025,875. The Local Loans Debt was always treated as a part of the National Debt until, under the Act of '87, Mr. Goschen separated the accounts, while in the course of the year '86-7 he reduced the National Debt by £26,558,959, being stock exchanged for Local Loans stock and cancelled. To the figure (D) of £684,070,959 there are to be added certain capital liabilities amounting to £1,883,059, and deducted certain assets (including the nominal value of the Suez Canal shares, £3,532,040), amounting in all to £5,272,437. With these readjustments the net national indebtedness amounted, **March 31st, '91**, to £680,681,587, as compared with £684,954,150 on the corresponding day of the preceding year, both estimates being made upon the same basis. The balances at the banks of England and Ireland amounted on **March 31st, '91**, to £6,370,897 and twelve months previously to £5,220,261. The total charge for the service of the Debt was, in '18, £32,457,000; in '86-7, £26,074,871; '78-4, £26,706,726; '70-7, £27,992,834; '79-80, £28,762,874; '85-6, £23,449,678; '86-7, £27,958,023; '88-9, £26,224,594; '89-90, £25,226,760; '90-91, £25,207,000. The amount of the charge in any year depends upon the sum required for interest plus the sum, if any, devoted by the operation of terminable annuities and sinking funds to the repayment of capital. In '75 Sir S. Northcote fixed a sum for the annual service of the Debt inside the Permanent Annual Charge of the Debt, which fixed sum included all charges connected with the Debt except such as related to that part of the funded and unfunded debt which had been specifically created for local loans and other reproductive purposes. The sum payable for interest was considerably within this fixed charge, and the balance was to be applied to reduction of capital; and as the amount required for interest decreased year by year the annual reduction would in course of time have grown very large. Although the scheme was, owing to extraordinary financial requirements, partly suspended at times, large reductions of capital were effected by it. Mr. Goschen in his '87-8 Budget reduced the fixed charge from £28,037,000 to £26,000,000. This left £5,000,000 a year applicable to the redemption of Debt, which he then said would redeem at par £600,000,000 in about fifty-two years, and £700,000,000 (practically the whole Debt) in about fifty-seven years. The most material change made for many years in regard to the service for the Debt was, however, effected under the National Debt (Conversion) Act, '88, which provided for a reduction of interest from 3 per cent. to 2½, and ultimately to 2½. The saving to the country by the operation was estimated at about £1,400,000 a year from 1889 to 1903, and from 1903 about £2,800,000 per annum. The Conversion Scheme, by reducing the interest on the Debt, placed about £1,500,000 at the disposal of the Chancellor of the Exchequer; and of this sum he, in '90, appropriated £1,000,000, reducing the fixed charge for the Debt from £26,000,000 to £25,000,000, at which figure it now stands.—In introducing his Budget for '91-2, Mr. Goschen (April 23rd) stated that while he had estimated for a surplus in the year '90-91 of £233,000, the surplus actually realised, in

spite of increased expenditure, amounted to no less than £1,756,000. The estimated revenue and expenditure had been £87,610,000 and £87,377,000 respectively; the actual revenue and expenditure had been £89,489,112 and £87,732,855. Mr. Goschen stated that, during the four years he had held office, the National Debt had been reduced by £30,939,000; and that he estimated that each penny of the income tax would now produce £2,300,000. The estimated expenditure and revenue for '91-2 on the basis of the then existing liability and taxation would have given him a prospective surplus of about £2,000,000, but by appropriating £500,000 for barrack construction, £400,000 for the re-habilitation of the gold coinage, and £920,000 for Education, he left himself with a final balance for contingencies of £166,000. For details of final estimates of income and expenditure see general balance sheet (*supra*). See also Civil Service estimates *supra*, and Session, sects. 56 and 69.

Fire Brigade, Metropolitan. See METROPOLITAN FIRE BRIGADE.

Fish Culture. The growth of the science of pisciculture in this country, although tardy, is steady, and there exists a fair number of establishments in the United Kingdom devoted to its prosecution. Among them may be mentioned the Howetoum Fishery, at Sterling, belonging to Sir James Matland, which not only disseminates salmon and trout life in Scotland, but also in England; the Solway Fishery, owned by Mr. T. Armistead; the interesting establishment belonging to Mr. T. Andrews, at Guildford; and the Midland Counties Fish Culture Establishment, founded by the late Mr. Wm. Burgess, at Malvern Wells, and now conducted by his son, Mr. John Burgess, which is the largest of its kind in England. It contains a hundred ponds and two hatcheries, each capable of accommodating six millions of ova. In order to assist Fishery Boards and other public bodies in developing fish life in the waters under their control, Mr. Burgess hatches ova for them free of charge, and turns the fry into their respective rivers and streams. During '91 consignments of the ova of various transatlantic salmonidæ were again received at this establishment from the United States Commissioners of Fish and Fisheries, together with ova of the American whitefish, *Coregonus albus*, which were incubated successfully, and the young fish have thriven. The naturalisation of this valuable food form still excites much interest, and the success attending its naturalisation at the establishment last year has been maintained in spite of the severe winter of '91; and there are many examples now in the ponds measuring ten inches, which represents the growth of eighteen months. Among the foreign fish which are being reared in this country, besides the whitefish, are the Californian (Rainbow) trout, the American brook char, Landlocked salmon, and Norwegian trout. Fish culture has, during the past year, made decided progress; and, with a view to stimulating increased interest in the subject, a series of lectures are being given by Mr. W. August Carter in London and the provinces, one of which was delivered by him at the South Kensington Museum, with the Marquis of Lorne in the chair. From the Midland Counties Fish Culture Establishment consignments of salmonidæ, perch and tench have been successfully transmitted abroad. The latest addition

to piscicultural literature is a work entitled "Modern Fish Culture," by Mr. Burgess. Sec. of the establishment, Mr. W. August Carter, 5, Roxburgh Road, Westgate-on-Sea. Fisheries Preservation Association—Office, 11, Seymour Street, Portman Square, W.

Flats, Law as to, in '91. The question whether flats can be considered as separate buildings from the point of view of a surveyor came before the Queen's Bench Division in the case of *Moir v. Williams* (May 12th, '91). The appellant was a builder, who had been ordered to pay the respondent, a district surveyor, £67, in respect of his inspection of a building which the appellant had erected. The building was divided into fourteen flats, and the respondent claimed to be paid as for fourteen separate houses. The appellant disputed this charge, and the Queen's Bench Division decided in his favour, holding that the magistrate was wrong in regarding the flats as separate houses.—The case of *Allochur v. Guardians of Hendon Union* (Court of Appeal, July 6th, '91) raised an important point as to whether there can be said to be separate occupation of a house which, though not originally built for the purpose, has been converted into flats. It was contended that because there was no structural severance there must be a joint occupation by persons who occupied the various parts of the premises, but the Court held that the occupations were separate, and that the occupiers must be separately rated. If the staircase was used in common they did not jointly occupy it. It was occupied by the landlord, and they had each an easement over it. The decision, it was added, might give trouble to overseers, but it was their duty to make the necessary inquiries as to the actual occupation of premises. The tenant of a residential flat was entitled by his agreement to the use of an hydraulic lift from 10 a.m. to 10 p.m., and "at other times without the use of an attendant." On several occasions, however, he found that the water had been cut off after 10 p.m., and that he could only go to his rooms by the staircase. The landlord contended that upon a reasonable construction of the agreement the tenant was only entitled to use the lift at "reasonable times," and that use after midnight and before 8 a.m. was not a reasonable use. The Chancery Division (*De Fock v. Sandon*, Dec. 18th, '90) refused to accept this view, and granted an injunction based upon the terms of the agreement.

Flax. See TRADE, '91.

Fletcher, Alfred Ewen, the new editor of the "Daily Chronicle" (*q.v.*), was b. at Long Sutton in 1841, and was ed. at Owens College, Manchester, and Edin. Univ. After a short scholastic career he resigned the profession of a teacher for that of a journalist, and contributed to *Chatter-box* and other periodicals till '72, when he became editor of the *Barrow-in-Furness Vulcan*, where he remained till '76, when the *London correspondence of the Barrow Daily Times* was offered to him. He afterwards became connected with the *Educational Times*, and for a period acted as sub-editor of the *Pictorial World*. Since '78 Mr. F. has transferred his services to the *Daily Chronicle*, and on the death of Mr. R. W. Boyle, in '89, was appointed to the editorship of that journal. His editorship of the *Cyclopædia of Education* must also be noted, while since his elevation in '90 to the editorship of the *Daily Chronicle* abundant proof of his

ability has been exhibited by the introduction of new features into that journal.

Floquet, Charles Thomas, was b. Oct. 28th, 1828, at St. Jean Pied de Port, in the Lower Pyrenees. Called to the Paris bar ('51), and practised for many years. After the fall of the empire he became deputy mayor and member of the National Assembly, but resigned both positions during the Commune. For suspected participation in the latter he was arrested at Biarritz, and interned at Pau until the end of '71. He subsequently became president of the Municipal Council, and member of the Chamber. In Jan. '82 he succeeded M. Herold as Prefect of the Seine, a position he resigned a few months later. Again elected to the Chamber in Oct. '82, he twice became its vice-president, and on M. Henri Brisson forming a cabinet, M. Floquet was elected president, an office he filled with tact and dignity. On the resignation of the Tirard Cabinet, in April '88, M. Floquet undertook the task of forming a Ministry, he himself taking the offices of President of the Council and Minister of the Interior. M. Floquet allowed himself, in the heat of debate, to be so far provoked by General Boulanger as to challenge him to a duel, which was fought with rapiers in Comte Dillon's grounds in July '88, and resulted in a victory for M. Floquet, who inflicted a serious wound in the neck of his adversary. M. Floquet in Oct. '88 introduced a Bill for the revision of the French Senate. A debate on this question resulted in the defeat of the Ministry by 307 to 218, and the resignation of M. Floquet on Feb. 14th, '89. Elected President of the Chamber for the Session '89-90.

Folk Lore—originally the lore (learning) of the "folk" or people, i.e. the natural or uncultured classes of mankind as opposed to the cultured (later literary) classes—is a science the ultimate object of which is the investigation of the primitive mind of man in its various phases towards God and nature. In 1878 a **Folk Lore Society** was established by Mr. Thoms, and it has since published several important collections of folk-tales, etc., and regularly issues a periodical. Considerable interest in the subject has recently been awakened in America and on the Continent. The second international congress was held in London in Oct. '91, and proved very successful and interesting in its discussions. President, Mr. Andrew Lang (*q.v.*). Hon. sec., Mr. J. J. Foster, 36, Alma Square, St. John's Wood, N.W.

Football. Although of some antiquity, football was, a couple of decades or so back, chiefly confined to our public schools and colleges. Now, however, all is changed; and although the game has oftentimes been censured as rough and brutalising, and has probably met with more opposition than any other of our pastimes, yet none has grown so rapidly in popularity during the last ten years. Judging by the attendances at the principal fixtures, especially in the north, football matches prove more attractive than cricket contests, and amongst the records in the way of "gates" mention may be made of that created in the final for the Association Challenge Cup, between the Blackburn Rovers and Notts at Kennington Oval, on March 21st, when from the return of the gate money close upon 30,000 persons must have been present, an attendance which has probably only been surpassed in the United Kingdom on the occasion of the memorable gathering at Perry

Barr, near Birmingham, once at Sheffield (which town claims the oldest Association Club in the country), and the England v. Scotland match at Glasgow in the Easter of '90, though neither quite reached the Australian record of 32,595. Another remarkable feature in this respect occurred at the match between Lancashire and the Rest of England at Whalley Range, Manchester, on April 18th, '91, when play was witnessed by close upon 20,000 persons, all of whom had purchased their tickets beforehand, no money whatever being taken at the gates. The question of professionalism had to be considered by the ruling bodies of both codes in '91, and at a meeting of the Rugby Union, held at the Westminster Hotel, on March 24th, suggestions were made for altering the method of scoring, for abolishing the "dead" ball, and for dealing with the illegal importation of players. With reference to the latter point, the Rev. F. Marshall proposed "That the Union Committee be requested to make such alterations and additions to Regulation 3" (regulations relating to professionalism) "as shall prevent the illegal importation of players." Each of the proposals bore fruit, and at the general meeting of the Union held at the same hotel on Sept. 16th, important rules as regards the transfer of membership were passed in support of Mr. Marshall's views with but few dissentients. Rules bearing on the other subjects were agreed to as follows: "That Law 7 be altered and read thus: A match shall be decided by a majority of points: a try shall equal two points; a penalty goal shall equal three points; a goal from a try (the try not also to count) shall equal five points. Any other goal shall equal four points. If the number of points be equal, or no goal be kicked or try obtained, the match shall be drawn." "That Laws 8 and 13 be struck out, and that Law 12 read thus: A player when on side may take up the ball at any time, except (1) in a scrum; (2) when the ball has been put down after it has been fairly held; (3) when it is on the ground after a player has been tackled. That the maximum extent of the dead-ball line be 25 yards." An excited discussion followed the proposal, "That bye-law 1 be altered so that the following be ingrafted in it: That the meetings of the English Rugby Union (annual) shall be held for the future in the north and south alternately. 143 voted for the motion and 106 against it, and as a two-thirds majority is necessary for the passing of a new rule, it was lost. A special general meeting of the London Football Association was held at Audertons' Hotel, Fleet Street, E.C., on June 19th, when Sir Reginald Hanson, M.P., presided, and was supported by about 180 members of affiliated clubs. The chief question at issue was as to professionalism in the south, arising out of a circular sent out by the Royal Arsenal Club, and it transpired that at a recent council of the London Football Association resolutions were drawn up against professionalism. The chairman pointed out that if these resolutions were carried it would be necessary to submit them to the annual general meeting to be held in September next. Mr. N. L. Jackson then proposed "That any club belonging to this Association playing against a professional club or player, except in the Football Association Cup ties, shall cease to belong to this association." Mr. T. Gunning (Hon. Secretary, L.F.A.) supported the resolution, and threatened that if it was not passed the L.F.A. would secede

from the Football Association. Mr. C. W. Alcock (secretary Football Association) opposed the resolution, and was supported by Mr. J. H. Farmer (Old Harrovians). At length the question was put from the chair, when 76 voted against the resolution, whilst 67 were in favour. Consequently professionalism is now recognised in the South. In the season of '90-91 a large number of matches had to be re-arranged, whilst many club contests were altogether abandoned, owing to unfavourable weather, that experienced during the months of December and February being especially bad. The first international match under Association rules was played at Belfast, on Feb. 7th, when Ireland beat Wales by seven goals to two. The teams were:—**Ireland**—J. Clugston (Cliftonville, goal), M. F. Goodbody (Dublin University), J. Morrison (Linfield Athletics, backs), S. Crawford (Cliftonville), J. Reynolds (Ulster), J. Moore (Linfield Athletics, half-backs), J. Dalton, J. Gaffikin (Linfield Athletics), G. Stanfield (Distillery), J. Peden, and S. Torrains (Linfield Athletics, forwards). **Wales**—Turner (Wrexham, goal), Roberts (Wrexham), Lloyd (Ruthin, backs), Griffiths (Chirk), Mates (Chirk), Lea (Wrexham, half-backs), Davis, Owen (Chirk), Davies (Welshpool), Roberts, and Lewis (Wrexham, forwards). On March 7th, at Sunderland, England defeated Wales, the scores in this contest being four goals to one in favour of the representatives of the Rose. It will be seen that the Welshmen on this occasion varied their team:—**England**—L. R. Wilkinson (Old Carthusians, goal), T. Porteous (Sunderland), E. Jackson (Oxford, backs), A. Smith (Notts Forest), J. Holt (Everton), A. Shelton (Notts, half-backs), G. Brann (Swifts), J. Goodall (Derby, captain, right wing), J. Southward (Blackburn Rovers, centre), A. Milward and E. Chadwick (Everton, left wing). **Wales**—R. E. Turner (Wrexham, goal), W. G. Evans (Builth and Aston Villa), S. Powell (Summerhill and West Bromwich Albion, backs), W. Hughes (Carnarvon and Bootle), H. Jones (Bangor and Queen's Park), C. Parry (Llansilin and Everton, half-backs), J. Davies, W. Owen (Chirk, right wing), W. H. Turner (Wrexham, centre), G. G. Howell (Builth), and W. Lewis (Bangor and Crewe Alexandra, left wing). On the same date, at Wolverhampton, the Englishmen also defeated Ireland, the verdict being six goals to one against the wearers of the Shamrock, who were represented by Clugston (Cliftonville, goal), Forbes (Belfast Distillery), Morrison (Linfield Athletic, backs), Crawford (Cliftonville), Reynolds (Ulster), Moore (Linfield Athletic, half-backs), Whiteside (Distillery), Stanfield (Distillery), McCabe (Ulster), McIlvenny (Ulster), and Peden (Linfield, forwards). The England side consisted of W. C. Rose (Wolverhampton Wanderers, goal), J. Marsden (Darwen), A. Underwood (Stoke, backs), J. Bayliss, C. Perry (West Bromwich Albion), J. Brodie (Wolverhampton Wanderers, half-backs), W. Bassett (West Bromwich Albion), T. Lindley (Notts Forest), A. G. Henfrey (Cambridge University), G. H. Cotterill (Cambridge University), and H. B. Daft (Notts County, forwards). On March 21st, at Wrexham, Wales sustained a further defeat, this time by Scotland, who scored four goals to three gained by the home players. The game, however, was splendidly contested throughout. Sides: **Wales**—J. Trainer (Wrexham and Preston

North End, goal), Seth Powell (Summerhill and West Bromwich Albion), D. Jones (Chirk and Bolton Wanderers, backs), A. Lea (Wrexham), Humphrey Jones (Bangor and Queen's Park, captain), C. Parry (Llansilin and Everton, half-backs), Joe Davies (Chirk), W. Owen, (Chirk, right wing), W. Lewis (Bangor and Crewe Alexandra), J. C. H. Bowdla (Rhagader and Wolverhampton Wanderers, left wing), W. H. Turner (Wrexham, centre). **Scotland**—J. McCorkindale (Patrick Thistle, goal), A. Ritchie (East Stirlingshire), J. Hepburn (Alloa Athletic, backs), M. McQueen (Leith Athletic), A. Brown (St. Mirren), T. Robertson (Queen's Park, half-backs), W. Guillard (Queen's Park), R. Buchanan (Abercorn, right wing), R. Boyd (Mossem Swifts), A. Keillior (Montrose, left wing), J. Logan (Ayr, centre). On the following Saturday, at Glasgow, "Bonnie Scotland" was again to the front, beating Ireland by two goals to one. Teams: **Scotland**—G. Gillespie (Queen's Park, captain, goal), D. Sillars, (Queen's Park), W. Paul (Dykebar, backs), (Hamilton (Hurlford), J. Clelland (Royal Albert) J. Campbell (Kilmarnock, half-backs), J. Lowe (Cambuslang), R. Clements (Leith Athletic), W. Bowie (Linthouse), J. Fraser (Moffat), R. Waddell (Queen's Park, forwards). **Ireland**—Loyal (Clarence, goal), Gordon (Linfield), Forbes (Distillery, backs), Crawford (Cliftonville), Reynolds (Ulster), Moore (Linfield, half-backs), Dalton, Guffikin (Distillery), Stansfield (Distillery), Brisby (Distillery), Torrains (Linfield, forwards). It will be observed that the Scottish team was an altogether different one to that which conquered Wales, and in the last and greatest International Association match of the season—that between England and Scotland, at Ewood Park, Blackburn, on April 4th—they yet placed another eleven in the field, but were defeated by their rivals by two goals to one. Sides: **England**—W. R. Moon (Old Westminsters, captain, goal), R. H. Howarth, R. Holmes (Preston North End, backs), A. Smith (Notts Forest), J. Holt (Everton), A. Shelton (Notts, half-backs), W. J. Bassett (West Bromwich Albion), J. Goodall (Derby County, right wing), F. Geary (Everton, centre), E. Chadwick, A. Milward (Everton, left wing, forwards). **Scotland**—J. Wilson (Vale of Leven, goal), W. Arnett (Queen's Park, captain), R. Smullic (Queen's Park, backs), J. Begbie (Heart of Midlothian), J. McPherson (Heart of Midlothian), T. Hill (Heart of Midlothian, half-backs), F. Watt (Queen's Park), T. Rankine (Vale of Leven), W. Sellar (Queen's Park), W. Berry (Queen's Park), J. Baird (Heart of Midlothian, forwards). The drain upon their supply of Association players caused by the demand, it is said, of English professional clubs, placed Scotland at a disadvantage in the matter of getting together a strong side, and this condition of affairs was by no means improved by a disagreement between the Scottish Association and the Scottish League. Of the first thirteen matches played between these countries nine were won by Scotland and two were drawn, and our friends across the border scored forty-three goals to twenty-three. In the seven matches played subsequently, victory has only twice rested with Scotland. Only the same number of victories can be claimed by England, but they have scored fourteen goals to ten. These statistics indicate a falling off on the part of Scotch teams, and with professionalism prospering in this

country, and denounced in Scotland, the situation does not seem likely to improve. Altogether England had an exceptionally successful season, winning all three matches, but especial care was taken that no chance of turning the tables on Scotland should be lost. Of the dozen goals obtained for England Goodall, Southworth, Chadwick and Milward scored against Wales, and G. H. Cotterill, A. G. Henfrey, Daft, T. Lindley, and Bassett (two) v. Ireland, the points against Scotland being credited to Goodall. The North and South match was played at Nottingham on Jan. 12th, and resulted in favour of the former by three goals to one, but Wilkinson's goal-keeping for the South formed one of the features of the afternoon's play. The Oxford and Cambridge match proved somewhat disappointing as regards the quality of the play, and in the result the Dark Blues won by two goals to nil. The engagement between the combined Universities and London was cancelled, out of respect to the memory of Mr. H. M. Walters, who died two days prior to the fixture, from the effects of an accident sustained whilst playing for the Casuals against St. Bartholomew's Hospital, an event which caused the greatest sorrow throughout football circles. The new conditions governing the Association Challenge Cup competition detract somewhat from the general interest in the struggle during the first few months of the season, but the later series of ties attract as much attention as ever. The concluding match for this trophy was left to the Blackburn Rovers and Notts County, play, as already intimated, taking place at Kennington Oval on boat-race day, when the Rovers (who held the trophy) won by three goals to one. Sides: **Blackburn Rovers**—J. Pennington (goal), T. Brandon, J. Forbes (captain, backs), J. Barton, G. Dewar, J. Forrest (half-backs), J. Lofthouse, N. Walton (right wing), John Southworth (centre), C. Hall, W. J. Townley (left wing, forwards). **Notts**—J. Thraves (goal), A. Ferguson, J. Hendry (backs), H. Osborne, D. Calderhead, A. Shelton (half-backs), H. B. Daft, W. Locker (left wing), J. Oswald (captain, centre), J. M'Innes, A. C. McGregor (right wing, forwards). Umpires: Messrs. T. Gunning (hon. sec. London Football Association) and W. H. Jope (Wednesday); referee, Mr. C. J. Hughes (Cheshire). The cup and medals were subsequently presented by Lord Kinnaird, President of the Football Association, in the committee room of the pavilion. Inter-Association matches have scarcely been so interesting as in former years, a result due in great measure to the various League competitions, which now excite such keen rivalry that members prefer to play for their Club rather than for their county.

	Played.	W.	D.	L.	Pts.
Everton.....	22	14	1	7	29
Preston North End ..	22	12	3	7	27
Notts	22	11	4	7	26
Wolverhampton W....	22	12	2	8	26
Bolton Wanderers ..	22	12	1	9	25
Blackburn Rovers ..	22	11	2	9	24
*Sunderland	22	10	5	7	23
Burnley	22	9	3	10	21
Aston Villa	22	7	4	11	18
Accrington	22	6	4	12	16
Derby County	22	7	1	14	15
W. Bromwich Albion ..	22	5	2	15	12

*Sunderland had two points deducted for utilising an ineligible player

Preston North End was at the head of the list of '89-90, but, as will be seen by the above table of results for '90-91, they were deposited by Everton, this Liverpool club taking a decided lead from the opening of the competition. In the **Alliance Competition** premier honours were gained by Stoke (who had to give way in the League contest to Sunderland) with 33 points (13 wins, 7 draws, and 2 losses), Sunderland Albion coming next with 30 points (12 wins, 6 draws, and 4 losses), and Grimsby Town just beating Birmingham St. George's for third award, with 27 points (11 wins, 5 draws, and 6 losses), as against 26 points (12 wins, 2 draws, and 8 losses). Gainsborough Trinity obtained pride of place in the **Midland Competition** with 26 points, the Long Eaton Rangers being second with 22 points. The Lancashire combination was headed by Bury with 33 points, and the Cleveland or Northern by Middlesbrough Ironopolis with 20 points. Royal Arsenal (who in the season of '90-91 have so far failed to justify the assertion that they would improve by becoming a professional club) won the London Senior Cup, St. Thomas's Hospital was credited with the Inter-Hospital trophy, and the 2nd Scots Guards took that of the Army. Shrewsbury Town secured the Welsh cup, the Scottish fell to the Heart of Midlothian, and the Irish to the Linfield Athletic Club; whilst the Casuals were successful in the London Charity Cup competition. A team of **Canadian players** visited this country, but their play was not of the order which allowed of their competing with our leading clubs with any degree of success. The record in the **League Championship** competition of the '91-92 season up to Nov. 7th shows that the Bolton Wanderers are leading with 20 points, the clubs coming next being—Aston Villa with 14 points Preston North End with 13, Derby County with 11, Sunderland, Notts, Everton, and the Blackburn Rovers with 10 each, Bromley, Accrington, and the Wolverhampton Wanderers with 8 each, and Stoke, Darwen, and West Bromwich Albion with 6 each. The Sheffield United have, so far, enjoyed a most prosperous season, although defeated by the Casuals at the Oval on October 1st by three goals to nil. Lord Kinnaird is president of the Association, and Mr. C. W. Alcock is the secretary. The Rugby international match list was opened at Newport (Mon.) on Jan. 3rd, with the contest between England and Wales, in which the former proved victorious by two goals and a try to one goal. Sides: **England**—W. Mitchell (back), R. E. Lockwood, F. Alderson (captain), and P. Christopherson (three-quarter backs), W. Berry and W. R. M. Leake (half-backs), W. E. Bromet, J. Toothill, T. Kent, R. D. Budworth, D. Jowett, R. P. Wilson, J. Richards, E. H. G. North, and S. M. J. Woods (forwards). **Wales**—W. J. Bancroft (back), C. S. Arthur, T. P. Pearson, Lloyd, and D. Gwynn (three-quarter backs), H. M. Inglewood and C. J. Thomas (half-backs), W. Bowen, J. Hannen, Bennett, W. Rice-Evans, J. Packer, R. Thomas, Pegge, and D. W. Evans (forwards). On Feb. 7th, at Dublin, England also beat Ireland, the latter failing to score, whilst their opponents were credited with two goals and three tries. Sides: **England**—W. G. Mitchell (Richmond, back), P. H. Morrison (Cambridge University), F. H. R. Alderson (captain, Durham), and R. E. Lockwood (Yorkshire, three-quarter backs), J. Berry (Lancashire) and W. R. M. Leake (Harle-

quins, half-backs), E. H. G. North (Oxford University), T. Kent (Lancashire), L. J. Percival (Oxford University), R. P. Wilson (Lancashire), J. Toothill (Yorkshire), W. E. Bromet (Yorkshire), S. M. J. Woods (Cambridge University), D. Jowett (Yorkshire), and J. Richards (Yorkshire, forwards). **Ireland**—D. B. Walkington (North of Ireland, back), R. G. Dunlop (North of Ireland and Dublin University), P. Lee (North of Ireland), and R. Montgomery (North of Ireland and Cambridge University, three-quarter backs), B. Tukey (Bective Rangers) and A. C. McDonnell (captain, Dublin Wanderers, half-backs), J. Roche (Wanderers), J. H. O'Connor (Bective Rangers), V. C. Le Fanu (Lansdowne), I. Davis (Bessbrook), E. Forrest (Wanderers), J. Lyttle (North of Ireland), H. Nash (Cork), T. Rooke (University), and J. Waite (Bective Rangers, forwards). On the same afternoon, at Edinburgh, Wales were beaten by Scotland by three goals and six tries to nil. Sides: **Scotland**—H. J. Stevenson (Edinburgh Academicians, back), P. R. Clauss (Oxford University), G. McGregor (Cambridge University), and W. Neilson (Murchiston, three-quarter backs), C. E. Orr (West of Scotland, half-backs), D. G. Anderson (London Scottish, half-backs), M. C. McEwan (Edinburgh Academicals), J. D. Boswell (West of Scotland), J. Dalgleish (Gala), F. W. J. Goodhue (London Scottish), A. Neilson (West of Scotland), H. T. O. Leggatt (Watsonians), I. McIntyre (Wanderers), J. G. McMillan (West of Scotland) and J. E. Orr (West of Scotland, forwards). **Wales**—W. J. Bancroft (Swansea, back), D. Gwynn (Swansea), R. L. Garrett (Penarth), W. McCutcheon (Oldham), and G. Thomas (Newport, three-quarter backs), H. M. Ingledew (Cardiff) and R. B. Sweet-Escott (Cardiff, half backs), R. L. Thomas (captain, Llanelly), W. H. Thomas (Llanelly), W. Rice Evans (Swansea), W. Bowen (Swansea), T. C. Graham (Newport), P. Bennett (Cardiff Harlequins), S. H. Nicholls (Cardiff), and D. J. Daniel (Llanelly, forwards). A fortnight later, the sons of "Caledonia, stern and wild," journeyed to Belfast, and defeated Ireland by four goals and two tries to nil. Sides: **Ireland**—D. B. Walkington (North of Ireland, back), R. Dunlop (North of Ireland and Dublin University), S. Lee (North of Ireland), H. G. Wells (Bective Rangers, half backs), B. Tukey (Bective Rangers), E. D. Cameron (Bective Rangers, quarter backs), J. H. O'Connor, W. Collopy, E. Frazer (Bective Rangers), J. Roche (Wanderers), R. D. Stokes (Edinburgh University and Queen's College, Cork), L. Naish (Queen's College, Cork), W. Davis (Bessbrook and Edinburgh University), J. Moffatt (Albion), and J. Lyttle (North of Ireland, forwards). **Scotland**—H. J. Stevenson (Edinburgh Academicals, back), G. R. Wilson (Royal High School), G. McGregor (Cambridge University), P. R. Clauss (Oxford University, half backs), W. Wotherspoon (Cambridge University), C. E. Orr (West of Scotland, quarter backs), M. C. McEwan (Edinburgh Academicals), J. D. Boswell, J. Orr, D. Neilson (West of Scotland), H. T. Leggatt (Watsonians), J. Dalgleish (Galashiels), J. Gibson (Royal High School), F. W. Goodhue (London Scottish), and I. M. McIntyre (Wanderers, forwards). On March 7th, Wales beat Ireland at Llanelly by two goals to one goal and a try. Sides: **Wales**—W. Bancroft (Swansea, back), R. L. Garrett (Penarth), C. J. Thomas (Newport), P. Lloyd (Llanelly), T. W. Pearson

(Cardiff, three-quarter backs), D. James, E. James (Swansea, half-backs), W. H. Thomas, R. L. Thomas (Llanelly), C. B. Nichol (Llanelly and Cambridge University), J. Samuel, J. Deacon, D. Samuels (Swansea), T. C. Graham (Newport), and S. Thomas (Llanelly, forwards). **Ireland**—D. B. Walkington (North of England, back), R. G. Dunlop (North of Ireland), S. Lee (North of Ireland), H. G. Wells (Bective, three-quarter backs), E. D. Cameron (Bective), R. Pedlow (Bessbrook, half backs), J. Roche (Wanderers), R. J. Stevenson (North of Ireland, captain), J. E. Jamieson (Lansdowne), F. Stokes (Wanderers), L. C. Nash (Queen's College, Cork), T. Fogarty (Garryowen), T. Rooke (Dublin University), R. D. Stokes (Queen's College, Cork), and W. Davis (Bessbrook, forwards). Great was the disappointment amongst English players at the defeat of their representatives by those of Scotland, at Richmond, the same afternoon, when the visitors, who hustled their opponents from start to finish, won by three goals to one. Sides: **England**—W. G. Mitchell (Richmond, back), P. Christopherson (Blackheath), F. H. R. Alderson (Durham), and R. E. Lockwood (Yorkshire, three-quarter backs), J. Berry (Lancashire), and W. R. M. Leake (Harlequins, half backs), R. D. Budworth (Blackheath), E. Bonham-Carter (Oxford University), S. M. J. Woods (Cambridge University), J. H. Rogers (Moseley), E. H. G. North (Oxford University), J. Richards (Yorkshire), R. P. Wilson (Lancashire), T. Kent (Lancashire), and D. Jowett (Yorkshire, forwards). **Scotland**—H. J. Stevenson (Edinburgh Academicals, back), P. R. Clauss (Oxford University), G. McGregor (Cambridge University), W. Neilson (Murchiston, three-quarter backs), C. E. Orr (West of Scotland), D. G. Anderson (London Scottish, half-backs), M. C. McEwan (Edinburgh Academicals), J. D. Boswell (West of Scotland), J. E. Orr (West of Scotland), G. T. Neilson (West of Scotland), F. W. J. Goodhue (London Scottish), J. G. Macmillan (London Scottish), Ian McIntyre (Edinburgh Wanderers), H. T. O. Leggatt (Watsonians), and J. Gibson (Royal High School, forwards). It will thus be seen that England did not fare so well under Rugby as Association rules, and the services of Bromet and Toothill were greatly missed. Of the nine tries gained by England in their international matches, three were credited to Lockwood, two each to R. P. Wilson and Christopherson, and one each to Toothill and Budworth. Alderson placed three goals, and Lockwood scored the remaining couple. The North and South match, after one postponement, was decided at Leeds on Dec. 9th, and terminated in favour of the Northerners by a goal and three ties to a goal, the dashing play of Bromet, an old Oxonian, and a prominent member of the Yorkshire county team, being the feature of the contest. This was the first season of the **County Championship** on the new basis suggested by Mr. F. Marshall, and taken altogether was a success. Middlesex, Somersetshire, Yorkshire and Lancashire had been regarded as the four probable group winners, but of these the two first-named were knocked out, Middlesex by Surrey and Somersetshire by Gloucestershire. Middlesex's defeat by Surrey came as a surprise, though on the day's form it was no fluke, but the latter proved no match for the northern shires. The South-Eastern and two Northern groups were able to

settle the question of supremacy by the end of November, when Yorkshire practically placed herself out of court by having her colours lowered by Lancashire at Whalley Range by two goals and a try to a try. Gloucestershire and Somersetshire, after two postponements through frost, met at Bristol on Jan. 28th, and the result being a draw, honours were easy. A fresh match was ordered to take place a week later, when Gloucestershire won by three tries to nil, but were beaten in March by Lancashire, and the latter, being the champion county, met the Rest of England (a match instituted when there seemed no likelihood of any settlement of the international difficulty which then existed) at Manchester, on April 18th, when the combined team proved victorious by a goal and a try to a goal. Sides: Lancashire—T. Coop (Leigh), full back, J. Valentine (captain, Swinton), D. A. Gwynn (Oldham), W. M'Cutcheon (Oldham, three-quarter backs), J. Berry (Tyldesley), W. Cross (St. Helens, half backs), W. Atkinson (Wigan), Melledew (Rochdale Hornets), T. Craven (Salford), J. Pyke (St. Helens Recreation), T. Rothwell (Swinton), T. Kent (Salford), R. Wilson (Liverpool Old Boys), T. Whittaker (Manchester), and E. Bullough (Wigan, forwards). Rest of England—A. S. Johnston (Blackheath, full back), R. E. Lockwood (Yorkshire), F. H. R. Alderson (Durham), J. Dyson (Yorkshire, three-quarter backs), H. Hughes (Cheshire), W. Taylor (Northumberland, half backs), R. D. Budworth (Blackheath), D. Jowett (Yorkshire), E. H. G. North (Oxford University), J. H. Rogers (Midland Counties), W. E. Bromet (Yorkshire), W. Nicholls (Yorkshire), W. Faulkner (Cheshire), W. Yind (Durham), and H. Wilkinson (Halifax, forwards). This was a memorable match, and the local charities were considerably benefited by the enormous receipts. The North and South match was played on the Leeds Club ground, Headingley Park, on Dec. 29th, and resulted in favour of the Northerners by a goal and three tries to one goal. The Oxford and Cambridge match took place at Queen's Club Ground on Feb. 25th, when a drawn game of one goal each resulted. Each fifteen suffered defeat on four occasions, Oxford from Bradford, Cardiff, Richmond, and West of Scotland; and the Cantabs from the Old Leysians at the outset of the season, Edinburgh Academicals, Hartlepool Rovers, and Dublin University; but neither team met with a reverse after Christmas. The Cambridge match with Bradford was a draw, while they beat Blackheath and Richmond twice, the Dark Blues, as already seen, falling to the last-named. Five of the Oxonians, viz., E. H. G. North, L. J. Percival, E. Bonham-Carter (England), P. R. Clauss (Scotland), and W. Rice Evans (Wales), played in international fixtures, four of the Cantabs gaining caps, viz., P. H. Morrison and S. M. J. Woods (England), C. B. Nichol (Wales), and G. McGregor (Scotland), also W. Wotherspoon (Scotland), who, though selected, did not actually form one of the Light Blue fifteen on account of indisposition. Club football under this code is in a very prosperous condition; and mention must be made of a successful trip which a team of English amateurs enjoyed in South Africa. Not only was victory achieved in all nineteen matches, but two hundred and twenty-four points (sixty-four goals and thirty-nine tries) were scored, while only one point was gained by the South

African players during the whole series of matches. It is interesting to note that W. G. Mitchell, R. L. Aston, R. G. M'Millan, and J. Hammond played in all nineteen matches, W. E. MacLagan, W. E. Bromel, and R. Thompson in eighteen, A. Rotherham in seventeen, Whittaker and P. F. Hancock in sixteen, E. Mayfield in fourteen, E. Bromet and A. A. Surtees in thirteen, P. R. Clauss in twelve, J. H. Gould in eleven, H. Marshall and C. P. Simpson in ten, W. Wotherspoon in eight, W. H. Thorman in six, and B. G. Roscoe and W. Jackson in five only. The team left England on June 18th, and returned on Sept. 28th. The first important match in the '91-92 season was played on Oct. 14th, when Surrey beat the Eastern Counties by five goals and three tries (31 points) to a try (2 points). On the following day, also in the county championship, Kent defeated Middlesex by two goals and a try (12 points) to one goal and three tries (11 points); on the 21st, however, Middlesex gained a decisive victory over the Eastern Counties by three goals and five tries (25 points) to nil. On the 29th the Midland Counties beat the Western Counties by eight points to nil. On Nov. 3rd Surrey defeated Sussex by a goal and a try to nil; on the following day London beat the Midland and Western Counties by two goals and four tries to a try; on the 5th Kent defeated the Eastern Counties by a goal and three tries to a goal; on the 7th the match between Blackheath and the London Scottish ended in a draw, with seven points each. Mr. E. T. Gurdon (Richmond) is president of the Union, and Mr. G. Rowland Hill (Richmond) is the hon. secretary.

Foreign Armies. Under this heading will be found the latest particulars relating to the military power of the countries of Europe, Japan, and the United States.

AUSTRIA. The law of universal service was introduced in the Austro-Hungarian army in Dec. '68. The forces consist of the army proper, the *Ersatz Reserve*, the *Landwehr*, and the *Landsturm*. The regular army requires an annual contingent of 103,000. Service is for three years with the colours and seven in the active reserve. Service in the Landwehr is for two years for those who have served their ten years in the senior service, and for twelve years for those who have been sent straight into the Landwehr for various reasons. After the Landwehr service, the soldier is sent for five years to the 1st Landsturm, and for a further period of five years to the 2nd Landsturm. By this time he is presumably forty-two years of age. The Empire is divided into fifteen territorial districts; but these being of different size and varying in population, the 15 army corps supplied by them vary in strength. On mobilisation the army would be organised as 3 armies, under one supreme commander, each army being made up of 3 or more army corps. The *Cavalry* of the active army consists of 14 regiments of *Dragoons* (Austrians and Bohemians), 16 regiments of *Hussars* (Hungarians), and 17 regiments of *Lancers* (with Polish Reserve). Each regiment consists of 6 squadrons and 1 cadre. In case of mobilisation the latter becomes an *Ersatz* squadron. The peace establishment is 246 field, 41 reserve, and 41 *Ersatz* squadrons, besides the Staff Cavalry. The *Artillery* is made up of 15 regiments of corps artillery—3 for each army corps—and each of 5 batteries and 8 inde-

pendent heavy divisions, each of 3 batteries. Several of the corps have in addition 2 batteries of horse artillery or a mountain battery. The latter have been found most useful in campaigns in Dalmatia, Bosnia, and Herzegovina. The Infantry comprises 102 regiments, each of 4 field and 1 Ersatz battalions. The latter is in peace time a cadre only; but is at once completed on the outbreak of war. There are, in addition, a number of Tyrolean rifle regiments—10 active and 2 Ersatz battalions, and 32 independent battalions of rifles of 4 field and 1 Ersatz companies. The Landwehr is formed into two distinct bodies, under their own ministers for defence. In peace time only the cadres exist. For instance, in the case of the Cis-Leithanian Landwehr—6 cavalry regiments, 24 squadrons, and 92 infantry battalions—only 1 strong squadron per regiment and 1 strong company per battalion is kept up. There is also the Honved (national Hungarian army), subject in war time only to the Commander-in-Chief, and in peace time only to the Royal Hungarian Jurisdiction. It forms in peace time 15 cadre regiments of Hussars, 60 squadrons, and 92 battalions of infantry. The officers are trained in the Honved Ludovica Academy at Budapest. In war time it reaches a strength of some 200,000. It is this army which saved the Austro-Hungarian monarchy a century ago, and it is reckoned as a most valuable factor in the military strength of the Empire. The total strength of the standing army is about 267,000. In case of war the united Empire could put into the field, at lowest computation, 1,140,000 men with 200,000 horses, not including reserves and garrisons.

BELGIUM. The total strength of the army on a peace footing with the colours, including Gendarmerie, is 46,380 men, 10,160 horses, and 204 guns. Cavalry (7,400)—2 regiments of Chasseurs, 2 of Guides, and 4 of Lancers. Each regiment consists of 4 squadrons active and 1 reserve. To the above have to be added the Gendarmerie (1,720 men). Artillery (7,900)—made up of 7 regiments, comprising a total of 34 field batteries of 6 guns each, with 6 batteries in reserve; 48 siege batteries, 3 in reserve; and 3 depot batteries. Engineers (1,400)—1 regiment of 3 battalions. Infantry (26,300)—Made up of 14 regiments of the line, of 4 battalions of 4 companies each, 3 active and 1 reserve battalion; 1 regiment of Grenadiers, similarly organised; 1 regiment of Carabiniers of 6 battalions (4 active and 2 reserve), and 3 regiments of rifles. Constitution.—The war strength is fixed at 142,000 men. Every able-bodied man who has attained his nineteenth year is liable to serve, but substitution is permitted. The term of service is eight years—two years and eight months with the colours. The new forts of the Meuse will shortly be completed. The great objection raised against them by nearly all military men, is that the present army organisation of Belgium cannot furnish the men necessary for their defence. The Minister of War asserts that, in case of mobilisation, after calling out all the classes of the reserve, the army would number 130,000 men, which, in his opinion, would be sufficient to garrison the fortresses, and to have besides the necessary force in the field. To this the most competent military critics reply, that the mobilisation would not produce 130,000, but only a little above 100,000 men, and that, therefore, sufficient garrisons for Antwerp and the Meuse forts

could not be provided. They estimate the number of men necessary for an efficient defence of Belgium at 180,000 men—a number which could never be obtained, unless by the introduction of conscription.

BULGARIA. The peace strength of the standing army is 22,400, as follows: Cavalry, 1,400; Artillery, 1,740; Engineers, 880; Infantry, 16,800; Gendarmerie, 1,600. The war strength is 32,220, with 102 guns. Besides this the Reserves are estimated at 24,000, and the Land-storm at 7,200, making altogether 63,420.

DENMARK. The army consists of 34,500 regulars and 13,000 second reserves. Cavalry (2,200)—5 regiments made up of 16 squadrons. Artillery (4,750) 2 regiments of field artillery of 12 batteries each with 8 guns; 2 battalions garrison artillery of 6 companies each. Engineers (620). Infantry (27,000)—21 battalions of the line. Constitution.—Service is obligatory on all able-bodied men who have reached the age of 22. Terms of service, eight years with the colours and eight in the reserves. The war strength is 49,000.

EGYPT. The Egyptian army consists of about 13,000 officers and men, distributed between Cairo, Suakin, and the Soudan frontier. The army is raised by conscription. As the population of Egypt is about 8,000,000, and the army is but 13,000 strong, the conscription falls very lightly. The conscripts have to serve five years with the colours and six in the police, or six with the colours and five in the police. They then go to the reserve for four years. There are five Soudanese battalions—some 3,700 men. The martial qualities of these men have been proved in recent campaigns. The army was reorganised after the war of 1882 by Lieut.-General Sir Evelyn Wood, and has been commanded for seven years past by Major-General Sir Francis Grenfell, who is assisted by a staff of British officers. Regiments are all commanded by British officers lent from the Queen's army.

FRANCE. The whole conditions of service were changed by the law of July '90. As the law now stands, seven-tenths of the annual contingent of recruits passed into the service have to serve for three years, and three-tenths for one year. After his colour service, a man joins the Active Reserve for seven or nine years. He then does duty in the Territorial Army for six years, and after that in the Territorial Reserve for nine years. The age when service becomes compulsory is twenty. It is calculated that some 312,000 youths attain that age annually. Of these 174,000 only are required for colour service. The effect of the new law will be that by A.D. 1915 there will be 3,500,000 Frenchmen properly trained as soldiers and ready to take the field, and 60,000 trained men per annum will have been added to the army. The field army consists, by latest returns, of some 2,700,000 men. The Cavalry consists of 96 regiments—14 of Cuirassiers, 34 of Dragoons, 22 of Chasseurs à Cheval, 14 of Hussars, 8 of Chasseurs d'Afrique, and 4 of Spahis. The Infantry consists of 162 line regiments, each of 3 battalions; 4 Zouave regiments, each of 4 battalions; 4 Algerian Rifle regiments (Turcos), each of 4 battalions; 30 regiments of Chasseurs (Rifles); 2 regiments of Foreign Legion, each of 4 battalions; and 5 battalions of African Light Infantry; total, 561 battalions. The report upon the recruitment of the French Army during the year '90 presented to the Deputies

in May '91, and which gives particulars as to the operation of the new law and the numerous modifications of service, shows that, when all deductions had been made, **804,873 young men** were called to the colours during the year. These were placed thus:—11,400 with the Marines for three years, and 193,473 with the army, being 122,056 for three years, 10,315 for two years, and 60,502 for one year. These figures are not quite exact owing to the retrospective action of the law in regard to those whose service was adjourned, these having been incorporated for four months only. The law of '89 gives, in effect, more than **200,000 trained men every year**; whereas that of '72 gave only 130,000, or, in good years, 140,000. It will thus be seen "in what an enormous proportion the military power of France grows." It appears that the increase in numbers has been employed to augment the strength of the infantry, artillery, and train, and to double the administrative troops, but that the cavalry have not gained in any degree. Steps were taken in '91 for the organisation of the French Colonial Army. Under the new law the Colonial Army will be charged with the guarding and defence of the Colonies, and of countries under the French protectorate, with the exception of Tunis; but there is nothing to prevent them from being employed elsewhere. The Colonial Army is, however, entirely autonomous in every grade, and preserves its own regulations independent of the National Army, to which, nevertheless, it stands in the light of an army corps. The first three battalions of each regiment of Colonial infantry are normally stationed in France, the fourth and fifth battalions furnishing the Colonial garrisons, constituting an expeditionary reserve, and receiving by preference volunteers as well as those who re-enlist, to whom greater facilities are to be given. The last Military Budget showed a slight decrease, the sum asked for being £70,520,697 *lr.* (£26,820,828), as against £75,729,040 *lr.* (£27,029,101) for '90-91. On the other hand, the total number of effectives was increased by 324 officers, 7,418 men, and 1,015 horses.

GERMANY. The German Army is in all respects a model of military perfection, and it has formed the basis upon which the military establishments of most of the other European states have been reorganised of late years. It may be useful, therefore, to review the organisation as explaining the advance made by Continental nations generally in the direction of warlike preparations. The Franco-Prussian War in '71, although it added lustre to the German Army, gave rise to consideration of improvement; and since that time various laws have been passed for the purpose of bringing these about. Three years of active service, four years in the Reserve, and two in the Landwehr, are now the terms; while in addition there are five years to be served in the Landsturm: but the latter branch is only used as a "cry of distress" when the standing army and the Landwehr have been found insufficient for the requirements. It includes all the young men between seventeen and twenty, and those who have previously passed through the twelve years required in the other branches. At the beginning of November each year the recruiting into the Landwehr of young men of twenty commences. To facilitate this business the Empire is divided into "regions," each occupied per-

manently by an army corps, which draws from it in time of peace, as well as in time of mobilisation all its effective. The regions are each divided into seventeen districts, under the control of a similar number of officers. Four districts are expected to recruit a brigade, and ten an army corps. There is a further division of districts into company districts, each in charge of a sergeant-major. These grouped in twos, form eight "circumscriptions" for the recruitment of the Landwehr, and of a regiment of infantry. There is besides a battalion district for the reserve of the Landwehr, to complete the numbers lacking in the less populous districts. The recruiting service for the Guard, consisting of the tallest and finest looking men, is carried out by a commission consisting of officers specially nominated for the purpose. On a day appointed they meet at certain specified places, and here the young men are required to appear before them. The census reports, of course, give all information as to the names and addresses of inhabitants, and those within the prescribed age are called up, and passed or exempted, as the case may be. It is the duty of another official body to then revise the lists thus obtained, make a report to the Minister, and decide where the new arrivals shall be stationed. Under this system of recruiting, it may readily be imagined there are always more men than necessary to keep up the army strength. As to the term of service, it may be stated that, if the recruit be apt, the full three years are not demanded; two years sometimes suffice, and at the end of that period, if he can pass certain tests, he is granted leave of absence for the remaining year. In the standing army, at the close of three years' service, a further period of four years has to be reckoned with, during which time there are held every year reviews and other manoeuvres, occupying about four months. The second term at an end, the recruit passes into the Landwehr. Here the duties are lessened—the annual review, and a couple of periods of exercise of fourteen days each, being the extent of the demand made. But no one in Germany can consider himself safe from being called upon for military duty until he is past forty-two years of age, unless he be in feeble health. At any time he is liable to a recruitment in the Reserve. If it were possible for Germany to call up every man it has power to do by the various methods of recruitment, it could put into the field an army of 3,200,000 men, made up by 400,000 in the three active classes, 700,000 reserve of recruitment, 500,000 reserve of active army, 600,000 Landwehr, and 1,000,000 Landsturm. The peace effective, however, is only about 407,000, an eighth of this number being non-commissioned officers. The approximate strength of the field and garrison armies when organised for active service, according to the "plan of mobilisation," is:—Field troops: 19 army corps, completely equipped, with trains, 714,115 officers and men, 1,938 field guns horsed, 210,539 horses; 9 cavalry divisions, 41,976 officers and men, 108 field guns horsed, 45,577 horses; 18 reserve divisions of all arms, completely equipped, with trains, 311,796 officers and men, 630 field guns, 69,679 horses; miscellaneous formations, including railway and Etappen troops, siege trains (with 720 siege guns), reserves for replacing casualties, foot artillery for fortresses, etc., 276,737 officers and men, 27,640 horses. Total field

troops, 1,344,644 officers and men, 2,676 field guns horsed, 353,435 horses. Garrison troops: 18 reserve divisions, equipped with trains for taking the field, 332,170 officers and men, 432 field guns horsed, 52,893 horses. Depot troops, which would remain at the Landwehr battalion districts, available for replacing casualties at the front: 551,939 officers and men, 450 field guns horsed, 33,431 horses. Total garrison troops, 884,109 officers and men, 882 field guns, 86,324 horses.—Grand total of mobilised army (exclusive of the Landsturm) 2,228,753 officers and men, 3,558 field guns, 439,759 horses. The effective mobilised strength of the army in '70 was 1,183,389 officers and men, 259,373 horses, and 2,040 field guns. The thoroughness of the military education in Germany is well known, the Empire having nine schools, six of which receive pupils at ten to fifteen years of age, who afterwards finish at either Lichtenfeld, Dresden, or Munich. The studies pursued at all of these three are very severe, and the pupils, even after passing through the preliminary course, are often sent back on examination to receive further tuition. The War Academy at Berlin is the highest of the military academies, but this is open only to lieutenants and captains who have served three years. Beyond all these institutions, which are military in the strict sense, there are other schools for artillery, marksmanship, riding, gymnastics, medicine, and surgery, and veterinary practice. The general staff of officers of the army is made up of the officers of the different armies temporarily attached. They form seven divisions, three study at a theatre of war, one occupies itself with the railroads, one with military history, one with geography and statistics, and the seventh with geodesy and topography. This staff of officers has access to a library which has been in formation for the last seventy years, and includes 60,000 volumes. With such a complete organisation, and such excellent opportunities for preparation in matters military, there can be little wonder that Germany is a nation of soldiers. This it certainly is, and its military atmosphere and bearing is apparent as soon as one enters the country. The last two years have been very important ones in the history of the German Army. In '89 the new smokeless powder was first tested on a large scale at the autumn manoeuvres near Hanover. On that occasion it was possible for the ordinary observer in the field to convince himself of the momentous importance of the new invention, and to form some estimate of the far-reaching consequences of its introduction. The experiments since carried out have been of such a nature as to upset many old theories as to battle tactics. The process of arming the whole of the cavalry with the lance has been successfully completed. The hollow tube of steel rolled by the Mannesmann process has been adopted as the model for the new shaft. In field artillery a change of far-reaching importance has been effected in the introduction of a uniform gun for mounted and ordinary batteries. A projectile has also been introduced, which can be employed either as shell or shrapnel. The new explosive projectiles scatter thousands of shell splinters in every direction, and are expected to prove a most formidable means of attacking an enemy in the field who enjoys good cover. There has been a very great development of the system of

strategic railways. The completion of the so-called "Railway of Circumvention" (Umgehungs-bahn) along the Swiss frontier secures the military communication of South Germany with the seat of any eventual frontier war against France, and ensures the preservation of Swiss neutrality. There are now seven through-going railways from east to west in South Germany, as against three in '70. On the Eastern frontier lines have also been built to secure rapid mobilisation in event of war. On the River Weichsel the protection of the crossing at Grandez has been secured by the restoration of the defences of the town. Saarlouis, Torgau, and Neisse have been abandoned as fortified posts of inferior importance; but the establishment of a new route across the Weichsel at Foidon is contemplated by the German strategists. In regard to matters of general organisation, two new Army Corps have been incorporated, raising the peace effective to 489,983 men, inclusive of 20,286 officers. The local disposition of the standing army has been altered with a view to strategic advantages; whereas formerly it was chiefly governed by administrative considerations. The 14th, 15th, and new 26th corps have now assigned to them the defence of the frontiers of Alsace-Lorraine; while five corps, the 1st, 2nd, 5th, 6th, and the new 17th, keep watch on the Russian frontier. The strength, on a peace footing, of the various infantry regiments has been considerably increased. The Field Artillery has been increased by 70 batteries, and the attempt has been made to effect a more equal distribution of batteries in each Army Corps. In many cases the batteries have received their full complement of six horses, as in the French Army; and it is known that the Emperor has the efficiency and further development of this arm very warmly at heart. The maintenance of great permanent cavalry divisions has been abandoned, except in the case of three Army Corps—the Guards, the 1st, and the 12th. It is believed that better results will be obtained by the concentration of large masses of cavalry for special purposes.

GREECE. The peace establishment of the army is fixed at 30,000. Of these 1,500 are Cavalry, 4,300 Artillery and Engineers, and 17,000 Infantry. In case of war, it is understood that the force which Greece could put into the field would amount to fully 80,000 men.

ITALY. The army is organised on the basis of that of Germany—on the principle of universal conscription—consisting of a standing army, a Landwehr, and Landsturm. The liability commences at twenty, and continues up to thirty-nine. It consists of eight years in the standing army (three with the colours and five in the reserve), four years in the Landwehr, and seven years in the Landsturm. Those exempted from service by ballot are sent straight to the Landsturm for nineteen years. The standing army on a peace footing numbers 183,280, made up as follows: Cavalry—Comprising 22 regiments, 18,867 men. Artillery—80 batteries, 9,464 men; 6 companies of Artillery artificers, 1,174 men. Engineers—4,132 men. Infantry—102 regiments, 128,000 men; 40 battalions of Bersaglieri, 16,165 men; Train, 2,460 men. Departmental Corps, 3,173 men. The army is organised in 12 army corps, 427,000 men under arms, besides 12,000 for Alpine regiments. The total armed strength by latest official returns was 2,858,495 officers and men. Exclusive of

officers the standing army numbered 843,381 men, the Mobile Militia (Landwehr), 372,221 men, and the Territorial Militia (Landsturm), 1,631,459 men. The total number of available officers was 35,972.

JAPAN. The standing army on a peace footing comprises 38,425 men. In case of war the number can be increased to 131,475.

MONTENEGRO. No standing army. The national army, a sort of Militia, is fixed at 30,000.

NETHERLANDS. The strength of the active army is about 62,000, the approximate numbers being—Cavalry, 4,500; Artillery, 13,000; Engineers, 1,400; Infantry, 42,700. In addition there is a "Schutteryeen" of 114,000 men. The Netherlands possess in addition a Colonial army of about 38,000 men, of whom only 14,460 are Europeans. The home army is recruited partly by voluntary enlistment and partly by conscription.

PORTUGAL. The peace establishment is fixed at 24,000, in the following proportions: Cavalry, 3,700; Artillery, 3,580; with 92 guns; Engineers, 600; Infantry, 15,680; miscellaneous, 440. The war establishment is 120,000 men, with 264 guns. There is in addition a Colonial army of 8,500. Compulsory service is the law, but the rules of exemption are most liberal, a sum of money paid to the Government being accepted as an equivalent.

ROUMANIA. The active army is 124,000, made up as follows: Cavalry, 10,000; Artillery, 8,500, with 218 guns; Engineers, 4,000; Infantry, 85,000; staff and general services, 17,000. The reserve army is 35,000, making a total of upwards of 160,000.

RUSSIA. Extensive modifications were brought about in the organisation of the Russian Reserve battalions by recent regulations. The law of compulsory service in Russia dates from '74, although some of the districts in Trans-Caucasia and Siberia are as yet exempted from its operation. For Finland compulsory service only came into force on Jan. 1st, '81. The period of liability to personal service lasts from the twenty-first to the forty-third year of age. Those who join the standing army remain in it for eighteen years—five of which are passed with the colours, thirteen in the reserve, and the remainder in the Opoltschenie, or Militia, which corresponds to the Ersatz Reserve of the German Army. In some instances, however, the War Minister has power to retain men for a longer period with the colours; whilst, on the other hand, this period is shortened by one, two, three, or four years for those possessing a superior education. The Opoltschenie embraces two different classes: (1) Men between twenty-one and forty-three years of age, who have never served; (2) men who have completed five years' service with the colours and thirteen years in the reserve. The ages of the men vary between thirty-nine and forty-three years. The organisation of the Cossacks is on a different footing. Every Cossack becomes liable to serve as soon as he has completed his eighteenth year. For the first three years, which are looked on as "preparatory," his service is, however, purely local; but for the next twelve years he is considered as belonging to the "front" category. This category consists of three bans, the first of which is formed of men actually serving, and the two others of men who have been granted unlimited leave. The last five years are spent in the Ersatz, or reserve, category. There is,

however, a still further category, for which no limit of age is fixed; this comprises all able-bodied Cossacks not otherwise classified. The Cossacks have to supply and maintain their own horses, besides providing their own clothing and equipment. In the Russian Empire some 850,000 men annually attain the age for joining the army, and of these approximately 260,000 are entered. Seventy per cent. of the men so entered are illiterates. About 5000 enlist annually as volunteers, and 16,000 join the Cossacks. The standing army in peace time is organised into 20 army corps. The regular army proper on a peace footing consists of some 659,000 officers and men, of which 47,000 are Cavalry, 84,000 Artillery (horse, field, and fortress), 383,000 Infantry, and 28,000 Engineers and Departmental Corps. The horse artillery, 30 batteries, some 182 guns; the field artillery, 303 batteries of 3 guns each for the most part—some 1,344 guns in all. In the establishment of the field troops are included reserve troops to the extent of 123,000. The Cossacks consist on a peace strength of 1984 officers, 4992 men, 38,707 horses. On a war footing the strength is 3346 officers, 141,969 men, 138,036 horses. Von Proskowetz puts the total Russian strength in Asia, on a peace establishment, at 1200 officers, 40,000 men, 78,000 horses, and 124 guns. The total of the contingent incorporated last year into the Russian Army was 257,500 out of 457,000 brought up for medical examination. Out of the 457,000 about 84,000 were put back a year on the ground of being deficient in size, 65,000 were rejected as infirm, and 23,500, of whom 4,972 were Israelites, did not answer their names. About 2,000 men were called out in Finland, while more than 5,000 engaged themselves for one or two years. Of the 28,500 natives of the Trans-Caucasia, and of the tribes of the Terek and the Kouban, subject to the military law in '90, 2,400 were called out for service. The war strength of the Russian forces consists of 2,480,000 men, as follows: Cavalry, including Cossacks, 104,000; Artillery, 83,000, with 2,624 guns; Engineers, 35,000; Infantry, 758,000; Riflemen, 53,000; Departmental Corps, 103,000. These form the active army of all classes. To these figures must be added the available reserve, estimated at 1,064,000; frontier battalions, 41,000; Cossacks, 142,000. There are besides these the Territorial Reserve, some 2,000,000 men, and the National Militia, 1,200,000, which could be fallen back upon on an emergency. By order of the Imperial Council, issued in April '91, the Opoltschenie is undergoing a process of reorganisation. In regard to numbers, it is estimated that when the change now in progress is fully carried out, in the first section or ban, the four classes of those men who have served in the army will number in all 400,000 or 500,000 men; while the four classes of those young men who, though recognised as good for service, have not been able to be incorporated, will number from 750,000 to 800,000—a force corresponding to the German Ersatz-Reserve—so that the first ban will include from 1,200,000 to 1,300,000 men. The second ban, consisting of 22 classes of about 800,000 each—or, in all, something like 7,000,000—is made up of uninstructed men, and can be called out only by an Imperial manifesto. The four classes of young men in the first ban will be called out, during the first four years, for two periods of training, not exceeding six weeks each. It is expected that under new organisa-

tion the Opoltschenie in time of war will form 40 infantry divisions, 640 battalions; 20 regiments of cavalry, 80 squadrons; 80 batteries of artillery, and 20 battalions of sappers; but owing to the vast distances to be covered, and the want of railway accommodation, the mobilisation of this great force would be neither easy nor rapid.

SERBIA. The field army is estimated at 60,000, with 264 guns; Reserves, 65,000, with 145 guns; Landstorm, 45,000; total, 170,000, with 409 guns.

SPAIN. The army, on a peace footing, is 100,000 men with 510 guns. The colonial forces, including militia, are estimated at 236,000. Service is compulsory for the regular army for 8 years, and in the colonies for 4 years.

SWEDEN AND NORWAY. The strength of the standing army of Sweden is about 39,000 men: viz., Cavalry, 4,500; Artillery, 4,700; Engineers, 900; and Infantry about 27,500. The army of Norway consists of about 75 officers and 18,000 men. This number, however, is gradually being increased, and will shortly be raised to nearer 50,000 men.

SWITZERLAND. The latest returns of the Swiss Army, dated Jan. 1st, '91, show its strength to be:—Federal army (Bundes-auszug): General Staff, 81; Cavalry, 2877; Artillery, 18,734; Engineers, 7402; Infantry, 92,685; Sanitary Troops, 4,669; Administrative Troops, 1492; Military Police, 33. Total, 127,973. Landwehr: General Staff, 13; Cavalry, 2775; Artillery, 11,509; Engineers, 2,924; Infantry, 66,185; Sanitary Troops, 2429; Administrative Troops, 437. Total, 80,272. The Landsturm numbers altogether 2954 officers, 8434 non-commissioned officers, and 260,736 men, or a total of 272,124, making in all a total of 480,369 officers and men. All able-bodied men between the ages of 20 and 32 are liable for service. The Artillery has 280 Krupp field guns and 22 mountain guns. Able-bodied men between 32 and 43 render service in the Landwehr.

TURKEY. The army is divided into the Nizam, or active army; the Redif, or reserves; and the Mustaphiz, or Landsturm. Under the new organisation the strength is calculated at:—Nizam: Cavalry, 37,800; Artillery, 37,800, with 1,512 guns; Engineers, 18,000; Infantry, 468,000—total, 588,600; Redif, 203,000; Mustaphiz (including irregulars), 370,000; making a total of 1,161,600, with 3,348 guns.

UNITED STATES. For command and discipline the army is under a military chief. The regular forces of the United States are limited by Act of Congress to a peace force not exceeding 30,000 enlisted men. Recruits must be between the ages of 16 and 35, not less than 5 ft. 3 in. in height. The term of service is five years, with power to re-engage. According to the last returns ('87) the number of officers was 2173, and the number of enlisted men was 26,200. The expenditure was \$44,435,870, or £8,887,052. The army is composed as follows:—3 Major-Generals, 6 Brigadier-Generals, 3 regiments of Artillery, 10 regiments of Cavalry, 25 regiments of Infantry, an Engineer Corps, and 1000 Indian Scouts. There is no provision for an increase of the army, but in case of war, by trained reserves. In case of national danger, the Constitution of the United States contemplates the liability of every able-bodied male citizen between the ages of 18 and 45 to render service. A certain proportion of the citizens receive military training in the National Guard. According to the last returns the total numbers of

this force amounted to 106,814 officers and men—105 troops of Cavalry, 97 batteries of Artillery, and 1,537 companies of Infantry.

. In consequence of the constant changes in the armies of Foreign Powers, the figures given are liable to variation.

Foreign Moneys. See after FOREIGN TRADE. **Foreign Navies.** Subjoined are the latest details of the progress made in the naval preparations of European countries and the chief Eastern and Western maritime powers:—

ARGENTINE REPUBLIC. This State possessed on Jan. 1st, '91, one steel-central battery ship of 4200 tons displacement, two monitors of 1535 tons each, one cruiser of 1530 tons, one gun vessel of 820 tons, and two of 550 tons, besides smaller vessels. Her torpedo flotilla consisted of six Yarrow 33½-m. torpedo boats and four spar torpedo boats. To the above must now be added two armoured coast defence vessels of shallow draught, launched by Laird of Birkenhead—the *Nuevo de Julio* on Dec. 11th, '90, the *Independencia* on Feb. 26th, '91. The maximum thickness of the armour is 8 in., the displacement 2700 tons, and the engines 3000 H.P. The protected cruiser referred to in '90 as the *Nicochea* or *Argentina* has been named the *25 de Mayo*, and she has left England. This vessel is of the *Piemonte* type, but larger; her dimensions are: length, 325 ft.; beam, 43 ft.; mean draught, 16 ft.; displacement, 3200 tons. She carries two 8½ in. guns as bow and stern chasers, eight 4½ in. Q.F. in sponsons on the broadside, twenty-four 3-pounder and 1-pounder Q.F., and three torpedo tubes. Her steel deck has a maximum thickness of 4½ in. on the slopes and 1½ in. on the flat, which is with normal draught 1 ft. above the water-line. Two sets of vertical 4-cylinder engines and four double-ended steel boilers are under this deck, but there is no inner bottom under the boiler compartments. The normal coal supply is 300 tons, she can stow 600, and with this can steam 10,000 knots at 10 knots speed, or 2000 at 22 knots. Her maximum speed with forced draught on the measured mile was 22½ knots, a six hours' run with natural draught gave 21½ knots an hour. The torpedo gunboats *Rosales* and *Espora* have left for Buenos Ayres. The armament of each is three 14-pounder Q.F., one 8-pounder Q.F., four 3-pounder Q.F., two machine guns, and five torpedo tubes. Thornycroft has supplied two first-class 150-ft. torpedo boats—the *Comodoro Py* and the *Murature*; these boats exceeded the contract speed of 25 knots on the measured mile, and 24 knots on the two hours' run. Yarrow has supplied six first-class 127-ft. torpedo boats, five are fitted with triple-expansion engines, and all have exceeded 23 knots speed on a two hours' run; the sixth (named *Bathurst*) has quadruple-expansion engines with a view to reduce the vibration, and with fair success. She made a maximum speed of 26 knots on the mile, and a mean speed of 24½ knots on the two hours' run. The same firm has also supplied eight third-class 59-ft. torpedo boats; they have all been tried, and the mean speed is 17½ knots, although one of them ran up as high as 20½ knots an hour. It is reported that another cruiser is being built at Elswick, and a torpedo gunboat at Laird's, for this Government.

AUSTRIA. The additions to the Austro-Hungarian Navy during the year have been merely a few small craft. The fleet consists at

the present time of 10 battle-ships, 1 river monitors, 3 yachts, and 1 wooden frigates, corvettes, and hul bringing the total up to 72. The flotilla comprises 23 boats of the 1st class, 26 boats of the second class, and 8 boats of the third class. Although small, the 1st class boats are every way efficient, and better for some of larger dimensions. Admiral Sterneck, who was captain of *Tegethoff* ship at Lissa, is the Commander-in-chief, is most active and energetic in promoting the wants of the navy. Of the casemate ships, the *Tegethoff* is now being refitted and provided with new engines. The *Kaiserin Elisabeth*, whose launch was mentioned in the '90 ed., is now nearly completed. Another cruiser of this type, but of the 2nd class (Cruiser C), is in course of construction at Pola. Of the two small monitors mentioned at Buda-Pesth for the Danube flotilla, the *Theiss* has been launched. The displacement of these vessels is 488 tons; 11.5 in. draught, 5 light Q.F. guns; and maximum speed 29 in. Early in the year men were sent from Trieste to bring home the *Plan Palmer's*, and the *Pelikan* and *N. Schichau's*. The *Plan* is a torpedo boat of 480 tons (*Rattlesnake* type), and is not giving satisfaction in the way of speed. The *Pelikan* is a torpedo depot ship of 3200 tons displacement and 3200 H.P. She was at Elbing, March 22nd, '91. She is armed with thirty-six torpedoes, and is armed with 5.9 in. and eight Q.F. guns. She is the *Kaiserin Elisabeth*. The *Navad* is a tank vessel, provided with a powerful apparatus. The Budget for '91 also appropriates for a torpedo vessel and for torpedo boats. Four of the latter are to be constructed—two at Elbing, England, and one at Pola. For military purposes, the effective fleet is classified in three categories: "full war equipment Reserve," ships which can be put to sea in from three to five days; "Reserve," ships which in twenty-one days can be put in the first reserve; "In Reserve," which require a longer time, but are available for. The personnel on a peacetime basis consists of 9 flag-officers, 74 captains, 180 lieutenants, 617 paymasters, chaplains, etc., and 7500 seamen. When on a war footing the lists of executives can be at once augmented, and the number of men raised to 10,000. The recruits, chiefly from the districts of Trieste and Zara, number annually about 10,000. Length of service is four years with 10 years in the reserve, three years in the Landwehr, and ten years in the Landsturm. One year's service, at the expense of the Government, is required of officers of the marine, and of those who have attained a certain standard in the technical school. After their one year's service they are sent to the reserve as second-class cadets, as warrant officers. If they fail to pass their examination they have to serve one year more as class cadets are those who have passed officers' examination; second-class cadets are those leaving the academy. As youths of 17 to 19 years old, who have not passed an examination. They have been instructed for nine months in the school-ship and four torpedo tubes.

Three months in a man-of-war pass for second-class cadets of the Imperial family, as captain, and Archduke, and, as lieutenant, are carried out by the fleet, after his being present, after his Mediterranean Squadron. It was that an enemy's ship (who commanded) came to Osborne in '90. The fleet supported by Admiral Rohrscheidt, near Spalato, in Dalmatia, my were to attempt to destroy a ship represented by 'Franz Josef, Eugen, and, Bluta, and Komit. consisted of a number of six first-class and torpedo boats. Captain von Jodan were the staff. It is reported successful, but without value put upon the *medan*, and other vessels on it would be a mistake in this report. The fleet possessed on Jan. 1st, 1890, 4900 and 5700 tons displacement, 7 older ironclads, 1 cruiser of 4023 tons, and 6 older type. Heated of 3 first-class, 150-ton, of the *Courcour* type, 5 with 16 of smaller size, designed for service recently been completed. Dimensions are: length, 107 ft. 7 in.; draught, 14 ft. 11 in. when loaded and carrying a load will consist of 60 officers, mean speed of 21 knots. Armament consists of one 10 machine guns. A gun-boat, mentioned as building at Rio de Janeiro on 1st, has a displacement of 600 tons, and armament of six 4.7 in. tubes. Two monitors, named the *Pernambuco*, laid down at Rio in 1887, the boat built for this navy has made very 150 ft. long by 14 ft. 6 in. 14-in. tubes. The mean speed gave 25.8 knots, and in average of 25.8 knots. De Forges et Chantiers as received instructions to construct a training ship, beam, a displacement of 1,000 tons, to give 14 knots on a hull of steel, with an upper deck sheathed and armament will consist of two 12 in. barbette towers of 150 tons, and two 11-in. guns. She will also have on the upper deck, four 6 in. auxiliary battery will have six Hotchkiss guns. In December last two

Brazilian war vessels, the *Aquidaban* and *Guanabara*, visited the United States. The undisciplined state of the crews and the harsh treatment accorded the men by their officers was the subject of some very outspoken criticism in the New York press.

CHILL. Special attention has been directed to this fleet owing to the performance of some of the vessels during the war which has just ceased. With hardly an exception all the ships which were in home waters at the outbreak of the revolution in January joined the Congressional party. These were the *Almirante Cochrane* battle-ship of 3560 tons (her battery comprises five 8 in. 14-ton guns in a casemate, and a number of machine and Q.F. guns of small calibre); the *Blanco Encalada*, a sister ship; the *Huascar* turret ship, carrying two 11 in. 14-ton, two 4.7 in., one light, and two machine guns; the *Esmeralda* cruiser, armed with two 10-in., six 6-in., and thirteen lighter guns; with several corvettes and gun-vessels of old type. To these the Junta added as armed transports the *Itala*, *Aconagua*, *Chacapoal*, *Maipo*, and *Bio Bio*, taking the armament for them from the older and slower ships. On the other hand, the late President Balmaceda came into possession of the new torpedo gunboats *Almirante Lynch* and *Almirante Condell*, described in ed. '91, with the corvette *Pilcomayo*, which had been sent to escort them up the coast, and the merchant steamers *Imperial* and *Chiloe*, which he caused to be armed. Several engagements took place between the ships of the rival fleets, but the only one of importance occurred in April, when the *Blanco Encalada* was torpedoed and sunk in Caldera Harbour, in an attack made by the gunboats *Almirante Lynch* and *Almirante Condell*. As none of the most ordinary precautions had been taken to defend the ironclad against such an attack—she had not steam up, most of the guns of her secondary battery had been transferred to the armed transports, she had very few trained men on board, and was completely taken by surprise—the lessons to be drawn from this action are not so valuable as they would have been in other circumstances. The *Aconagua* was armed with a 40-pounder Armstrong, 26-pounder Q.F., and one 1 in. 4-barrel Nordenfeldt; the *Chacapoal* had a similar armament, less the 40-pounder; while the *Bio Bio* carried one 7-pounder and one .45 machine gun. Of the new vessels building in France, the *Atina* *Prat* is a battle-ship of 6900 tons displacement, partly described in ed. '90. Her armament consists of four 9.45-in. Canet guns mounted in barbette towers—one forward, one aft, and one each side amidship. These turrets are all equipped with Canet central loading tubes, so that the gun can be loaded in any position. Electricity is the motive power, but the guns can be worked by hand if necessary. Eight 4.72-in. Canet Q.F. are placed in pairs in closed turrets, two on each side of the ship. The minor armament consists of four 57-mm. and four 47-mm. Q.F., six 37-mm. rifle calibre, seven Maxim machine guns, and four torpedo tubes. Electricity is used everywhere for working the guns in place of hydraulic power. The cruisers *Presidente Pinto* and *Presidente Errasuris* have completed their trials, and after many delays have received their armament; some changes have been made, but they have not yet been ascertained. It is reported that the late

President Balmaceda purchased an armed vessel at Monte Video, and that this vessel has been taken over by the new Government, but the report has not been confirmed.

CHINA. Exclusive of ships building, the fleet now comprises 5 battle-ships, 12 cruisers, 3 gunvessels, a torpedo gunboats, 24 gunboats, 6 floating batteries, 21 first-class torpedo boats, and 9 of the second class. The *Ping Yuen*, an armoured coast-defence vessel of 2600 tons displacement, was completed at Foochow in '90, and is said to have attained a maximum speed of 10.5 knots. She is armed with one 10.2-in. Krupp in barbette forward, two 5.9-in. Krupp on sponsons, one each side amidships, eight Q.F. guns of small calibre, and four torpedo tubes. She has a complete water-line belt of 8-in. armour, a protective deck of 2 in., and 5 in. on the baibette and covering towers. Her dimensions are: length, 200 ft.; beam, 40 ft.; draught, 16 ft.; engines of about 2400 I.H.P. Two small cruisers, the *Kong Bin* and *Kong Hi*, laid down at Foochow last year, have been launched. They are of about 1000 tons displacement.

COSTA RICA. Messrs. Yarrow are building a gunboat for this Republic.

DENMARK. Three of the new vessels named in ed. '91 have been put into service. The *Heda*, cruiser of 1280 tons, launched Nov. 28th, '90, her heaviest guns are 5.9 in.; the *Springeren*, a 111 ft. 6-in. torpedo boat, built at Chiswick; and the *Hyalperen*, a submarine miner for mooring purposes. Mr. Irwin Scott, a San Francisco shipbuilder, states that the *Heda*, which is partly protected by cellulose, had a ball go right through her, making a hole in both sides. She continued in her course for three hours and a half at 16 knots an hour. The quantity of water she had taken in was inappreciable. The discovery of its applicability to such a purpose was due to accident. A French gunboat had been practising at a target set up against a lot of these moistened coconut husks on the seashore. They couldn't find the shot afterwards, and it was eventually seen that the balls had pierced through the wet husks, which had closed up after they passed in, leaving no hole. Cellulose is made chiefly at Clermont, in France.

EGYPT. A screw steam despatch-cruiser, which is to be used for coastguard purposes in the Red Sea, and probably also for the prevention of the slave trade, was launched by the Ailsa Shipbuilding Company on March 28th, '91, and since proceeded to her destination. She is lightly armed, fitted with the electric light, and possesses a fair speed. During the voyage to Malta she showed herself to be a good sea-boat. She is called the *Ab-Bass*.

FRANCE. The credits for '91-'92 were granted by the Chamber of Deputies and Senate without amendment. The chief reasons adduced for the expenditure were based on the ground that in '95 the French Navy would be inferior to the combined forces of Germany, Italy, and Austria (the Triple Alliance). A special committee of the Chamber, consisting of thirty-three members, has been elected to consider and report upon all naval questions. The following outline of the future shipbuilding policy was made by the Minister of Marine: "As soon as the three armourclads provided for in the Budget of '91 shall be in due course of construction, two others will be commenced, which are to be provided for in the Budget of '92. A certain

number of cruisers, torpedo vessels, and torpedo boats will be commenced at the same time in order to preserve continually the same proportion between the different classes." The battle-ships *Neptune*, *Magenta*, and *Brennus* will be completed in '92-'93; the last-named was launched Oct. 17th, '91. The battle-ships *Lazare Carnot*, *Martel*, and *Jauréguiberry* are being built, the first two by the Government at Toulon and Brest respectively, and the third at La Seyne. The *Lazare Carnot* and *Martel* will each carry two 12-in. guns in closed revolving turrets on centre line in bow and stern, the forward gun being 26'2 ft. and the after 19'7 ft. above the water; two 10'6-in. in closed turrets, one on each beam; eight 5'5 Q.F. in closed turrets, four a side; and about twenty guns of lighter calibre. The turrets will be 14'6 in. thick, the complete belt 17'7 in. maximum thickness, protective deck 2'7 in., and the upper work forward covered with 3'9-in. armour. Speed, 18 knots with forced draught; displacement, 11,900 tons. The private built ship is very similar in character. Two new battle-ships, as yet unnamed, will be laid down early in '92, one at L'Orient and one in a private yard. The plans of the *Trehouart*, *Jemmapes*, *Palmy*, and *Bouvines*, hitherto classed as coast-defenders, having been revised, these vessels are now to be battle-ships, their freeboard, secondary battery, and protection have been increased, but their heavy armament decreased. The armoured cruiser *Dupuy de Lôme*, launched at Brest, Oct. 27th, '90, will be completed in the course of '92, the *Charnier* and *Bruix* are promised in '93, and the *Chanzy* and *Calouche* *Treville* the same year. The armoured gun-boats *Phlégeton* and *Styx* are both behindhand. The former, which should have been completed this year, was launched in Dec. 90, and the latter in Aug. '91. It is reported that these vessels are over-weighted with armour, and

roll badly in a sea-way. The *Phlégeton* carries one 10'6-in. gun in a closed turret forward, and one 5'5-in. in aft. The thickness of armour belt is 6 to 8 in.; turret, 8 in.; the displacement, 1640 tons. The first-class cruiser *Alger* will be finished this year; the *Isly* was launched at Brest, June 23rd, '91; the *Jean Bart* is to be put in commission shortly. The construction of four protected cruisers of the *Davout* type is under way—the *Suchet*, which will be more than half finished in '92, the *Chasseloup Laubat*, the *Bugeaud*, and the *Friant* at Cherbourg, Toulon, and Brest respectively. The three last named are those referred to in ed. '91 as unnamed. They will each be of 3722 tons displacement, and have 19'5 knot speed. The Budget for '92, not yet confirmed, provides for the construction of one first-class cruiser of 5000 tons, two second-class cruisers for foreign service of 1700 tons, one third-class cruiser (modified *Forbin* type), one torpedo depot ship to carry ten 50 ft. torpedo boats and workshops for their repair, and one torpedo vessel of 900 tons displacement (modified type of the Italian cruiser *Partenope*). The torpedo cruiser *Walgny* was launched at Rochefort, April 9th, '91—her armament consists of five 10-cm. q.r. guns; the torpedo cruiser *Lévrier* was launched April 2nd, '91, and her sister, the *Léger*, on Aug. 4th, '91. These vessels are to be completed by March next. Two similar vessels, the *D'Iberville* and *Catinet*, have been put in hand in private yards. The Budget for '92 also provides for the construction of six sea-going torpedo boats and others, the object being to have, at the close of '95, 34 sea-going boats and 228 of the first and second classes. The submarine boat *Siréné* will be delivered before Jan. '91; but the work upon the *Vaucluse*, *Pacific*, and *Andromède* is stopped. A wooden transport, the *Manche*, was launched at Cherbourg, Oct. 16th, '90. The battle-ships *Marceau*

building programme of '90. The battle-ship *Kurfürst Friedrich Wilhelm* has been launched, freeboard, and with 12 pairs in covered weak point is wanted. A sister-ship is launched on Sept. 1. coast-defence ships have been launched 90, and the *Frithjof*, of the *Schwalbe* class, launched April 4th, '91, mine vessel of 1800 tons as also been put into service undertaken during the coast-defence, the cruiser *H*, the torpedo boats 9 and 10. al manœuvres have character as last year, every useful training the conclusion, on it was met by the board the Imperial h was accompanied by Admiral Von der r, and many other present 14 battle-ships and 20 cruisers and 20 torpedo boats. An inter-

esting article upon the German Navy appeared in the *Anti-Jacobin*, Sept. 12th, and a new semi-official monthly periodical, called the *Marine Rundschau*, has been established in Germany, and contains a great deal of information about German naval affairs. During the year '91 the following torpedo boats are to be delivered from Schichau's works at Elbing: 10 first-class boats, Nos. 65 to 74, of 110 tons and 24 knots; 1 first-class boat, No. 75, of 145 tons and 26 knots; 5 first-class boats, Nos. 76 to 80, of 125 tons and 25 knots; 16 first-class boats, Nos. 81 to 96, of 110 to 150 tons and 26 knots; 3 second-class boats of 88 tons and 22 knots; 2 second-class boats of 90 tons and 23 knots; 13 vedette boats of 13½ tons and 18 knots.

GREECE. The three vessels described in ed. '91 have made their trials. The *Hydra* obtained a mean speed of 17'04 knots; the *Vesta*, 17'55 knots; and the *Psara*, 17'24 knots a. hour. These vessels have been delivered at the arsenal at Salamis. It is reported that Greece intends purchasing three swift cruisers and several torpedo boats, as well as putting the rest of the fleet in repair. Her largest cruiser is the *Miaulio*, of 1800 tons displacement, and built in '79.

ITALY. The building programme given in ed. '91 is being carried out, and work in the dockyards is very active. In future all naval material for use in the fleet is to be bought in Italy. The employment of petroleum as fuel has been approved. Economies are to be made in the administrative departments. One ship less will be kept in commission, and by delaying the completion of the cruisers *Etruria*, *Liguria*, and *Umbria*, and transferring the expense to next year's Budget, a saving has been effected. Two vessels of the cruiser *Partenope* type, constructed at Castellamare, have received the names *Iride* and *Euridice*. They are referred to in ed. '90 as *A* and *B*. The two supply vessels mentioned as *G* and *H* have been called the *Allante* and *Ercole*; they are building at Genoa. The protected cruiser *D* of the *Lombardia* type has been called *Elba*. The *Sicilia*, first-class battle-ship described in previous editions, was launched at Venice, July 6th, in the presence of King Umberto, the baptism of the ship being effected with the ancient ritual. The Patriarch of Venice first blessed the seas and the ring that was to wed the ship with the waters, and then Queen Margherita dropped the ring into the waves as the vessel took the water. A party of British naval officers from the ships of the Mediterranean Squadron were present by invitation. The protected cruisers *Umbria* and *Etruria* were launched at Leghorn, April 23rd, '91, and the torpedo vessels *Arctusa* and *Urania* respectively at Leghorn in March and Genoa in June. The *Iride* was launched at Castellamare in July. The battle-ship *Morandi* during her trials in Dec. '90 made a speed of 16 knots with two-thirds power; she was afterwards commissioned, and, unfortunately, touched the shore. The damage seems to have been slight. The *Doria*, a similar ship, has also made successful trials. The *Re Umberto* made a speed of 17½ knots when tried light; she has yet to receive her full equipment. Trials with liquid fuel (petroleum) have been made on board the cruiser *Flavio Gioia* and the *Castelfidardo* and *Ancona*, and with such a measure of success that a course of instruction in the necessary procedure for the application of petroleum as auxiliary fuel is now taking

place. It is reported that in addition to the torpedo boats mentioned as building in ed. '91, six first-class boats of the Russian *Adler* type have been ordered of Schichau, at Elbing. On Jan. 1st, '91, the Italian Navy consisted of 62 ships in commission, including the *Dandolo*, *Ancona*, and *Castelfidardo*; 23 with reduced complement, including the *Morosi*; 41 in the first category of the reserve, and 24 in the second category; 114 unarmed, including the *Sardigna* and *San Martino*; 2 being prepared for service, the *Re Umberto* and the *Euridice*; and 28 in course of construction; in all 294. The vessels in construction were the battle-ship *Sicilia*; 4 cruisers of the second class, the *Marco Polo*, *Etruria*, *Liguria*, and *Umbria*; 4 of the third class, the *Iride*, *Minerva*, *Arctusa*, and *Urania*; 17 sea-going torpedo craft; and the 2 supply ships, *Allante* and *Ercole*.

JAPAN. The Minister of Marine informed Parliament in March last that the total amount of warship tonnage required for the defence of the Empire was 120,000, but that the present tonnage was only 50,000; it was accordingly decided, as an instalment, to spend about £800,000 in providing 2 cruisers of the second class, 1 cruiser of the third class, and 1 torpedo vessel. According to a Japanese paper, the Government has further decided on the following programme of 22 vessels: 2 armoured cruisers of 9500 tons each, 3 armoured cruisers of 6000 tons each, 1 first-class cruiser of 4500 tons, 2 second-class cruisers of 3500 tons each, 1 third-class cruiser of 2500 tons, 3 third-class cruisers of 1500 tons each, 7 torpedo vessels of 750 tons each, and 3 torpedo vessels of 500 tons each. The *Akitsu-hima* and the *Akutsima*, mentioned in ed. '91, are the same vessel; the former name is the correct one. Contracts for two armoured coast-defence vessels reported to have been ordered in Europe last year, are now said to have been placed with the Société de la Méditerranée at La Seyne, but their designs will not be decided upon until the new ships of this type have been thoroughly tested and compared. The *Chyoda*, a protected cruiser built at Clydebank and launched June 3rd, '90, was originally designed by the Japanese Government, but several important alterations have been made in the plans. Her armament consists of ten 4·7-in. Armstrong Q.F. guns, fourteen 4·7-in. Hotchkiss Q.F. guns, three galling machine guns, and three torpedo tubes. The water-line for about two-thirds of its length is covered by a belt of steel plates, giving a maximum thickness of 48-in.; an inch protective steel deck runs the whole length of the vessel, and a short distance above it is an ordinary deck, the intervening space being used for coal. Further protection is given to the machinery by coal and a belt of cellulose, while the interior of the ship is divided into 84 water-tight compartments, and there is a double bottom on the cellular system. Two sets of triple-expansion engines develop 5600 I.H.P., and give a speed of 19½ knots an hour. Her dimensions are: Length, 320 ft.; beam, 42 ft.; draught, 14 ft.; displacement, 2450 tons. The two coast-defence vessels mentioned in ed. '91 have made satisfactory trials, and with the *Chisima Kan*, a torpedo gunboat of 753 tons displacement, launched at St. Nazaire, Nov. 27th, '90, are expected to proceed to Japan this autumn. The *Haside* was launched at Yokosuka dockyard, March 24th, '91. Like her two sisters mentioned above, she combines good speed

and sea-going qualities with an effective armament, but no hull armour is carried, a complete system of water-tight compartments and cofferdams filled with cellulose being relied upon to afford protection from injury at the water-line.

The barbette turret, which is forward in the *Matsushima* and *Hasidate*, is placed aft in the *Matsushima*. Two 4.7-in. Q.F. are placed forward, instead of the heavy gun; five 4.7-in. Q.F. guns are carried on each broadside. The protective deck is 2.6 in. thick, and 4-in. steel shields protect the breeches of the heavy guns. A steel torpedo and submarine mine carrying vessel of 250 tons displacement and 11 knot speed was launched from the Mitsu-Bishi dockyard in November last for use at the Sasapo Naval Station. During the year two vessels, the *Hiyei* and *Kongo*, visited Constantinople, in return for the visit paid to Yokohama by the ill-fated *Erigoul*. Six first-class torpedo boats of the French 35-metre type, but with modifications, are in course of construction or have been recently completed.

MEXICO. The school-ship mentioned in ed. '91 as building at Havre was launched April 9th, '91. Her dimensions are: Length, 213.2 ft.; beam, 32.8 ft.; draught, 14.1 ft.; displacement, 1200 tons. Engines of 1300 H.P. are to give 13 knot speed. The armament will consist of two 4.72-in. and four smaller calibre Q.F. guns. Her complement, including cadets, will be 230. She will be barque rigged, and has received the name of *Saragosa*.

NETHERLANDS. The two armoured ships mentioned in ed. '91 have been named the *Koninkgen Wilhelmina der Nederlanden* and the *Reinier Claessen*. The chief characteristics of the former vessel are: Length, 128 ft.; beam, 49 ft.; draught, 19 ft. 8 in.; displacement, with 450 tons of coal aboard, 4600 tons. Armament: One 12-in. in turret forward, one 8.3-in. on central pivot aft, two 6.7-in. on central pivots on each side in sponsons, 14 Q.F., and three torpedo tubes. The turret has 11-in. armour, a curved protective deck with maximum thickness of 3 in. runs the whole length of the ship, a belt of cellulose extends fore and aft between the berth and steel decks. The covering tower also has 11 in. Four vertical triple-expansion engines are to give a speed of 16.5 knots. She is to be ready for trials in '93. The *Claessen* is smaller, her displacement, with 90 tons of coal aboard, being 2490 tons; but her protection is very similar. Her heaviest gun is a 8.2 in. in a revolving turret. Speed, 13 knots for a four hours' run. These vessels are building at Amsterdam. A protected cruiser, the *Sumatra*, has recently been completed. Her length is 229 ft. 7 in.; beam, 36 ft. 9 in.; draught, 14 ft.; displacement, with 170 tons of coal, 1703 tons. The armament consists of one 8.3-in. on central pivot forward, one 5.9-in. on central pivot aft, two 4.7-in. sponsoned one each side, and two torpedo tubes. The covering tower is protected with 5.9 in., the mean thickness of the protective deck is 1.5 in., and cellulose is largely used for protection. The results of her trials gave a maximum speed of 17.1 knots with force draught, and 15 knots on six hours' run with natural draught. The *Lamongan*, *Makjan*, and *Nobo* are three first-class torpedo boats now in course of construction, of which the last named was launched April 22nd, '91. The Naval Budget for this year shows an increase over last year's appropriation; it amounts to 14,353,242 fl. (about £1,150,000).

PORTUGAL. Messrs. Orlando, of Leghorn, were successful in obtaining the order to build the four belted cruisers mentioned in ed. '91, and will start with the work as soon as money is voted by the Portuguese Parliament. The vessels as designed will possess the following characteristics: Length, 334.6 ft.; beam, 46.9 ft.; draught, 20 ft.; displacement, 4700 tons; 1 H.P., 12,000; speed, 21 knots; coal supply, 850 tons; steaming radius, 5100 miles; maximum thickness of armour, 4 in. The Portuguese Government will acquire, when circumstances permit, the following gunboats for service in Africa's rivers: For Guinea—1 steamer of the *Massabi* type (220 tons), to carry four Q.F. and one machine gun, and 2 launches, each armed with one Q.F. and one machine gun; for Angola—2 steamers of the *Massabi* type and 4 launches; for Mozambique—3 steamers of the *Massabi* type; 4 of the *Mosquito* type, each armed with two 2.9-in. Q.F. and two machine guns, and two launches for the navigation of the Upper Zambesi. Several light-draught stern-wheel gunboats, recently constructed by Yarrow for the Portuguese Government, have been sent to the Pungwe River. A novel submarine torpedo boat has been invented by Señor de Mello, and a committee has been appointed to study and report upon the invention. Admiral Carlos Testa, a writer upon naval matters, died in Feb. '91.

ROUMANIA. See previous ed.

RUSSIA. A battle-ship similar to the *Ghan-gout*, of 6628 tons, but larger, has been laid down at the Admiralty Works, St. Petersburg, and one of 12,400 tons has been begun at Nicolaieff, in the Black Sea. It is also reported that a new battle-ship is to be laid down either on the ships occupied by the *St. George* or by the *Navarin*, as soon as one or other of these vessels is launched. The first-named ship is to be of 8800 tons displacement; her length will be 351 ft. 10 in., and beam 68 ft. She will carry two 12-in. guns mounted one forward the other aft in barbette towers; the secondary battery will comprise six 6-in. Q.F. guns, and in addition she will mount about twenty guns of smaller calibre; her engines are to be of 8500 H.P., and the speed 16 knots. The armoured gunboat *Grossiastchi*, of 1492 tons, was launched at St. Petersburg, June 1st, '90, and two similar vessels, the *Gremiastchi* and *Obvagnii*, laid down in Jan. '90, were launched Oct. 20th, '91. The battleship *Navarin* took the water the same day. A torpedo vessel similar to the *Kazarski* has been recently laid down at Nicolaieff, and two more of the same type, ordered at Elbing. Yarrow, of Poplar, has built a river boat 200 ft. long, an enlarged *Mosquito*, for the Russian Government, and on trial in May she made 11 knots. The *Pole Star*, the Emperor's yacht cruiser, made 18.85 knots on her trial. The *Oral* and *Saratov*, auxiliary cruisers for the Russian Volunteer fleet, of 5000 tons displacement and 19 knot speed, have been delivered. In Dec. '90 the Minister of Marine ordered 3 new torpedo boats for the Black Sea Fleet—2 at Sebastopol, 2 at Odessa, and 2 at Nicolaieff. The belted cruiser *Rurik* will, when complete, be the largest cruiser afloat. She is of nearly 11000 tons displacement, and measures 426 ft. long by 67 ft. broad. Four engines, developing altogether 15,000 H.P., will give a sea speed of 18 knots. Along four-fifths of the water-line there will be a 10-in. belt, and over this a 24-in. steel deck. She will carry

enough coal to steam 20,000 knots at 10-knot speed. Her armament will consist of four 8-in., sixteen 6-in., fourteen 4.7-in., and eighteen smaller calibre guns, with five torpedo tubes. She is said to be superior to any cruiser yet laid down.

SAN SALVADOR. A small wooden steamer of 75 tons displacement has been built at San Francisco for this Government, and named the *Cuscatlan*. She is lightly armed, of 10 knot speed, and can be used either as a transport, a man-of-war, or for the revenue service.

SIAM. See previous ed.

SPAIN. A plan for the reconstruction of the Spanish Navy has been authorised by royal decree dated Oct. 29th, '90. The policy is admittedly based on the fact that Spain is a country with widely separated colonies, and but limited financial means; it includes the provision of an effective system of coast defence, and of a number of very fast cruisers with great coal endurance and sufficient protection. By Article I. of the decree the first-class cruisers to be built for the completion of the fleet must fulfil the following conditions: Armament—two 11-in. Hontoria &c., a number of G.F., and six torpedo tubes. Protection—armour of sufficient thickness over the artillery, and a system of copper-dams and cellulose at the water-line, armoured covering tower and tube. Speed, not less than 20 knots under natural draught; steaming radius, 12,000 to 15,000 miles. Maximum draught, 25½ ft. Article II. provides that the second-class cruisers must have at least 20 knots, and be as efficient as their displacement will allow. Article III. organises the fleet into three divisions. First Division at Cadiz: Armoured cruiser *Emperador Carlos V.*, of 9000 tons; armoured cruiser *Princess of Asturias* and *Infanta Maria Teresa*, of 7000 tons; and the protected cruiser *Reina Regente*. Auxiliary: 2 cruisers of the third class, 2 torpedo vessels, and three torpedo boats. Second Division at Ferrol: One 9000-ton armoured cruiser, to be built; the armoured cruisers *Cisneros* and *Oquendo*, of 7000 tons; and the protected cruiser *Alfonso XIII.* Auxiliary: 2 cruisers of the third class, 2 torpedo vessels, and 3 torpedo boats. Third Division at Cartagena: *The Pelayo*, of 9000 tons; the armoured cruisers *Catalonia* and *Viscaya*, of 7000 tons; and the protected cruiser *Lepanto*, of 4800 tons. Auxiliary: 2 cruisers of the third class, 2 torpedo vessels, and 3 torpedo boats. Article IV. provides for the protection of the ports by means of mobile and fixed defences. Article V. deals with the modifications and rehabilitation required for the ironclads *Numancia* and *Vitoria*. Article VI. states that in order to utilise part of the existing material, the *Reina Cristina* is to be fitted as a transport for 1000 infantry, the *Reina Mercedes* to carry cavalry and munitions of war, and the *Alfonso XIII.* as a floating arsenal, torpedo depot, and supply vessel to the fleet. Article VII. ordains that in future, to avoid confusion in classifying Spanish warships, those which have any armour at all will be designated as "protected," and those which have none as "unprotected." In accordance with the above decrees two of the 7000-ton cruisers mentioned in ed. '90, will have their displacement increased to 9235 tons, and their batteries protected with armour. A contract for one of these vessels, to be called the *Emperador Carlos V.*, has been given to the firm of Vea-Murquia Bros., of Cadiz. The

conditions set forth in Article I. above will be carried out in her construction. The 11-in. guns will be carried in turrets with armour of 9.8 in. thickness. Of the 7000-ton cruisers building at Bilbao, a second in all respects similar to the *Maria Teresa* was launched July 8th, '91, and named the *Viscaya*. The third ship was launched Oct. 3rd, '91, and named *Oquendo*. Of the torpedo vessels of 570 tons, two more have been launched and one of a larger type has now been ordered. She will be of 747 tons and 20-knot speed—an improved torpedo-boat destroyer. In April the *Canla*, a small gunboat, was wrecked off Puerto Plata; the Spanish service has also sustained the loss of Admiral Pinzong Alvares, the Commander-in-Chief of the navy, who died in May. The *Peru* submarine boat has turned out a failure. It is rumoured that next spring a Spanish squadron will be sent on a cruise to the French, British, and Baltic ports. Lieut. Little of the United States Navy has arrived in Spain to superintend the construction of a *fac-simile* of the caravel *Santa Maria*, on board which Columbus set forth in 1492 to discover the New World, and whose form and lines in draught have been preserved as a relic by the Church. The reproduction is for the Chicago Exhibition.

SWEDEN. The Naval Budget contains appropriations for commissioning the new armoured class of the *Svea* class, mentioned in ed. '91; for completing the armoured class *Gota*; and for building a second-class gunboat. The *Gota* has made her trials, a mean speed of 16 knots with 3200 H.P. being obtained.

TURKEY. A few torpedo boats of the 39-metre and 47-metre Schichau type have been added during the year, and there have been several rumours to the effect that the rehabilitation of the navy is to be taken in hand. Nothing, however, of importance appears to have taken place beyond the repairs mentioned in ed. '91, which are in progress.

UNITED STATES. The armoured steel cruising monitor is not to be built, and but one new vessel is authorised by the Appropriation Bill for June '91; this is cruiser No. 13. The three battle ships have received the names of *Indiana*, *Massachusetts*, and *Oregon*. Armoured cruiser No. 2, now called the *New York*, is to be built by Messrs. Cramp. The harbour defence ram is building at the Bath Iron Works, and is to be completed in eighteen months from Jan. 28th, '91. First-class protected cruiser No. 12, otherwise known as the *Pirate*, is being constructed by Cramp, and is to be completed May '93. Cruiser No. 13 is to be like her. Cruiser No. 6 is being built at the Union Iron Works, and is to be completed by January '93. The *Maine*, *Monterey*, and *Bennington* have been launched. The *Philadelphia*, *Newark*, *Concord*, and *Bennington* have been tried, and all with fairly satisfactory results. The *Miantonomoh* is nearly ready for commissioning. She is one of five rebuilt iron double-turreted monitors, and her main battery consists of four 10-in. B.L. guns. Four others of these monitors are in course of reconstruction—the *Amphitrite* at Norfolk, the *Terror* at New York, the *Monadnock* at Mare Island, and the *Puritan*. Cruisers Nos. 7, 8, and 9, it is reported, are to be called the *Cincinnati*, *Raleigh*, and *North Point* respectively. Cruisers 9 and 10, gun-vessels 5 and 6, and the *Cincinnati* and *Raleigh* will probably be launched before Jan.

'92. Torpedo-boat No. 2 is to be built at the Iowa Iron Works, Dubuque.

VENEZUELA. Four gunboats have recently been ordered in this country for the Venezuelan Government.

Foreign Trade, '91. French trade has been less satisfactory than it was last year. The iron industry has suffered somewhat, and the woollen and worsted a good deal, partly from the M'Kinley tariff and partly owing to the decreased demand from South America. During nearly the whole year the new tariff has been under consideration, and is not even now definitely fixed; but it seems clear that very much heavier duties will be put on all round, including imposts on textile raw materials, which have been strongly protested against by the trades interested. After the disastrous experience of imposing a duty on raw silk, it is evident that further taxation of raw material must have a disastrous effect on French industries. In Belgium great inconvenience and unsettlement has been caused by strikes among the colliers, which have not achieved the object which the men had in view, though they have seriously affected both the iron and coal industries. The textile trades there have continued a good deal depressed. During the autumn negotiations took place for a treaty with Germany; but the last news is that there is a hitch in them somewhere. As regards Germany, its trade has, during '91, been very unsatisfactory. The iron trade has not only been depressed, but profits from what orders have been secured have been reduced to a minimum, owing to the action of the Coal Union. That body has so forced up the prices of fuel as to materially increase the cost of all manufactures. The textile trades have suffered seriously—though perhaps not so seriously as was anticipated—from the M'Kinley tariff; and, owing to the general rise in wages, one great advantage—that of cheap labour, which Germany has hitherto enjoyed—has to a great extent ceased. This condition of affairs has caused consider-

able discontent in German commercial circles, where it has led to a certain movement in favour of free trade. In this connection it is interesting to note that the idea of a Central European Customs Union is at present much favoured by the German Government, and has the support of most of the chambers of commerce in the country. A treaty has been concluded with Austria, and negotiations are on foot with Italy, Switzerland and Servia, in addition to those with Belgium, to which we have already referred. The most notable fact in connection with trade in Austria-Hungary is, that the iron and steel industry has been well employed throughout the year, though it has suffered from considerable depression in other countries. The Bohemian coal trade has also been very brisk. In Spain there have been some attempts to develop pig-iron manufacture from the ore obtained there, and competition from that quarter seems likely to attain serious dimensions within a few years. The textile industries of Barcelona have been rather depressed. Portugal seems on the eve of national bankruptcy, and money has been extremely scarce this year, so much so that deferred payments have been the rule rather than the exception. Italy has also suffered from great depression, which is not likely to be overcome for some time. In Russia the failure of the harvest is leading to widespread famine, and the trouble is aggravated by the heavy burden which the new tariff places on the people at large, for the benefit of a comparatively small class of manufacturers. In Persia the opening of the Karun river is beginning to have an effect on trade in the lower reaches; but in the upper part of the river the difficulties are still so great that central Persia reaps but little benefit. In India the most notable events of the year have been the unprecedentedly heavy wheat exports, and a great increase in the output of coal. The Bombay cotton industry has been depressed, and short time was generally resorted to in the autumn. In China anti-foreign

riots have tended to check trade development, as has also the fact that the tea exports continue also to decline. Fictitious efforts continue to be made to encourage iron and steel industries, but they come to very little. Japan has taken a distinct step forward, the exports are increasing considerably, and great efforts are beginning to be put forward to develop that part of the trade with the United States, Australia and China. The cotton spinning industry has, however, suffered very severe depression, and shares in the Joint Stock companies have fallen heavily. Egypt is progressing satisfactorily under British rule, and a revival began in that country in the course of '90, which is still in progress. Nearly half the imports come from England. The export trade of the Congo has expanded rapidly during the last four years, and a continuation of this development seems probable. In Cape Colony there has been some recovery from the depression caused by the bank failures in the autumn of '90, but things there are far from being in a satisfactory condition. As regards Natal, the most noteworthy fact is the discovery of nitrate deposits; if these prove really available, they will considerably enhance the prosperity of that colony. Natal coal has been pretty well tested, and is found to compare very unfavourably with the Welsh product. The returns for the year ending June 30th, '91, show considerable diminution in the imports, due mainly to the depression in the Transvaal. That country has, however, recovered from its bad position in '90, and the extension of railways in its territory will do much to help it in the future. The output of gold at Johannesburg this year has been very much heavier than at any previous time. In the United States the effects of the McKinley tariff are at present not easy to gauge, but it may be said shortly that it has led to considerable diminution in the import of manufactured goods, though apparently without seriously benefiting the industries, both the textile and the iron trades having been steadily depressed. There has been much controversy as to the possibility of manufacturing tin plates in the United States, but up to the present, at any rate, very little has been produced, and it seems extremely doubtful whether it can be made there on an important scale. The southern States continue to develop, and the increase of trade at some ports in that region has been very notable. Reciprocity treaties have been concluded with Brazil and Spain, and the Government is beginning negotiations with Mexico. It is very doubtful, however, whether this policy will lead to the development of the export business after which our American cousins hanker. As long as American manufacturers are handicapped by protective duties all round, they can hardly hope effectually to compete in neutral markets. Canada has developed an egg trade with this country, that product having been, to a great extent, shut out of the United States by the new tariff. Mexico is making steady progress. The new tariff will be, in many respects, an improvement on the old one, and efforts are being made to increase the production of cotton. South America is in an even worse state than it was at the close of '90. Brazil is suffering from rotten finance, aggravated by an incapable Government; and the arrangements for dealing with the imports and exports are so defective that there is some-

thing like a dead lock both in Rio and Santos. In the Argentine Republic various unsound experiments have been tried to palliate the financial difficulties, but their result has been only to make confusion worse confounded. Everything is thoroughly disorganised there, and the prospect of any improvement is very slight. The hope of the country really lies in agricultural development, and it is therefore satisfactory to know that this year's wool clipping has been a good one. In Chili business has been almost at a standstill, owing to the civil war. In Australia strikes have been again prominent, but things have now settled down into a fairly satisfactory condition. In New South Wales the protectionists have gained strength, but the whole question of Australian tariffs is complicated by the proposed Federal Union, which would necessarily involve uniform duties for all the colonies. South Australia has shown decided signs of increasing prosperity, and the same may be said of New Zealand. Western Australia, too, seems to be making as much progress as can be expected from so thinly populated a colony.

* Subject to fluctuations.

* It should be noted that English money of each denomination is current in most British

Colonies, also that the rate of exchange for all coins varies from time to time. Some silver coins vary according to the price of standard silver.

Foresters, Ancient Order of. The origin of the Ancient Order of Foresters dates back more than a century. The earliest notice of Forestry may be said to be a list of members made in "Court No. 1" of the "Ancient Royal Order of Foresters" in the parish of Leeds. The date of this list is 1790. Slow progress marked the early years of the movement, but in 1813 "Court No. 2" was commenced at Knaresborough. General laws for the rule of Forestry were sanctioned on June 3, 1816, but the life of this "Royal Order" was practically cut short in 1834. In the first twenty-one years of its existence no less than 358 Courts had been opened. The "Ancient Order" soon eclipsed the "Royal Order," and within three months of the momentous meeting (1834) at **Roosdale**, at which the disruption in the ranks of the "Royal Order" was made apparent, 294 courts of the latter were incorporated in the Ancient Order of Foresters. Mr. G. F. Mandley became its first **High Chief Ranger**. Salford was the scene of the first **High Court Meeting** (1835), when three days were occupied in discussion of the business of the Order. It was notified that 16,520 members had received certificates. In 1832 Forestry was introduced into the **United States**, and there, as well as in **Canada**, it has thriven. In 1840 the first **Juvenile Foresters' Society** was formed, in Hull. It provided for funeral benefits only. The official magazine is *The Foresters' Miscellany and Monthly Review*, and an annual report is issued under the title of *The Foresters' Directory*. During '90 it appears that the benefit members of the Order increased by 17,587, and the honorary members by 580. Its funds amount to £4,551,965. The total adult membership is 711,051, comprised of 693,505 benefit members, and 17,546 honorary members. According to report, there has been an increase in **Juvenile Foresters** only, during the year '90, of 1945, the total number of members being 85,125. The meeting place for '92 is Ipswich. **High Chief Ranger** for '92, Mr. G. Crickmer. The **Permanent Secretary** is Mr. T. Ballanstead. P.H.C.R., Clifton Villa, Angelsea Rd., Ipswich. **Forged Transfers Act, '91.** See **SESSION**, sect. 74.

Forms of Address. See **ADDRESS, FORMS OF.**
Forth and Clyde Canal. This is a scheme to unite the east and west coasts of Scotland by joining the Forth and Clyde by means of a canal, to admit of the passage of the largest ships without the intervening locks. Messrs. D. & T. Stevenson, C.E., of Edinburgh, the engineers engaged by the promoters, have reported that the best route passes up the Forth to Alloa, where the canal would really commence. Here vessels would be raised by an entrance lock to the level of Loch Lomond, 13 ft. above high water, and the highest canal level. The waterway would then proceed along the valley of the Forth through Loch Lomond to Tarbet, and across the narrow neck of land to Loch Long, or across Loch Lomond to a point near Arden, and thence to the Forth of Clyde near Helensburgh. For further details, see last ed.

Forth Bridge. The greatest work of its kind in the world. The main features are the extraordinary spans, for a rigid structure, of a third of a mile in length, each of which is made by two

cantilevers of 680 feet long, united by 350 feet of girder. The structure carries the railway high above the sides of the valley of the Forth, the piers indeed being nearly the height of St. Paul's Cathedral. On March 4th, '90, the ceremony of formally opening the bridge was performed by the Prince of Wales under the most favourable circumstances, His Royal Highness being accompanied by the Duke of Edinburgh and Prince George of Wales. In the middle of the north connecting girder the Prince drove the last (a gilded) rivet, which is on the outside of the boom and holds together three plates; around its top is a suitable inscription. At a subsequent banquet the Prince of Wales delivered a speech, in which he announced baronetries for Mr. Thompson and Sir J. Fowler, and knighthoods for Mr. Baker and Mr. Arrol. For further details, see last ed. At the general meeting of the company on Feb. 26th, '91, the chairman (Mr. J. Dent Dent) expressed entire satisfaction at the condition of the bridge and the traffic over it.

Four-in-Hand Club. See **COACHING.**

France. A republic governed by a President and National Assembly under constitution of 1871, revised in '75 and '84. The legislative power resides in the Assembly, sitting in two houses: viz., the Senate of 300 members, elected by delegates of municipalities; and the Chamber of Deputies of 557 members, elected by universal suffrage. The initiative in legislation is exercised by the President or either House. Executive power is confided to a president, elected by the two Houses united in National Assembly. War can be declared by the President only with consent of the two Houses. All religions are on a legal equality; every sect being entitled to a grant from the State if its numbers exceed 100,000.—Area 204,177 sq. m.; pop. 38,095,000. Estimated revenue, '90, 3,046,417,120 fr.; expenditure, 3,046,020,874 fr.; public debt, £1,580,000,000. Imports ('90), 4,423,255,000fr.; exports, 3,720,121,000 fr. (For army and navy see **FOREIGN ARMIES AND NAVIES**). The colonies include Algeria, Cochinchina, Senegambia (including the territory of that name and other colonies and protected states on the west coast of Africa), Réunion, Pondicherry, etc., in India, Martinique and Guadeloupe in West Indies. These colonies are politically part of France, and are represented in the National Assembly. France has also three protected states: Tunis, Annam, Tonquin. (For history from '79 to '90, see former editions.)—**POLITICAL.** It was reported in November that M. Mizon's mission was attacked on the Niger by nine native boats; he was wounded. M. Mizon complained that the Royal Niger Co. claimed the right to close the Tchad route to the Germans of the Cameroons. The Italian Government has decided to erect posts along the Franco-Italian frontier to prevent incidents. The Bill making Paris time the legal time throughout France was agreed to (Decr. 2nd). The Chamber adopted a proposal for the conversion or repayment of 57,000,000 of 30-year 4 per cent. Treasury Bonds in a period extending to 1907, and also of the 172,000,000 of 5 per cent. Liquidation Bonds issued 1874-5. The Budget was (10th) passed by 363 to 54. The Chamber (20th) agreed to a supplementary vote of 1,300,000 fr. for the *lycées*. In the Chamber (23rd) the surtax of 4 instead of 3 per cent. on coupons was agreed to by 187 to 76. The Budget was adopted and the Session closed (24th). The Shah offered a site of 12,000 metres for the

erection of a French Legation at Teheran. News received in Paris (29th) from Senegambia, stated that fighting had taken place between Col. Archinard's force and the Toucouleur tribe, the former losing 4 killed and 15 wounded, and the latter 50 killed. The Paris Municipality, by 38 to 31, refused (31st) to discuss the estimates, over 5,000,000 fr., for the Prefecture of Police, the object of the Municipality being to get the control of the police for political purposes. '91. A decree making a new loan of 869,488,000 fr. was issued (Jan. 3rd). The first meeting of the French and Spanish delegates to delimitate the frontier between the Mouni and Benito rivers (Gaboon) took place (5th). At a meeting of the Customs Committee (9th), the President read a statement of the Minister of Foreign Affairs to the effect that the Government intended on the 1st Feb. to denounce all commercial treaties with tariffs, leaving those only to stand which rested on the most favoured nation clause. It was reported in Paris (9th) that the taking of Niore, Senegambia, Dec. 30th, was preceded by a sharp battle, after which Ahmadou fled, and the French entered the city on Jan. 1st. The 3 per cent. loan of 869,000,000 was (11th) subscribed for 16½ times over. The Senate and Chamber met (13th), M. Floquet being re-elected President of the latter. M. Le Royer was re-elected President of the Senate (15th). A credit of 2,000,000 for the relief of distress was unanimously agreed to by the Chamber (18th). The Chamber also agreed, by 458 to 11, to the Government declaration denouncing treaties, placed before the Customs Committee on the 9th. The newly established Superior Council for the Colonies held its first sitting (21st). A Supreme Council of Labour was created (22nd). The question of the suppression of *Thermidor* was discussed at length in the Chamber (29th), and eventually the action of the censor was approved by 307 to 184. The Chamber read a first time (Feb. 13th) a Bill regulating and subsidising working men's provident and superannuation societies. The Government pledged itself (28th) to enforce the law against gambling, and rejected the Bill to legalise the *pari-mutuel*. By a law promulgated (March 27th) an important change was made in the mode of punishing criminals. Henceforth a great distinction is to be drawn between a first offence and an offence preceded by one or more condemnations. In case of condemnation to imprisonment or fine, if the prisoner is brought up for the first time the Criminal Court is authorised to postpone the execution of the punishment. If for five years the criminal is not convicted of any offence, the postponed sentence will fall to the ground. If the criminal, on the other hand, commits a second offence, the first punishment will be carried out independently of that following on the second offence. The May-day demonstrations in Paris passed off quietly with the exception that a dynamite cartridge was exploded against the mansion of the Duc de Trévise in the Rue Beny. The damage was slight, and no one was injured. Mr. Cunningham Graham took part in the procession. At Lyons there were conflicts with the police, and military charges; telegraph and telephone wires were cut by the rioters. There were also conflicts with the gendarmerie at Fourmies, in which a number of persons were injured. The Paris Municipality voted (May 6th) 10,000 fr. to the Fourmies victims, and passed a vote of censure on the authorities for

not allowing "peaceable and Republican demonstrations." A committee of the Chamber agreed to recommend the building of a new Chamber, adjoining the present one, at a cost of 2,000,000. Mr. Cunningham Graham addressed a socialist meeting at Calais (10th), and was afterwards expelled by the police commissary. Johanna, the chief town of the island of the same name in the Comoro group, was bombarded as a punishment for the revolt against French authority and outrage on French subjects. M. Tripone, a captain in the Territorial Army, was arrested (23rd) on the charge of selling to Messrs. Armstrong the secret of the manufacture of melinite and explosives manufactured at the State establishments. M. Turpin, a chemist, claiming to be the inventor of melinite, denounced the Captain in a volume, "Comment on a Vendu la Melinite," and was himself arrested. The Chamber (27th) agreed to a Bill empowering the Minister of War to lay in a two months' stock of wheat and flour for the civil population comprised within intrenched camps or fortified towns. The Chamber (June 3rd) agreed to a Bill extending the twelve hours' limit to engine drivers, stokers, pointmen, omnibus drivers, and conductors, and other persons employed by transport companies having concessions from the State or from local bodies. MM. Fasseler and Feuvrier were also arrested in connection with the melinite scandal. It was reported (7th) that at the beginning of May a proposal made to Russia for the formation of a defensive alliance had been rejected. The Minister of Foreign Affairs signed a convention with the Swiss Government, under which the frontier between Mont Dolent and the lake of Geneva received new delimitation. The trial of the prisoners in the melinite affair was commenced in closed Court (13th). Sentence was pronounced (16th): M. Turpin to five years' imprisonment, a fine of 2000 fr., and five years' interdiction of civil rights; Captain Tripone to five years' imprisonment, a fine of 3000 fr., five years' interdiction of civil rights, and ten years' exile; M. Fasseler to five years' imprisonment, a fine of 3000 fr., and five years' interdiction of civil rights; and M. Feuvrier to two years' imprisonment, a fine of 200 fr., and two years' interdiction of civil rights. The committee of the Chamber ratified the Brussels Act in relation to the Congo State (16th). There was a naval mobilisation at the chief ports (24th). The Chamber, by 439 to 104, refused to ratify the Brussels Convention. The Chamber agreed to the creation of a labour bureau at the Ministry of Commerce. A strike occurred on the Orleans Railway (July 7th). The Senate (9th) pronounced in favour of ten hours a day for children and eleven for women. The national fête was celebrated (14th), President Carnot reviewing the troops in the Bois de Boulogne. Monsignor Ferrata, the new Papal Nuncio, presented his credentials to President Carnot (21st). M. Brisson's scheme for doubling the navy was adopted by the Budget Committee (25th). A new strategic railway between Digne and Mezel was opened (Aug. 16th). English bookmakers were ordered to leave the French territory. The French fleet under Admiral Gervais visited Cronstadt in July, and was accorded a brilliant reception. It then paid a visit to Portsmouth (15th) of a week, and was heartily welcomed, and inspected by the Queen. The fleet left Portsmouth (26th),

The army manoeuvres began (Sept. 3rd). The whole of the labourers at the Havre Docks struck work. The Congress of Dominicans at Lyons (10th) elected Father Fruhwirth, Provincial of Austria, to be General of the Order. A Franco-German company was formed in Paris, with a capital of 10,000,000 fr., for the execution of public works in Servia. MM. Rouvier, Yves Guyot and Jules Roche were hissed on leaving the Prefecture (Oct. 9th); a knife was thrown at the carriage. The indirect taxes for the nine months ended Sept. 30th yielded 1912 millions, as against 1835 millions in the previous year, the estimate having been 1838 millions. By a treaty with the new chief of the Trarzas, in Senegal, the right of the French to a protectorate over their country on the right bank of the Senegal was recognised. The autumn session of the Legislature was opened (15th). The Cabinet decided to make a grant of five millions for the construction of twelve new gunboats and the incorporation of 3000 militiamen in the Anamite Tirailleur Regiments, for Tonquin (20th). The Senate decided (27th) by 109 to 99 that adult women should not be subject to the Factory Labour Regulation Bill.—**GENERAL.** Lady Caithness, Duchess of Pomar, has applied for leave to erect a statue of Mary Stuart in the Avenue Wagram. The Paris Municipality (Dec. 3rd) requested the authorities to arrange for the Koch system in the hospitals. Fagoux, the publisher of an anarchist paper, was (8th) fined 5000 fr. and sentenced to two years' imprisonment for inciting to murder, pillage, and military mutiny. A girl of seventeen was sent to the House of Correction, and her lover sentenced to penal servitude for life (13th), for murdering the girl's father, who would not allow them to marry. The Society of the Friends of Russia, whose object was to promote an alliance with Russia, was dissolved (15th). The trial of Michel Eyraud and Gabrielle Bompard for the murder of Gouffé, the process-server, was opened (16th) at the Seine Assizes. There was a tremendous rush for the eighty tickets available for spectators. Mme. Duc Quercy and M. Labruyère of Padlewski, the murderer of Seliverstoff. Serious defects were found in the new steel cruiser *Forbin*, and she was sent to the repairing dock. The Gouffé murder trial terminated (21st). Both prisoners were found guilty, with extenuating circumstances against the female. Eyraud was condemned to death, and Bompard to twenty years' penal servitude. The Minister of Public Works called on the railway companies to provide foot-warmers in third-class carriages. The results of the vintage for '90 gave 27,416,397 hectolitres, being 4,182,755 hectolitres more than the previous year. The total value was about £39,551,760, or £4,309,000 more than the previous year. The trial of Mme. Duc Quercy, MM. Labruyère and Grégoire, for aiding the escape of Padlewski, commenced (23rd). Mme. Duc Quercy was sentenced to two months' imprisonment, M. Labruyère to thirteen months' imprisonment, and M. Grégoire to eight months' imprisonment, which was afterwards reduced to four. The Paris Municipality resolved (24th) to adopt the son of Dr. César de Pape, the Belgian Socialist. Grégoire was arrested in Palermo (25th). The Anglo-French postal convention was (31st) renewed for three months. Eight of the twelve jurymen who convicted Eyraud signed a memorial for the commutation

of his sentence. His wife, who had been separated from him since '89, obtained a divorce. '91. A fire broke out (Jan. 8th) in a pianoforte warehouse, Boulevard St. Martin, and 1,000,000 fr. damage was done. The Seine was almost completely frozen over (14th). The roof and upper storeys of the Rouen Palais de Justice were seriously damaged by a fire which broke out there (14th); the ancient Gothic part of the building was unharmed. The Court of Cassation (15th) rejected Eyraud's appeal. The Appellate Court (17th) annulled the sentence on M. Labruyère. The sentences on Mme. Duc Quercy and M. Grégoire were confirmed. Père Didon preached to 6000 or 8000 persons in the Madeline (25th) to raise funds for a new church in Rome; the collection amounted to £1456. Drs. Bertin and Picq, of the Nantes Medical Faculty, gave a demonstration (25th) of a suggested new method of cure for tuberculosis: the transfusion into the patient of the blood of the goat, which animal is incapable of being affected by the disease. Eyraud was executed (Feb. 3rd). The Marat statue was removed from the Parc Montsouris by the order of M. Constans. The Minister of Justice, in a circular, directed the judges to discontinue giving tickets of admission to the courts to those in search of sensation. A considerable portion of the pine forest of Peira Cava was destroyed by fire (27th). The telephone between London and Paris was opened (April 1st). The International Miners' Congress was opened at the Labour Exchange (31st), Mr. T. Burt, M.P., being elected President for the English language for the day. There were forty-one English delegates present, and the number of members of the societies and federations they represented, when added together, came to a grand total of 448,636. Germany had sent 19 delegates, representing 141,330 miners; and Austria-Hungary one delegate from Bohemia, who claimed to speak on behalf of 100,000 miners. Belgium was represented by 16 delegates, who were appointed by 92,000 miners; and France by 23 delegates, who represented 125,000 miners. The grand total was 99 delegates, representing 909,167 miners. The Paris Municipality (29th) renewed for ten years the contracts for the electric lighting of the Boulevards. A new torpedo, the invention of Messrs. Sims and Edison, was tried at Trouville-sur-Mer (May 2nd). The Jeanne d'Arc festival was celebrated with much jubilation at Orleans (7th), the President, M. Carnot, being present. A new work, *Griselidis*, by Armand Sylvestre and Eugène Normand, was produced at the Théâtre Français (15th). The omnibus drivers of Paris struck (25th) for increased pay. The strike terminated (27th) on the directors agreeing to recognise the Union and fix a working day of twelve hours. Mr. James G. Bennett sent a cheque for 20,000 fr. to the fund. The centenary of the passing of the French Patent Law by the Constituent Assembly was celebrated at Paris (25th). The tramway men at Bordeaux struck (June), and serious riots occurred, the military being called out (22nd). More serious conflicts occurred the next day. The strike was terminated (24th) by the Municipal Council allowing the company to raise the fares, in order to enable them to grant a twelve hours' day. Several thousand Parisian bakers came out on strike (25th), but the strike terminated (30th). A society, the French Catholic Association for the Application of the Religious and Social Doctrines of Pope

Leo XIII., was formed (July), its programme being the encyclical on Socialism. Dr. Lanne-longue read a paper before the Academy of Medicine (7th), giving particulars as to his new cure for tuberculosis—an injection of chloride of zinc. Monsignor Joseph Auatole Toulotte was (11th) consecrated as Cardinal Lavigerie's coadjutor in the Sahara and Soudan. The Club train dashed into the rear of a train from Lille in the Gare du Nord, Paris (12th). One lady died from the injuries she received, and a number of other people were more or less injured. The President opened the new Avenue de la République. The Paris Municipality agreed (25th) to a scheme for an underground railway from the Arc de Triomphe to the Bastille, and an overground line round the southern Boulevards to the Trocadero. A serious railway accident occurred at St. Mandé (16th). One excursion train ran into another, with the result that fifty persons were killed and over one hundred injured; part of the train caught fire, and several persons were suffocated or burnt. The annual exhibition of the Holy Coat at Argenteuil (Aug. 17th). Pierre Vassort was (23rd) sentenced to six years' imprisonment for embezzling 392,000 fr. from a military contract company. A statue of Joan of Arc was unveiled in Domremy Church (25th). Miss Eames, late of the Covent Garden Theatre, was presented with the decoration of Officier d'Académie (21rd). A railway from Morlaix to Carbaix was opened (27th). The census gave the following as the foreigners resident in Paris: English and Irish, 5224 men and 7503 women; United States, 1870 men, 2367 women; Mexicans, 151 men, 133 women; South Americans, 1563 men, 1522 women; Germans, 10,353 men, 16,510 women; Austrians, 2541 men, 1846 women; Hungarians, 791 men, 492 women; Belgians, 22,115 men, 22,702 women; Dutch, 2153 men, 2052 women; Luxemburgers, 6196 men, 6961 women; Italians, 13,212 men, 7913 women; Spaniards, 2115 men, 2000 women; Portuguese, 231 men, 152 women; Swiss, 13,334 men, 11,452 women; Russians, 5125 men, 4159 women; Swedes, 212 men, 295 women; Norwegians, 119 men, 102 women; Danes, 209 men, 163 women; Greeks, 531 men, 228 women; Roumanians, 701 men, 374 women; Servians and Bulgarians, 130 men, 42 women; Turks, 761 men, 266 women; Africans, 101 men, 49 women; Chinese, Japanese and Asiatics, 137 men, 33 women; other nations, 47 men; unknown nationality, 724 men, 806 women; giving a total of 90,806 men and 90,156 women. A strike commenced among the glass bottles manufacturers of Paris (Oct. 2nd). The Budget of the Minister of the Interior gave the following particulars regarding French newspapers: There are 1998 papers published in Paris. Thirty-three deal with questions of municipal administration, 4 with ballooning, 53 are devoted to agriculture and kindred interests, 6 to furnishing and the painting of buildings, 23 to advertisements merely, 39 to architecture and public works, 59 to associations and societies, 17 to insurance, 33 to the fine arts, 174 to financial questions, 84 to educational matters, 145 to medicine and surgery, 30 to military matters, 12 to naval questions, 30 to sporting, 21 to the theatres, and 81 to jurisprudence and law. Trade papers are more numerous than would be expected. The illustrated journals number 105, the literary, political, or scientific reviews 321, papers exclusively religious 93, of which

67 are Roman Catholic, 3 Jewish, and 23 Protestant. Of the 161 political journals, 128 are Republican and 33 Conservative. Eighty-seven of these are daily papers, 65 weekly, 3 bi-weekly, 2 monthly; 3 appear every two months, and 1 quarterly. Outside Paris there are published in France and the colonies 3180 papers, of which 1479 are political and 1701 literary. Of the former, 1022 are Republican and 467 Conservative. The two departments which possess the most journals are the Gironde and Nord, which have each 139. The Rhone comes next with 132, and the Hautes Alpes naturally closes the list, possessing only 6. Corsica possesses 25 papers, Algeria 125, and the colonies 48. The Latin Monetary Convention was renewed till Dec. 31st, '93. The striking glass-workers were cited before the Council de Prudhommes (16th) by the master, when they were ordered to pay 100 fr. damages, and a fine of 15 fr. for every day's delay in resuming work after twenty-four hours. The new ironclad *Brennus* was launched at Lorient (17th). There was a severe gale on the Northern coast and in the Gulf of Lyons, and much damage was done, the soldiers assisting the people to remove their goods in some places. A passenger train ran off the metals and down a high embankment between Lyons and Grenoble (26th). Two passengers were killed and 21 wounded. Father Hyacinthe preached in the Gallican Church in the Latin Quarter of Paris (25th) in favour of a revision of the Concordat. He said the Roman Catholic Church contained many abuses calling for condemnation, including the devotion paid to our Lady of Lourdes and the adoration of the Holy Coat of Treves. The Post Office Savings Bank report showed that the deposits during the past year had been 413,000,000 fr., being an increase of 81,000,000 fr. over those of the previous year. The official report of the Post Office business transacted in '89 shows that the total number of inland letters, postcards, newspapers, patterns, and other parcels dealt with was 1,508,896,368, as against 1,371,320,986 in '88. There was an increase in every section, the number of letters being 588,863,059, as against 566,350,104, while the total of postcards rose from 38,077,490 to 41,497,320. Newspapers increased from 354,094,712 to 499,822,187, and printed matter of other descriptions from 355,220,811 to 417,074,743. The total number of foreign letters and papers increased from 222,106,380 in '88 to 234,587,166, and of these 119,860,436 were letters and 79,556,962 newspapers. The strike of the glass workers terminated (Nov. 11th).—SOCIAL. Père Gambetta was buried with great ceremony at the cemetery of the Chateau, Nice (Dec. 7th). The sixty-ninth annual dinner of the Geographical Society of Paris was held (14th) under the presidency of M. de Quatrefoiges. Cardinal Lavigerie told an interviewer (22nd) that he joined the Republic because he thought it the only possible government. He was a Frenchman above everything. The first representation of Daudet's new play, *L'Obstacle*, took place at the Gymnase (27th). The Russian ambassador and his wife were received with cries of "Long live Russia!" at the Folies-Bergères. The Mayor of Sedan issued (31st) an appeal to the mayors of France and Algeria for contributions for a monument to be erected at Sedan in memory of the French who fell in the Franco-German war. '91. It was stated that Cardinal

Lavigerie had received adhesions to his recognition of the Republic from the Archbishops of Tours, Cambrai, and Rouen, and the Bishops of Digne, Bayonne, Langres, and Bayeux. The Paris Savings Banks received during '90, 449,789 deposits for 64,235,447 fr., the new deposits being 44,411, 2501 transfer receipts for 1,557,370 fr., and arrears of Rentes due to depositors of 1,062,432 fr. There were 228,375 withdrawals—of which 26,136 were in full—to the amount of 54,471,475 fr., 2243 transfers for 1,151,744 fr., and the purchase of Rentes for depositors, 6,974,955 fr. The amount due to depositors (Jan. 1st) was 139,804,413 fr. The President's new year receptions at the Elysee were unusually brilliant. Mr. Bryce, M.P., was (3rd) elected corresponding member of the Academy of Moral and Political Sciences. Three deaths occurred in the streets of Paris from the intense cold (8th). The prisoners in the Fouroux case were found guilty (9th). Fouroux was sentenced to five years' imprisonment, Laure (the midwife) to three years, Mme. de Jonquières to two years, and Mme. Audibert to eighteen months. Mr. Goschen was (10th), by 27 votes out of 31, elected a Correspondent of the Academy of Moral and Political Sciences. Millet's *Angelus* was shipped from the United States (10th) on its return voyage to France. M. Léo Delibes, the composer, was buried (10th) at Montmartre. Pierre Vladimiroff, twenty years of age, was tried for the murder of his mistress, Mme. Dida, a wealthy widow (21st). The trial lasted till the 25th, when the prisoner was found guilty and sentenced to twenty years' penal servitude and ten years' restricted residence under police supervision. The *Angelus* reached Havre safely. Mme. Boulanger applied for a judicial separation from her husband. A new play by M. Sardou, *Thermidor*, dealing with the period of the Revolution, was performed for the first time (26th), and stopped by order of the Cabinet Council (27th). Meissonier, the artist, died (31st), and was buried with great ceremony (Feb. 3rd). The suicide was announced (9th) of Mr. Charles Pratt, an Englishman, who had recently inherited £280,000, at Annecy. The Empress Frederick arrived at Paris (18th), dining at the British Embassy (23rd). The Empress left Paris for England (27th). M. Bélaie, president of the Messageries Maritimes Steamship Co., died (March 2nd). *Le Mage*, by Jules Massenet, was performed at the Opera (16th). Prince Napoleon died (16th), the body being placed in the church of La Superga (20th). The "Talleyrand Memoirs," published by M. de Bacourt were widely attacked, it being asserted that much of the original text was missing. M. Harancourt's *La Passion* produced a great sensation at the Théâtre d'Application (25th). Queen Victoria arrived at Grasse (25th), which she left (April 28th). The Czar conferred the Order of St. Andrew on M. Carnot. The International Catholic Congress was held at Paris, closing its sitting on the 6th. The Civil Tribunal granted Mme. Boulanger (May 12th) a decree for the separation of her property from that of her husband, which was sequestrated. M. Margerin, curé of Bourmies, who stepped between the military and the rioters and stopped the bloodshed, was created honorary canon of Cambrai (16th). Pierre Loti (Julien Viaud) was elected to the Academy (21st). The ceremony of delivering the cardinal's hat to Cardinal Robelli took place at Paris (June 3rd). The

annual dinner of the Provincial Royalist and Catholic Press was held (7th) in Paris, under the presidency of the Comte d'Haussonville. The Church of the Sacred Heart on Montmartre was consecrated (5th) by Cardinal Richard. A man named Schneider was condemned under the law of espionage to five years' imprisonment and 3000 fr. fine for photographing one of the forts round Paris. The funeral service over Prince Vladimir Dolgoroukoff took place at the church in the Rue Daru (July 7th). President Carnot received the insignia of the Order of the Elephant from the King of Denmark (Aug. 24th). M. Grévy died (Sept. 6th), aged eighty-four, and was buried by the State at Mont-Sous-Vaudrey (14th). The Czar conferred the Order of the White Eagle on Mr. Barbey, Minister of Marines, as a souvenir of the visit of the French Fleet to Cronstadt. Prince Damrong, brother of the King of Siam, visited Paris (27th). Queen Natalie visited Paris. A statue of Gambetta, subscribed for by the inhabitants of Alsace-Lorraine, was unveiled (Nov. 8th) in the garden of the cottage at Sevres where he died. A service was held at the Russian Church in Paris (9th), in celebration of the Czar's silver wedding.—**COMMERCE.** A league was formed at the end of the year to counteract the McKinley Bill. The Chamber (Dec. 6th) agreed to a duty on mural advertisements. The Court of Appeal, in the Copper Ring case, decided that the contracts of the mining companies with the Société des Métaux, being contrary to public policy, were null and void, as was also the guarantee given by the Comptoir d'Escompte. '91. The Minister of Commerce, to encourage young men to become merchants or enter counting-houses abroad, offered four bursarships for competitive examination. Two youths under eighteen were to have 4000 fr. each the first year, 3000 fr. the second, and, if they deserved it, 3000 fr. a third year. Two young men under twenty-six were offered in like manner 2500 fr., 2000 fr., and 1000 fr., or, if they went out of Europe, 4000 fr., 3000 fr., and 2000 fr. The successful candidates must leave France shortly after their examination, and must report their arrival abroad and their engagement in commercial pursuits. At a general meeting of the Comptoir d'Escompte the shareholders' committee fixed the damages to be demanded from M. Edouard Hentch at 1,600,000 fr., 1,200,000 fr. to be paid in Jan., and the remainder during the year. A Paris banker, Maccé, disappeared (Feb. 9th), leaving liabilities to the extent of 16,000,000 fr.; his real name was Victor Berneau. At the beginning of March there was a run on the Société de Dépôts et Comptes Courants, from the results of which it was rescued by an advance of 60,000,000 fr. by the Bank of France. The Chamber (July and) agreed to a bounty on flax growing.

France, President of. See CARNOT.

Franchise. The following, which is issued, by one of the large political organisations, gives a good general idea of the different classes of males of full age who are entitled to be registered, and, when registered, to vote at Parliamentary elections. There are, in addition, some ancient franchises, such as those enjoyed by the livery-men of the City of London. No man can be registered who has within the twelve months preceding July 15th received parochial assistance other than medical relief, or who is an alien. In counties the qualifications are as follows: Freehold of inheritance

or by purchase of the clear annual value of 40s. or upwards. Freehold for life must be of the clear annual value of £5, unless the same comes by descent, marriage, devise, or promotion to any benefice or office, in all which cases 40s. clear annual value is sufficient. **Freeholders** by purchase are required to be six months in possession previous to July 15th; by descent, etc., no length of possession is necessary. **Copyhold** of the clear annual value of £5 or upwards. **Copyholders** are subject to the same terms of possession as freeholders. **Leasehold**, if created originally for a term of not less than sixty years, of the clear annual value of £5 or upwards; if for a term of more than twenty, but less than sixty years, the clear annual value must be £50. **Leaseholders** by purchase are required to be twelve months in possession previous to July 15th; by descent, etc., no length of possession is necessary. Persons qualified in respect of any of the foregoing qualifications must send in their claims to the overseers on or before the 20th of July. [No person can claim in respect of a rent-charge, other than the owner of the whole of the title rent-charge of a rectory, vicarage, chapelry, or benefice, to which an apportionment of the title rent-charge shall have been made in respect of any portion of tithes. No more than one person can claim in respect of any estate in land or tenement, unless the same shall be derived by descent, succession, marriage, marriage settlement or will, nor unless the owners occupy the land or tenement, and are *bonâ fide* engaged as partners carrying on trade or business thereon.]—**Counties and Boroughs: Occupation** as owner or tenant of any land or tenement of a clear yearly value of not less than ten pounds. **Occupation** as owner or tenant of any dwelling-house. [The term "dwelling-house" includes part of a house in which the landlord or superior tenant does not reside. When he does reside, his under-tenants are held to be lodgers.] **Occupation** by virtue of any office, service or employment, of any dwelling-house which is not inhabited by a person under whom such office, service or employment is held. [In the above three classes of occupiers the occupation need not be of the same premises, but may be of different premises, occupied in immediate and unbroken succession in the same constituency.] **Occupation** as lodger of any lodgings of a clear yearly value, if let unfurnished, of £10. [Successive occupation is also allowed in the case of lodgings, but it must be from one part to another part of the same house.] In all cases of occupation, whether as owner or tenant, servant or lodger, twelve months' occupation is required up to the 15th day of July in any year. **Occupiers** need not send in claims unless they find that their names are omitted from the list published by the overseers on the 1st of August, or that in the entry on such list there be a misdescription of some essential particular or particulars, and, in case of such omission or misdescription they must send in their claims to the overseers on or before the 20th of August. **Lodgers** must claim every year, and when claiming for the first time must send in their claims to the overseers on or before the 20th of August. After the first year, lodgers continuing in the same lodgings and desiring to continue on the register may send in their claims to the overseers from the 16th to the 15th of July inclusive, and their names will then appear on the list

published by the overseers on the 1st of August. [The declaration annexed to the claim of a lodger is held to be *prima-facie* evidence of his qualification.] The revised register comes into operation on the 1st of January in each year. A statute of '91 enacts that no person is to be disqualified from being registered by reason only that during part of the qualifying period, not exceeding four months at any one time, he has, in the performance of any duty in connection with his employment, been absent from his dwelling-house or lodgings or not resided within the required distance.

Francis Ferdinand of Austria, Archduke, son of Archduke Charles Louis, by his second marriage with the Princess Maria Annunciat, daughter of Ferdinand II., King of the two Sicilies, was b. at Gratz, in 1863, and is a major in the 4th Dragoon Regiment. A few years ago he inherited the large fortune of his relative, the Grand Duke of Modena, and in so doing took the name of Este. On Feb. 1st, '89, he renounced the fortune and name in favour of his brother, Archduke Otho. Archduke Francis is unmarried, and has never made any great figure in Austrian society. By the death of the Crown Prince Rudolph and the abdication of his father, he becomes heir to the Austrian throne. His brother, Archduke Otho, was born in '65, and married in '86 Maria Josepha, daughter of Prince George of Saxony.

Francis Joseph I., Emperor of Austria, King of Hungary and Bohemia, was b. 1830. His father was the late Archduke Francis Charles. Succeeded his uncle, Ferdinand, on the throne when he abdicated (49). The beginning of his reign was marked by important events. Hungary was in a state of rebellion, which was quelled by the help of Russia. His Italian dominions were saved by the genius of General Radetzky. The Emperor made strenuous efforts to prevent the Crimean war, and refused to join France and England. After the Austro-French war ('59), he was compelled to sign the treaty of peace of Villafranca, by which Lombardy was ceded to Italy. In '66 he lost the duchy of Holstein, obtained by the convention of Gastein, and in the same year, as the result of the war with Prussia, Venetia also. That year was fatal to the supremacy of Austria in Germany, the contest being decided in favour of Prussia by the treaties of Nikolsburg and Prague respectively. The Turkish provinces of Bosnia and Herzegovina were, by decision of the Berlin Congress ('78), placed under the administration of Austria-Hungary. In '54 the Emperor Francis Joseph married the Princess Elizabeth Amalie Eugenie, daughter of the Duke Maximilian Joseph of Bavaria. The Empress is a famous equestrian, and has made several visits on hunting expeditions to England and Ireland. During June, '91, the Emperor visited Fiume. He received the young King of Servia in August.

Frankfort-Lauffen Electrical Transmission. See NECKAR.

Fraser, Alexander Campbell, D.C.L., LL.D., was b. at Archhatten, Argyllshire, 1819. Ed. at Glasgow and Edinburgh Univs. He was awarded the Edin. Univ. prize for an essay on "Toleration," in '42. Elected '56 to succeed Sir William Hamilton (the "modern Aristotle") as Professor of Logic and Metaphysics in the Univ. of Edinburgh. He is Dean of the Faculty of Arts of the Univ. For some years he edited the *North British Review*. Prof. Fraser has been

an Examiner in the Moral Science Tripos of Cambridge, and in Moral Science and Logic for the India Civil Service. He has published in the Clarendon Press Series a "Collected Edition of the Works of Bishop Berkeley, with Dissertations and Annotations"; and has contributed a biography of that philosopher to the series of "Philosophic Classics for English Readers." Hon. LL.D. Univ. of Glasgow '71, hon. D.C.L. Oxon. '83, hon. D.C.L. Edinburgh '91.

Frederick William Louis, Grand Duke of Baden, was b. 1826. Succeeded his father, the Grand Duke Leopold, '52. By right of succession the government of the duchy belonged to his brother Louis, who was older than himself; but Duke William had to assume the government, his brother being mentally incapacitated. As a ruler he has proved himself a firm ally of Prussia, and in the war of '70-'71 against France he fought side by side with Prussia, and took a prominent part in the struggle. In home politics he declared himself a stern opponent of the Jesuits, and in '55 he put an end to their existence as an organised ecclesiastical community, by banishing them from the duchy. His wife is a daughter of the late Emperor William of Germany.

Free Church of England. A Protestant episcopal organisation, originated in 1844 (enrolled in Chancery 1863) as a counteracting movement to the Oxford Tractarianism. Being free from State control, the Free Church claims the liberty to enter a parish where ritualistic practices prevail, and establish a liturgical service on the basis of the Evangelical party in the National Church, with which section it is in ritual practically identical. It is governed by Convocation and bishops, consecrated in the line of the Canterbury succession by the Rt. Rev. Bishop Cummins, of the American Protestant Episcopal Church, whose bishops were consecrated at Lambeth Palace 1787. The churches, although not numerous, are widely spread. Convocation held yearly (June). Bishops: Revs. B. Price (Primus), H. O. Meyers, W. Baker and J. S. C. Dicksee (Missionary Bishop). Hon. Sec.: Rev. E. J. Boon, Worcester. Registrar: Mr. F. S. Merryweather, New Malden, Surrey. Office: 5, Westminster Chambers, S.W.

Free Education Act. See SESSION, sect. 60.

Free Libraries. See PUBLIC LIBRARIES Act.

Freeman, Prof. E. A., D.C.L., LL.D., was b. at Harborne, Staffordshire, 1823. Educated at Trin. Coll., Oxford, Scholar ('41), Fellow ('41), Hon. Fellow ('89). Has filled several offices of distinction in his university, including that of *Regius Professor of Modern History* ('84), Rede Lecturer at Cambridge ('72), D.C.L. Oxon ('70), LL.D. ('74), Fellow of Oriel ('84). Holds numerous foreign distinctions and orders. A voluminous writer; his works, chiefly on historical, political, and architectural subjects, possess a high reputation. Amongst them may be mentioned "*History of the Norman Conquest*," "*The Ottoman Power in Europe*," "*The Historical Geography of Europe*," "*Lectures to American Audiences*," "*The Chief Periods of European History*," etc. During '91, his volumes on "*The History of Italy from the Earliest Times*" were published, and proved most remarkable for the research exhibited therein.

Freemantle. Port for Perth, capital of Western Australia (q.v.). At Swan River mouth.

Freemasonry. The masons of the Middle Ages, like many other craftsmen, formed organised corporations which they governed by their own rules, and the numbers of which they were called up from their apprentices. They were called "*free*" because by several papal bulls they were exempted from laws regulating common labourers and from burdens borne by the working-classes in England and on the Continent. Roman Catholicism therefore acknowledged the craft, and it is only within the time of the present generation that it has opposed it. The masonry of the present day is famous for two things: conviviality and charity. The latter was recognised 160 years since by the formation of a committee of charity in connection with the Grand Lodge in 1725. In 1788 Chevalier Ruspini, surgeon-dentist to George III., established the Freemasons' Girls' School, now known as *The Royal Masonic Institution for Girls*, and ten years later the Boys' School was started. *The Institution for the Aged* is the youngest of the three, the Institution for the Men not having been established till 1842, and for the Widows not till 1849. English Masonry has first of all a fund called *The Fund of Benevolence*, to which every one initiated in a lodge under the English constitution contributes a sum on his initiation; and as long as he is a subscriber to a lodge in London 4s. a year is paid by his lodge for him to this fund, and 2s. if he subscribe to a country lodge, another 2s. going to the fund of his province. *The Board of Benevolence* assists cases of distress to the amount of about £10,000 each year; the Girls' School boards, clothes and educates 260 girls, and the Boys' School 264 boys; while the Benevolent Institution grants annuities to 410 persons—£10 a year to men, and £32 a year to widows; there being now 181 men and 220 widows on the Funds. On March 12th, '91, the Prince of Wales, accompanied by the Princess of Wales, and the Princesses Victoria and Maud of Wales, opened at the Girls' School at Battersea Rise a grand new hall which cost £23,000, and which was named in honour of the occasion the Alexandra Hall. On April 26th the architect, Mr. H. A. Hunt, in consideration of his services to the school, received from the Prince of Wales the rank in Grand Lodge of Past Grand Superintendent of Works. Down to Sept. '91 the last lodge on the roll of the Grand Lodge of England was numbered 2412; but this does not represent the actual number of lodges subject to the United Grand Lodge, as a deduction of 403 has to be made for lodges which have ceased to exist or have joined and merged in other lodges since '63, and others which have joined Colonial Grand Lodges formed in New Brunswick, Nova Scotia, Montreal, Canada, Victoria, New South Wales, South Australia, Prince Edward's Island, British Columbia and Tasmania, all of which are recognised by the Grand Lodge of England as independent Masonic jurisdictions. The Grand Lodge in Sept. '90 refused to recognise a body styling itself "*The Grand Lodge of New Zealand*," as the lodges in that colony were far from unanimous in desiring to form themselves into a separate Grand Lodge. The United Grand Lodge of England recognises only two species of Freemasonry—the Craft and the Royal Arch, both of which are exceedingly powerful. Scotch, Irish, American and Continental jurisdictions acknowledge higher de-

grees; but these, with the exception of the **Mark Degree**, are not universal—that is, they are Christian degrees, and the Jew, the Turk, the Mohammedan and the Parsee will not join them. Strong endeavours were made thirty-six years since to induce the Grand Lodge to recognise the Mark Degree, but the attempts were unsuccessful, and the Mark Masons established a Grand Lodge of their own in 1856. By dint of hard work and a strong sincerity of purpose the Mark brethren have raised this degree to the position of one of the great powers in Freemasonry. It has already 431 lodges in England and Wales and the colonies and dependencies of the British Crown; it has 28,523 registered Mark Masons subject to its authority; has a large Benevolent Fund, out of which it relieves distressed Mark Masons, or the widows and families of deceased Mark Masons; has an Educational Fund, which pays for the education and clothing of 33 children (16 boys and 17 girls in the localities where they live; and out of the interest of its annuity funds grants £60 a year to each of seven decayed Mark Masons and £21 a year to each of three widows, with a present to each annuitant of £5 at Christmas. The work of English Freemasonry does not end here, because there are several provincial organisations which grant annuities to local brethren and widows, and pay the expense of educating Masons' children. On April 29th, '91, the Prince of Wales, having appointed the Earl of Lathom to succeed the Earl of Carnarvon, his lordship was installed as Pro-Grand Master, and the Earl of Mount-Edgcombe was appointed by His Royal Highness, and installed as Deputy Grand Master in place of the Earl of Lathom. The office of Pro-G. M. only exists when a prince of the Blood Royal is Grand Master. In connection with Freemasonry there exists a lodge, the **Quatuor Coronati** (founded 1884), whose membership is restricted to persons possessing either literary or artistic qualifications (Sec., G. W. Speth, Streatham House, Margate). Of a similar nature is the **Savage Club Lodge**, which is restricted to members of the Club. Consult Mackay's "Lexicon of Freemasonry"; Kenning's "Cyclopædia of Freemasonry"; Gould's "History of Freemasonry" (6 vols.). English Freemasonry has two weekly newspapers devoted to its interests—the *Freemason* and the *Freemasons' Chronicle*. The former has been established twenty-three years, and the latter seventeen.

French Colonies, The. See FRANCE, and COLONIES AND DEPENDENCIES OF EUROPEAN POWERS; also under various headings.

French Political Parties. Political parties in France may be roughly divided into two camps—**Republicans** and **Reactionaries**. There are, however, both inside and outside the Chamber of Deputies, several groups in each of these two divisions. The common principle which unites the Reactionaries in the Chamber is opposition to the Republic; and they sit together to form **The Right** or **Opposition**, although representing at least two distinct parties, viz., **Bonapartists** and **Monarchists**. The former were, previous to the late Prince Napoleon's death, further divided into **Victorians**, or followers of Prince Victor, and **Jeromists**, or adherents of Prince Napoleon (Jerome). The system of election in France is that known as **scrutin d'arrondissement**, which, by a vote of the Chamber passed in the early part of '89, was

substituted for **scrutin de liste**, the latter system, however, having only obtained since June '85. The avowed object of recurring to **scrutin d'arrondissement** was to combat General Boulanger, who, it was feared, intended to take advantage of the existing system to force a **plébiscite** from the country by offering himself as a candidate in every department. In order to completely defeat this scheme, the Government introduced a further measure abolishing multiple candidatures, which was also passed. The result of this alteration of the electoral system was to reduce the number of deputies from 584 to 576. Of these 16 are returned by Algeria and the distant colonial possessions. To secure election it is indispensable that at least a fourth of the electors on the register record their votes; and return is further conditional on obtaining an absolute majority of the votes recorded. The principle of election is by universal suffrage. The Chamber of Deputies is elected for a period of four years, and the Senate or Upper Chamber, apart from life members, for nine years, one-third retiring every three years. In the present Chamber, which was elected on Sept. 22nd and Oct. 6th, '89, the Opposition at that time numbered 217, and was thus divided: **Monarchists**, 104; **Bonapartists**, 60; and whilom **Boulangists**, 47; the remainder of the Chamber consisting of **Republicans** of various shades. The Republicans were subdivided as follows: **Opportunists**. This is the most numerous and influential section of Republicanism, and owes its creation to Gambetta. In the last Chamber the Opportunists numbered no more than 150, having experienced a serious reverse at the general election of '85. At the general election of '89, however, they recovered some of their lost ground, and mustered between 100 and 200, but their most prominent member, M. Jules Ferry (*q.v.*), was defeated. Among the more prominent members of the party are MM. Spuller, Ranc, and Reinach. The organs of Opportunism are the *Temps* and the *République Française*.—**Left Centre**, or **Moderate Republicans**. This party, which in the former Chamber numbered no more than half a dozen, was returned some 50 strong to the present Chamber. Its members are nearly all politicians of experience and standing, wealth and social position. It accepts as its political motto the dictum of M. Thiers, "*La République sera conservatrice, ou elle ne sera pas*"; and it follows, therefore, that it opposes all measures or ideas approaching an imitation of the first Revolution. At its head stand M. Léon Say, who resigned his seat in the Senate in order to stand for the Chamber at the general election, when he was successful, and M. Ribot, present Minister of Foreign Affairs, who, however, has taken a ruddier tone in office and is on good terms with the extreme Left.—**Radicals**. The Radicals returned to the present Chamber number some 120 (see *ed. '90*). In the last Chamber they numbered 160, their loss of forty seats being chiefly due to the fact that many members of the party openly espoused the cause of General Boulanger. The prominent members of the Radical parties in the Chamber are MM. Clémenceau, Brisson, Floquet, De Freycinet (*q.v.*), and Millerand. M. Goblet, one of the Radical leaders in the late Chamber, failed to secure re-election.—**Boulangists**. In the late Chamber the Boulangists numbered some scores, but were only returned 47 strong to the present Chamber. Of this

number 18 sit for Paris constituencies. It was stated in our ed. of '90 that even the 47 Boulanger deputies could not be said to form a united party, many of the number being dissatisfied politicians who were as likely to turn their backs upon Boulangerism as they were to espouse it. Of actual followers of the General, it was said, there were probably not a score in the Chamber, and whatever the future of the group, it was the almost general opinion that "Boulangerism," as a precise political creed, was already extinct. The suicide of Gen. Boulanger (Sept. 30th, '91) gave the final coup to Boulangerism.—**Monarchists.** Of 104 deputies returned Monarchists probably fewer than ever now adhere to the Comte de Paris. The Leader of the Monarchists is Comte d'Haussonville, who speaks of Monarchy as "the hope of the future."—There remain the **Bonapartists**, who number 60 in the present Chamber. Of this party there are, as stated, two distinct sections—the "Imperialists" or "Victoriens," and the "Jeromists." To the former the young Prince Victor, the son of Prince Napoleon and the Princess Clotilde, stands in the light of the future Emperor. The political leaders of the Victoriens are M. Jolibois, a former legal functionary of the Empire, M. Cunéo d'Ornano, and M. Paul de Cassagnac. Prince Victor has hardly a serious following, but may rather be said to be surrounded by a coterie. His present policy is one of inaction. The **Jeromists**, or adherents of the late Prince Napoleon, affect to accept the present form of Republic so long as this is the expression of the national will, but aim more or less overtly at what they designate a "Consular Republic." But they,—and, indeed, the other monarchical parties—are disposed to make peace with the Republic. Of this Prince Napoleon was to have been the chief, giving a pledge not to employ any unconstitutional act of violence to convert the Consulate into an Empire. The **Jeromists** are scarcely represented in the Chamber. Prince Victor is, like the Comte de Paris, in exile under the decree of June 22nd, '85, expelling the direct descendants of former reigning houses. With the Bonapartists, as with the Monarchists, there are many who are becoming wearied of the useless struggle against the Republic, and a new group has lately been formed calling themselves "**Independents.**" They are, however, accused on the one side of going over to the Republic, and on the other of coming into the Republic to betray. There is a growing tendency in the direction of Patriotic union under a conciliatory Republican government. At the head of the present Ministry, which succeeded to that of M. Tirard in March '90, is **M. de Freycinet**, who is also Minister of War. His colleagues are drawn from Opportunist, Radical and Independent Republican groups. '91. The senatorial elections took place in January, with the result that 244 Republicans and 56 Reactionaries were returned.

Freycinet, Charles Louis de Saulces de, French statesman, was b. in 1828 at Foix. Educated as an engineer at the Polytechnic School. Elected member of the Academy of Sciences '78. Appointed (64) an ordinary engineer of the first class, he was until '70 a member of the council of the Tarn-et-Garonne. After Sedan M. Freycinet became Prefect of the same Department. He was coadjutor of M. Gambetta in the Ministry of War ('70-71). His other official appointments are as follow:

Minister for Foreign Affairs '77-9; President of the Council and Minister for Foreign Affairs '79-80, January to July '82, and '85, after the resignation of M. Jules Ferry. On the fall of the Brisson Cabinet (Dec. 29th, '85), M. Freycinet again resumed office, but was defeated, and retired (Dec. '86). On the formation of the Floquet Cabinet M. de Freycinet accepted the portfolio of Minister of War, which he retained in the Ministry of M. Tirard. He has written several scientific works of acknowledged excellence. Became for the fourth time Premier and Minister of War (Mar. '90). In Dec. '90 he was elected a member of the French Academy.

"**Friedenheim.**" See HOME for THE DYING.

Friendly Societies. See SESSION, sect. 17.

Friendly Societies. The Friendly Societies Act, '76, as amended in '87, consolidates all the law upon the subject. The last annual report of Mr. J. M. Ludlow, C.B., late Chief Registrar of Friendly Societies, is for the year ending December, '90. The societies include Friendly Societies proper, with their branches, Working Men's Clubs, Industrial and Provident (co-operative) Societies, Building Societies, Trade Unions (*q.v.*), certified Loan Societies, Trustee Savings Banks, and certain other Scientific and Literary Societies certified for exemption from rates. Of Friendly Societies and branches the number of the newly registered ones rose from 301 in '76 to 600 in '90, the total number of these making returns in '90 being 18,036. Further information is given in Return No. 332 (Session '91). See FORESTERS, QDDFELLOWS, and BUILDING SOCIETIES.

Friendly Societies' Registry is for the registration of friendly societies, cattle insurance societies, benevolent societies, working men's clubs, and certain societies which may be specially authorised by the Treasury. The chief registrar and assistant registrar, who constitute the central office, also exercise functions and powers as respects building societies, loan societies, and certain societies instituted for purposes of science, literature, or the fine arts, and savings banks; and the chief registrar reports yearly to Parliament upon the principal matters transacted by him, and upon the valuations returned to or caused to be made by the registrar during the year preceding. **Central Office**, 28, Abingdon Street, S.W.; **Chief Registrar**, E. W. Brabrook, F.S.A. (salary £1,200); **Assistant Registrar** (vacant); **Actuary**, W. Sutton (£800); **Chief Clerk**, H. Tompkins (£500).

Friends. The religious Society of Friends, commonly called Quakers, was founded in the middle of the 17th century by George Fox. "Friends" are distinguished from other Christian bodies by their belief in the immediate teaching and guidance of the Holy Spirit, and that no one should be paid or appointed by human authority for the exercise of the gift of the ministry. In obedience to this belief they hold their meetings without any prearranged service or sermon, and sometimes in total silence. Friends believe that the sacraments of Baptism and the Lord's Supper are to be taken spiritually, and not in an outward form. Their protests against the use of oaths and against the exaction of tithes and church rates cost them much suffering and frequent imprisonment during the first fifty years of their existence. In Norway young Friends have been imprisoned from time to time because they will not submit to military service, for the absolute unlawfulness of war is one of the leading tenets

of the Society. The simple dress which Friends adopted from conviction two hundred years ago became stereotyped into a uniform. This dress has generally been given up, as have the "testimony" against music and singing in its rigid application, and the peculiarities of speech, such as the use of "thee" and "thou" instead of "you," and the avoidance of all titles of courtesy. Of late years there has been a very decided evangelical movement among Friends, under the influence of which the old quietism is dying out. As a result of this change the influence of the Society beyond its own borders, through home missions and adult First Day (Sunday) Schools, has developed to a remarkable extent. In this country Friends have recently been slightly increasing in numbers. The latest statistics of the Society are nearly as follows:—

Members in Great Britain	15,961
" Ireland	2,680
Total membership	18,641
Attenders of meetings not in membership	6,688
First Day Scholars, Adults	23,197
" " Juniors	15,165
	64,601
Deduct scholars, also attenders, say	3,300
Total connected with the body more or less closely	63,391

There are probably about 70,000 in the United States and Canada, besides small numbers in other countries. There is also in America a numerous body of Friends called "Hicksites" (from their founder, Elias Hicks), who about sixty years ago separated from the orthodox community, and hold views somewhat bordering on Unitarianism.

Frith, William Powell, R.A., was b. 1819, and gained considerable reputation from the pictures which he contributed to the British Institution ('39-46). His "**Village Pastor**" ('45), secured his election as A.R.A. Two of his subsequent pictures, "**The Derby Day**" and "**The Railway Station**," are well known. The former created immense interest at the Royal Academy Exhibition ('58), and is now in the National Gallery. His "**Before Dinner at Boswell's Lodgings in Bond Street, 1769**," shown at the Royal Academy ('68), was sold ('75) for £4567, one of the highest prices given for any picture during an artist's lifetime. R.A. ('52). Published his "**Autobiography**" in '87, and "**Further Reminiscences**" in '88. He was placed, by his desire, in '90 on the list of retired Royal Academicians. His son, Mr. Walter Frith, is the author of vaudevilles and plays which have attracted attention.

Froebel Society of Great Britain and Ireland (established in '74, and incorporated in '91) and National Froebel Union, 12, Buckingham Street, Strand, W.C. Sec., Miss A. M. Clive Bayley.

Froude, James Anthony, LL.D., was b. at Dartington, Devonshire, 1818. Educated at Westminster and Oriel Coll., Oxford; graduated with 2nd class classical honours ('40); Vice-Chancellor's prizeman and Fellow of

Exeter ('42); ordained '44. In consequence of his book "**The Nemesis of Faith**" ('48) he withdrew from the Church and resigned his Fellowship. Contributed to *Fraser's Magazine*, of which for a time he was editor ('71-72), and to the *Westminster Review*. Elected Rector of St. Andrews University and LL.D. ('69). Made a tour to the United States ('74), and visited ('74-75) the Cape of Good Hope on a mission to inquire into the Kaffir insurrection, and subsequently the Australian colonies. Was the guest of the Liberal Unionist Club (Dec. 16th, '90). In addition to his "**History of England from the Fall of Wolsey to the Defeat of the Armada**" ('56), his principal works include "**Short Studies on Great Subjects**" ('67), "**English in Ireland in the Eighteenth Century**" ('74), "**Julius Caesar**" ('76), "**Reminiscences of the High Church Revival**" ('81), "**Thomas Carlyle**" ('82), "**Oceana, or England and her Colonies**" ('86), "**The English in the West Indies; or, The Bow of Ulysses**" ('88). Published in '89 a novel, "**The Two Chiefs of Dunboy**," an Irish romance of the last century, and in '90 a "**Life of Lord Beaconsfield**." In the autumn of '91 his work entitled "**The Divorce of Catherine of Aragon**" appeared.

Fruit Farming. Of late years the consumption of fruit has greatly increased in this country, having risen from 1s. to 2s. 8d. per head of population in the last twenty years; and consequently fruit growing might be carried on more extensively and profitably in many parts of England than it is at the present time. In '89, the land under orchards showed an increase of 719 acres; in '90, a further increase of 2,408 acres. In '89, the land under small fruit represented a total increase of 5,209 acres; in '90, an increase of 4,101 acres. In '88 the **British Fruit Growers' Association** was established. Hon. Sec., Mr. Lewis Castle.

Fry, Rt. Hon. Sir Edward, was b. at Bristol 1827. Called to the bar ('54); Q.C. ('69). App. a judge of the High Court ('77). Six years later, on Lord Justice Brett's elevation to the Mastership of the Rolls, Mr. Justice Fry was made a **Lord Justice of Appeal**. Has written a valuable treatise on "**Specific Performance**," as well as certain theological works. His lordship has been a welcome lecturer at Toynbee Hall and elsewhere.

Funchal. Cap. of Madeira (g.v.), pop. 20,000.

Furniss, Harry, the distinguished caricaturist, who since 1880, when he joined the staff of *Punch*, has been familiar to the public as the author of the clever Parliamentary illustrations of that periodical, was b. at Wexford, '54. Previous to his engagement with *Punch*, he had for some years been connected with the *Illustrated London News*. Mr. F. has also contributed illustrations to *Harper's Magazine* and other periodicals, as well as to books for children, of which the best known, perhaps, is "**Romps**," published '85-6. An exhibition of Mr. F.'s "whimsical sketches" was held at Old Bond Street in '87. During '91 Mr. F. delivered a series of illustrated lectures, of which the theme was "**The Manners and Men of the House of Commons**."

G

Gaboon-Ogowé Region, or Gaboon and French Congo. A district of Western Africa north of the Lower Congo. The Gaboon is strictly only a great estuary by which several minor streams discharge their waters. The **Ogowé** is a large river, which reaches the Atlantic by several mouths, forming a great delta, not far south of the Gaboon estuary. France has possessed the Gaboon estuary and district since 1843. See CONGO FREE STATE, CONGO RAILWAY, and COLONIES OF EUROPEAN POWERS.

Galeria (Peru) Railway Tunnel. This is the highest village in the world, being 15,635 ft. above the sea, or within 100 ft. of the summit of Mont Blanc. Close by (according to a report to hand in April '91) a tunnel, 3,847 ft. long, is being bored through the peak of the mountain, 600 ft. above the perpetual snow line, thus affording another instance of the extraordinary railway engineering enterprise of the Andes. (It should be stated here that the Buddhist monastery of Haine in Tibet, over 16,000 ft. above sea level, is said to be the highest regularly inhabited place in the world.)

Galle. Port of call for steamers, south point of Ceylon (q.v.).

Gallipoli. A town of about 21,000 inhabitants, situated on the Dardanelles, chiefly known as the place whither English ships were sent during the Crimean war.

Gambia. A British colony on Gambia river, West Africa. Mostly negroes. First founded, 1588. Capital, **Bathurst** (pop. 6138). Consists of St. Mary's Island, with Combo on south, Albreda, Barra, and Ceded Mile on north bank. Up river are several stations, of which McCarthy's Island, 187 miles from mouth, is the highest. Produces ground-nuts, hides, beeswax, rice, cotton, maize, grain, etc. Ruled by Administrator. For financial statistics see BRITISH EMPIRE, etc. (table).

Game Laws. Animals, *fræ natura* (wild animals), are not in English law subjects of property, and therefore are not protected by the law of larceny. Special statutes, accordingly, have been enacted for the preservation of game, and these are known as the game laws. Game, as a legal term, comprises hares, pheasants, partridges, grouse, heath or moor game, black game and bustards (1 and 2 Will. IV., c. 32, s. 2). By the Ground Game Act, '80, it is provided that the occupier of land (the tenancy of which has been created since Sept. 7, '80) shall have the right to kill ground game (hares and rabbits) thereon equally with the landlord, and shall be unable to alienate this right; but he may authorise certain others to kill his game. See more fully, ed. '87.

Garter King of Arms. The holder of this office of dignity and historic interest is within the College of Arms above all other officers. His powers include the adjustment of arms in England and Wales, and the power of granting arms under the authority of the Earl Marshal in conjunction with the provincial Kings of Arms, according to their several jurisdictions, to persons qualified to bear them, and the creation of arms, crests, cognisances, and devices, as well as the power and authority to grant armorial bearings. He has under the Earl Marshal the regulation of the proceedings

at State ceremonies, and the guidance of coronations; and he controls and manages all matters concerning the Order of the Garter. At the commencement of every Session he lays on the table of the House of Lords the roll of the lords temporal, and he assists at the introduction of all newly created peers (see PEERAGE). The present holder of the office, Sir Albert Woods, C.B., K.C.M.G., F.S.A., is son of the late Sir William Woods, Garter King of Arms, and entered the College of Arms (Queen Victoria Street, E.C.) as Pursuivant 1838, was appointed Lancaster Herald '41, and assumed his present office '69.

Garter, The Most Noble Order of the. Was originally established by King Edward III. in 1349. As reconstituted in 1831 it is limited to the Sovereign, the Prince of Wales, and such descendants of George I. as may be elected to be members of it, and to twenty-five Knight Companions; but sovereigns and princes of other realms, and other foreigners of distinction, may be admitted by special statutes. Its abbreviation is K.G., and it is the highest order of knighthood. Its insignia and habit are most elaborate and imposing and include the **George**,—a gold medallion of St. George and the Dragon, suspended from a blue ribbon; the **Garter**, which is worn below the knee of the left leg, and is made of dark blue velvet, edged with gold, its motto being "*Honi soit qui mal y pense*" (Evil be to him who evil thinks); a mantle of blue velvet lined with taffeta, with the star of the order embroidered on the left breast; a hood and surcoat of crimson velvet, and a hat of black velvet; a collar of gold weighing thirty ounces, and the star with the cross of St. George in the centre, encircled by the Garter. There are at present fifty-one K.G.s in all, including the Sovereign, and the following is a full list of them, the date of creation being prefixed in each case:—

THE SOVEREIGN.

- 1835 Cambridge, H.R.H. the Duke of.
- 1867. Connaught, H.R.H. the Duke of.
- 1878. Cumberland, H.R.H. the Duke of.
- 1863. Edinburgh, H.R.H. the Duke of.
- 1841. Wales, H.R.H. the Prince of.
- 1883. Clarence and Avondale, H.R.H. the Duke of.
- 1884. Wales, H.R.H. Prince Geo. Frederick of.
- 1867. Austria, the Emperor of.
- 1885. Battenberg, H.R.H. Prince Henry of.
- 1866. Belgians, the King of the.
- 1871. Brazil, the Emperor of.
- 1865. Denmark, the King of.
- 1877. German Emperor, the.
- 1873. Hellenes, the King of the.
- 1862. Hesse, the Grand Duke of.
- 1866. Holstein, H.R.H. Prince Christian of.
- 1878. Italy, the King of.
- 1862. Mecklenburg-Strelitz, the Grand Duke of.
- 1891. Naples, H.R.H. the Prince of.
- 1884. Netherlands, the King of the.
- 1873. Persia, the Shah of.
- 1889. Prussia, Prince Henry of.
- 1881. Russia, the Emperor of.
- 1844. Saxe-Coburg and Gotha, Duke of.
- 1882. Saxony, the King of.
- 1882. Sweden and Norway, the King of.

THE KNIGHT COMPANIONS (one vacancy).

- 1885. Abergavenny, Marquis of.
- 1883. Argyll, Duke of.
- 1867. Beaufort, Duke of.
- 1891. Cadogan, Earl.
- 1865. Cowper, Earl.
- 1884. Derby, Earl of.
- 1858. Devonshire, Duke of.
- 1862. Fitzwilliam, Earl.
- 1863. Grafton, Duke of.
- 1862. Grey, Earl.

- 1870. Westminster, Duke of.

The Bishop of Winchester is Prelate, the Bishop of Oxford Chancellor, and the Dean of Windsor Registrar of the Order. Sir Albert W. Woods, C.B., K.C.M.G., F.S.A., is Garter Principal King of Arms, and the Hon. Sir J. R. Drummond, G.C.B., is Gentleman Usher of the Black Rod.

Geikie, Sir Archibald, F.R.S., was b. at Edinburgh 1835. Ed. at the High School and the University. Appointed to the Geological Survey in '55. Dr. Geikie was associated with Sir Roderick Murchison in working out the true geological structure of the Scottish Highlands. On the extension of the Geological Survey in '67 he was appointed director of the survey of Scotland, and in December '70 was nominated by Sir Roderick Murchison as first occupant of the new chair of Mineralogy and Geology, founded in the University of Edinburgh by Sir Roderick and the Crown. The University of St. Andrews conferred on him the degree of LL.D. ('72). In '81 he was appointed Director-General of the Geological Survey of the United Kingdom, and Director of the Museum of Practical Geology, London. The honour of knighthood was announced on the Queen's Birthday, '91, and was conferred upon Dr. G. He received the hon. degree of LL.D. from Cambridge University in June. Will preside over the British Association in '92 at Edinburgh.

Geikie, Prof. James, the younger brother of the above named, is the author of "The Great Ice Age" and "Prehistoric Europe." Prof. J. G. succeeded his brother in the chair of Geology at Edinburgh; and at the meeting of the British Association at Newcastle-on-Tyne ('89) was President of the Geological Section. Hon. D.C.L. (Durham) '89. President of the Geological Society '90.

General Assembly. The highest court of the Presbyterian State Church of Scotland, and consists of representatives, clerical and lay, from all the presbyteries of the Church in Scotland and Ireland, also delegates from the universities and Scottish royal burghs. It meets annually in Edinburgh in May, and sits about ten days. Its deliberations are presided over by a Moderator, and are also attended by an officer representing the State (the Lord High Commissioner), who, however, has no voice in

its procedure or decisions. During the sitting of the Assembly the Lord High Commissioner, a Scottish nobleman, holds semi-regal state in the palace of Holyrood.

Gentlemen-at-Arms. A bodyguard to the sovereign instituted by Henry VIII., and the oldest corps in H.M. service except the Yeomen of the Guard. It is only mustered for duty on such occasions as drawing-rooms, levées, and great state ceremonies. The captain of the corps changes with the Ministry (*q.v.*).

Geographical Progress, '91. The past year has not been marked by any striking geographical discoveries, and, indeed, the main topographical features of the earth are now so far outlined, that untrodden regions are few and limited. The work of the explorer must of necessity be devoted mainly to the less brilliant but not less needful work of investigating in detail limited areas. And, in this respect, good work has been done during the year. In Africa, the still recent extension of the "spheres of influence" of the various European powers has given an impetus to a more careful and systematic examination of their respective regions. The results of the expedition of Messrs. Jackson and Gedge, who in '89 travelled from Mombasa to Uganda *via* Masailand, became available in the early part of this year, and have contributed, with the more recent work of Capt. Lugard, to the still insufficient stock of knowledge with regard to that region. Further south, Dr. Baumaris has continued his surveys in Usambara. The appointment of Mr. H. H. Johnston as H.M. Commissioner to British Central Africa is expected to be fruitful in results to geographical science. Mr. J. Buchanan, who journeyed along the southern frontier of Nyassaland, discovered the Zoa Falls on the Ruw River, about twenty-five miles inland. Traces of gold mines and remarkable ruins in Mashonaland have whetted the curiosity of archaeologists, and Mr. Theodore Bent has gone out to examine and report upon these relics of a lost civilisation. Mr. Joseph Thomson returned in October from Central Africa, where he accomplished important work in the delimitation of Lake Bangweulu. This lake has been incorrectly mapped in recent years owing to disregard of Livingstone's observation of its position, now shown to have been quite accurate. The record of Dr. Peter's work in the Equatorial Region of East Africa was published this year. He succeeded in tracing the Upper Tana to its source in Mount Kenia. The Congo and its tributaries are being explored, and the position of sites accurately determined. Capt. Van Gels, who has been surveying on the Mobangi, confirms an observation of M. Crampel which places the northern bend of that river half a degree further north than it was supposed to be. The expeditions of M. Crampel to Lake Chad, and of Lieut. Quinquy in Upper Guinea, were unhappily terminated with terrible disaster. Capt. Monteil is now pushing on to the Lake Chad region. In the Cameroon mountains a new crater-lake has been discovered by Mr. G. Valdan, and named "Soden Lake." The work of Major Macdonald and Capt. Farryman in the Binne basin, made known this year, has resulted in the definition of the Niger basin from that of Lake Chad. The Italian interest in Abyssinia has led to the sending of an expedition to explore the Juba River. In Asia the interest of exploration gathers mainly about the vast central region where the Russians, as

usual, have been especially diligent, although British enterprise has not been wholly wanting, and the results of Capt. Younghusband's travels in the Pamir region will be awaited with keen interest. In the Pamirs, Capt. Backewski has been supplementing the work of Capt. Grombchevski, who, during the years of '89-90, was engaged in exploring the Tibetan plateau, which he entered *via* Polu and the Keria Valley, when the Yarkand Daria, part of the Kashgarian Range and other districts, were carefully examined by him. Of special interest is the expedition of the Brothers Grijmailo to the Tian Shan Oases and Lob-Nor. They found a volcanic district in the mountains south of Shi-ho, the existence of which seems to lend confirmation to the theory of the earlier geographers, that this central point of Asia was the seat of volcanic activity. According to Grijmailo, the Hami Ranges (200 miles in length and from 6,000 to 10,000 feet high), belong to the Altai system and not to the Tian Shan. The Tarim-Hami Wilderness, formerly supposed to be a plain of moderate elevation, was found to be mountainous, while in the south of this region a tract below the level of the sea was discovered. Mr. Pratt and Mr. Agassiz have added to the known facts about China. Persia and Beluchistan have been in part more correctly mapped, and in Upper Burma the work of the survey proceeds. A fresh water lake has been discovered near the sea of Aral by Colonel Kosbowski. In Australia, geographical interests are focussed in two main centres. The expedition for exploring the interior, fitted out by Sir Thomas Elder, and which started from Adelaide in April, under the direction of Mr. David Lindsay, and the Great Antarctic expedition which has been organised in conjunction with Baron Oscar Dickson, of Sweden, and of which Baron Nordenfjöld is the leader. In New Guinea Sir W. Macgregor continues to lend his valuable aid to exploration. Mount Yule or Kovic (10,046 feet), in that island, was visited by an expedition from Victoria. Turning to America we find that another attempt to cross Greenland, this time to the north, is being made by Lieut. Peary. The Russell exploring party returned in October from the Alaskan Wilds. Mount Elias was ascended to a height of 14,500 feet, and Professor Russell estimates that it reaches to 5000 feet more. In Canada, Dr. Dawson points out that there is still work for the explorer, as there are large areas almost unknown. MM. Rousson and Willens have added to our knowledge of Tierra del Fuego. On European borderland further researches have been made in the Caucasian region, and in the far north-east, additional facts have been gleaned from the region of the Samoyedes. The successful journeys undertaken by lady travellers in out-of-the-way regions deserves a word of notice, as also does the meeting of the International Geographical Congress at Berne, in August, at which a proposal was considered with the object of securing international co-operation in the mapping of the whole world on a uniform scale.

Geographical Society. See ROYAL GEOGRAPHICAL SOCIETY.

Geological Society. This organisation was founded by Sir H. T. De la Beche, who commenced work single-handed in the south-west of England about 1830. The Geological Survey was officially recognised as a branch of the Ordnance Survey in '34. In '45 it was placed

under the office of Woods and Forests, and in '54 under the department of Science and Art. The entire geological survey of England on the one-inch Ordnance maps (scale 1: 63,360) has been completed; the six-inch scale (1: 10,560) has been used for coal-fields and other important districts. The Geological Survey of the South Wales coal-field on the six-inch scale has just been commenced. The drifts were formerly neglected; but of late these have been mapped, and hence many sheets are issued in two editions—one showing the solid geology, while the other, or drift-map, shows the superficial deposits. An index map (scale: 4 miles to 1 inch) is in progress. The maps are illustrated by horizontal and vertical sections, and by explanatory memoirs. The geological survey of Scotland was commenced in '54, and that of Ireland in '45. The geological map of Ireland on the one-inch scale having been completed, the Irish survey was broken up in '90; but a small staff is retained at the Dublin office to revise the maps of certain districts as occasion may require. The survey of each country was formerly placed under a director, and all united under a director-general. The successive directors-general have been Sir H. T. De la Beche (45-55), Sir R. Impey Murchison ('55-72), Sir A. O. Ramsay (72-81), and Sir A. Geikie (q.v.) ('81). The most important work of the survey in '91 was the publication of a memoir on the "Pliocene Vertebrata," by Mr. E. T. Newton, a companion to the "Pliocene Deposits of Britain," by Mr. C. Reid, the latter being the first of a series of comprehensive works on the geological formations of this country. For further information consult "The National Geological Surveys of Europe," by W. Topley.

Geology, '91. In the spring of '91 Mr. A. Strahan, of the Geological Survey, announced his discovery of a deposit of phosphatic chalk, near Taplow. It is a brown sandy chalk, containing from 18 to 35 per cent. of phosphate of lime, derived probably from the associated remains of fish. The discovery may lead to important industrial results, since similar phosphatised chalk is largely worked in France and Belgium for the sake of its value as a manure. No chalk of this character had previously been known in Britain. Sir A. Geikie has announced the discovery, by the Geological Survey of Scotland, of the trilobite called *Olenellus* in certain shales, in Rosshire, under the famous Durness limestone. This discovery fixes the age of some important rocks in the North-west Highlands, and greatly modifies pre-existing views. The Durness limestone may be Upper or Middle Cambrian; the Fucoid beds, with the *Olenellus* fauna and the underlying quartzites, are Lower Cambrian; whilst the Torridan sandstone, lying unconformably below, must now be called pre-Cambrian.—The term *Dalriadan Series* has been introduced by Sir A. Geikie in his presidential address to the Geological Society (Feb. '91), as a name for the younger crystalline schists, occurring in the Central Highlands, the south-west of Scotland and north of Ireland. The name is taken from the old kingdom of Dalriada, in Ireland, whence a colony passed to Argyllshire.—Prof. Prestwich has submitted to the Geological Society and to the Anthropological Institute an account of the discovery of certain flint implements, in Kent, under conditions which suggest their pre-glacial origin. These rudely worked flints are found in red clay and flint gravel

on the chalk plateaux up to a height of nearly 800 feet; and it is believed that they were deposited there before the present chalk valleys were excavated, and therefore long previously to the date of the palæolithic implements of the high-level river-drifts.—The Geologists' Association has published a special paper on the geology of the Paris basin, by Messrs. G. F. Harris and H. W. Burrows. Dr. Johnston-Lavis has issued an important work on the South Italian Volcanoes.—An event of much interest was the triennial meeting of the International Geological Congress at Washington, in the autumn of '91. The Report of the London meeting has been published.—Geology is represented in this country by the Geological Society. President, Sir A. Geikie; Hon. Secs., Messrs. Marr and Hicks. Offices, Burlington House, W. There is also the Geologists' Association, at University College, Gower Street, W.C. President, Prof. J. F. Blake. The London Geological Field Class has been formed, under Prof. Seeley, for the systematic study of the London district. The Palæontographical Society (President, Sir R. Owen) is a publishing body for the issue of figures and descriptions of British fossils.

George of Wales, H.R.H. Prince. See WALES, PRINCE GEORGE OF.

George I. (Christian William Ferdinand Adolphus George), King of Greece, is the second son of King Christian of Denmark, and a brother of the Tsarina and the Princess of Wales; was b. 1845. Chosen King of Greece in '64, in succession to Otto I. The vacant throne had previously been offered to Prince Alfred (Duke of Edinburgh), and to Duke Ernest of Saxe-Coburg Gotha. King George married in '67 Princess Olga, daughter of the Russian Grand Duke Constantine.

German Political Parties. The centre of political life in the German Empire is the Reichstag or Imperial Diet, in which, together with the Bundesrath or Federal Council, are vested the legislative functions of United Germany. There are sharply defined limits, however, to the power of both. The Reichstag's decisions may be overridden by the Emperor, to whom is intrusted the supreme direction of military and political affairs. The Emperor has the power of declaring war if for purely defensive purposes, of making peace, of contracting treaties, and appointing ambassadors and envoys, without the consent of either legislative body. To declare war for other than defensive purposes, however, the assent of the Bundesrath is required. The latter body, which represents the individual states of the Empire, as the Reichstag represents the German nation, consists of fifty-eight delegates. Of these, seventeen sit for Prussia, six for Bavaria, four each for Württemberg and Saxony, three each for Baden and Hesse, two each for Mecklenburg-Schwerin and Brunswick, and one each for the remaining states, including Hamburg, Lübeck, and Bremen. Of its functions, it may be said that the Bundesrath is mainly a confirming body, although it has the privilege of rejecting measures passed by the Reichstag. It has also a limited initiatory power, which it occasionally exercises. Members of the Bundesrath have the right of appearing in the Reichstag, and of speaking on any question in which the State they represent is directly interested. Members of the one chamber, however, are not

eligible for election to the other, although they may sit in their respective provincial diets. The Reichstag is composed of 397 members. Of these 236 constitute the elected of Prussia, 48 represent Bavaria, 23 Saxony, and the remainder the other states in due proportion, ranging from 1 to 17. The present Reichstag was elected on Feb. 20th, '90. It is split up into eight or nine groups. The largest individual party is the Centre, or Ultramontane, which obtains its chief strength in the Rhine districts and South Germany. It was returned at the '87 election 101 strong, and in '90 raised its strength to 117. Its prestige has been greatly increased by its successful resistance to the May Laws, of which it has now almost secured the complete revocation. Prior to '90 the Conservatives, Imperialists and National Liberals, in an alliance which became known as "The Cartel," made up the strength of the Ministerialist party. The great feature of the elections last year was their overwhelming defeat. The National Liberals, under Herr von Bennigsen and Dr. Miguel, lost 50 seats, and now number only 41. The Conservatives were reduced from 75 to 72. The Imperialists, or New Conservatives, were 38, and are now only 20. The allied strength of these parties, which in '89 was 205, was therefore brought down to 133 by the elections of February. On the other hand, besides the increase of the Centre party above noticed, the Social Democrats had a remarkable success. They now possess 35 seats instead of 21, and represent a total Socialist vote in the country of 1,427,323, as compared with 763,128 in the elections of '87. The "Deutsche Freisinnige" party and its allies (see eds. '87 and '90) are gradually regaining their position: they rose at the '90 election from 36 to 66; and the Volkspartei (see eds. '87 and '90) have recovered 10 seats. The Poles number 16 instead of 13. The great success of the Socialist party has been attributed to the severity of Prince Bismarck's policy. Since his memorable disappearance from the political scene, and since the expiration of the Anti-Socialist Law, the party has begun to show signs of losing its cohesion. Herr Bebel, whose organ is the *Volksblatt*, is the recognised chief of the Moderate Socialists. Between them and another section led by Herr Schippel, and represented by the *Volkstribun*, there is a tendency to increasing divergence. The resignation of Herr von Gossler, Minister of Public Worship, took place March '91, and Count Zedlitz-Trutshler, who was Governor of the Province of Posen, succeeded him. In June, the retirement of Herr von Maybach, Minister of Public Works, was notified. He was succeeded by Herr Thielen.

Germany. The German Empire is a confederation of German states under the presidency of the Emperor William of Hohenzollern, king of Prussia. By the constitution of the 16th April, 1871, all the states of Germany are to form an eternal union; direction of political and military affairs vested in an emperor, who may declare war, but if not defensive, consent of Federal Council required. The legislative functions of the empire vested jointly in a Federal Council (Bundesrath) of 58 members appointed by and representing the individual states, and in a Chamber of 397 members elected by ballot and universal suffrage, representing the German nation. The following states are included in the confederation:—The kingdoms of

Prussia, Bavaria, Württemberg, and Saxony; the imperial province of Alsace-Lorraine; the grand duchies of Baden, Mecklenburg, Brunswick, Oldenburg, and fourteen smaller principalities. Area (with Alsace-Lorraine), 211,768 sq. m.; pop. ('89), 46,855,704. **Revenue and expenditure** ('91-2), £56,532,294. (For army and navy see FOREIGN ARMIES AND NAVIES.) **Funded debt** ('87), £40,369,500 m., and **unfunded debt**, 133,868,500 m.; but on the other hand there is a sum of £33,312,055 invested for various federal purposes. **Special imports** ('88), 3,435,877,000 m. (mark = 1s.); **special exports**, 3,352,602,000 m. In '70 the North German Confederation comprised all the German states north of the Maine, under the headship of Prussia, united in military alliance with Bavaria, Württemberg and Baden. (For history '70-90 see previous editions.)—**POLITICAL.** A military celebration of the 250th anniversary of the ascension to the throne of Brandenburg and Prussia of the Grand Elector was held (Dec. 1st, '90). The Imperial Parliament began its sitting (2nd), and passed the first reading of the Budget (11th). The Parliaments adjourned (12th) for the Christmas recess. Prince William of Luxemburg visited the Emperor, to formally notify the accession of his father, the Grand Duke, to the throne. It was reported (22nd) that the clergy had received secret instructions from the Vatican to combat Socialism from the pulpit and by lectures. It was announced that Breslau was to be raised to the rank of a first-class fortress by the construction of additional works. '91. The Prussian Chamber resumed its sittings (Jan. 8th). The Prussian Budget for '91-2 was introduced in the House of the Diet (12th); it balances at £86,041,737. The Reichstag resumed its sittings (13th). The Bill for restoring to the Catholic dioceses the money withheld during the Kulturkampf was read a first time by the Prussian Chamber (24th). The Legislature sanctioned the issue of a loan of 450,000,000 m. (Feb.) for military and other purposes. The Empress Frederick left Berlin (17th) for England. The Emperor received (March 14th) a deputation from the inhabitants of Alsace-Lorraine, asking that the passport regulations might be modified. The Emperor replied, "No, not yet." There were no May-day demonstrations of any importance in any part of the Empire. A new treaty of commerce between Germany and Austria was signed (May 3rd). The Emperor was entertained at a banquet at Düsseldorf, and in reply to the toast of his health he said, "I only wish the peace of Europe lay in my hand. I should certainly take care that it should never again be troubled." The Budget for '91-2 provided for an expenditure of £56,532,294, made up of ordinary expenditure £47,056,751, and extraordinary or non-recurring expenditure £9,475,541. The revenue derived from Customs duties, indirect taxes, and administrative receipts was estimated at a similar amount. The deficiency was to be made up by contributions from the Federal States and proceeds of loans to be issued in the course of the year. The total ordinary and extraordinary cost of the German army in '90-1 was £34,172,010, and in '91-2 it was estimated at £34,194,782, showing a decrease of £9,978,197. This great decrease occurred wholly in the extraordinary expenditure, which was estimated at only £3,365,176, which was £11,267,921 less than the final vote of '90-1. On the whole Budget there was an increase in

ordinary and a great decrease in the extraordinary Budgets. The disbursements amongst the Federal States as their shares of the revenue collected from Customs, tobacco, and stamp duties, amounted to £16,567,650, of which Prussia gets £10,014,380, Bavaria, £1,916,776, Saxony £1,125,152, and all the others less than a million each. The total debt of the Empire was £72,358,767, made up mainly of a 4 per cent. loan of £22,500,000, of a 3½ per cent. loan for £34,550,000, and of a 3 per cent. loan for over £15,000,000. The service of this debt during '90-1 took £3,205,200. The contributions from the Federal States were put down at £16,131,175, which left a balance from the amount to be distributed amongst the States of about £400,000. The civil list of the King of Prussia (he receives none as Emperor) amounted to £785,965 per annum, of which £400,000 was voted by the Prussian Parliament, and £385,965 from the receipts from lands and forests. The Bill restoring to the Catholic dioceses the clerical stipends sequestered during the Kulturkampf was finally adopted by the Prussian Lower House (June 4th) and by the House of Lords (15th). The Emperor signed the treaty for the renewal of the Triple Alliance for six years (28th). The Emperor paid a visit to Heligoland (29th). The Emperor met the Emperor of Austria at Horn (Sept. 3rd). The Emperor went to Munich (7th) to witness the Bavarian manoeuvres, and was presented with the freedom of the city. An Imperial decree was issued (21st) providing that on and after Oct. 1st passports on entering Alsace-Lorraine would be required only from military men on active service, ex-officers, pupils of foreign military schools, and from persons who, before performing their military service, lost their German nationality. The *visé* for such passports as were required would be free of cost. Finally, it was ordered that foreigners staying more than twenty-four hours in Alsace-Lorraine must give notice to the police, under penalty of expulsion. Capt. Rüdiger was appointed sub-governor of German East Africa (Oct. 3rd). Herr Sonnenschein was appointed Chief Judge of German East Africa. It was decided to test the possibility of reducing the term of military service from three years to two, in the 4th Regiment of the Guards, and the battalions of the 131st and 145th Regiments. The Württemberg Parliament was opened by the King (22nd). A telegram was received from Captain von Dresky (26th) to the effect that the Abo people (Cameroons) had been punished, Maing having been captured. In consequence of the large number of immoral crimes in Berlin the Emperor issued (27th) an Imperial Rescript, in the course of which he says:—"Although I have already stated my views to the Minister of Justice, and am aware that in the Ministry of the Interior steps have been taken to remedy the existing evils, I nevertheless feel it to be my duty to draw the attention of my entire Cabinet to this incident, affecting as it does the well-being of the whole country, and to request it, as soon as possible after the deliberation of the various departments, to lay definite proposals before me on the subject. If in so doing I refer to the considerations which appear to me specially important in order to inspire a proper comprehension of the existing state of affairs, it is because I feel myself obliged to do so, seeing that the decision will be given in my name, and

because I am fully conscious of the duties devolving upon me as Sovereign defender of law and public order." Proceeding, the Rescript said that the existing laws must be considered to see how far they would meet the state of affairs, and that the Public Prosecutors would receive his gratitude and affection in their efforts to stamp out the plague, and urging on judges to give the full penalty in first offences on the conviction of *sousteurs*. The Cabinet was also to consider what change or supplement would be necessary in the penal code. It was officially acknowledged (30th) that Emin Pasha had deserted his post in G. East Africa, having gone on the territory in the British sphere of influence; and the Government repudiated his action. A special mission from the King of Siam arrived in Berlin (Nov. 6th). The Budget for '92-3 was presented (10th). The expenditure exceeded that of the current year by 110,000,000 m., and the receipts showed an estimated increase of 24,000,000 m. —**GENERAL.** The commission of artists and manufacturers appointed in November reported (Dec. 15th) in favour of holding a German Exhibition of Arts and Industries in London. The Emin Pasha committee dissolved itself. A bank in the principality of Russo-Schleiz suspended payment with liabilities of £100,000. The *Gondoliers* was produced in German (20th) at the Friedrich Wilhelm Städtisches Theatre, Berlin, the actors also wearing German dress. Twelve young girls returning from church (22nd) ventured on the ice of the Selenter Lake, in Eastern Holstein; they fell in, and were drowned. The existence of a secret society in Germany, with representatives in London, Vienna, Berlin, and Altona, was discovered (26th); its object was the perpetration of railway robberies. The North German Lloyd was forbidden to carry German emigrants to Brazil.—'91. The city of Berlin voted 100,000 m. towards an International Art Exhibition. The Rhine was frozen at Cologne (Jan. 1st), and postal communication with Helligoland suspended. A terrible explosion of firedamp occurred at the Heinrich Gustav coalpit, Bochum (2nd); sixteen were killed. A fire occurred at the Wiesbaden Theatre (2nd), by the catching fire of the dress of a *dansuse*; she only was seriously hurt. Under the Invalid and Aged Working Men's Insurance Law (see '89 ed.), which came into operation on the 1st, two hundred working men at Rixdorf claimed annuities from the State. Snow had been falling at Berlin for two days, and on the 6th railway traffic was suspended in many places, one train being snowed up. A famine broke out in Silesia, hunger-typhus occurring in several villages. It was reported (8th) that large petroleum stores at Pillau were on fire. The Rhine was (11th) frozen over down to the Lorelei rock. The charge for inland telegrams was (17th) reduced from six to five pfennigs per word, with a minimum charge of fifty pfennigs (6d.). Mr. E. H. Hankin, the discoverer of tox-albumens, discovered a cure for anthrax while studying Koch's remedy. It was decided (Feb. 11th) to call Koch's lymph tuberculin. General Booth addressed a meeting (23rd) in Berlin. Professor Liebreich, of the Pharmacological Institute, at a meeting of the Berlin Medical Society (25th), announced his remedy for tuberculosis, which consisted of an injection of cantharidate of potash. It had been successful in tubercular laryngitis and pharyngitis.

The steamer *Hermann* arrived at Bremerhaven (April 4th) from Baltimore with a cargo of cattle, the first ever brought from America to that port. The building at Magdeburg, in which the art collection was kept, was burnt (6th), and the whole collection destroyed. The miners of Westphalia and Rhineland went on strike without giving notice at the end of the month. The Empress Frederick formally opened the International Art Exhibition (May 1st), which was held to celebrate the Jubilee of the Society of Berlin Artists. A branch establishment of the Berlin Aquarium was opened at Rovigno (12th). Herren Fusangel and Lüneburg, leader-writers on a Roman Catholic journal published at Bochum, the *Westphalian People's Paper*, were charged (June 11th) with having, in a series of thirty articles written by them during last summer, labelled the Local Income Tax Assessment Committee, the Municipal Council of Bochum, and a whole host of leading citizens of the place—notably Herr Baare, the director of the great Iron and Steel Association of Bochum, and a man of high position in all respects. The incriminated articles alleged that, in the year '89, the Income Tax Assessment Committee, being composed principally of National Liberals and adherents of the Evangelical Church, grossly favoured their own political friends and co-religionists in fixing the amount of income tax which they were required to pay. The Court found the defendants guilty (19th), and they were sentenced, Fusangel to five months, and Lüneburg to two months' imprisonment. M. Raoul Pictet, the celebrated chemist, was at Berlin arranging for the employment of his method of manufacturing pure chloroform. There were heavy storms throughout the country (26th), and the consequent floods caused much damage. The cashier of the Bohemian Agricultural Bank embezzled 500,000 m. and fled to America, and Herr Padior, the president and founder of the bank, shot himself in consequence. A terrific hail and thunder storm passed over the greater part of the country (July); great damage was done, and many people killed. The German decree, allowing passengers to pass through Alsace without passports after the Moenchenstein accident, was made permanent. Dr. Leivig made the charge against Professor Bergmann and Dr. Hahn of having experimented with cancer lymph on the healthy part of a man's body, and the two accused were ordered by the Government to give an answer within twenty-four hours. The laying of a new telegraph cable between England and Germany was completed (Aug. 12th). The new Institute for Infectious Diseases was opened in Berlin (17th). The exhibition of the Holy Coat at Treves was inaugurated (20th). The Bishop of Treves and a priest from Argenteuil examined the coat, and came to the conclusion that the coat at Treves and also that at Argenteuil were authentic. The electric lamps at the Electrical Exhibition at Frankfurt-on-Main were lighted for the first time (25th) by the current generated by water power at the Lauffen falls of the Neckar, and transmitted to the Exhibition through a cable 108 miles long. The Congress on International Law was opened at Hamburg (Sept. 7th) under the presidency of Professor Von Bar, and closed (24th). Burglars broke into the British Consulate at Hamburg (18th), and stole the consulate seal, coin and postal orders. The congress of German scientists

and physicians was opened by Professor His, at Halle; there were 1,215 persons present, 280 being ladies. It was reported that the Zelewski expedition had met a disaster, and further disquieting reports arrived during the month. The number of pilgrims who visited Trèves was set down as 1,900,000. The second German Socialist Congress met at Erfurt (Oct. 14th); the report showed that the revenue for the year was £11,193, and the expenditure £6,747. Professor Julius Sommerbrodt, of Breslau, expressed the opinion that large doses of creosote (from one to four grammes daily) had a curative influence, excelling that of every other remedy, in innumerable cases of consumption. The Socialist Congress closed (21st) after having adopted a long programme; including amongst other points a demand for the repeal of the laws subordinating the wife to the husband whether in private or public life. The next Congress is to be held at Berlin. At the annual meeting of the G. East African Co. (26th) the loss on the Zanzibar business was set down at 58,870 marks, and the loss on the general balance sheet at the head office at 123,191 marks. The great majority of the printers in Berlin and all the large towns gave a fortnight's notice on the 24th, having determined to go on strike unless they get a nine hours day and an increase of wages by from 5 to 7½ per cent. The Mutual Aid Society of German Printers threatened to declare men who did not join the strike to have forfeited their right to assistance from the treasuries and central sick funds. The printers' strike began (Nov. 1st). Miss Gentry, an American graduate in mathematics, was permitted by the Berlin University authorities to attend the lectures of certain professors; this was the first time a lady had been allowed to do so. Russia refused the offer of assistance from Germany towards the relief of the famine-stricken population. The master printers issued a notice that no concessions would be made to the demands of the men. The total number of emigrants who left Bremen in the ten months ending Oct. '91 was 19,722 against 20,948 in '90.—**SOCCIAL.** At a concert held in Berlin (Dec. 20th) Miss Henshaw, the first winner of the Liszt Royal Academy prize in London, made her *début* with great success. Two thousand Silesian weavers pointed out (23rd), in a petition to the Emperor, that the average weekly wage of a married hand weaver amounted to 5m. The chimney-sweep apprentices of Berlin were entertained at a Christmas dinner (27th) by the members of the British Embassy. Count Pastor Stoecker preached his farewell sermon in the Dominican Church (28th). '91. There was a religious service in the Schloss Chapel and grand reception by the Emperor on New Year's day. *The Middleman* was produced (Jan. 8th) at the Gärtner Platz Theatre, Munich, under the title of *Arbeit*. Herr Mueltenstefen, National Liberal, was elected a member of the Reichstag as successor to Herr Schorlemer. At a field *battue* (9th) the Emperor killed 278 hares. The Emperor accepted the resignation of Count Waldersee as Chief of the Grand General Staff (Feb.). Lieut.-Gen. Count Schlieffen (*g.v.*), late Chief Quartermaster of the Army, was announced as Chief of the Grand General Staff (8th). The Empress Frederick visited Paris (18th) and London (28th). A ceremonious service, in memory of Dr. Schlieffmann, was held by the learned societies in the large hall of the Berlin

Rathhaus. Dr. Windthorst died (March 14th) at the age of eighty. A requiem was performed (17th) in the church of St. Hedwig; the ceremony was most imposing. The funeral took place (18th). The Emperor laid the foundation stone of a church (22nd) and to perpetuate the memory of his grandfather, Count von Moltke died suddenly (April 24th), and was buried in his private mausoleum beside his wife's remains (28th). Prince Bismarck was elected to the Reichstag (30th) by a majority of 508 over the Social-Democratic candidate. Professor Joachim celebrated his sixtieth birthday (June 28th). The Emperor arrived in England (July 4th); lunched at the Mansion House (10th); he left (13th) England for Norway, where he arrived on the 21st. He arrived at Kiel (Aug. 8th). Mr. Goring Thomas' *Esmeralda* was performed for the first time before a Berlin audience at Kroll's Opera House (26th). The condition of the King of Wurtemberg gave considerable anxiety, and an operation was performed (Oct. 4th). The king died at Stuttgart (6th). The funeral took place (9th) at the Old Palace, the Emperor being present. The Emperor conferred the titles of Privy Councillor and Excellency on Dr. Helmoltz (18th). The King of Roumania arrived at Potsdam (27th), where he was met by the Emperor.—**COMMERCIAL.** A quantity of American bacon, value 60,000m., was seized (Dec. 23rd) by the Customs, and the importer arrested. '91. The definite construction of the colonial company for South-West Africa, with a capital of 20,000,000 m., was announced (Feb. 20th). The banking firm of Hirschfeld & Wolf suspended payment (Nov. 3rd), with a deficit of 5,000,000m. The bank of Friedländer and Sommerfeld failed, and the two brothers Sommerfeld committed suicide; the other partner was abroad at the time owing to ill-health.

Germany, Emperor of. See WILLIAM II. OF GERMANY.

Gibraltar. Name a corruption of *Jebel el Tarik*, the Mount of Tarik. Anciently *Calpe*, one of the pillars of Hercules. Is a rocky promontory on the south of Spain, connected with Andalusia by a low isthmus, and is a British fortress and the "key" of the Mediterranean. Area 2 sq. m., pop. 18,381, exclusive of garrison, 5000 or 6000. The rock rises to 1500 feet, and is impregnablely fortified. The town lies within the bay, on the western side. Anchorage is bad. The port is free, but there is little commerce. Sir Lothian Nicholson was appointed Governor (Feb. '91). The bakers went on strike (June 4th) for shorter hours and higher wages. During July the garrison was placed on short allowance of water owing to its scarcity. It was reported (Sept. 26th) that the Moors at Cape Juby were in open rebellion, and threatening the British factory there. H.M. gunboat *Goshawk* arrived (Oct. 1st) and found all quiet. For *financial statistics* see BRITISH EMPIRE, etc. (table). Ruled as a Crown colony by a military Governor. For Governor, etc., see DIPLOMATIC.

Gibraltar, Railway to. On Sept. 7th, '91, a portion of this line connecting Bobadilla with Ronda, and 45 miles in length, was opened. Twenty-six miles from Algeciras to Jimena, were already being worked, and 40 miles remain for completion, and then Gibraltar will be in communication with the rest of Europe. The work is being done by an English Company.

Gibson, Rev. J. Monro, D.D., Moderator of the English Presbyterian Synod, was born in Wigtownshire in 1838. Educated at Brechin and in Canada, whither his family emigrated. Ordained at the age of twenty-six, and became coadjutor, and afterwards successor, to the Rev. Dr. W. Taylor, of Montreal. Lectured on Hebrew and Greek Exegesis at Montreal College. After a pastorate lasting six years at the Second Presbyterian Church in Chicago, Dr. Gibson returned to England as pastor of the **St. John's Wood Presbyterian Church**, in '80. In his writings, which include a work entitled "Christianity according to Christ," Dr. G. has exhibited a similar freshness and vigour to that which distinguishes his pulpit utterances. Elected in Nov. '90 to the office of **Moderator** of the English Presbyterian Synod.

Giers, Nicholas Carlovitch de, Russian Minister for Foreign Affairs, was b. 1820. In '48 he was attached as a diplomatist to the staff of General Lüders in Transylvania. In '50 he became First Secretary to the Russian Embassy at Constantinople. Appointed ('53) Director of the Chancery of the Commissary-Potentiary in Moldavia and Wallachia. In '56 he was raised to the rank of a Councillor of State. After occupying various consular posts, he ('63-9) represented Russia in Teheran, Russian Minister at Berne ('69-70), and at Stockholm. In '75 the post of Adjunct to the Minister for Foreign Affairs and Director of the Asiatic Department was conferred upon him, and in '76 he was appointed to the important office which he now holds.

Gilbert, Sir John, R.A., was b. 1817, and is Pres. of the Royal Society of Painters in Water Colours, to which position he was elected in '71. He first exhibited in '36, since which time he has constantly contributed to the Royal Academy and other exhibitions. He has been well known for many years as an illustrator of books and pictorial magazines. Many of the best editions of the British classics have been enriched by his art, and he was for many years engaged in illustrating an edition of Shakespeare. Knighted '71. Elected A.R.A. ('72), R.A. ('76). He is a Chevalier of the Legion of Honour, and a member of various home and foreign art societies.

Gilbert, William Schwenck, Barrister of the Inner Temple, was b. 1836. Entered the literary world as contributor of "**Bab Ballads**" to *Fun*, and several magazines. Came into note as a play writer on production of his pieces "**Palace of Truth**" and "**Pygmalion and Galatea**" ('70-71). Mr. Gilbert has written the librettos of a series of comic operas, which have been set to music by Mr. (now Sir A.) Sullivan. The list comprises "**Trial by Jury**," "**Sorcerer**," "**Pinafore**," "**Pirates of Penzance**," "**Patience**," "**Iolanthe**," "**Princess Ida**," and the Japanese opera "**Mikado**," produced at the Savoy Theatre, London, all of which have attained great popularity. Mr. Gilbert's other notable productions are "**Dan'l Druce**," "**Engaged**," "**Sweethearts**," "**Ruddigore**," and "**The Yeomen of the Guard**" ('88). Published "**Songs of a Savoyard**" in Nov., '90. Mr. G. was appointed a magistrate for Middlesex in June '91.

Gilchrist Educational Trust. A fund left by the late Dr. John Borthwick Gilchrist (1759-1841) to trustees, "for the benefit, advancement, and propagation of education and learning in every part of the world, as far as circumstances will permit." The income is applied to

the support of scholarships for young men and young women, awarded on the result of competitive examinations; in occasional grants to **Educational Institutions** under special circumstances; and to the delivery of high-class scientific lectures for the people, at a charge for admission of 1d. each per lecture. See, R. D. Roberts, M.A., D.Sc.; Office, 17, Victoria Street, Westminster, S.W.

Gillett, William, originated and carried out the system of **Country Bankers' Clearing**. Has written several pamphlets on financial questions, including "**A British Zollverein**" ('79), and "**The Revival of British Industries**" ('85). The latter had an enormous circulation, and excited a great deal of attention. Is Deputy-lieutenant for Herefordshire, and was Major of the Middlesex Yeomanry Cavalry, '73-81; is a Fellow of the Royal Geographical Society, and travelled with the American Army Commission through Japan, China and India in '75 and '76.

Gillies, Duncan, Victorian statesman, was b. 1830 in Scotland. Went to Victoria '54, when he was twenty-four years old, drawn by the prospect of gold mining. Elected to V. Parliament '59, and was appointed **Minister for Lands** '68. Held the office of Minister for Railways '72-5 and '80-83, once more being Minister for Lands '75-7. Became in '86 the **Premier**. Was Chairman of the Federal Conference, Melbourne, Feb. '90, and during the year was also active in connection with Australian trade disputes. These disputes led (Oct. 30th) to the defeat of the Ministry of which he was the head. Mr. G. at once resigned, the vote of confidence in the Ministry being lost by 20 votes.

Girls' Friendly Society. See **YOUNG WOMEN, ORGANISATIONS FOR**.

Girton College. See **HIGHER EDUCATION OF WOMEN**.

Gladstone, Rt. Hon. William Ewart, M.P., P.C., statesman and man of letters, was b. at Liverpool Dec. 29th, 1809. The son of a Liverpool corn merchant—Sir John Gladstone, M.P., sometime of Leith—and of Ann Robertson, daughter of Mr. Andrew Robertson, of Stornoway, and Provost of Dingwall, the greatest Liberal statesman of his time has ever been proud to boast of his Scottish nationality and middle-class origin. He was educated at Eton, and Christ Church, Oxford, and at both places early developed High Church tendencies, and those Tory principles he apparently inherited from his father; at school contributing largely to the *Eton Miscellany*, and subsequently taking an active part in the discussions of the Oxford Union. Shortly after the passing of the first Reform Bill, in '32, Mr. Gladstone made his entry into public life at **Newark**, where he was elected, as the Duke of Newcastle's nominee, in the Tory interest, defeating Sergeant Wilde, the popular candidate. It was on May 17th, '33, that he delivered his maiden speech in the House of Commons, in reply to Lord Howick, on the slavery question, when he expressed himself as opposed to slavery, but not in favour of hasty and wholesale enfranchisement. On the dissolution of the Melbourne ministry, at the end of '34, Sir Robert Peel called Mr. Gladstone to his first public appointment as **Junior Lord of the Treasury**, which post he resigned in February of the following year for that of **Under-Secretary for the Colonies**. A month afterwards (March '35), however, Lord John Russell introduced

his motion with regard to the temporalities of the Irish Church, which Mr. Gladstone vigorously opposed; but the ministry were beaten and Lord Melbourne again came into power. The death of William IV., in June '37, caused another general election, when Mr. Gladstone was once more returned for Newark. In '41, on the accession of Sir Robert Peel, after the defeat of Lord John Russell in the House of Commons, Mr. Gladstone accepted office as **Vice-President of the Board of Trade and Master of the Mint**. He took an active part in the Corn Law debates of '41-2, and although opposed to Mr. Villiers, the champion of the Repeal party, the revised tariff scheme was said to be chiefly Mr. Gladstone's work. He became **President of the Board of Trade** in '43; but at the commencement of '45 he resigned, owing to his opposition to the extension of the Maynooth Grant and the establishment of non-sectarian colleges. In '46, it having been announced that an immediate revision of the Corn Laws was pending, Sir Robert Peel resigned, finding that certain members of his government would not go with him; but Lord John Russell declining to form a cabinet, Sir Robert returned to office with Mr. Gladstone as **Colonial Secretary, and member for Oxford University**. On the death of Sir Robert Peel, in '50, Mr. Gladstone paid his memorable visit to **Naples**, which laid the foundation of his future friendship with Cavour and Garibaldi. During this period he finally severed himself from the Tories, although holding aloof from the Liberals for a time; and in '52 became **Chancellor of the Exchequer** in Lord Aberdeen's administration, but fell with the collapse of that cabinet after the Crimean war. Subsequently he was appointed, by the Earl of Derby **Lord High Commissioner to the Ionian Islands**. In '59 he accepted the **Chancellorship of the Exchequer** in Lord Palmerston's Government. His budgets were always looked forward to with absorbing interest; but no little sensation was caused by that of '61, which announced the total repeal of the much debated paper duty. On the dissolution of '65, Mr. Gladstone was rejected at Oxford, but was returned for **South Lancashire**, receiving great ovations at Manchester and Liverpool. On the death of Lord Palmerston, in the autumn of that year, Earl Russell became Premier; his old foe, Mr. Gladstone, being the leader of the lower house. During the debates on the new Reform Bill a "cave" was formed in the House of Commons, and the ministry fell in '66, to be succeeded by the Earl of Derby's government, with Mr. Disraeli as leader in the Commons, who passed a Bill in '67, by the operation known as "dishing the Whigs." It was in this year that Mr. Gladstone made his famous declaration in favour of disestablishing the Irish Church. In February '68 Mr. Disraeli became Prime Minister, but parliament was dissolved in the following November, when Mr. Gladstone, rejected in South-West Lancashire, was elected for **Greenwich**. In the parliament of '69 he became Premier for the first time, and thence up to the dissolution of '74 a number of important measures were placed on the statute book. The Irish Church having been disestablished, and while Europe was distracted with the Franco-Prussian war, the Liberal Government carried the Ele-

mentary Education Act (*g.v.*), the Irish Land Act, the Abolishment of Purchase in the Army (by Royal warrant), the Act for abolishing University Tests, and the Ballot Act; but they were beaten on the Irish University Education Bill in '73, and Mr. Disraeli returned to power in '74. Mr. Gladstone then decided to resign the leadership of the Liberal party, but in '75 aroused much public indignation by calling attention to the alleged horrors being perpetrated in Bulgaria by the Turks. In '79 he made his first visit to **Midlothian**, and on the dissolution of '80 issued his great Liberal manifesto, which was followed by the second Midlothian campaign and his return for that constituency. For the second time Premier, with a Liberal majority in the House of Commons of fifty over the Conservatives and Home Rulers combined, with Mr. Disraeli as Lord Beaconsfield in the House of Lords, and Sir Stafford Northcote as his opponent in the Commons, Mr. Gladstone again succeeded in carrying many important Acts up to the dissolution of '85. Amongst these are included the **Employers' Liability Act**, the second **Irish Land Act**, the **Hares and Rabbits Act**, a reform in the Land Laws, and chief of all, the third **Reform Act and Redistribution Act** (*g.v.*). After the dissolution of the autumn of '85, Mr. Gladstone again came forward for Midlothian, and was re-elected by an enormous majority. On the fall of the Salisbury administration, January 26th, '86, Mr. Gladstone was summoned by the Queen to again take office. He then held as **Premier** the office of **First Lord of the Treasury and Keeper of the Privy Seal**. In consequence of a divergence of views between some of the leading members of the Liberal party and Mr. Gladstone with respect to his proposed **Irish policy**, several of his old colleagues, notably Lord Hartington and Sir H. James, did not join his cabinet.—Mr. Chamberlain and Mr. Trevelyan, who accepted office, resigning March 27th. Mr. Gladstone gave notice (29th) of his intention to introduce bills relating to the government and land of Ireland. The former (see **HOME RULE** in previous eds.) was introduced in a great speech on April 8th, and the **Sale and Purchase of Land (Ireland) Bill** on the 16th. But in the meantime the revolt of a large section of the Liberal party, who were known as Unionists, became pronounced, and on April 14th a great Unionist meeting was held at Her Majesty's Theatre to protest against both the **Home Rule** and the **Land Purchase Bill**, which, the Premier had announced, were indissolubly tied together. On May 3rd Mr. Gladstone issued (in the *Edinburgh Daily Review*) a lengthy address to his constituents of Midlothian, the opposition to his Irish proposals meanwhile having been actively carried on all over the United Kingdom. On May 10th the second reading of the Government of Ireland Bill was moved in the House of Commons, and a lengthy debate commenced. On May 27th a meeting was called by Mr. Gladstone at the **Foreign Office**, the invitation being issued to "all members of the Liberal party who are desirous, while retaining full freedom on all the particulars of the Irish Government Bill, to vote in favour of the establishment of a legislative body in Dublin for the management of the affairs specifically and exclusively Irish." More than 200 members attended. On June 8th, about one o'clock in

the morning, the vote of the House was taken on the Home Rule Bill, when the Government were defeated by a majority of 30—there being 311 ayes and 341 noes—a result which caused a scene of wild excitement. At a Cabinet Council on the same day the Government resolved to resign, the announcement being made in Parliament on June 10th, the Sale and Purchase of Land (Ireland) Bill being on the same evening withdrawn. On June 14th Mr. Gladstone issued his election address, and on June 17th left London for another Midlothian campaign, his progress to the north being yet again marked with every sign of enthusiasm. After his return to Hawarden, the right hon. gentleman proceeded to Manchester, June 25th, and to Liverpool, June 28th, and addressed large gatherings in those cities. In a supplement of the *London Gazette* of June 26th Parliament was dissolved by proclamation. On July and Mr. Gladstone was elected for both Midlothian and Leith, and chose to sit for his old constituency. The result of the general election was to deprive him of power. (For later events see previous editions.) On Dec. 11th, '90, Mr. G. delivered a speech at Retford on behalf of the Liberal candidate for the Basestlaw division. The anniversary of the right hon. gentleman's 81st birthday was made the occasion of the unveiling of a memorial fountain at Hawarden (Dec. 20th), which had been erected to commemorate Mr. and Mrs. G.'s golden wedding. Mr. G. alluded to the attachment which his family felt towards the village. On Jan. 6th, '91, many congratulations were sent to Mrs. G., that being the date of her 78th birthday. Delivered a short speech at the Hawarden cent audit dinner (15th.) Spoke in the House of Commons (27th) in favour of the motion to expunge resolutions referring to the expulsion of Mr. Bradlaugh. He moved (Feb. 4th), in a speech, which was regarded as one of his most eloquent efforts, the second reading of the Religious Disabilities Removal Bill. The object of the Bill was to enable Roman Catholics to fill the offices of Lord Chancellor of England and Lord-Lieutenant of Ireland. He supported the Welsh Disestablishment movement in a brief speech in the House of Commons, and a resolution affirming the principle of "one man, one vote" (March 3rd). At Eton College (March 14th) he delivered a lecture to the scholars upon the Homeric *Atreus*. Visited Hastings (March 17th), and spoke in the Gaiety Theatre on financial, naval, and Irish affairs. A reference to Mr. Goschen's Budget was the subject of correspondence between the Chancellor of the Exchequer and Mr. G. On April 4th, Mr. G. had the mournful duty of attending the memorial funeral service of Earl Granville, in the Chapel Royal, St. James's. A letter from Mr. G. to five Liberal candidates was published April 18th. The right hon. gentleman was detained indoors for several days during May by the prevalent epidemic, the influenza. From Hawarden he sent Mr. S. Montagu, M.P., an important letter on the persecution of the Jews (May 27th). After slight indisposition, Mr. G. addressed the jubilee meeting of the Colonial Bishops' Fund, of which he has been treasurer for fifty years (June 10th). A relapse ensuing, Mr. G. spent a short time as guest of Mr. J. J. Colman, M.P., at Corton. He was recalled to town by the death of Mr. W. H. Gladstone, his eldest son, on July 4th, which was a severe shock to the right hon. gentleman,

especially in his convalescent state. He attended his son's funeral at Hawarden. A sympathetic letter inquiring after the great preacher's health was sent to Mr. Spurgeon by Mr. G. In the *Nineteenth Century* for Sept. there appeared an article by Mr. G. entitled "Electoral Facts," which gave rise to correspondence in the *Times* owing to a mistake contained therein, and to a contrary opinion as to Mr. G.'s deductions. As sole surviving founder of Trinity College, Glenalmond, Mr. G. delivered a deeply interesting address on its jubilee (Oct. 1st), and laid the foundation stone of a new wing of the college. He then journeyed to Newcastle, where the annual meetings of the National Liberal Federation were in progress. He spoke at considerable length on the Liberal programme (Oct. 2nd), and on the following day was presented with the freedom of the city of Newcastle. Mr. G., after a speech alluding to the growth of the locality, returned to Hawarden. On hearing of the death of Mr. W. H. Smith, M.P., Mr. G. telegraphed his great regret and his appreciation of "his fine qualities, and his distinguished devotion to the public service."

Glaisher, James, F.R.S., the well-known aeronaut, was b. 1803, and when a youth was employed in a subordinate capacity at the observatory at Madingley, near Cambridge, and has since acquired considerable fame as a meteorologist. In recognition of his experiments above the clouds in his balloon voyages he was chosen a F.R.S. (49). In '63 he made, in company with Mr. Coxwell, the famous ascent (nearly seven miles) to the highest altitude ever reached. Appointed ('65) to succeed Admiral Fitzroy in the control of the Meteorological Department of the Board of Trade. He is the author of "Travels in the Air." Mr. G. is President of the Royal Aeronautical Society and of the Photographic Society of Great Britain.

Glasgow (Craigmaddie) New Reservoir. The construction of this great reservoir was commenced in '87, and is now going on under the direction of Mr. J. M. Gale, M. Inst. C. E., Engineer to the Water Commissioners, the contractors being Messrs. Morrisson and Mason. The Craigmaddie will have an area of 87 acres, with a capacity of 690 million gallons, and is alongside the existing Mugdock reservoir, which is of 62 acres, and has a capacity of 4882 million gallons. The total water capacity will be equivalent to about 18 days' supply for the whole of Glasgow. The water comes down from Loch Katrine in a conduit, and therefore there was no choice in selecting the site of the Craigmaddie, which has given considerable trouble in the search for a water-tight foundation.

Glasgow Harbour Tunnels. Powers were obtained in the Parliamentary session of 1889 to construct tunnels under the Clyde at Finnieston, and Messrs. Simpson and Wilson, C.E., are the engineers, the contract being given to Messrs. Hugh Kennedy & Sons, Partick. There will be three tunnels laid side by side, only about two feet dividing them, and all sufficiently below the bed of the river to be clear of future dredging operations, the two outer being for vehicular traffic and the inner for passengers. They will each be 16 ft. in diameter, formed of cast-iron segments, and at the highest point will be 15 ft. below the bed of the river, and 35 ft. and 46 ft. respectively below low and high

water levels. The ingress and egress will be by means of a vertical shaft on each side of the river, that on the north 7½ ft. 6 in. and on the south 7½ ft. 6 in. deep, the diameters being 80 ft. There will be hydraulic hoists, with stiff gradients and staircases, which passengers will have the option of using.

Glasgow Subway Railway. On July 17th, 1901, a House of Commons committee passed a bill incorporating a company with powers to construct a circular subway railway around Glasgow, the scheme thus being sanctioned by both Houses. The total length will be over six miles, and the share and loan capital authorised is £937,500.

Glasgow University. Founded by a bull of Pope Nicholas V. in 1450; received a new charter 1577. The number of students in all the faculties was last session 2166, of whom 2083 were students in Arts. Chancellor, Rt. Hon. the Earl of Stair, K.T., LL.D. Lord Rector, Rt. Hon. A. J. Balfour, M.A., LL.D., M.P. Principal, John Caird, D.D. (appointed 73). Parliamentary representative, J. A. Campbell, LL.D. Registrar, W. James Addison. Degrees. M.A. (h. black silk lined with red purple silk); B.Sc. (h. black silk lined with gold-coloured silk colour of whin blossom); D.Sc. (h. black velvet lined with gold-coloured silk); B.L. (h. black silk, bordered inside with Venetian red silk colour of clove carnations); LL.B. (h. black silk lined with Venetian red silk); LL.D. (h. black velvet lined with Venetian red silk); M.B. and C.M. (h. black cloth lined with scarlet silk); M.D. (h. black silk lined with scarlet silk); B.D. (h. black silk bordered with black velvet, lined with red purple silk); D.D. (h. black velvet lined with black silk, or, if the graduate be Master of Arts, with red purple silk). Among the distinguished alumni are Adam Smith, Archbishop Tait, Principal Shairp, Rev. R. S. Candlish, and Sir Wm. Thomson.

"Globe, The." Established 1803, and subsequently incorporated *The Traveller*. It was started by the old Whig party, and always was recognised as an authority on political matters, its contributors including some who held high office in the State. It retained its Whiggism until 1866, when a new proprietary, recognising the changed times, made it an outspoken though independent Conservative organ, reducing its price from fourpence to twopence, and eventually to one penny. It is now a recognised evening journal of the Constitutional party. Editor, Captain G. O. H. Armstrong. Offices, 367, Strand, W.C.

Gloucester and Bristol (united 1856), Right Rev. C. J. Elliott, D.D., Bishop of, was b. 1819. Educated at St. John's Coll., Cambridge, where he graduated with distinction ('41); Fellow of St. John's ('44). Rector of Pilton ('48); resigned his benefice to prosecute his critical studies at Cambridge ('54); Professor of New Testament Exegesis at King's Coll., Lond. ('58); Hulsean Professor of Divinity at Camb. ('59); Dean of Exeter ('61). Elevated to the episcopal bench in '63. Chairman of the company of Revisers of the New Testament. Bishop Elliott holds high rank as a commentator, and has published commentaries on the Gospels and other Pauline Epistles, Hulsean Lecture ('60), "Historical Lectures on the Life of our Lord," Addresses on "The Being of God," "Salutary and Fundamental Doctrine," and several other works.

Goa. A port-town and territory between the boundaries of Madras and Bombay, India. Once the seat of great trade, now decayed and ruinous. Belongs to Portugal. See COLONIES OF EUROPEAN POWERS.

Godavery Railway Bridge. From Calcutta, Dec. 25th, 90, it was reported that the Indian Government had directed Mr. Spring, chief engineer of the Kistna Bridge, to investigate the problem of bridging the Godavery for the East Coast Railway. The length was estimated at 1½ miles, and the cost 5½ lakhs of rupees.

Goethe Society, English. was formed to promote and extend the study of Goethe's work and thought, and in '91 its scope was extended so that, while always keeping Goethe as the central figure, the attention of members might be also directed to other fields of German literature, art, and science. The meetings of the Society are held in Feb., April, June, Oct., and Dec. The President for '91 is Prof. Blackie, F.R.S.E.; Sec., Dr. E. Oswald, 16, St. Mark's Crescent, N.W.

Gold Coast Colony. A British Crown colony on the Guinea Coast, West Africa, consisting of towns, forts, and stations, with the country around, formerly styled the Protectorate. The products are chiefly palm-oil, gold, ivory, copal, monkey skins, caoutchouc, camwood, Guinea grains, palm kernels, etc. For financial statistics see BRITISH EMPIRE, etc. (table). For Executive Council see DIPLOMACY.

Gold Fields and Production. Gold is found in every quarter of the globe: in reefs or veins among quartz, from which it is separated by quarrying, crushing, washing, and treatment with mercury; in alluvial deposits, from which it is extracted by washing, in dust, grains, lamme, or nuggets. Alluvial deposits are of several kinds—namely, (1) beds of running rivers, involving the employment of dredging apparatus; (2) superficial or not deep deposits, capable of being worked by diggers single-handed; (3) deep alluvial beds, often underlying hard rock, necessitating thorough mining; (4) deposits of gravel, schist, and disintegrated rock, often on hill-sides, now generally washed gradually down by means of hydraulic engines. Mining in quartz entails the employment of large capital, machinery, etc. The annual production of gold throughout the world is estimated as follows:—

Epoch.	Production in Australia.	Production in America.	Total production in the World.
	£	£	£
'51-55	49,711,711	60,950,412	135,144,641
'56-60	58,520,527	52,820,560	137,199,753
'61-65	53,674,499	45,769,628	124,726,881
'66-70	49,374,613	50,148,751	139,243,819
'71-75	41,517,872	40,252,066	115,967,933
'76-80	29,882,889	39,955,992	107,924,351
'81-85	29,384,790	31,528,025	97,971,659
'86	5,343,346	7,231,405	19,554,007
'87	5,460,520	6,818,181	19,182,729
'88	5,707,055	6,854,339	20,499,296
'89	6,539,799	6,776,860	22,233,180
'90	6,500,000	7,300,000	22,750,320

For the seventeen years, '71-'87 inclusive, the average production of South Africa was slightly over £50,000 per annum, but it has increased very rapidly since then. It is, however, difficult to arrive at anything like exact figures with

regard to the output of all the mines. The official returns in '88 gave the total production as 230,640 oz.; in '89 the yield was 370,373 oz., in '90 494,755 oz., and for the first nine months of '91 502,414 oz. Queensland is also rapidly coming to the front as the leading goldfield of the Australasian Colonies. From '51-'86 the average yearly production was £542,000; in '87 it amounted to £1,590,000, while for the first half of '89 it reached a total of nearly £1,400,000. The amount of gold received at the Melbourne Mint in '89 amounted to 761,616 oz., against 757,548 oz. in '88. At the Sydney Mint the total was 900,475 oz., as compared with 609,843 oz. Of this total Queensland contributed 739,103 oz., as against 495,183, and New South Wales 114,436 oz. The aggregate of gold coin and bullion issued by the Melbourne Mint in '89 was £3,931,285, and by the Sydney Mint £3,322,750. The number of gold pieces struck at the London mint in '90 was valued at £9,460,860; Sydney, £2,808,000; Melbourne, £2,475,737; Calcutta, £5367 gold mohurs. This mint is now coining gold and silver pieces for the Imperial British East African Company. The United States mints of Philadelphia, San Francisco, Carson City and New Orleans produced gold coinage to the value of 24,021,748 dols. in '90. The work done by the German mints was only £4,967,461 as compared with £10,000,000 in '89. In Paris twenty franc gold pieces to the value of £824,112 were struck; in Italy twenty-five gold pieces valued at 1,364,400 lire; at the Vienna and Kremnitz mints gold coinage to the value of £584,803; in Russia, gold coins valued at £4,480,556; in Portugal £83,777 in gold coinage was struck, which was a considerable increase compared with former years. The following table indicates approximately the amount of gold and silver coinage per head of population in circulation in the various countries. (For topography of the various gold districts of the world see ed. '88):—

	Gold.		Silver.

Golf. (For earlier details see eds. '88 and '89.) This pastime has greatly advanced in favour in recent years, notwithstanding the difficulty experienced in obtaining suitable ground for "links" near our large cities and industrial

centres. Nurtured in Scotland, where the Royal and Ancient Club of St. Andrews was instituted as far back as 1754, the game has travelled with the sons of Caledonia to various climes, and has also found staunch adherents in both England and Ireland. In all there are over 300 clubs in existence. The proposed new rules were considered at a general meeting of the Royal and Ancient Club held in May, but the only alteration made was on one of the paragraphs in Rule 4. As it stands printed in the Badminton book the paragraph reads: "12. When a ball lies in a bunker, sand, or any other hazard, there shall be no impression made by the club whilst addressing the ball, nor sand nor other obstacle removed 'before striking at the ball.'" As amended the paragraph now reads: "When a ball lies in a bunker, road, sand, or any other hazard, the club shall not touch the ground whilst addressing the ball, nor shall sand nor any other obstacle be removed before striking at the ball." Amongst other courses opened during the year were those at Cheltenham, Crief, Leopardstown, Leven, and Wallesey (near Liverpool). The amateur championship is played in rotation over the St. Andrews, Hoylake and Prestwick links; and the hero of '91 was Mr. J. E. Laidlay, of the Honourable Company Edinburgh Golfers, who beat Mr. H. H. Hilton, of the Royal Liverpool, at St. Andrews, on May 9th, by one hole, after a tie at the nineteenth hole. At the same meeting the St. Andrews Cross was won by Mr. H. S. C. Everard, and the Bombay Medal by Mr. Laidlay, after tieing with Mr. A. F. Macfie and Mr. C. E. S. Chambers. The championship, established in '72, is in turn played over the Prestwick, St. Andrews, and Musselburgh links. The trophy is a silver cup, which, unlike the belt, cannot pass into the absolute possession of any one, but is retained in the custody of the principal club in the district from which the winner hails. In addition to the proud distinction of being the champion golfer for the year, the successful man receives a money prize and a gold medal in memento of his victory. The honour of winning the cup for the first time fell to the late young T. Morris, and since then it has been held by various players, Jamie Anderson, St. Andrews accomplishing the remarkable feat of winning it three times in succession, a performance which was afterwards equalled by R. Ferguson, Musselburgh, who carried it off also three years running. At first the competition was almost exclusively in the hands of professional players, but of recent years increasing numbers of amateurs have put in an appearance, and in '90, at Prestwick, Mr. John Ball, the crack player of the Royal Liverpool Club, secured the blue ribbon of the golfing green for the first time for amateurs. He took part in the contest over the St. Andrews links on Oct. 6th, '91, but was beaten by Willie Campbell in the first round, and in the result Hugh Kirkcaldy (St. Andrews) proved successful. On the following day Andrew Kirkcaldy (St. Andrews) beat Willie Fernie (Troon) in their tie for second honours. The first portion of a professional match for £50 a side, between the brothers Andrew and Hugh Kirkcaldy and Bernard Sayers and D. Grant, of North Berwick, was played over the St. Andrews links on Sept. 9th, and terminated, contrary to general anticipation, in favour of the latter couple by five holes. The final portion of the contest was decided a

week later over the North Berwick links, where Sayers and Grant were again hailed the winners, the verdict being in their favour by twelve up and eleven to play. Consult "The Golfing Annual," edited by Mr. David Scott Duncan, of the *Field*; and "Golf" (Badminton Library), by Mr. Horace Hutchinson, the Right Hon. A. J. Balfour, Sir Walter G. Simpson, and other writers.

Goodall, Frederick, R.A., was b. 1822. Exhibited his first picture in the Royal Academy at the early age of seventeen. One of his early pictures, "*The Return from Christening*," gained a prize of £50 from the British Institution. Later pictures, dealing with Eastern subjects, are the outcome of a visit to Egypt in '58-9. Elected R.A. '63. Among the best of Mr. Goodall's pictures on religious subjects are his recent pictures "*For of such is the Kingdom of Heaven*," and "*Misery and Mercy*."

Good Templars, The Independent Order of, a total abstinence fraternity originated in New York in 1851. In 1868 it was extended to England by Joseph Malins, who, by 1870, had instituted the Grand Lodge of England, from which the Order has spread round the world. It administers a pledge of lifelong abstinence from intoxicating beverages, and advocates the legal suppression of their common sale. It seeks to protect the abstinent and reclaim the inebriate. It admits both sexes to equal privileges and office. Only a small fee of sixpence or one shilling per quarter is exacted, as it is non-beneficiary in basis; but an auxiliary provident fund is allowable. It enrolls by a brief service, of a somewhat religious character, including scripture reading, counsel, singing, and prayer; and all meetings are opened and closed with prayer and praise. It consists of (1) local "subordinate" lodges, meeting weekly; (2) county "district" lodges, meeting quarterly; (3) national "grand" lodges, meeting annually; and an international "Right Worthy Grand Lodge." In '76, when the Right Worthy Grand Lodge met in Kentucky, a disruption occurred on "the Negro question"; and there have since been two Orders—one mainly American, and the other mainly British. In '86 the American leaders invited the British to a Reunion Conference, which was accordingly held at Boston, Massachusetts, Sept. '86. A basis for reunion, declaring illegal any exclusion on account of colour or race, was unanimously drafted and sent to all jurisdictions, and was indorsed by each. As then agreed, both international courts met separately at Saratoga, New York, May '87. The last R.W.G.L. Session was held at Edinburgh, May '91, and the officers there installed reside in the United States, Canada, England, Ireland, Norway, Sweden, Africa, India, and Queensland. The chief post was taken by Dr. Oronhyatekha, of Canada, a Mohawk Indian, who edits the Right Worthy Grand Lodge monthly organ. The Order publishes about forty newspapers and magazines in various languages. **The Right Worthy Grand Lodge has met** in the United States, Canada, England, Ireland, Scotland, Wales, and Sweden, and next meets at Des Moines, U.S.A., in May '93. The United Right Worthy Grand Lodge has a membership of over 500,000, in about 12,000 branches, governed by 100 different Grand Lodges. There are in the United Kingdom nearly 200,000 adult and junior members, of whom 60,000 adults and 40,000 juniors are under

the Grand Lodge of England, whose permanent offices are in Edmund Street, Birmingham. This Grand Lodge has over 1,500 lodges, of which 70 are in the army and navy. The Grand Lodge annual session at Great Yarmouth, Easter '91, was attended by 500 representatives and officers. The English Grand Lodge has started a **Provident Fund** as an auxiliary to the Voluntary Order, and this includes life insurance, medical attendance, sick pay, old age pensions, and a savings fund. Their greatest festival is an intermittent **Crystal Palace fête**, when 30,000 to 50,000 persons attend. Mission vans have been built for village work, for which £1000 was raised in '90. There is also attached a **Juvenile Order**, enjoining abstinence from strong drink, tobacco, gambling and profanity, and which has 70,000 British members, in 1,000 branches. The members have founded a **Temperance Orphanage** at Sunbury, at a cost of about £10,000. The Grand Lodge of Scotland has 663 adult and 355 junior branches, with a total of 63,056 members; its office is 72, Great Clyde Street, Glasgow, and its monthly organ is *The Good Templar*. Ireland and Wales have about 500 adult and junior branches, and publish English and Welsh organs. The organ in England is *The Good Templar's Watchword*, weekly; and several local monthlies are issued, besides much literary matter from the Grand Lodge printing presses.

Goodwood Race Meeting. See TURF.
Gore, Rev. Charles, M.A., the editor of "*Lux Mundi*," a book which has excited great discussion in theological circles, was b. 1853. He is the son of the Hon. Charles Alexander Gore, the brother of the 4th Earl of Arran. His father was raised to the rank of an earl's son in '37. He is a Fellow of Trinity College, Oxford. As **Principal of the Fusesy Library**, Oxford, Mr. G. has taken a prominent position as the exponent of High Church tenets. The publication of "*Lux Mundi*" caused almost as much controversy as that of "*Tracts for the Times*," and its large sale was considered a sign of the deep interest taken in the modern interpretation of the canon of Scripture. He published in Nov. '91 "*The Incarnation of the Son of God*," being the Bampton Lectures for '91.

Gorst, Rt. Hon. Sir John E., P.C., Q.C., M.P., the Under-Sec. for India, was b. 1835, and was ed. at St. John's Coll., Camb. Held the position of Civil Commissioner of Waikato, New Zealand, '61-3. Appointed Queen's Counsel in '75, and ten years later became **Solicitor-General** in Lord Salisbury's first government. Entered the House as M.P. for Cambridge '66, and has represented Chatham since '75. As member of the celebrated "**Fourth Party**," Sir John contributed many clever speeches to the debates. Appointed Under-Sec. for India '86, and created **Privy Counsellor** ('90). He was one of the English delegates at the Berlin Labour Conference held in '90. During the session of '91, his attitude on the labour question attracted much attention. He visited Ireland in Sept. He was appointed **Financial Secretary to the Treasury** in November.

Goschen, Rt. Hon. George Joachim, M.P., P.C., was b. in London 1831. Educated at Rugby, under Dr. Tait, and at Oriel Coll., Oxford, taking a first class in Classics. Soon after he entered the firm of Fröhling & Goschen, and became a director of the Bank of England in '56. He was returned without opposition as a Liberal for the City of London at a bye-election in '63,

and at the general election in '65 was re-elected at the head of the poll. In the same year he was appointed Vice-President of the Board of Trade, and ('66) Chancellor of the Duchy of Lancaster, with a seat in the Cabinet. His tenure of that office, however, was only of brief duration, as Lord J. Russell's ministry retired in June of the same year. On Mr. Gladstone's accession to power, in '68, Mr. Goschen joined the Cabinet as President of the Poor Law Board, and in '71 succeeded Mr. Childers as First Lord of the Admiralty. He was again returned for London in '74, but only as the minority member, and in '80 did not seek the suffrages of his old constituents, but accepted an invitation to stand for Ripon, which he represented until the general election of '85, when he was returned for the Eastern division of Edinburgh. On the formation of Mr. Gladstone's Government in '80, which Mr. Goschen was unable to join owing to his opposition to the extension of the franchise, he was offered the post of Viceroy of India, which he declined. He, however, accepted the office of special Ambassador to the Porte, in which capacity he was instrumental in settling the Montenegrin and Greek frontier questions in '80 and '81. On the elevation of Sir Henry Brand to the peerage, Mr. Goschen was offered the speakership of the House of Commons, but declined the honour on account of his defective eyesight. During the Parliament of '80-85 Mr. Goschen on several occasions was unable from conscientious motives to move with his party, and broke from them on the question of the extension of the county franchise, as well as on questions of foreign policy. He is the author of several financial and political pamphlets, and of the well-known work on "*The Theory of Foreign Exchanges*." He has also published a number of addresses on educational and social subjects, including one on the "*Cultivation of the Imagination*," delivered at Liverpool '77, and one on "*Intellectual Interest*," delivered by him as Lord Rector to the students of Aberdeen University in '88. When Mr. Gladstone launched his Home Rule bill, in '86, Mr. Goschen was among the first to enrol himself in the opposition, and added much to his reputation as an argumentative orator by the successive onslaughts he made upon the measure and its supporters. He delivered in Edinburgh and elsewhere by far the most eloquent and vehement philippics against the Home Rule proposals of the Government, and was speedily recognised as, next to Lord Hartington, the most authoritative and influential of the Liberal Unionists. His eloquence, however, failed to secure him his seat in Edinburgh at the July election, when he was beaten by a large majority by Dr. Wallace. On the resignation of Lord R. Churchill in December '86, and when Lord Salisbury had failed to induce Lord Hartington to join his Government, Mr. Goschen was prevailed upon to accept the Chancellorship of the Exchequer. He accepted the post with the full sanction of Lord Hartington. Mr. Goschen holds his position in the Government as a Liberal Unionist. He was a candidate for the Exchange Division of Liverpool, but was defeated by Mr. Neville, Gladstonian Liberal, by seven votes (Jan. 26th, '87). A vacancy having been caused by the retirement of Lord Algernon Percy from the St. George's Hanover Square Division, Jan. 31st, Mr. Goschen was elected to the seat Feb. 9th, '87. The Budgets

which he introduced in '88 and '89 were vigorously attacked by Mr. Gladstone because of their proposals with reference to the death duties. The proposal to impose a horse and wheel tax in '88 was also strongly opposed, and had to be abandoned. Mr. Goschen's scheme, however, for the reduction of the interest on the national debt, was cordially accepted by all parties, and successfully brought to a conclusion in July '89. A high compliment was paid to Mr. G. by his election as correspondent of the French Academy on Moral and Political Sciences (Jan. '91). Delivered an important speech on the questions of Currency (Jan. 28th) at Leeds. In the Budget introduced by Mr. G. (April) there was an unusually large surplus. His announcement of the Government's intentions respecting Free Education had a mingled reception. In Oct. he delivered a particularly vigorous speech on the policy of the Government, at Cambridge. Another stirring oration by the right hon. gentleman was delivered (Nov. 5th) at Oldham.

Gosse, Edmund William, Clark Lecturer in English Literature at Trinity Coll., Camb., and the author of several well-known poems and literary criticisms, was b. in London 1849. Ed. privately. His work "*From Shakespeare to Pope*" was published in '85. "*The Masque of Painters*," which was performed with great success by members of the Royal Institute of Painters in Water Colours in May '86, was written by Mr. Gosse. Mr. G.'s recent work ('89) is entitled "*The History of 18th-Century Literature, 1660-1780*." Is at present editing a new series of translated foreign novels.

Gounod, Charles, was b. in Paris 1818. In '38 entered the Conservatoire at Paris, and won the great "Rome" prize in '39, entitling him to residence in Italy, where he worked hard at the finest early Italian church music. The consummate mastery of strict ecclesiastical writing, which he thus gained, forms the basis of all his work, sacred and secular. After writing some operas, on his return to France C. G. became the conductor of the Paris division of the *Orpheonists*. His successful opera of *Faust* ('59) placed Gounod at the head of operatic composers. Other operas followed, among which we may mention the charming "*Mireille*," ('64), "*Roméo et Juliette*," "*Cinq Mars*" ('77), and "*Polyeucte*" ('78). Besides his male-voice masses, Gounod has written a splendid "*Messe Solennelle*"; a fine motet, commemorating the grief of France in '70, called "*Gallia*," and other choral works universally popular. His songs, especially "*Nazareth*," "*There is a green hill far away*," and "*Serenade*" (Victor Hugo), are well known. In '82 Gounod struck fresh ground with his grand oratorio of the "*Redemption*," written for the Birmingham Festival, followed in '85 by "*Mors et Vita*." During the summer of '91 M. Gounod was laid aside by illness, but has now recovered.

Government Contracts. See SESSION, sect. 18.

Government Publications. See PARLIAMENTARY PAPERS and STATIONERY OFFICE PUBLICATIONS.

Gow, Andrew C., R.A., was b. in 1843, and was ed. for an artistic career at Mr. Heatherley's Art Studio. He was elected Member of the Institute of Painters in Water Colours in '68. His earliest triumph at the Academy was gained by "*A Suspicious Guest*," exhibited in '70. One

of his most successful paintings has been "The Last Days of Edward VI." A most careful finish distinguishes Mr. G.'s pictures. Elected A.R.A. in '81, and R.A. in Jan. '91.

Grace, Dr. W. G., the renowned cricketer, was b. at Downend, Bristol, 1848; made his first appearance in important match in West Gloucestershire v. Bedminster, at Mangotsfield. Between '64 and '79 he made 20,842 runs in a total of 415 innings. His exploits as a batsman, fielder, and bowler, became so celebrated, that the title of "champion" was spontaneously conferred upon him. No amateur or professional has ever reached the batting averages credited to Mr. Grace, who comes of a cricketing family; and on July 22nd, '79, at Lord's, the enthusiasm of his admirers took the form of a presentation of the value of £1400. In *Sussex v. Gloucestershire* he made for the latter, in May '88, 215 runs off his own bat. Although pursuing the medical profession, Dr. G. is still successful at the national pastime. An interesting book upon Cricket was published by Dr. G. in '91.

Graham, Peter, R.A., was b. in 1836, at Edinburgh, where he studied in the School of Design. In that city his life, until he was thirty, was spent. Like most Scotch artists, he removed to London. But Scotland has been the chief inspiration of his work, affording him material for those scenes of Highland mists, cattle and barren shores, to which he has devoted his life. "A Spate in the Highlands," exhibited at the Royal Academy in '66, "The Cradle of the Sea Bird," and "Our Northern Walls," were among his early successes. He was elected an Associate of the Royal Scottish Academy in '60, which he resigned in '77, on becoming A.R.A. In 1881 he became R.A. Among his recent pictures are "After Rain" ('82); "Sea Mist" ('84); "Across the Moor" ('86); and "Morning Mists" and "Evening" in '91.

Grand National Steeplechase. See TURF.

Grand Prix de Paris. See TURF.

Grantham, Sir William, b. 1835, was called to the bar ('63), and became a Q.C. fourteen years later. Bench of the Inner Temple ('78). Represented in the Conservative interest East Surrey '74-83, and sat for Croydon for a few months, until his appointment as a Judge of the High Court ('86).

Granville, the late Earl. See SESSION, sect. 18.

"**Graphic, The**," founded 1860, by Mr. W. L. Thomas, its present manager, is an illustrated weekly of high-class character, and treats of current events. Its Christmas and Summer numbers are especially excellent, and have a very wide circulation. See also DAILY GRAPHIC. Office, 190, Strand.

Great Britain. See UNITED KINGDOM.

Great Metropolitan Stakes. See TURF.

Great Officers of State are:—(1) The Lord High Steward, (2) The Lord High Chancellor, (3) The Lord High Treasurer, (4) The Lord President of the Council, (5) Lord Privy Seal, (6) Lord Great Chamberlain, (7) Lord High Constable, (8) Earl Marshal, and (9) the Lord High Admiral. They are always of the Privy Council, and the first five take precedence of all dukes who are not of the blood royal, while the others have place of all peers of their own degree. Nos. 1 and 7 when existing, and Nos. 6 and 8, have no share in the government of the country, and the duties of Nos. 3 and 9 have long been performed

by commission. See CHANCELLOR, TREASURY, and other articles.

Greece. A kingdom under George I., of Glücksburg. Area about 25,014 sq. m.; pop. 2,200,000. Executive vested in king and responsible ministers. Greek orthodox Church state religion; other sects tolerated: complete liberty of worship. Total revenue ('90), 93,967,720 dr.; expenditure, 91,081,985 dr.; amount yet due of total funded debt, 623,883,288 dr. Imports, '90, 132,653,248 dr., exports 107,777,808 dr. Prince Nicholas, third son of the King, was (Dec. 8th, '90) enrolled an officer in the artillery. M. Constantopoulo, member for Arcadia, was elected President of the Chamber. The Government ordered (28th) two gunboats to cruise between Capes Sunium and Matapan, to seize vessels conveying Cretans, or arms and ammunition. The Minister of Finance and the Director of the Credit Bank at Athens signed a convention (30th) for a loan to the Government of 45,000,000 drachmas. The Budget for '91-2 was introduced (31st); the revenue was estimated at 96,971,000 drachmas, and the expenditure 99,253,000 drachmas. '91. Dr. Schliemann was buried at Athens (Jan. 3rd). The Chamber (Mar. 4th) assented to a Bill enabling the Duke of Sparta to act as Regent during the absence of the King. Twenty Ministerialists signed a Bill for the impeachment of the Tricoupis Ministry, which was presented to the Chamber (26th). The Chamber appointed a committee to investigate the charges. The 70th anniversary of the declaration of Greek independence was celebrated (April 5th); the King read an address at the University. At the end of the month the Christian population broke out in an agitation against the Jews, who were driven to great straits. Two of the Jews were (May 12th) killed. There were also disturbances at Zante, where the troops had to fire on the Christian agitators, killing several. The Government sent two war vessels to Corfu and replaced the existing officials; and on the strong representations of the British, German, Italian, and Austrian Governments, took steps to relieve the distressed Jews (15th). Rich petroleum wells were discovered at Zante (July). M. Karapanos, Minister of Finance, resigned (Sept.) in consequence of difference of opinion with his colleagues. For army and navy see FOREIGN ARMIES AND NAVIES.

Greece, King of. See GEORGE I.

Greek Political Parties. The Greek Legislative Assembly, or Boule, consists of 150 members, having been reduced to this number from 245, by a measure introduced by M. Tricoupis, the late premier, in the early part of '86. The system of election, which takes place every four years, is by *scrutin de liste*, as in France. From the death of M. Koumoundouros, until '90, the party leaders in Greece were M. Tricoupis and M. Delyannis, who have alternated as Presidents of the Council of Ministers, as did MM. Koumoundouros and Tricoupis during the lifetime of the former. But in '90 a section of the Opposition, under M. Delyannis, broke away from him to follow M. Ralli, who is spoken of as chief of a Neo-Hellenic party. Its appearance on the eve of the electoral period seemed to be favourable to M. Tricoupis, who had to face a divided instead of a united opposition at the ballot; but, notwithstanding this state of parties, M. Tricoupis was defeated. On Oct. 27th, '90, the elections

were held, and resulted in there being returned 80 supporters of M. Delyannis (*q.v.*), 50 of M. Tricoupis, and 20 adherents of M. Kalli. The resignation of the Tricoupis Ministry followed, of course; and on Nov. 5th a new cabinet was formed, with M. Delyannis as Premier, Minister of the Interior, and (*pro tem.*) Minister of War. The members of the new Ministry, with the exception of the Premier, had not previously held office. In Sept. '81 the resignation of M. Karapanas was announced. The cause of it was said to be a difference of opinion as to the proposed tobacco monopoly.

Greek Railways (see last ed.). From Athens, Jan. 9th, '91, a subscription list was announced for 15 million drachmas in gold, being one-third of the new loan of 45 million drachmas for the Athens-Larissa railway, on which 3000 men are working. The new railway from Missolonghi to Agrinon was opened on Sept. 13th.

Greenland. An extensive region or island on N.E. of America, extending into Polar regions. Interior is all ice, but part of south and west coast are habitable, with verdant pasturage, some shrubbery, and mossy valleys. Principal exports: oil of seals and whales, fox, seal, and reindeer skins, eider down, feathers, and cryolite. The chief trade is with Denmark. See COLONIES OF FOREIGN POWERS.

Gregory, Very Rev. Robert, Dean of St. Paul's, was born in Nottingham in 1819, and was engaged in commercial pursuits for four years prior to entering Corpus Christi College, Oxford, where he took his B.A. degree in '43, and M.A. in '46. He was ordained deacon in '43, and priest in the following year. His first curacy was at Bisley, and became canon of St. Paul's in '68. The *treasurership* of the Cathedral was placed in his hands in '82. He was appointed Rural Dean of Camberwell in '70. In connection with the National Society for the Education of the Children of the Poor in the Principles of the Established Church, Canon Gregory has always taken a prominent position, becoming its treasurer in '68. On not a few Royal Commissions, including that on Education, Canon Gregory has served, while for three years ('73-'76) he was a member of the School Board for London. He is the author of some books dealing with education, as well as a volume of sermons. In succession to the late Dr. Church, his appointment as Dean of St. Paul's was notified in Dec. '90. Was installed as Dean in Feb. '91.

Grenada. An island in the West Indies forming part of the British colony of the Windward Islands. Capital, St. George. Products are sugar and rum, cacao, cotton, coffee, fruits, spices, and turtles. For financial statistics see BRITISH EMPIRE, etc. (table).

Grenadines. A cluster of islets lying between Grenada and St. Vincent, and forming a dependency of Grenada. Exports: fish oil, wood, sugar, oorn, and cotton. Area, 86 sq. m.; pop. 6400.

Gresham College. In connection with this College lectures have been regularly given since Nov. 1843; having for many years previous to that time, been read in a room over the Royal Exchange. There was a certain fitness in the temporary establishment of the lectures under this roof; for the Gresham Lectures, as well as the College in which they are delivered, owe their institution to the munificence of Sir Thomas Gresham, the "Royal Merchant" of Queen Elizabeth. By his will, dated July 5th, 1575,

Sir Thomas bequeathed certain rents growing out of the Royal Exchange, which he built, to the Corporation of the City of London, and to the Mercers' Company, for the "erecting and maintaining of divers lectures in sundry faculties"—divinity, law, physic, geometry, astronomy, music, and rhetoric. The bequest of Sir Thomas Gresham who died Nov. 30th, 1579 (did not come into effect until the death of his widow, Dame Anne Gresham (December 1596); and the lectures were organised and commenced in June, 1597. Sir Thomas further left for the professors, who should be appointed under his will, his house in Bishopsgate Street, with its gardens and other appurtenances, "for them and every of them there to inhabit, study, and daylie to read the said severall lectures." The buildings of Gresham House, which had thus become Gresham College, were pulled down in 1768, and the General Excise Office erected on the site, the property having been acquired by the Crown for an annuity of £500. Sir Thomas enjoined that the Lecturers of his College should be unmarried at the time of their appointment, and also that marriage, subsequently contracted, should void their pre-ferment. This injunction was formally set aside by Act of Parliament. In '76, whilst the Earl of Selborne was Master of the Mercers' Company, the Gresham Lecturers submitted two schemes for the improvement of the Lectures, and the recommendations under this head were adopted, the principal being that all the Lecturers should be delivered in English instead of Latin and English, twelve lectures to be given in each year by each Professor. The names of the present Gresham Lecturers are as follows:—Physic, E. Symes Thompson, M.D.; Rhetoric, J. E. Nixon, M.A.; Astronomy, R. E. Ledger, M.A.; F.R.A.S.; Law, J. T. Abdy, LL.D.; Geometry, Karl Pearson, M.A., LL.E.; Music, Dr. J. F. Bridge, Mus. Doc. (*q.v.*); Divinity, Rev. Henry E. J. Bevan, M.A.; Clerk to the Gresham Committee, John Watney, Mercers' Hall, London, E.C.

Grey, Sir George, K.C.B., was b. at Lisbon in 1812. Was ed. at Sandhurst, and became a captain in the 83rd Regt. before he was twenty-four years old. Occupied himself in exploring Western Australia '39, and was appointed Governor of South Australia two years later, and New Zealand in '45. Was also Governor of Cape Colony '54, and again of New Zealand in '61. He took up his abode permanently in New Zealand, and became an active politician. He has been more than once Premier of the Colony, and is one of the most distinguished of N. Z. statesmen.

Griffith, Sir Samuel Walker, K.C.M.G., Queensland statesman, was b. at Merthyr Tydvil, June 21st, 1845. Arrived in Australia in '54, and was ed. at Sydney Univ., where he took first-class honours in classics and mathematics. Was called to the Queensland bar in '67, and entered Parliament five years later. Became Attorney-General in '74. Was Sec. for Public Instruction '76; Sec. for Public Works '78; and Leader of Opposition '79-'83. From this date until '88 he held the Premiership. On the defeat of the Morehead Ministry, in Aug. '90, he again became Premier.

Griqualand East. A district of the Transkeian Territories (*q.v.*).

Griqualand West. A province or district of Cape Colony. In 1867 diamonds were discovered here, and a rush from all sides into

it ensued. In '71 the Griqua chief, Waterboer, was induced to cede his authority, and the province was annexed to Cape Colony but with independent jurisdiction. In '81 it became an integral part of Cape Colony. The diamond fields are some of the most productive in the world. See CAPE COLONY.

Grossmith, George, actor, a son of the late Mr. Grossmith, journalist and lecturer, was b. in London, and commenced life as a reporter for the London daily papers at Bow St. police court. Having attracted the notice of Sir Arthur Sullivan, he was given the part of **John Wellington Wells** in the comic opera of "**The Sorcerer**," written and composed by Gilbert and Sullivan. In all those gentlemen's subsequent productions Mr. Grossmith has taken a leading character, and played the **Lord High Admiral** in "**H.M.S. Pinafore**," **Ko Ko** in the "**Mikado**," and the **Jester** in the "**Yeomen of the Guard**." Mr. G. has assumed the *role* of an entertainer, and has given a humorous account of his experiences in this direction under the title of "**A Society Clown**."

Ground Values, Taxation of. See STATISTION, sect. 20.

Grove, Sir George, was b. 1820. Ed. as a civil engineer. Appointed Secretary of Crystal Palace Company on its formation in '52, and afterwards served on the Board of Direction. His analyses of classical orchestral music for Crystal Palace Saturday Concerts are well known, as also his zeal in propagating good music. Edited *Macmillan's Magazine* for many years, and is also the editor of the "**Dictionary of Music**." In '75 the University of Durham conferred on him the honorary degree of D.C.L. Appointed Director of the Royal College of Music at Kensington by the Prince of Wales in '82. Knighted in '83.

Grove, Sir William Robert, D.C.L., F.R.S., was b. in 1811. Graduated at Brasenose '39, and subsequently devoted himself to the study of science. He is the author of "**Correlation of Physical Forces**" ('46), and many papers published in the "**Transactions of the Royal Society**." Was Professor of Experimental Philosophy at the London Institution '40-47. **President of the British Association** at Nottingham '66, and **Gold Medalist** of the Royal Society '47. Called to the bar ('35); Q.C. ('51); elevated to the bench ('71); retired '87.

Guadeloupe. Consists of two islands, Basse-terre and Grande-terre, separated by a narrow salt water river. Situated in the Leeward group of the Lesser Antilles. One of the principal French colonies in the West Indies. Products are sugar, rum, coffee, cotton, cacao, tobacco, etc. See COLONIES OF EUROPEAN POWERS.

Guatemala. The most northern republic of Central America, bounded on the east and north by Mexico, west by Balize, the republics of Honduras and Salvador, and south by the Pacific; governed by President and Assembly, each elected for six years by universal suffrage. Area 46,800 sq. m.; estimated pop. in '89, 1,427,116. Capital, **Santiago de Guatemala** (or **Guatemala la Nueva**), pop. '05, 796. **Revenue**, '90, \$5,000,000; **expenditure**, \$4,610,675. **External debt**, £922,700; **internal debt**, \$8,481,355; and **value of imports** in '89, \$7,070,000; of **exports**, \$13,248,000. **Chief exports**, coffee, sugar, fruit, hides. The first line of railway, from San José to the capital (69 miles), was opened in '84. Army nominally 2000, with militia about 64,000.

Cholera raged during the latter part of '90, no less than 1,200 deaths being reported in the city in seven weeks. The troops assumed a threatening attitude (Dec. 31st) and demanded their pay, the whole financial situation being unsatisfactory, '91. It was reported that 20,000 deaths had occurred from the smallpox. General Barillas' government was stated to be in danger in consequence of the intrigues of his rival General Sanchez. A treaty of peace between Guatemala and Salvador was ratified (June 19th). It was reported (July) that the mountains were full of malcontents who were organising themselves and making warlike preparations; several revolutionary outbreaks had occurred. It was reported (28th) that a revolt broke out in the city on the 16th Sept. General Barillas ordered out some troops and two guns, and put it down after three days' fighting. It was stated that 500 people were killed. There was also an outbreak at Inezaltenango.

Guernsey. One of the Channel Islands (q.v.).

Guiana, or Guayana, is a region of South America comprised between the Orinoco and Amazon rivers. May be regarded as a great forest-clad peninsula. Chief sections appertain to **Brazil** and **Venezuela**. Name now usually confined to European provinces, **British Guiana**, **Guayenne** or **French Guiana**, **Surinam** or **Dutch Guiana**. Coasts are low and flat, faced by mud-shallows. Country rises gradually, forming plateaux of different elevations, back to high mountains of far interior, whence large rivers descend. Climate tropical and humid. Europeans few, but many negroes; tribes of Indians sparsely people the interior. Guiana was the "**El Dorado**" of Sir Walter Ralcligh, and formerly supposed to be rich in gold. Gold is still found in the interior, in the Sierra Parime, but the true wealth of Guiana lies in its fertile soil and its boundless capabilities in regard to tropical produce. Much of the interior still unexplored. The **Kaieteur Falls**, on the Potaro, a western tributary of the Essequibo, were discovered 1870. They are 822 ft. high and 370 ft. broad, and are one of the greatest wonders of the kind in the whole world. **Mount Roraima**, a singular table-mountain on the borders of British, Venezuelan and Brazilian territories, has been the chief object of recent travellers.

Guildhall School of Music, Victoria Embankment, E.C., was established by the Corporation of London in '80, for the purpose of providing high-class instruction in the art and science of music at a moderate cost. Students are nominated by an alderman or a member of the Court of Common Council. The school commenced with 62 pupils, but now there are more than 3,000 pupils. Its origin is traceable to the Guildhall Orchestral and Choral Society, founded by Mr. H. Weist Hill in '79. The Common Council having had a report of this school laid before it, granted £350, and lent some buildings in Aldermanbury with which to establish the present school. Its speedy success led the Corporation of London to vote £20,000 for the fine buildings in which the school has carried on its work since '87. The total sum which the Corporation have expended on the school is £50,000, in addition to an annual contribution of £2,300. There are several exhibition scholarships in connection with the school. **Principal**, Mr. H. Weist Hill; **Lady Superintendent**, Mrs.

(Charles P. Smith; **Secretary**, Mr. Charles P. Smith.

Guilds. There are within the Anglican Church Guilds for various purposes, but most of them are in some way affiliated or attached to the **Church Guilds Union**—an association of Guilds and similar societies desirous of helping each other in the "furtherance of the good works which are set before them." Connection with the Union does not in any way lessen the independence of a Guild. The Union has for its object the promotion of corporate services for prayer and praise, the organisation of conferences and conversations for the benefit of Guildsmen. The headquarters of the Union are at Guildford. Among the principal Guilds are—1. The **Order of the Holy Redeemer**, founded in '80, by a few young men studying for Holy Orders. Its aim is the spiritual welfare of its members consistent with the principles of the Anglican Church. It assists in Mission work, Sunday School teaching and the preparation of any of its members for Holy Orders or any tests in religious knowledge. 2. The **Guild of the Holy Trinity (Cambridge)** was founded in '57, for the benefit of members of the University, and now numbers about 400. It holds periodical meetings during term for prayer and praise and mutual intercourse. The **Guild of the Holy Trinity (Oxford)** was founded in '44, and now numbers about 300 members. It is worked upon similar lines to the Cambridge Guild. 3. The **Army Guild of the Holy Standard** is an association of communicants for the promotion of Church principles in the Army. It has about 80 branches in various military centres and about 2000 members. There is also a Guild for soldiers' wives and daughters called the **Guild of St. Helena**. The Guild of the Holy Standard gives support to (1) Church of England Soldiers' Institute; (2) the Army division of the Church of England Temperance Society; (3) the Army Missionary Society in connection with the Society for the Propagation of the Gospel; (4) the Home for soldiers' daughters at

Kilburn, where soldiers' orphans are maintained and educated. The offices of the Guild are 140, Palace Chambers, Bridge Street, Westminster. The Guild has an annual service in St. Paul's Cathedral. The **Medical Profession** has its **Guild of St. Luke**, which was founded in '64, and has for its object to encourage and support its members in leading the higher Christian life and to promote and defend the Catholic Faith, especially amongst members of the medical profession. One of the special features of its work is in providing and maintaining fully qualified medical missionaries for work in the foreign mission field. The **Guild of the Holy Cross** has for its aim the promotion of spiritual life among men in the railway service. There are besides these many Diocesan and Parochial Guilds.

Guinness's Trust. Founded by Sir E. C. Guinness, Nov. '89, to provide dwellings for the poorer classes in London and Dublin. The trustees are Lord Rowton, Mr. Ritchie, M.P., and Mr. D. R. Plunket, Q.C., M.P., in whose hands Sir E. C. Guinness placed the sum of £250,000, £200,000 to be allocated to London and £50,000 to Dublin. In London three sites, at Walworth, Bethnal Green and Clerkenwell, have been purchased for £100,000, and Earl Cadogan presented a site in Chelsea, and they will contain 1,300 rooms. In Dublin a site has been leased in Thomas' Court, near the Meath Market, where 120 tenements for 120 families will be erected at a cost of £7,000. Other sites will be secured in the near future. See, Capt. T. H. Vickers.

Guy's Hospital and Medical School, S.E. This institution, which was founded in the year 1645 by Thos. Guy, a city bookseller, has recently had two important additions: (a) a **Dental School** for complete instruction in Dental Surgery and Mechanics, and (b) a **Residential College** for the accommodation of 50 students and the junior medical staff. The former makes Guy's the only institution in London in which the whole of the dental curriculum can be taken.

H

Habeas Corpus, Writ of. A writ directed to a person who has another person in custody requiring him to produce his prisoner in court upon a day specified therein. From the time of Magna Charta imprisonment at the discretion of any person, even the sovereign, has been unlawful in England. But down to the seventeenth century the royal prerogative was so indefinite, and the royal power so great, that persons were frequently detained in custody at the discretion of the Crown. See ed. '88.

Habitual Drunkards. See Session, sect. 21. **Haggard, Henry Rider**, was b. at Bradenham Hall, Norfolk, 1856. At the age of nineteen he accompanied Sir Henry Bulwer to Natal as his private secretary, and subsequently served in a similar capacity under Sir Theophilus Shepstone, H.M. Commissioner to the Transvaal, and took part in the temporary annexation of that territory to the British Crown in '77, and was afterwards appointed **Master of the High Court of the Transvaal**. At the commencement of the Zulu war he was adjutant-lieutenant of the Pretoria Horse. He began

his career as an author with the publication of "Cetewayo and his White Neighbours" in '82, and subsequently wrote "Dawn," and "The Witch's Head," in which he gave promise of his success as a romance writer, which was fully realised in "**King Solomon's Mines**." This won for him immense popularity, which was further increased by his wildly romantic and idealistic story "**She**" which created a great sensation on its appearance in '87. "**Allan Quatermain**," "**Jess**," "**Mr. Meeson's Will**," "**Maiwa's Revenge**," "**Colonel Quaritch, V.O.**," "**Allan's Wife**" and "**Cleopatra**," are among Mr. H.'s recent writings. His latest works are a collaboration with Mr. A. Lang entitled "**The World's Desire**," "**Beatrice**," and "**Eric Brighteyes**." He has also edited one or two vols. by relatives.

Haileybury College, Herts. Founded 1862, received Royal Charter '64. Exhibitions to Oxford and Cambridge five annually (£60, £50, £50, £40, and £20) for three years. Pupils 500. **Head Master**, Hon. and Rev. Edward Lytton, M.A.

Halifax. Capital of Nova Scotia (*q.v.*), pop. 40,000. It is a fine city, and stands on one of the finest harbours in the world. It is the chief naval station of British North America, and has a large royal dockyard, covering 14 acres. Harbour and city are protected by 11 different fortifications, garrisoned by British troops.

Hall, Rev. Newman, was b. at Maidstone, 1816. Ed. at Tottenham and Highbury Coll., LL.B. Lond., '55 (law scholarship). Ordained Pastor of the Abdon Congregational Church, Hull, '42. In '54 was chosen minister of Rowland Hill's Chapel, Blackfriars Road, London. Subsequently removed with his congregation to the handsome new church in the Westminster Bridge Road, the tower of which, called "Lincoln Tower," was erected by English and American subscribers in memory of Abraham Lincoln. During the American war Mr. H. raised his voice on behalf of the North, and subsequently visited the United States with a view to promoting international goodwill. Mr. H. has long been associated with the temperance cause, and was one of the first to inaugurate a movement for providing pleasant evenings for the people. He is the author of various evangelical books and tracts, of which the best known is "*Come to Jesus*," of which several millions have been circulated. His impending resignation was notified in July '91. His last book is entitled "Gethsemane."

Hallé, Sir Charles, pianist, b. 1819, is the son of a local bandmaster near Elberfeld. He studied chiefly at Paris, and in '49 gave concerts there. The Revolution of '48 drove him to London. His rendering of Beethoven's F. Flat and Pianoforte Concerto at a concert at Covent Garden in the same year brought him prominently into notice. He subsequently settled in Manchester. For many years he has been at the head of classical pianists; and since about '57 has gained fame as conductor. In addition, Hallé has edited the finest classical composers, and has done much for the culture of the highest description of music. He was knighted in '88, which was the fortieth anniversary of his settlement in England. In July '88 he married Madame Norman-Neruda, the famous violinist (see biography). A farewell dinner to Sir C. H. was given in March '91 by the Westminster Orchestral Society, previous to his departure, with Lady H., to Australia, from which he returned in the autumn.

Halsbury, Hardinge Stanley Giffard, P.C., 1st Baron (creat. 1885), the Lord Chancellor of England, was b. 1825. Mr. Giffard, after graduating at Merton Coll., Oxford, was called to the bar at the Inner Temple '50, becoming Q.C. ('65). He was engaged in most of the celebrated trials of his time, including the Overend, Gurney, and the Tichborne cases. Solicitor-General ('75-80). M.P. for Lancaster ('77-85). On the accession to office of the Salisbury government ('85) he was made Lord Chancellor. His attainment to high judicial office is a remarkable exception to the general axiom of the English bar, that no criminal practitioner ever reaches the woolsack. In June '91 his lordship received the hon. degree of D.C.L. from Oxford University.

Hamilton. Capital of the Bermuda Isles (*q.v.*). **Hamilton, The Rt. Hon. Lord George Francis, P.C., M.P.,** third son of the late Duke of Abercorn, was b. at Brighton, 1845, and educated at Harrow. Married Lady Maud Caroline, youngest daughter of the third Earl of

Harewood ('71). Entered the Rifle Brigade ('66); was ensign and lieutenant Coldstream Guards ('68). Lord George contested Middlesex at the election of '68, and won the seat by a majority of more than a thousand over Viscount Enfield, who was second. Again, at the general election of '74, Lord George defeated Lord Enfield by over 5000 votes. After this election, when he was under thirty years of age, he was appointed Under-Secretary for India, and four years later succeeded Lord Sandon as Vice-President of the Committee of Council on Education. Lord George attained cabinet rank in '85, Lord Salisbury nominating him for the high post of **First Lord of the Admiralty**. In Lord Salisbury's present administration he holds the same office. Lord George was again elected member for Middlesex in '80, when he defeated Mr. Herbert Gladstone by a large majority, and for the Ealing Division in '85 and '86.

Hamley, General Sir Edward Bruce, K.C.B., K.C.M.G., M.P., was b. 1824. Second lieutenant Royal Artillery '43. Served throughout the Crimean war, and commanded the second division in the Egyptian campaign ('82). He was commandant of the Staff College '70-77, and has held other important positions. He has received the Crimean medal with four clasps, the Egyptian war medal, and eight other decorations. Sir Edward's first appearance in the literary world was in '54, when he produced a charming tale called "*Lady Lee's Widowhood*." His "*Operations of War*," of which several editions have appeared, is the recognised text-book for military examinations. He has written several other books and pamphlets on various subjects. In '90 "*The War in the Crimea*," appeared from his pen. He has represented Bickenhead in Parliament since '85. His writings and speeches are characterised by independence in opinion and frankness in expression, and he is generally considered an authority on important military and political questions.

Hampton and Nunhead Water Main. Mr. J. W. Kestler, Engineer to the Southwark and Vauxhall Water Co., during the earlier portion of '91 laid a second water main from Hampton to Nunhead, some 15 miles of pipe line. The work involved the construction of an iron subway under the Thames near Kingston bridge. It is circular in section, 9 feet diameter, made of cast iron plates 1 inch thick, and bolted in segments forming rings 18 inches deep. The method adopted in driving the tunnel was the same as that used on the City and South London Railway (*q.v.*). The subway under the river is 600 feet long, and was completed in the short space of nine weeks. The cast iron main of 42 inches diameter conveying the water is divided in the tunnel into two pipes of 31 inches. Messrs. John Aird & Sons were the contractors, and the completion was announced in July.

Handel Festival, '91. See Music.

Hannen, James, Lord, was b. at Kingswood, Surrey, 1807, and was ed. at St. Paul's School and Heidelberg University. Called to the bar at the Middle Temple ('48). Going the old Home Circuit, he soon acquired a reputation for ability and industry, which led to his appointment as junior counsel to the Treasury. He was junior counsel for the prosecution at the celebrated trial of "the Manchester martyrs," during the Fenian agitation. An advanced Liberal, Sir James Hannen unsuccessfully con-

tested Shoreham ('65). Appointed a judge of the Queen's Bench Division ('68), President of the Probate, Divorce, and Admiralty Division ('72), in which capacity he has tried many *causes célèbres*. Presided over the **Parrell Commission** ('89), and his dignified bearing during the Commission met with general approval. Appointed a Lord of Appeal in Jan. '91, and took his seat in the House of Lords.

Harcourt, Sir Wm. Geo. Granville Venables Vernon, Knt. (1873), M.P., P.C., LL.D., Q.C., son of the late Rev. W. V. Harcourt, of Nuneham Park, Oxford, and grandson of a former Archbishop of York, was b. 1827. Educated at Trin. Coll., Cambridge, where he graduated with first-class honours in the Classical Tripos, and Senior Optime ('51). Called to the bar at the Inner Temple ('54), Q.C. ('66). Appointed Whewell Professor of International Law, Cambridge ('69). He married ('59) the daughter of Lady Theresa Lewis, by whom he has a son, Lewis (b. '63). Sir W. Harcourt entered parliament as Liberal for Oxford ('68-80). On seeking re-election after his acceptance of office in Mr. Gladstone's administration he was defeated by Mr. Hall, who was subsequently unseated on petition. Meantime a seat was found for Sir W. H. at Derby, by the voluntary retirement of Mr. Plimsoll, for which constituency he has continued to sit up to the present time. He has held the following offices: Solicitor-General ('73-74); Secretary of State for the Home Department ('80-85); **Chancellor of the Exchequer** ('86). He married ('76) his second wife Mrs. Ives, daughter of the late Mr. J. L. Motley, the historian, by whom he has a son, Robert (b. '78). Under the *nom de plume* of "**Historicus**" he is the author of the well-known letters on International Law. He was one of the members of the Round Table Conference, which was held at his town residence '87. He is one of the most clever of Parliamentary debaters and platform speakers, and is spoken of as a probable future leader of his party. A caustic criticism by Sir William enlivened the debate on the Budget proposals (April '91). Delivered several speeches in Devonshire during May. Presided at banquet (July 30th) to celebrate a Liberal victory at Wisbech, and delivered a witty speech. In Nov. it was reported that he was suffering from partial loss of eyesight.

Hardy, Thomas, novelist, was b. 1840, in Dorsetshire, and commenced his career as an architect. For an essay dealing with "Coloured Bricks and Terra-cotta Architecture," Mr. H. received the medal and prize of the Institute of British Architects. His first literary effort was a novel published in '71, entitled "Desperate Remedies." In '74 the work by which he is best known appeared in the pages of *Cornhill Magazine*—"Far from the Madding Crowd," which was dramatised and played at the Globe Theatre. Other novels from his pen have been—"A Pair of Blue Eyes" ('73), "**The Trumpet Major**" ('80), and "**The Laodicean**" ('81). For the delineation of rural life with homely dialogues, Mr. H. has long been considered *facile princeps* among novelists. During '91 a series of "Wessex Tales" has appeared in *Harper's Magazine* from the pen of Mr. H. He also published "**A Group of Noble Dames**."

Hare, John (John Fairs), the eminent comedian and theatrical manager, was b. in 1844 in Yorkshire. Studying under Leigh Murray, he appeared early in '65 at the Prince of Wales's

Theatre, Liverpool, in "A Business Woman." A few months later he was engaged by Miss Marie Wilton (Mrs. Bancroft) for the old Prince of Wales's in London, making his *début* in "Naval Engagements." Soon after came the era of Robertsonian comedy. As Lord Parnigan in "**Society**" (the first of the series), the Russian Prince in "Ours," Sam Gerridge in "**Caste**," and Beau Favintosh in "School," the artistic finish of his style was universally recognised. In '75 he became lessee of the old Court Theatre, and in '79 joined Mr. Kendal in the management of the St. James's. The partnership ceased in '88, and the next year Mr. Hare opened the Garrick Theatre, where "**A Pair of Spectacles**" furnished him with a splendid part. His son Gilbert has made his mark as a character actor in "School."

Harris, Sir Augustus, actor, dramatist, and manager (b. 1852), is a son of the late Augustus Harris, at one time so well known in the theatrical world. Made his first appearance on the stage ('73). He is renowned as a most enterprising, energetic and successful manager. Since '79 he has produced, besides several popular pantomimes, "**The World**" (written by himself in collaboration with Messrs. Meritt and Pettitt), "**Youth**" (Harris and Meritt), "**Human Nature**" (Harris and Pettitt), "**A Run of Luck**" (Harris and Pettitt), "**Pleasure**" (Meritt and Harris), "**The Armada**" (Harris and Hamilton), '88, and "**The Royal Oak**," '89, "**A Million of Money**" (Pettitt and Harris), '90. Mr. Harris was elected to the London County Council for the Strand Division last January. Elected one of the Sheriffs of London for '91. During the year he acquired, in addition to Drury Lane Theatre, Covent Garden Theatre, and conducted an opera season with success. After the visit of the German Emperor the honour of **knighthood** was conferred upon Mr. Harris (July).

Harris, Geo. Robert Canning, 4th Lord, the new Governor of Bombay, was b. 1851; ed. at Eton and Ch. Ch., Oxford. Although well known for his success as a cricketer, being captain of the Kent County Club, it was not till '85 that Lord H. came into public notice as a statesman. He held the office of **Under-Sec. for India** '85-86, and in Lord Salisbury's second Government became Under-Sec. for War. Popular among Englishmen, to whom his was a familiar figure at the Oval or at Lord's, he was accorded several **banquets** prior to his departure for Bombay to assume the governorship (Feb. 27th, '90).

Harrison, Benjamin, was b. 1833, at North Bend, near Cincinnati. He claims descent from Commissioner Harrison, who signed the death warrant of Charles I. He is a great-grandson of Benjamin Harrison, one of the signers of the declaration of American Independence, and a grandson of General W. H. Harrison, who was elected President of the United States in '40, and died a month after his installation. He was educated at the Miami University at Oxford, Ohio. He subsequently studied law in Cincinnati, in '54 removed to Indiana, and in '60 was elected reporter of the Supreme Court of that State. After the outbreak of the civil war, he entered the 70th Indiana regiment, and during the Atlanta campaign greatly distinguished himself. At the conclusion of the war he returned for a short time to his post in Indiana. He subsequently became partner in a law firm. In '80

he was elected Governor of Indiana, and in the following year was returned by that State to the United States Senate. He was elected President of the United States of America in Nov. '88. He is an ardent Republican. On March 4th, '89, he was formally installed, and delivered his inaugural message.

Harrison, Frederic, M.A., was b. in London 1837; educated at King's Coll., Lond., and Wadham Coll., Oxford; scholar, '48; first class in classics, '53; fellow and tutor, '54. Called to the bar, Lincoln's Inn, '58; practised in the Equity Courts; examiner in jurisprudence for Inns of Court '69-76; for London University '75-9; Professor of Jurisprudence, Inns of Court, 78-89; member of Royal Commission on Trades Unions '67-9; secretary to the Royal Commission for the Digest of the Law '69-70. Was member of the State Trials Committee in '88. Is President of the London Positivist Committee, Newton Hall, and has published numerous essays and addresses on Positivism. Author of very many articles in the *Fortnightly*, *Contemporary*, and *Nineteenth Century*. Reviews from their commencement; of "The Meaning of History," '62; of "Order and Progress," '75; "Social Statistics," the second volume of Comte's "Positive Polity" (a translation), '75; the "Choice of Books," '86; "Oliver Cromwell," '88; and a great number of lectures, printed privately, on historical, social, and religious questions. He is editor and part author of "The New Calendar of Great Men," a dictionary of general biography. He was elected an alderman by the London County Council in February '80. Lectured (Jan. 1st, '91) on "Religious Socialism," and (Sept. 5th) on "The Emancipation of Women."

Harrow School. Founded 1571, by John Lyon, a yeoman, b. at Preston, near Harrow. Age of admission from 12 to 14. Among the scholarships to either University are Isabella Gregory's of £100 a year for four years; Earl Spencer's £30 a year for three years; Botheld's £60 a year for three years; to Hertford College, Oxford, Baring's three of £100 a year for five years; to Caius College, Cambridge, Sayer's two of £52 10s. for four years; and to any College, Oxford, Need's two of £30 for three years. Pupils—about 600. Head Master—Rev. J. E. C. Weldon, M.A. Motto *Stit fortuna domus*. Some distinguished alumni—Butler, afterwards head master, Sir R. Peel, Cardinal Manning, Byron, Archbishop Trench, Trollope the novelist, Sir George Trevelyan, Lord Shaftesbury, Dr. Parr, Lord Palmerston, Theodore Hook, Rt. Hon. E. Stanhope, M.P., Rt. Hon. Lord Knutsford, Rt. Hon. H. Chaplin, M.P., Rt. Hon. Lord George Hamilton, M.P., Rt. Hon. Sir W. Hart Dyke, Bart., M.P., and the present Master of Trinity Coll., Cambridge. About six or seven Entrance Scholarships, one of not less than £80 a year, two of not less than £60 a year, and the rest of not less than £30 a year each, are offered every Easter to boys (not members of the school) who were under fourteen years of age on the previous 1st of January. These scholarships are held during the scholar's stay in the school, provided that both his conduct and diligence continue satisfactory. One at least of the scholarships is given for proficiency in mathematics, or in modern subjects. No boy can be elected under twelve years of age. The governors can, at their discretion, add £20 a year to any scholarship, if the circumstances of the scholar appear to

make it desirable. There are also two scholarships, each of £30 a year for two years, open to boys in the fifth form, and awarded for proficiency in such subjects as are common to both sides (classical and modern) of the school.

Harte, Bret, was born at Albany, New York, 1839. At the age of fifteen he settled in California, and went through a variety of experiences. He worked for a time in the mines, and subsequently served a short apprenticeship to a printer, and also acted as teacher in a school, and express messenger to a newspaper editor, and secretary to the Mint at San Francisco. He became the first editor of the *Atlantic Monthly*, in '68. He established his reputation as a humorist by his well-known poem "The Heathen Chinee," which appeared in that journal in '69. "The Luck of Roaring Camp" greatly increased his popularity. Was appointed United States Consul at Crefield and at Glasgow in '80. In '82 he published a collected edition of his works. His latest works are "Cressy," "The Heritage of Dedlow Marsh," "A Waif of the Plains," "A Ward of the Golden Gate" ('90), and "A Sappho of Green Springs" ('91).

Hartington, Rt. Hon. Spencer Compton Cavendish, Marquis of, M.P., P.C., is the eldest son of the Duke of Devonshire, and was b. July 23rd, 1833. Educated at Trinity College, Cambridge, where he graduated B.A. ('54). He was returned for North Lancashire as a Liberal in '57, and in '59 moved the vote of non-confidence which resulted in the defeat of Lord Derby. In March '63 he was appointed a Lord of the Admiralty, and in April of the same year Under Secretary of State for War in Lord Russell's administration. In February '66 he obtained cabinet rank as Secretary for War. At the general election of '68 he was defeated in North Lancashire by Mr. (now Lord) Stanley, but shortly afterwards was returned for the Radnor Boroughs. He was appointed Postmaster-General in Mr. Gladstone's first administration, and retained that office till '71, when he succeeded Mr. Chichester Fortescue as Chief Secretary for Ireland. On the retirement of Mr. Gladstone after his defeat in '73, Lord Hartington was unanimously chosen as leader of the Liberal party at a meeting held at the Reform Club under the presidency of Mr. John Bright. In '79 he was elected Lord Rector of the University of Edinburgh (*q.v.*). At the general election of '80 he was elected M.P. for North-East Lancashire, and was sent for by the Queen on the defeat and resignation of Lord Beaconsfield. He declined, however, to form an administration, being content to serve again under Mr. Gladstone. He became Secretary for India, but on the appointment of Mr. Childers as Chancellor of the Exchequer in '82, his lordship returned to the War Office. At the general election in '85 he was returned by an enormous majority for the Rossendale Division of Lancashire. When Mr. Gladstone formulated his policy of Home Rule for Ireland, Lord Hartington was unable to follow him, and moved the amendment to Mr. Gladstone's motion for the second reading of that measure. During the electioneering campaign which followed the defeat of the Government on the Bill, Lord Hartington frequently declared himself in favour of a substantial reform of Irish local government, but protested against such a reform being based upon a principle which he conceived to be inapplicable to England, Scotland and Wales, and

destructive of the integrity of the United Kingdom. His lordship became the recognised leader of the **Liberal Unionist party**, to whose action in dividing the Liberal vote the Conservative triumph at the polls was largely due. Recognising the commanding influence of Lord Hartington with the Unionists of both parties, Lord Salisbury offered to serve under him if he would accept the premiership. Lord Hartington, however, declined Lord Salisbury's overtures, but undertook to give his support to the new ministry in the House of Commons. After the secession of Lord Randolph Churchill, Lord Salisbury again endeavoured to induce Lord Hartington to join his Cabinet. On the ground that he could best serve the Unionist cause without taking office, he again declined. It was, however, with his full approval that Mr. Goschen entered the Cabinet as Chancellor of the Exchequer. Events which have taken place since then have emphasized Lord Hartington's antagonism to Mr. Gladstone's Home Rule policy, and in his speeches delivered in the autumn of '88 at Nairn and Belfast he assumed an attitude of closer alliance with Lord Salisbury. At the commencement of '90 Lord H.'s illness caused universal regret, while his departure for Egypt in a convalescent state caused the leadership of the Unionist party to be divided between Sir H. James and Mr. Chamberlain. His return to England and to politics was hailed with unanimous pleasure by politicians. His lordship was appointed Chairman of the Royal Commission on Labour (April '91). The death of his brother, Lord Edward Cavendish, M.P., took place in May. The noble marquis delivered an important speech at Manchester (Nov. 10th).

Hastings Passenger Lift. A new lift, after the style of those at Brighton and Folkestone, was opened by Mr. Wilson Noble, M.P., at Hastings, on March 26th, '91, after being in course of construction for about a year. It is situated at the junction of George Street and the Marine Parade, and the object is to afford easy means of access from the sea front to the West Hill. It was necessary to drive a tunnel through the hill-side, a distance of 402 ft., at an incline of about 1 in 3, and it is stated that this is the first instance in England where a tunnel has been excavated on such a slope. The tunnel is 19 ft. wide and 18 ft. high, lined with strong brickwork; the total length of the track is 500 ft., and the vertical rise from platform to platform is nearly 170 ft. There are two lines of rails for two cars, each containing 16 persons, power being obtained from a stationary engine. The time of the journey is 15 minutes. Messrs. F. & J. Plowman, of Hastings, were the architects and originators of the scheme.

Havelock, Sir Arthur Elibank, K.C.M.G., the new Governor of Ceylon, was b. in 1844, and has had a varied colonial experience. He was appointed in '77 President of Nevis, and became two years later the Chief Civil Commissioner of the Seychelles. His next promotion was in '81 to the Governorship of the West African Settlements. Became Governor of Trinidad three years after this, but did not remain in this position for more than a few months, becoming Governor of Natal in '85. Previous to this he had been created K.C.M.G. In March '90 he accepted the Governorship of Ceylon.

Hawaiian Islands. A group of eight in-

habited and four uninhabited islands in the North Pacific. Area, 6677 sq. m., pop. 80,576. Capital, Honolulu, on the south-west coast of the island of Oahu, pop. 20,487. Imports in '88, \$4,541,000; exports, \$11,631,000; estimated revenue, '88-90, \$2,618,913; expenditure, \$3,102,418; debt, \$1,936,500. The Hawaiian Islands were discovered by Captain Cook in 1778, and by him named Sandwich Islands, in honour of the Earl of Sandwich, then first lord of the Admiralty; but the natives have adopted the name Hawaiian, from the largest island, Hawaii. Exports, sugar, rice, coffee, hides, wool, whale oil and bone. The bulk of the trade is with the United States. Under Kamehameha I. the Hawaiian Islands were united into one kingdom. Kamehameha II. succeeded him in 1819, and one of his first acts was to abolish idolatry. Thenceforward the commercial development of the islands and the civilisation of the people has proceeded rapidly. The form of government is a limited monarchy. A new constitution was granted in July '87. There are two Houses—the House of Nobles and the House of Representatives—each consisting of 24 members, and both popularly elected, the nobles for six years, the representatives for two. The two Houses sit together, and form the Legislative Assembly. The members of the Privy Council are appointed by the king. The reigning sovereign is Queen Liliuokalani I. Steamers connect the islands with America, Australasia, and China.—'91. King Kalakaua died (Jan. 20th), and his body was embalmed the same day; the funeral took place on the 22nd. The Cabinet resigned (Feb.), and the new Ministry was composed of Mr. Parker, Premier and Minister of Foreign Affairs; Mr. Widemann, Minister of Finance; Mr. Whiting, Attorney-General; Mr. Spencer, Minister of the Interior. Mr. Spencer held the same portfolio in the last Cabinet. Princess Kaiulani, niece of Queen Liliuokalani, was (March 9th) officially declared Heir Apparent to the throne of Hawaii. It was reported (April 20th) that the people were clamouring for a republic, and that the Queen's life was in danger. It was reported (Oct. 26th) that a new lake had been discovered, named Alia Paakaia, which was more salt than the Dead Sea. For Ministry, etc., see DIPLOMACY.

Haweis, Rev. H. R., was b. at Egham, Surrey, April 3rd, 1840, and ed. at Trinity College, Cambridge where he graduated ('63), M.A. ('64). In 1865 he was appointed to the Crown living of St. James's, Marylebone, which he still holds. He is well known as an able preacher and speaker. He was present at the siege of Capua during the Italian Revolution, and also at several other engagements. He is an author of repute, his principal work being "**Musie and Morals**." Amongst his other works are "**American Humanists**," "**Thoughts for the Times**," "**Christ and Christianity**," "**Pet, or Pastimes and Penalties**," and a memoir of Garibaldi, besides several pamphlets and articles on social subjects, etc. In '91 he issued a book entitled "**The Broad Church; or, what is Coming?**"

Hawkins, Sir H., was b. at Hitchin 1816, and educated at Bedford School. Called to the bar '43, Q.C. '58, and made a Judge in '76. He was junior counsel for the defence at the famous trial of Sir John Dean Paul and his colleagues, and assisted Mr. (afterwards Lord Chief Justice) Bovill in the Roupel case. He successfully defended the late Mr. W. H. Smith when

his return for Westminster was challenged, and was leader in the prosecution of the Tichborne claimant. Sir Henry retains many of his youthful tastes for athletics, and is an hon. member of the Jockey Club, for which he was formerly standing counsel. During Aug. '91 Sir Henry was prostrated with a serious illness. He resumed his judicial work in October.

Hayti, called Hispaniola by Columbus, and afterwards San Domingo. The second largest island of the Antilles, lying between Cuba and Puerto Rico. Area 28,249 sq. m., pop. 1,200,000.—There are two states. The largest, the **Dominican Republic** (the mulatto republic) occupies the eastern end of the island. Area, 18,045 sq. m.; estimated pop. in '87, 504,000. It is divided into five states or provinces, and four maritime districts. Has a President and National Congress. Capital, **San Domingo**, founded in 1494, the first European settlement in America, pop. 16,000. Revenue, 6,412,957 p.; expenditure, £4,066,236; foreign debt, \$4,320,000; internal debt, \$9,180,000. There is also an international debt. There is said to be now some progress, and the country is being opened up by railways. **Exports**—valuable timbers, coffee, tobacco, cacao, and sugar, to amount of 10,785,366 p. **Imports**—6,845,597 p. The **Republic of Hayti** (the negro republic) occupies the western portion of the island. Area, 10,204 sq. m.; pop. estimated at from 572,000 to 800,000. The capital is **Port-au-Prince**, pop. 40,000. It has a President, Senate, and House of Representatives. The government, nominally republican, is in reality military, the powers of the elective President greatly outweighing those of the legislature. There is an army of about 7000 men, commanded by numerous generals; and a navy of five small gunboats. **Estimated revenue and expenditure** for '86-7, £1,064,257, including over £200,000 for interest. **Debt** officially stated in '87 as £13,500,000. **Exports**, coffee, mahogany, logwood, and cotton (86) £1,511,199; **imports**, £993,050.—'81. The supporters of the deposed president, General Legitime, caused an agitation, with the result (**May**) that martial law was proclaimed at Port-au-Prince and over the whole of the old Western Department of the island. A large number of persons were executed. The island was reported all quiet (June 29th), 280 persons having been killed in the suppression of the outbreak. The Chamber of Deputies passed a vote of censure on the Hippolyte Cabinet (Aug. 15th), and the ministers at once resigned. A bridge on the river St. Marc gave way, when crowded with natives, and over eighty persons were drowned. A new Cabinet was (18th) formed as follows: M. Archin, Minister for Foreign Affairs; M. Joseph, Minister of Works; M. Montas, Minister of War; M. Apollon, Minister of Instruction; M. Stewart, Minister of Finance; and M. Pierre Louis, Minister of Interior.

Healy, Timothy M., M.P., was b. in Bantry, 1855, Secretary to Mr. Parnell in '80, when he was summoned to America. Took an active part in the Land League agitation ('80), and was arrested in the autumn on a charge of intimidation, and committed for trial, but was acquitted. Elected for Wexford borough without opposition. Took a very active part in the discussions of the Land Bill of '81, and obtained the insertion of words excluding the improvements of tenants from rent; and the clause has since come to

be known as the "**Healy clause**." Was charged with the use of intimidating language in a speech in '82, and sentenced to find bail for good behaviour, or be imprisoned for six months. Refusing bail, he was imprisoned. Was released after he had served four months of his sentence. Returned for Monaghan in '83, and in '85 for both North Monaghan and South Derry; elected to sit for the latter. Failed to secure his return in '86, but (Feb. 7th, '87) was returned unopposed for North Longford. Mr. H. was called to the Irish bar '84. In '91 Mr. H. took a prominent part in the struggle against Mr. Parnell's leadership.

Henley Regatta. See **AQUATICS**.

Hereford, Rt. Rev. James Atlay, Lord Bishop of. Consecrated '68. The see was founded 676 (income £4200). His lordship, who is the 93rd bishop, was b. 17. Ed. at St. John's Coll., Cambridge; Sen. opt., 1st cl. Class. Tripos, '40; graduated M.A. in '43, B.D. in '50, and D.D. '59. Was ordained deacon '42, and priest in the following year. His lordship was formerly Fellow of St. John's Coll., Camb., '42-50, and Tutor '47-59; vicar of Madingley, Cambs., 47-52; Whithall Preacher '56-8; vicar of Leeds and Rural Dean '59-68; Canon Residentiary of Ripon Cathedral '61-8.
